Adhesion of the Grand Duchy of Luxemburg to the International Convention for the Protection of Industrial Property.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE.
Washington, D. C., June 27, 1922.

The following communication, referred to this Office by the Secretary of the Interior, is published for the information of those concerned.

WM. A. KINNAN,
Acting Commissioner.

[Translation.]

LEGATION OF SWITZERLAND,
Washington, D. C., June 16, 1922.

Mr. Secretary of State:

On my Government's request, I have the honor to inform Your Excellency that by note dated May 12, 1922, the Legation of Luxemburg at Berne notified the Swiss Federal Council that the Government of the Grand Duchy of Luxemburg decided to adhere to the International Convention for the Protection of Industrial Property revised at Brussels on December 14, 1900, and at Washington, June 2, 1911, with its final protocol. (See article 18 of the Convention.)

In compliance with article 16, paragraph 3, of the Convention of Union of Paris as revised, that adhesion will take effect one month after the issuing of this notice, that is to say, on and after June 30, 1922.

* * * * * * *

I beg Your Excellency kindly to take note of this adhesion, and take this opportunity to renew to you, etc.

In the name of the Swiss Federal Council:

MARC PETER,
Minister of Switzerland.

Interference Notices.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., June 13, 1922.

Conn and Moran, their assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Conn and Moran, of 324½ South Hill Street, Los Angeles, Calif., and an application of Pasquale Beneduce, of 826 Monroe Street, Hoboken, N. J., for patent, and the Office having failed to secure proof of service upon Conn and Moran at their address of record, or upon Pottenger and Pottenger, of 427 Western Mutual Life Building, Los Angeles, Calif., the parties who filed said Conn and Moran's application, notice is hereby given that unless Conn and Moran, their assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
Acting Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., June 13, 1922.

William H. Starbuck, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of The Hirshberg Paint Co., 106 to 110 West Pratt Street, Baltimore, Md., for registration of a trade-mark and trade mark registered April 7, 1903, No. 40,058, to William H. Starbuck, 404 Broome Street, New York, N. Y., and a notice of such declaration sent by registered mail to said William H. Starbuck at the said address having been returned by the post office undeliverable, notice is hereby given that unless said William H. Starbuck, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING,
Assistant Commissioner.

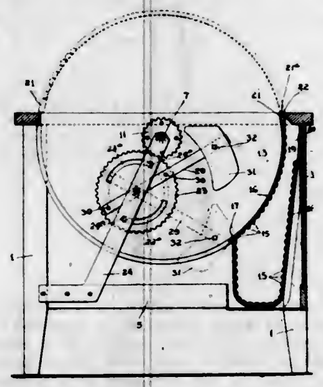
DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., June 21, 1922.

Leslie & Welsh, their assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Flora W. Pinkus, of 93 Third Avenue, New York, for registration of a trade-mark and trade-mark registered November 6, 1894, No. 25,463, to Leslie & Welsh, 297 Main Street, Buffalo, N. Y., and a notice of such declaration sent by registered mail to said Leslie & Welsh at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Leslie & Welsh, their assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
Acting Commissioner.



Condition of Applications Under Examination at Close of Business June 24, 1922.

Room No.	Divisions, Examiners, and subjects of inventions. (Total number of applications waiting action, excluding Trade-Mark division, 67,490; Trade-Mark division, 8,644. Oldest new case, Mar. 31; oldest amended, Mar. 23, 1921. The dates given are 1921 except where * indicates 1922.)	Oldest new application and oldest action by applicant awaiting office action. New.	Amended	No. of applications awaiting action.
314	1. LOEFFLER, F. A., Closure Operators; Fences; Gates; Harrows and Diggers; Plows; Planting; Scattering Unloaders.	Nov. 28	Dec. 14	917
128	2. BALDWIN, M., Bee Culture; Dairy; Medicines; Pneumatics; Preserving; Presses; Tents, Canopies, Umbrellas, and Canes; Tobacco; Trees, Plants, and Flowers.	June 29	July 5	1,921

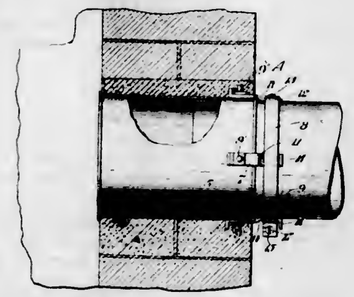
PATENTS

GRANTED JULY 4, 1922.

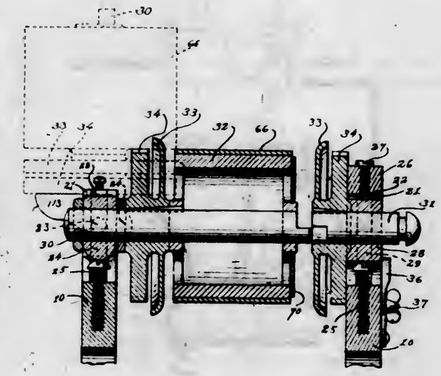
1,421,357. FLAT-TOP ROLL-COVER DESK. ROBERT H. ALLWORK, New York, N. Y. Filed Oct. 24, 1921. Serial No. 509,944. 5 Claims. (Cl. 45—92.)

1. The combination, with a flat top desk, whose top is provided with slots near each side edge and a rear slot, of a shaft journalled below the desk top, segmental walls respectively operable through the side slots and carried by the shaft, the segments each exceeding a half circle, and a flexible apron secured at one end to the segmental walls, the apron adapted to be drawn through the rear slot and over the segmental walls in their rotation, to cover the desk top.



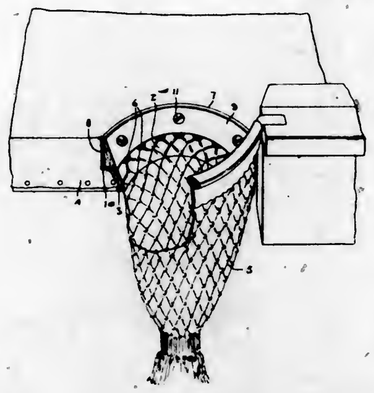
1,421,358. COMBINATION SCRAPER, CHARGER, AND TAMPER. THOMAS J. AVERY, Albia, Iowa. Filed July 15, 1921. Serial No. 484,975. 2 Claims. (Cl. 80—21.)

1. In a device of the character described, a tubular charge receiving member of uniform outside diameter for its entire length, a coupling ring secured to the charge receiving member at one end of and in axial alinement with the latter, said coupling ring having an outside diameter substantially equal to that of the charge receiving member, an inside diameter less than that of the charge receiving member, and being formed with a pair of inwardly offset arms, a second tubular member, a second coupling member carried at one end of the second tubular member and pivotally supported between the arms of the first named coupling member, a rod slidable in the second named tubular member, and a plunger slidably disposed in the charge receiving member and provided with a shank pivoted at its end to the adjacent end of the said slidable rod.



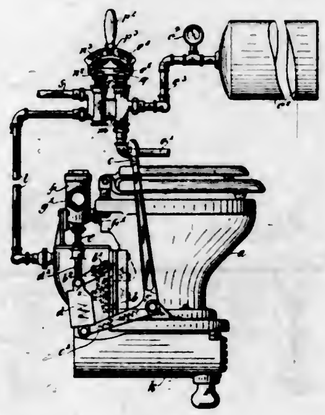
1,421,359. COMBINED THIMBLE AND STOVEPIPE HOLDER. STEVENSON R. BARR, Tacoma, Wash. Filed Aug. 15, 1921. Serial No. 492,572. 1 Claim. (Cl. 126—318.)

A device of the class described comprising a flue thimble, a plurality of strips secured exteriorly of said thimble, a split clamping band secured to one of said strips and disposed in embracing relation to the other of said strips, said band being terminally provided with a pair of depending lips, one of which has a U-shaped slot opening out the rear edge of the lip, the other of said



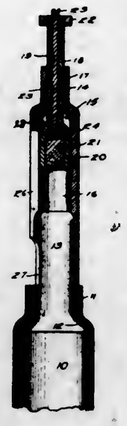
lips being bent upon itself to provide a space, a nut located in said space, and a fastening device seated within the slot of the first mentioned lip and passing through the nut and the opposite lip, substantially as and for the purpose specified.

1,421,360. ROTARY PHOTOGRAVURE PRESS. HARVEY V. BIERY, Oklahoma, Okla. Filed Apr. 2, 1919. Serial No. 286,948. 10 Claims. (Cl. 101—378.)



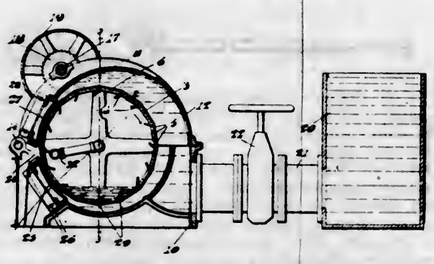
1. In a rotary photogravure press, the combination with a frame, of a mandrel mounted for rotation in the frame and pivoted at one end therein, a printing cylinder removably mounted on the mandrel and adapted to be introduced upon and removed from the free end of the mandrel when swung upon said pivot, means for securing the mandrel at its free end in the frame, and means for retaining the cylinder upon the mandrel.

1,421,361. GUARD FOR BILLIARD-TABLE POCKETS. EDWARD H. ACLAND, Toronto, Ontario, Canada. Filed Aug. 25, 1920. Serial No. 405,898. 2 Claims. (Cl. 46—12.)



1. In a billiard table, the combination with the table bed having a curved pocket recess and the table cover, the edge of which is drawn into said recess, of a rigid guard curved to fit into said recess to clamp the cover in place and adapted to rest on the bottom of said recess and to extend upwardly substantially to the level of the table top to protect the cover around the edge of the pocket recess from the impact of balls rebounding from the pocket.

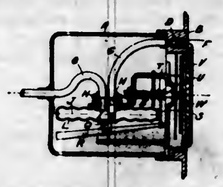
1,421,362. MARINE CLOSET. PERCY ALLAN, Montclair, N. J., assignor to A. B. Sands & Son Co., New York, N. Y., a Corporation of New York. Filed Aug. 5, 1919. Serial No. 315,397. 8 Claims. (Cl. 4—17.)



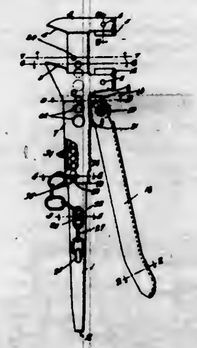
6. In a marine closet, a bowl, a waste tank communicating therewith, means to flush the contents of the bowl into the tank, an air tank in communication with the waste tank, a valve to control the supply of air from the air tank to the waste tank, and an air vent from the waste tank to relieve the pressure therein automatically when the control valve is seated.

1,421,363. BAILER STRUCTURE. FRANCIS B. ALLDREDGE, Des Moines, Iowa. Filed Aug. 10, 1920. Serial No. 402,612. 1 Claim. (Cl. 166—19.)

In a bailer structure, a bailer can, a reduced extended, tubular, swivel socket, having at its upper end a reduced elongated neck, having on its interior a substantially semi-spherical shoulder, said swivel socket, having in its wall, an elongated slot, having a large position at its lower end, a rope lift comprising a tubular member slidably mounted in said neck, a stopping element detachably mounted on the upper end of said tubular member, and an enlarged hollow portion on the lower end of said tubular member, having an exterior shoulder to coact with said first shoulder, and a flexible member mounted in said rope lift.



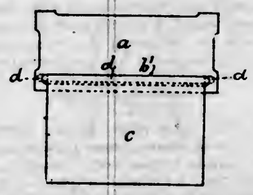
1,421,364. PULP-THICKENING MACHINE. CARLTON H. ALLEN, Millinocket, Me., assignor of one-half to Great Northern Paper Company, Millinocket, Me., a Corporation of Maine. Filed May 28, 1920. Serial No. 384,942. 15 Claims. (Cl. 92—36.)



1. A pulp thickening apparatus comprising, in combination, a filtering drum, means for driving said drum, and a reservoir in which said drum may be submerged in pulp, said reservoir having an opening at one side of said drum for the discharge of thickened pulp.

1,421,365. LIQUID-LEVEL GAUGE. IVAN ANDRASSON, East Elmhurst, N. Y. Filed Mar. 13, 1920. Serial No. 365,676. 4 Claims. (Cl. 73—54.)

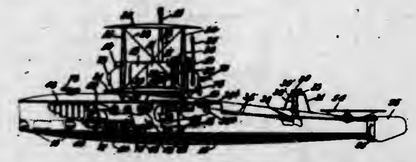
1. In a gauge, the combination of a diaphragm chamber, an outer support and means to support the diaphragm chamber from the outer support, such means including a liquid inlet tube communicating with the interior of the diaphragm chamber and an air outlet tube also communicating with the interior of the diaphragm chamber at its upper part.



1,421,366. WRENCH. PETER F. ANDERSON, Prentice, Wis., assignor of one-half to Peter S. Lound, Prentice, Wis. Filed Sept. 1, 1921. Serial No. 497,458. 4 Claims. (Cl. 81—86.)

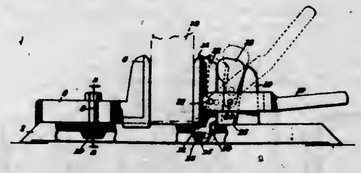
1. A tool of the class described, comprising a shank having a fixed jaw; a rider mounted to reciprocate on the shank and having a rack, the rider including a loop-shaped jaw within which the shank is located; a filler in the jaw of the rider and located between one end of said jaw and the shank; a cutter on the jaw of the rider and cooperating with the fixed jaw; a securing element connecting both the cutter and the filler to the jaw of the rider; and a lever fulcrumed on the shank and engaged with the rack of the rider.

1,421,367. SHOWCARD, CALENDAR, AND THE LIKE. WILLIAM JOSEPH ANDERSON, Hyde, England. Filed May 19, 1919. Serial No. 298,821. 1 Claim. (Cl. 40—128.)



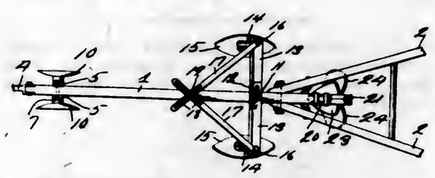
A show device comprising a head piece portion having at slot approximately the length thereof leaving comparatively narrow portions that may be fixed more readily than other portions of said head piece, a perishable apron-like refill portion having an upper edge of a length less than the length of the head piece slot and adapted to be supported entirely and wholly in the same plane as that of said head piece, and a lath secured to the front face of said apron-like portion at the upper end thereof and of a greater length than said apron-like portion so that the lath ends may extend into the slot of said head piece portion and support said apron-like portion.

1,421,368. DIRIGIBLE HEADLIGHT FOR LOCOMOTIVES. GEORGE H. ANTHONY, Sykesville, Pa. Filed Oct. 1, 1921. Serial No. 504,730. 3 Claims. (Cl. 240—62.)



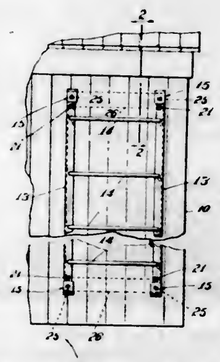
1. A dirigible headlight for locomotives comprising a casing, a reflector pivotally mounted therein for swinging movement on a vertical axis, a supporting frame carried by and extending forwardly within the reflector, and a pendulum supported from the top of the casing and having its weight confined within said frame.

1,421,369. SUBMERSIBLE FLYING BOAT. JOSEPH AADO, Newhall, W. Va., assignor of one-half to Kalman Horvath, Newhall, W. Va. Filed Oct. 28, 1921. Serial No. 511,144. 5 Claims. (Cl. 244—2.)



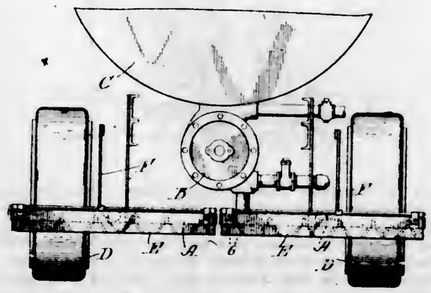
1. In a submersible vessel, a hull, a series of cylinders opening at one end through said hull, pistons in said cylinders, means for locking said pistons in different adjusted positions against inward movement in said cylinders said means permitting free outward movement of the pistons in the cylinders, and other means for moving said pistons outward in said cylinders.

1,421,370. BENCH AND FLOOR CLAMP. THOMAS ASHWORTH, Millersburg, Ohio. Filed Sept. 16, 1921. Serial No. 501,141. 1 Claim. (Cl. 144—303.)



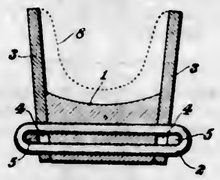
In an adjustable wood working clamp, a bed plate, a main stationary jaw, a pivoted and longitudinally movable supplemental jaw, an operating lever pivoted on said supplemental jaw, a fulcrum post fixed on said bed plate, and a wedge carried by said lever intermediate said supplemental jaw and said fulcrum post, whereby said lever is depressed, the wedge will engage said fulcrum post and said supplemental jaw and cause the latter to be moved toward the main jaw.

1,421,371. DISK PLOW. SIDENEY CICERO ATTAWAY, Thomasville, Ga. Filed Sept. 2, 1921. Serial No. 497,831. 3 Claims. Cl. 55—9.)



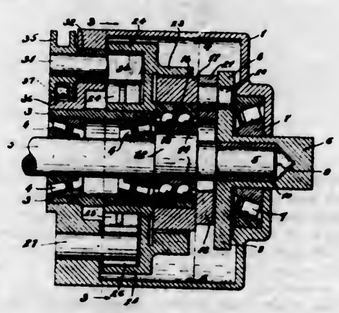
3. A combined vine cutting, row barring and potato digging plow, said plow comprising a beam, spaced vine cutting disks adjacent the forward end of said beam, row barring spaced disks disposed rearwardly of the vine cutting disks and a plowing element disposed rearwardly of the row barring disks.

1,421,372. LADDER CONSTRUCTION. LE ROY H. BADGER, Oak Park, Ill., assignor to De Remer Blatchford Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 6, 1920. Serial No. 422,179. 15 Claims. (Cl. 228—49.)



2. A ladder construction for railway cars comprising, in combination, a ladder and ladder supporting means on which the ladder has a slidable anchorage permitting it to be separated therefrom when bent laterally.

1,421,373. LIQUID-DISTRIBUTOR DISCHARGE MECHANISM. FREDERIC E. BAGER, Kenosha, Wis., assignor to Frederick C. Austin, Chicago, Ill. Filed Feb. 17, 1917. Serial No. 149,211. 12 Claims. (Cl. 299—34.)



1. A liquid-distributor discharge-mechanism comprising outlet-means to form a jet, a movable deflector disposed in position to receive the discharge from said outlet-means and formed to direct the liquid downward in a flat fan-shaped spray, and valve-means mounted on said deflector and arranged to cooperate with said outlet-means to so control the discharge that the size of the jet may be varied without materially changing its point of impingement on said deflector.

1,421,374. TROUGH. ROBERT A. BAGNELL, St. Louis, Mo. Filed Sept. 11, 1920. Serial No. 409,563. 6 Claims. (Cl. 266—38.)

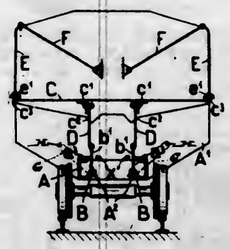
1. A trough for conducting molten metal, comprising, a base, a pair of detachable side members, and means for connecting said base and said members.

1,421,375. TRANSMISSION. HENRY C. FAINER, East Cleveland, Ohio, assignor to The Baines Engineering Company, Canal Dover, Ohio, a Corporation of Ohio. Filed Feb. 28, 1920. Serial No. 362,060. 3 Claims. (Cl. 74—35.)

1. In a device of the character described, the combination with a casing, of a sleeve projecting inwardly within said casing, a shaft journaled in said sleeve, an external gear eccentrically journaled on said shaft, an internal gear rotatably mounted on said sleeve and disposed in operative relation to said external gear, means adapted to connect said internal gear with said casing to prevent rotation thereof, a second shaft journaled in said casing and means for connecting said second shaft to said external gear whereby power may be transmitted between said shafts.

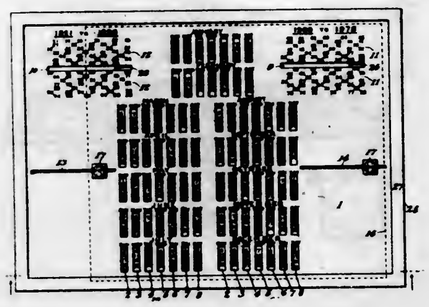
1,421,376. FUSE. HOWARD H. BAKER, Buffalo, N. Y., assignor to United States Fuse Corporation, Buffalo, N. Y., a Corporation of New York. Filed Apr. 30, 1919. Serial No. 293,705. 6 Claims. (Cl. 200—131.)

1. A fuse emprising a body having two body sections of insulating material which engage each other by a longitudinal joint between the same and which are provided on their opposing central parts with cavities forming a chamber, terminals mounted on the ends of said body and having parts arranged on the exterior and the interior of said body, a fuse link arranged within said chamber and engaging its opposite ends with the inner parts of said terminals, and clips for connecting said link with said terminals, each of said clips being of substantially U form and engaging its legs with the outer sides of one end of said link and the corresponding terminal and that



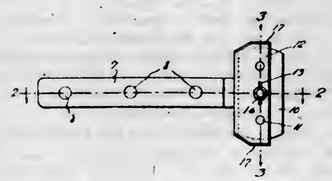
leg which engages with said link being provided with a laterally projecting lug which engages with the adjacent wall of said chamber.

1,421,377. SPLIT LOOSE PULLEY BUSHING. THOMAS F. BARRY, Muscatine, Iowa, assignor to Barry Company, Muscatine, Iowa, a Corporation of Ohio. Filed Jan. 27, 1920. Serial No. 354,451. 8 Claims. (Cl. 64—10.)



1. A split bushing for pulleys, comprising opposite similar complemental interchangeable sections each having one inner meeting edge smooth and having in its other meeting edge a longitudinal channel to receive a packing; the packing on one section contacting with the smooth meeting edge of the opposed section when the parts are assembled, whereby leakage of the oil between the meeting faces of such sections is prevented by such packings.

1,421,378. SELF-DISCHARGING CAR. KARL BARTH, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Jan. 14, 1921. Serial No. 437,325. 2 Claims. (Cl. 105—260.)

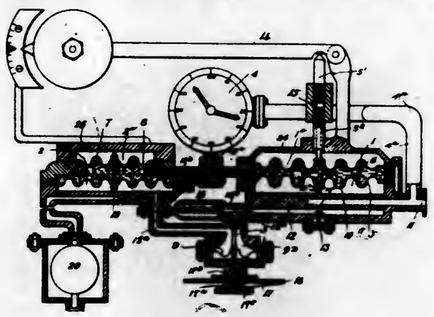


1. A self discharging receptacle comprising a rotatably disposed bottom, a frame structure, said bottom articulated to said frame structure by means of link devices, the elements of which devices when said receptacle is in loaded position are substantially parallel each to each to form a substantially linear support for said bottom, and abutments for said link devices permitting a collapsing action of said link devices only toward the longitudinal center line of said receptacle.

1,421,379. CALENDAR. SAMUEL O. BARTLETT. New York, N. Y. Filed Feb. 11, 1921. Serial No. 444,086. 2 Claims. (Cl. 40—109.)

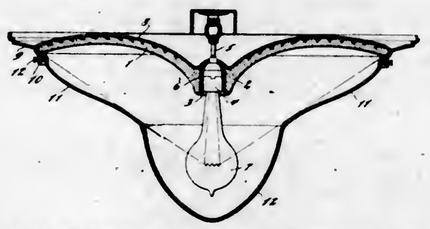
1. The combination, in a multi-year calendar, of a mat, provided with monthly groups of day-index slots, a group of ear indicating numbers, a year index slot, and guide strips, and a rela ively movable, cooperating number-sheet, provided with guide slots adapted to register with said guide strips, series of day numbers, adapted to register behind the day-index slots, and with a year indicator adap ed to register behind the year-index slot.

1,421,380. SCRAPER. HENRY BAUM, East Cleveland, Ohio. Filed Feb. 13, 1922. Serial No. 536,081. 1 Claim. (Cl. 145—47.)



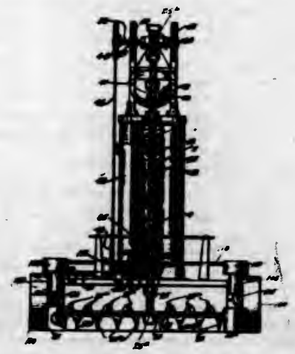
A scraper comprising a handle including a metal plate extending and expanded laterally beyond the front end of the handle and in a plane parallel thereto, the ends of said expanded part of the plate being flanged to form a seat, said seat having projecting spaced lugs, a blade resting on said seat and having holes into which the lugs project, and a cap plate clamped upon the blade and engaged by said lugs and fitting between said flanges.

1,421,381. MEANS FOR REGULATING THE FLOW OF COMPRESSED GASES. ALFRED EDWIN BAWTREE, Sutton, England, assignor of one-half to Arthur Samuel Legg, Thornton Heath, England. Filed Mar. 8, 1918. Serial No. 221,313. 6 Claims. (Cl. 50—11.)



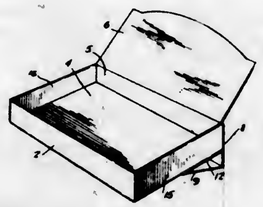
1. Valve mechanism for regula ing the flow of compressed gases, comprising a casing, two pairs of diaphragms within said casing, a continuous system of non-elastic fluid between said diaphragms, means for providing pressure on the upper diaphragm of the first pair of diaphragms, a valve controlled by the under dia-

phragm of the first pair of diaphragms for admitting gas to said under diaphragm, and a valve controlled by the



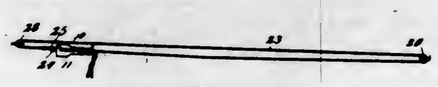
second pair of diaphragms for opening the outlet from the gas chamber beneath the under diaphragm of said second pair of diaphragms.

1,421,382. ELECTRIC-LIGHT FIXTURE. RICHARD M. BEARD, New York, N. Y. Filed Sept. 20, 1919. Serial No. 325,148. 2 Claims. (Cl. 240—92.)



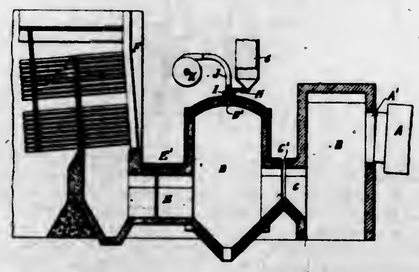
1. In an electric lighting fixture, a relatively broad plaster composition reflector having a depending neck portion, a protecting and reinforcing band carried by the reflector at its periphery, means for supporting the reflector solely at the neck portion, and depending enclosing means supported entirely from the band.

1,421,383. SAND GATHERING AND ELEVATING MACHINE. ELMER O. BEARDSLEY, Chicago, and WALTER F. PIPER, Oak Park, Ill. Original application filed June 22, 1917, Serial No. 176,354. Patent No. 135,641. Divided and this application filed Jan. 30, 1919. Serial No. 274,096. 9 Claims. (Cl. 37—27.)



9. In a foundry machine of the class described, the combination of a truck, mans for propiling th truck into a pile of sand, sand-gathering means comprising a conveyor formed of a helical blade provided with a periphery formed to continuously feed the sand transversely, and an elevator for conveying the sand from the screw, and means for rotating the screw and driving elevator, the screw being equipped with blades projecting radially from its periphery so as to break up the sand engaged thereby.

1,421,384. DISPLAY CONTAINER. HENRY B. BEATTY, Brooklyn, and CLARE LE ROY JOHNSON, New York, N. Y., assignors to Laplante & Dunklin Printing Company, New York, N. Y., a Corporation of New York. Filed Apr. 26, 1921. Serial No. 464,573. 5 Claims. (Cl. 206—44.)



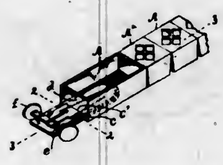
1. A display package consisting of a single foldable blank comprising sides, a bottom portion; an outer front portion, an inner front portion, an inner bottom portion, an inner back portion, and a display tab extending in the order named from the forward side of the bottom portion; an outer back portion, an outer top portion, an outer tab, an inner tab, and an inner top portion extending in the order named from the back of the bottom portion.

1,421,385. ROPE CLAMP. CHARLES BEECKEN, New York, N. Y. Filed Apr. 4, 1921. Serial No. 458,503. 3 Claims. (Cl. 24—132.)

3. A rope clamp including a pair of jaws having grooves on their inner faces, ears upon one jaw embracing the other, a pin entering said ears and jaw to pivot the jaws for relative movement, and slidable means to bind the jaws together.

1,421,386. METHOD OF UTILIZING WASTE-HEAT GASES OF CEMENT KILNS. JOHN E. BELL, Brooklyn, N. Y. Filed Sept. 26, 1919. Serial No. 326,650. 2 Claims. (Cl. 110—28.)

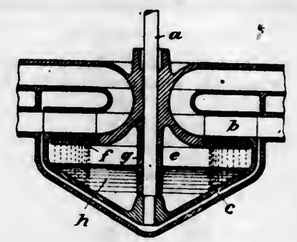
1. In the operation of a plant comprising a cement kiln, a waste heat flue leading therefrom and an element for



the utilization of the heat of the gases connected to said flue and so operated that the waste heat gases collected in the flue contain a considerable amount of free oxygen, the method of increasing the temperature and heat efficiency of the gases in the waste heat flue and utilising element with small increase in the weight thereof which consists in feeding finely divided fuel into the flue in quantity proportioned to the amount of free oxygen in the waste heat gases contained in the flue and so as to utilize said free oxygen to combine with the fuel and raise the temperature of the whole body of gas.

1,421,387. SELF-SHIFTING TRACK. HANS J. BENTSON, Winthrop Harbor, Ill., assignor to Frederick C. Austin, Chicago, Ill. Filed May 31, 1919. Serial No. 300,820. 11 Claims. (Cl. 180—9.)

1. The combination of a body provided with segmental wheels, tracks resting on the ground to support said wheels, means for causing forward movement of said body, so that the wheels will roll along upon said tracks, said wheels being adapted to shift the load weight alternately from one track to the other, so that the tracks are alternately relieved of weight and thereby released, and instrumentalities dependent upon the forward motion of the body and operated thereby to automatically and alternately pull the tracks directly forward along the ground.

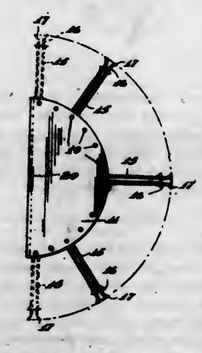


1,421,388. JEWELRY COUPLING. ACHILL BIPPART, East Orange, N. J. Filed July 23, 1921. Serial No. 487,055. 3 Claims. (Cl. 24—230.)

1. A jewelry coupler having a socket member and a catch-member, the socket-member having an opening at one end with shoulder therein, and the catch-member provided with a tongue fitted snugly to the opposite edges of such opening, two latch-bars connected at their inner ends and fastened upon the upper flat side of the tongue, one at least of the latch-bars having a notch to engage the shoulder upon the socket-opening, thumb-pieces for pressing the latch-bars toward one another upon the flat side of the tongue, and the latch-bars operating normally to hold the notch upon the shoulder when the latch-bars are not pressed together.

1,421,389. DEVICE FOR PREVENTING THE PENETRATION OF AIR INTO CENTRIFUGAL PUMPS. BERNHARD BISCHOF, Geneva, Switzerland. Filed May 7, 1921. Serial No. 467,535. 4 Claims. (Cl. 253—194.)

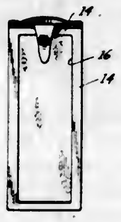
1. In a device for preventing the penetration of air into centrifugal pumps, a centrifugal wheel, a carrier plate for said centrifugal wheel, a stationary disc, a hollow cham-



ber formed by said carrier plate and said stationary disc, a sealing liquid arranged in said chamber.

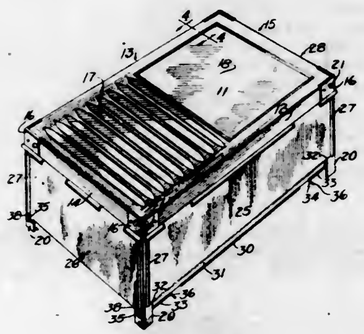
1,421,390. SPEED-INDICATING DEVICE. JOSE VIDAL BOSQUE and PANTALEON GIRO Y CASASAS, Habana, Cuba. Filed Oct. 14, 1921. Serial No. 507,671. 4 Claims. (Cl. 234—31.)

1. A speed indicating device comprising a casing having a glass lid to look therethrough; sealing closing means between the casing and its lid; a heavy member pivotally and eccentrically mounted in the casing and operated by the action of centrifugal force when the casing is caused to gyrate around an exterior point, said heavy member having a resilient connection at one end and at its opposite end a transmission with a shaft arranged gyratorily and centrally through the casing; an arm fixed to said shaft which carries a marking member adapted to impress a permanent mark or signal on a scale graduated for different speeds and means to set at will the heavy element inside the casing and means connecting an element producing an acoustic signal with the heavy member.



1,421,391. DISPLAY RACK FOR PHONOGRAPH DISKS. CHESTER ALMONDE BOWER, Castor, Canada. Filed Dec. 16, 1921. Serial No. 522,837. 1 Claim. (Cl. 211—16.)

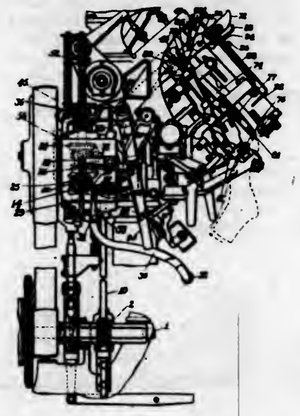
A display rack for phonograph disks or records, comprising a plurality of rods, vertically disposed in semi-circular arrangement, a plurality of racks pivotally mounted on



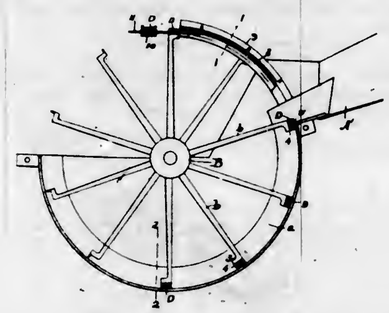
the rods, and each comprising a sleeve mounted on the rods, grooved arms carried by each sleeve, and slanting upwardly, the outer ends of the grooved arms being diverged outwardly, and spacing means between the sleeves.

1,421,392. COMBINATION COMB CASE. FRANK WM. BOWLER, Chicago, Ill. Filed Oct. 31, 1921. Serial No. 511,959. 3 Claims. (Cl. 132—85.)

1. An article of manufacture comprising a mirror, a sheet of material covering the back of said mirror, and a flexible sheet covering said first mentioned sheet, the edges of said mirror and sheet being fastened together by means of a U-shaped framework extending around the edges of said mirror and sheets, and a resilient securing clasp fixed to one end of said article and projecting outwardly and towards the central portion thereof.



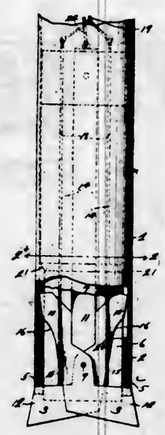
1,421,393. CAMP STOVE. LOUIS M. BOYLE, Los Angeles, Calif. Filed July 2, 1921. Serial No. 482,014. 2 Claims. (Cl. 126—29.)



1. A camp stove comprising: a top member; legs foldably attached to said top member; aprons foldably attached to said top member; and latches mounted upon certain of said aprons adapted to engage said legs and other of said aprons adjacent thereto when said legs and said aprons are disposed in open position.

1,421,394. PULLING-OVER MACHINE. ELI BROTHERS, Lynn, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 18, 1916. Serial No. 126,422. 52 Claims. (Cl. 12—4.)

1. In a machine of the class described, a gripper lever, a gripper connected to said lever by means constructed to permit independent relative movement of the gripper and the lever, means for depressing the gripper to open its jaws and permit insertion of the upper, means for reversely moving a part of the gripper for closing its jaws prior to starting the machine, and manually operative means extending into a position at the outer side of the gripper in proximity to the location of the shoe to enable the operator to cause said jaw closing movement of the gripper.

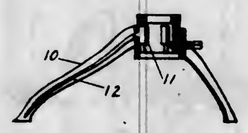


1,421,395. FEED WHEEL FOR SPOOL MACHINES. CHARLES S. BROWN, Bethel, Me. Filed Mar. 9, 1922. Serial No. 542,305. 4 Claims. (Cl. 142—20.)

1. In a feeding device for feeding cylindrical blanks for spool and other like machines, the combination of a hopper for the blanks, a wheel rotating adjacent to said hopper and having radial arms passing through said hopper and terminating in radially open recesses closed in the rear of the arms for receiving the blanks, guides for holding the blanks in said recesses as the wheel turns, a feed spout for the spool machine and means for forcing the blanks laterally from said recesses into said feed spout.

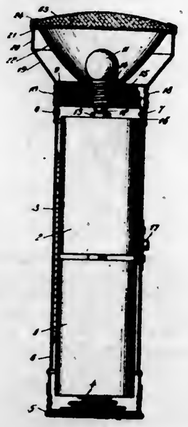
1,421,396. OIL-WELL DRILL BIT. ROBERT J. BROWN, of Merryville, La., assignor of one-half to J. F. Walden, Merryville, La. Filed July 26, 1921. Serial No. 487,648. 2 Claims. (Cl. 255—76.)

1. A well drilling device comprising a casing having diametrically disposed notches in the lower end thereof, a drill bit shank vertically movable in said casing and having its lower end provided with a bifurcation, crossed pivoted bit blades disposed in said bifurcation, said bit blades being provided with outwardly extending arms and upwardly extending arms, a vertically movable locking pin carried by the bit shank and forming means for locking the upwardly extending arms against inward movement and the outwardly extending arms against downward movement,



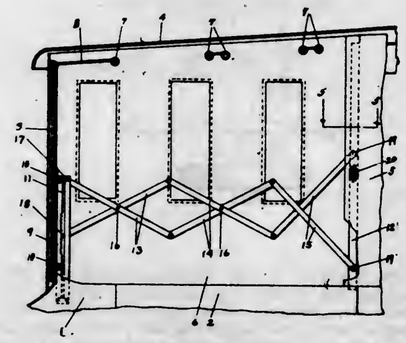
and trip bars vertically movable in the shank and having their lower ends positioned to cooperate with the upwardly extending arms of the bit blades for forcing said bit blades inwardly after the locking pin has been removed.

1,421,397. FOWL CLEANER. WILLIAM A. BRUCK, Pearl River, N. Y. Filed July 1, 1920. Serial No. 393,277. 2 Claims. (Cl. 17—30.)



1. A fowl cleaning tool comprising an elongated relatively narrow blade having a plurality of teeth projecting from a longitudinal edge thereof adjacent its forward free transverse end, said transverse end being arranged at a substantially abrupt angle to the longitudinal axis of the blade, and said transverse end being sharpened into a cutting edge.

1,421,398. CHRISTMAS-TREE SUPPORT. CHARLES L. BURCHESS, Lincoln, Nebr., assignor of one-half to H. M. Dirks, Lincoln, Nebr. Filed Dec. 27, 1921. Serial No. 524,935. 3 Claims. (Cl. 248—38.)

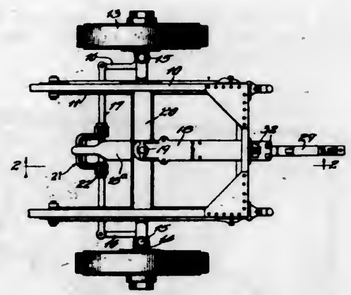


3. A support including a cylindrical collar having a vertical axis, a plurality of legs, said legs being anchored in said collar against movement in all directions but one, and a second collar adapted to be concentrically mounted on said first mentioned collar to prevent sliding of the legs in the remaining direction, said first and second named collars being welded together.

1,421,399. BATTERY HAND LAMP. CHARLES F. BURGESS, Madison, Wis., assignor to Burgess Battery Company, Madison, Wis., a Corporation of Wisconsin. Filed May 14, 1920. Serial No. 381,245. 7 Claims. (Cl. 240—8.5.)

1. In a battery hand lamp, the combination of a casing, a battery of dry cells therein, a lamp connected with one terminal of said battery, a socket in which said lamp is threaded, a yielding disc of insulation supporting said socket, a reflector insulated from said socket and removable therefrom, and means for establishing electrical connection from the other terminal of said battery to said socket.

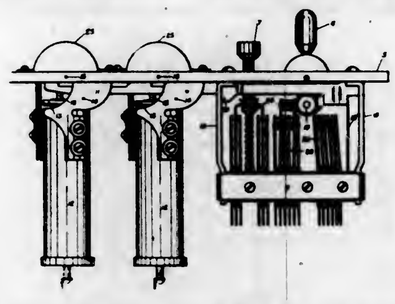
1,421,400. VEHICLE TOP CURTAIN. FRANK L. BURNS, Three Rivers, Mich. Filed Oct. 2, 1920. Serial No. 414,227. 4 Claims. (Cl. 296—138.)



1. In a structure of the class described, the combination of a curtain having grommets at the upper edge thereof, a supporting wire carried by the top disposed through said grommets, a support for said curtain comprising a bracket member having a vertical slot therein, a bar to which the outer edge of the curtain is secured, and pairs of crossed links, one of the inner pair of links being pivoted to said bracket member and the other being slidably engaged in the slot thereof, the outer ends of the outer pair of links being pivoted to said bar, the inner and intermediate pairs of links being pivoted to each other, the outer pair of links being free from each other at their point of crossing and thereby permitting the collapsing of the lazy tong frame with the bar at the outer end thereof in upright position.

1,421,401. AUTO LOCK. BENJIMAN O. BYERS, Cleveland, Ohio, assignor of one-half to William St John, Cleveland, Ohio. Filed Feb. 19, 1920. Serial No. 359,866. 1 Claim. (Cl. 70—129.)

A device of the class described comprising a hinged sleeve adapted to engage the steering column of a vehicle, a yoke pivotally fastened to a free end of said sleeve, a projection formed on the other free end of said sleeve, means associated with said yoke and said projection for drawing said sleeve tightly about said column, an arm pivotally fastened to said sleeve and adapted to engage the steering wheel, to prevent rotation thereof, a shield adapted to cover said tightening means to prevent access thereto and means for locking said shield in position.

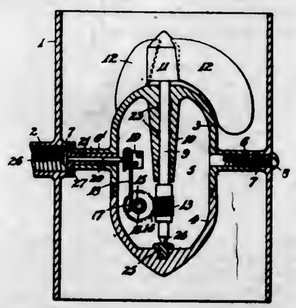


1,421,402. TRAILER TRUCK. ADDI BENJAMIN CADMAN, Beloit, Wis., assignor to Warner Manufacturing Company, South Beloit, Wis., a Corporation of Wisconsin. Filed Aug. 12, 1918. Serial No. 249,388. 4 Claims. (Cl. 280—33.5.)

2. In a vehicle of the character described, a main frame, an axle having steering knuckles pivoted at its opposite ends, carrying wheels mounted on said steering knuckles, springs for supporting said frame upon said axle, a draw-bar pivotally connected to said frame, a transversely extending steering rod pivotally connected to said knuckles, a tubular member mounted on said steering rod to swing forward and back, and a pin having a universal connection with the rear end of said draw-bar and arranged to slide in said tubular member.

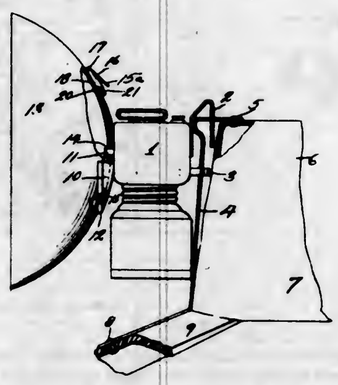
1,421,403. SWITCHBOARD SIGNAL. GUSTAF CARLSON, Rochester, N. Y., assignor to The Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y., a Corporation of New York. Filed Aug. 22, 1919. Serial No. 319,089. 17 Claims. (Cl. 179—176.)

8. In combination, a key, an electromagnet and an armature adapted to be attracted thereby, a signal arranged to occupy either a displayed or a concealed position, means carried by said armature for normally holding said signal in a concealed position, and a member slidably mounted



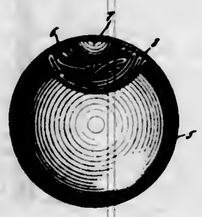
for moving said signal from a displayed to a concealed position, and means for operating said member.

1,421,404. MOTOR FOR TALKING MACHINES. FOREST CHENEY, Chicago, Ill., assignor to Cheney Talking Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 18, 1919. Serial No. 271,776. 15 Claims. (Cl. 185—45.)



1. In a spring motor, a spring barrel comprising a one-piece straight cylinder, a central support, a pair of springs in said cylinder, means for securing the outer ends of the springs to the cylinder, means for supporting the inner ends of the springs on said support, a one-piece head or end wall for each end of said cylinder, and means interposed between the two springs to divide the interior of said cylinder into two intercommunicating compartments, one for each spring, for housing and lubricating the springs thus separately inclosed, so that each of the two springs is wound and unwound in its own compartment.

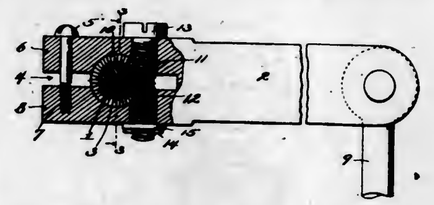
1,421,405. SHIP'S LOG. BASIL CHERNIKEEFF, London, England. Filed Dec. 9, 1921. Serial No. 521,212. 4 Claims. (Cl. 73—122.)



1. Mechanism comprising in combination a shaft, a rotator mounted thereon, a casing enclosing one end of said shaft, radial arms on said casing, a tubular holder supported by said arms concentrically with said shaft, a tubular stem serving to support said holder submerged in water, means for electrically controlling a remote indicating and recording instrument and a lubricant filling for said casing.

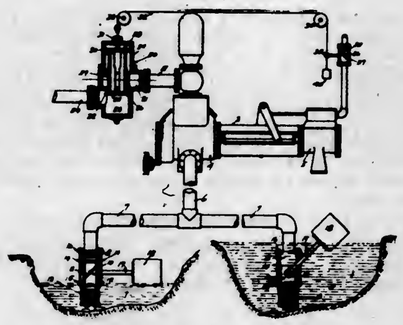
1,421,406. LAMP. ALLEN J. CHRISTMAS, Rayville, La. Filed Oct. 19, 1921. Serial No. 508,748. 1 Claim. (Cl. 240—103.)

The combination with a concaved reflector having a burner extending axially therethrough, of a detachable enlarged concaved reflector disposed within the first mentioned reflector, said enlarged reflector being provided with spaced lugs on its rear side adapted to receive the marginal edge of the first mentioned reflector, a slidable lever controlled member carried by the rear side of the enlarged reflector and adapted to engage over the marginal edges of the first mentioned reflector and hold the same in close engagement with the spaced lugs carried by the enlarged reflector.



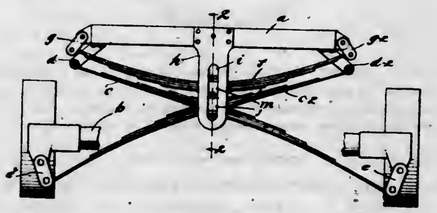
1,421,407. BALL. WARREN H. CLARK, West Burlington, N. Y. Filed July 25, 1921. Serial No. 487,298. 3 Claims. (Cl. 46—4.)

1. A hollow ball formed of resilient material, a semi-spherical member having an opening, and adapted to be positioned over the ball, a flexible member having connection with the ball and carrying a button, and said button adapted to be positioned in the opening of the semi-spherical member.



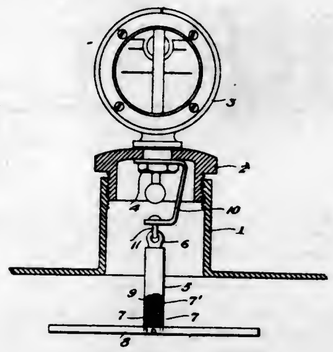
1,421,408. ADJUSTABLE CONNECTION FOR ACTUATING ARMS. LOUIS GREINER COLLYER, Upper Montclair, N. J., assignor to The Aeolian Company, a Corporation of Connecticut. Filed Mar. 27, 1919. Serial No. 285,509. 5 Claims. (Cl. 74—5.)

1. Means for adjusting and locking an arm or crank in different angular relation to a rotatable element, comprising an element provided with an annular series of worm-wheel teeth, an arm or crank having a bore in which said element rotatably fits and carrying a worm which is rotatable but non-shiftable axially therein and



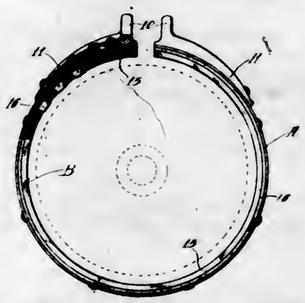
meshes with the worm-wheel teeth on said element and means operative independently of the worm to lock said element and arm in different adjusted relations.

1,421,409. PUMPING APPARATUS. RUDOLPH CONRADER, Erie, Pa. Filed Mar. 15, 1920. Serial No. 365,913. 8 Claims. (Cl. 103—92.)



1. The combination of a pump; an inlet pipe leading to the pump; a valve on the inlet; a float controlling the valve; a discharge pipe for the pump; a motor driving the pump; devices controlling the motor; and means controlled by the volume of discharge from the pump for controlling the devices, said devices acting to reduce the energy of the motor as the discharge decreases.

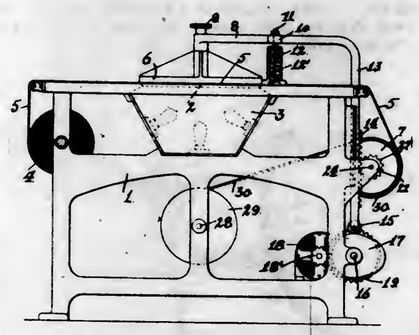
1,421,410. VEHICLE SPRING. FRANK V. COOKE, Detroit, Mich. Filed June 30, 1920. Serial No. 392,940. 10 Claims. (Cl. 267—45.)



3. The combination of a vehicle body, an axle, a spring pivoted to one side of the body and to the end of the axle furthest therefrom, a spring pivoted to the other side of the body and the opposite end of the axle, a yielding fulcrum support intervening said body and springs, means for restraining movement of said springs laterally yet permitting movement longitudinally, and movement vertically against the resistance of said yielding fulcrum support.

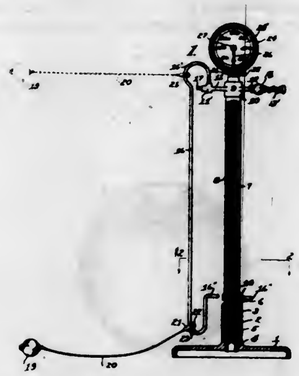
1,421,411. INDICATOR LOCK. LESTER J. CORBITT, Detroit, Mich. Filed Aug. 9, 1920. Serial No. 402,097. 1 Claim. (Cl. 220—24.)

The combination with a radiator and its cap and an attachment carried by the cap, of means for permanently connecting the cap with the radiator while permitting its partial removal therefrom for filling purposes, such means consisting of a stem swiveled to a part on the cap, said stem having a bore in its lower end and a pair of diametrically arranged slots communicating with the bore, a cross rod passing through the slots and pivoted to the lower end of the stem and a spring in the bore engaging the rod for holding the same at right angles to the stem.



1,421,412. FRICTION LINING. HARVEY CORY and ORRIN D. GRAY, Chicago, Ill. Filed Apr. 20, 1920. Serial No. 375,289. 8 Claims. Cl. 188—259.)

5. A duplex friction lining of the kind described having, in combination, a facing of wearing material and a backing of compressible absorptive material, the two materials being united, substantially as described.

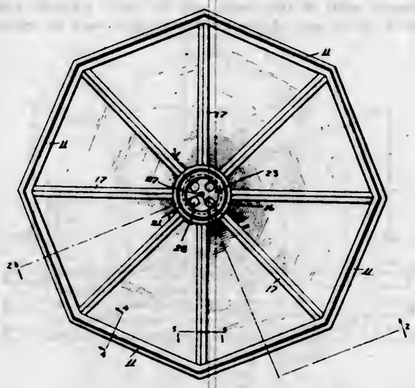


1,421,413. PHOTOGRAPHIC-PRINTING MACHINE. MALCOLM L. COSSITT, Alameda, Calif., assignor to Manifold Impressions Corporation, Carson City, Nev., a Corporation of Nevada. Filed July 21, 1921. Serial No. 486,644. 2 Claims. (Cl. 95—75.)

1. A photographic printing machine comprising a table having an exposure opening, means associated with the table for carrying a roll of sensitized paper, means for drawing the paper from the roll over the exposure opening, a light box associated with said opening; a reciprocative contact pad adapted to press the paper upon a negative lying in the exposure opening and to withdraw therefrom; a driving means; and connections operated by said driving means for alternately simutaneously withdrawing the contact pad and advancing the paper, and simultaneously arresting the paper and returning the pad, said connections comprising a reciprocative bracket

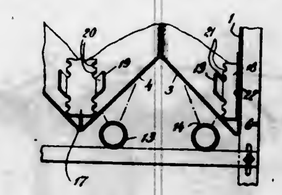
carrying the contact pad, rack members associated with said bracket, pinions engaged by the rack members, cams operating on said rack members to lift the bracket; springs to return said bracket, and clutch members for intermittently transmitting motion to the paper drawing means.

1,421,414. CAPTIVE-BALL PRACTICE DEVICE. CHARLES FREDERICK CRAIG, San Francisco, Calif., assignor to Craig Golfmeter Co., Wilmington, Del., a Corporation of Delaware. Filed July 19, 1921. Serial No. 485,806. 8 Claims. (Cl. 205—22.)



1. A device of the class described, comprising a fixed standard; a sleeve adapted to revolve about said standard; a register member carried by the top of the standard above the sleeve; a rotatable shaft carried by the register member; a gear on top of the sleeve; a gear on the lower end of the shaft engaging with the sleeve gear; and means for operating the register-member from the upper end of said shaft.

1,421,415. LAMP SHADE. JOSEPH M. CAUCET, New York, N. Y. Filed Nov. 19, 1921. Serial No. 516,316. 4 Claims. (Cl. 240—108.)

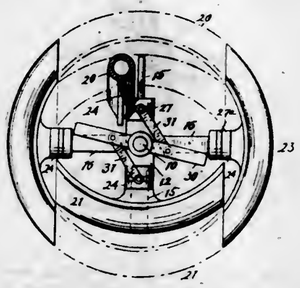


1. A lamp shade comprising a continuous outer rim; a center ring, said ring having a series of bottom opening

recesses; a plurality of radial ribs structurally connected with said rim, the inner ends of said ribs being disposed

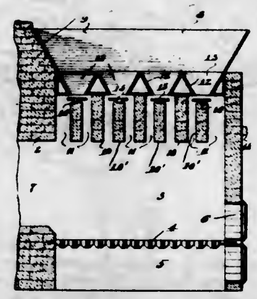
in the recesses in said ring; and a housing member permanently attached to said ring to cover the inner and lower surfaces thereof.

1,421,416. PROCESS AND APPARATUS FOR MELTING SULPHUR. HAROLD S. DAVIS and RAYMOND F. BACON, Pittsburgh, Pa., assignors to Texas Gulf Sulfur Company, Bay City, Tex., a Corporation of Texas. Filed Aug. 13, 1921. Serial No. 491,914. 9 Claims. (Cl. 23—1.)



1. The process of melting sulphur, which comprises providing a surface heated to the melting temperature of the sulphur, progressively feeding the solid sulphur against said surface in such manner that only that portion of the sulphur at the said surface is heated to the melting point of the sulphur, and removing the melted sulphur as it forms.

1,421,417. PERFORATOR FOR PRINTING PRESSES. DANIEL J. DEEGAN, Youngstown, Ohio. Filed July 13, 1921. Serial No. 484,491. 2 Claims. (Cl. 164—98.)

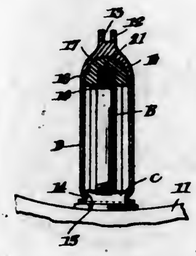


1. In a device of the class described, a serrated perforating blade slightly shorter in height than ordinary type, a steel strip secured to tympan sheets by means of arrow points at each end, there being a plurality of brads formed on the sides of said improved steel strips, and a vertical side to said brads, substantially as described for the purpose set forth.

1,421,418. COLLAPSIBLE TIRE CORE. HAROLD A. DENMIRE, Akron, Ohio, assignor of one-half to The General Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Dec. 9, 1920. Serial No. 429,340. 3 Claims. (Cl. 154—9.)

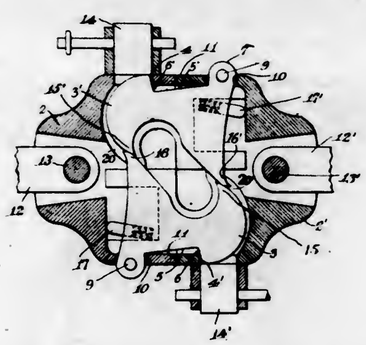
1. A collapsible core made up of a plurality of arc-shaped sections which when circumferentially aligned form a complete annulus, two of said sections being diametrically opposed key sections which are capable of being moved radially into and away from the positions in which they are circumferentially aligned with the other core sections, guides upon which said key sections are movable, means for moving said key sections along said guides, said construction being characterized by that the two key sections are capable of being turned about the radial axis along which they move toward and from said shaft.

1,421,419. MECHANICAL STOKER. JOHN J. DERSOM, Columbus, Ohio. Filed May 15, 1920. Serial No. 381,714. 5 Claims. (Cl. 110—118.)



1. A stoker comprising a fuel receiving hopper arranged above the fire box of a furnace, a plurality of spaced stationary walls disposed between the lower end of said hopper and said fire box, said walls defining between them a plurality of fuel passageways arranged over the fire box, outlets provided in the bottom of said hopper and communicating with said passageways, and a plurality of movable agitator members positioned beneath said outlets and operating to effect the passage of the fuel from said outlets into alternate passageways.

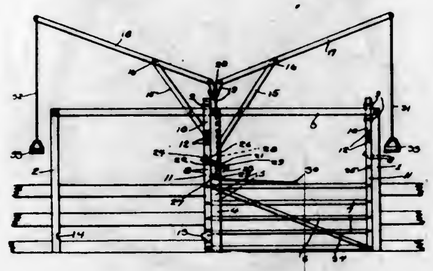
1,421,420. PRESSURE-RETAINING DUST CAP FOR PNEUMATIC-TIRE VALVES. THEODORE JOSEPH DERY, Windsor, Ontario, Canada. Filed Apr. 25, 1921. Serial No. 464,273. 3 Claims. (Cl. 152—12.)



1. A device of the character described comprising a pneumatic air valve having a screw threaded outlet tube and a retaining nut, a dust cap of tubular form adapted to engage the retaining nut, an air retaining member

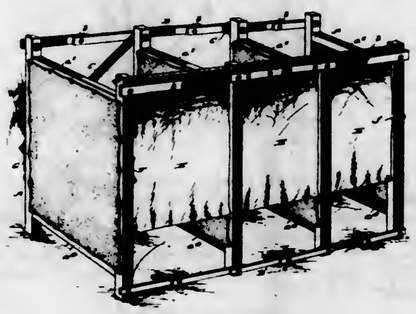
engaging the sides of the cap on the inner side and adapted to fit the outer end of the cap being reciprocal within the said cap and formed with a socket adapted to fit over the end of the said tube and seal the same, the

said retaining member having free sliding movement both with respect to the cap and with respect to the tube whereby it may freely slide over the screw threading on the tube.



1,421,421. CAR-COUPLING KNUCKLE. ONESIME HERBERT DI LE COMPTE, Oklahoma, Okla., assignor to Universal Car and Hose Coupler Company, Oklahoma, Okla., a Corporation of Arizona. Filed Dec. 16, 1919. Serial No. 345,315. 1 Claim. (Cl. 213—17.)

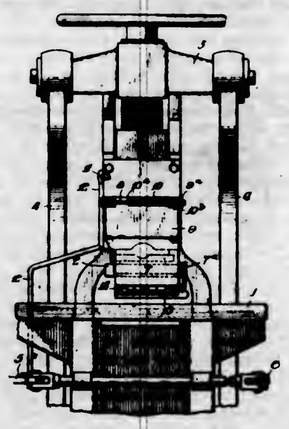
In a car coupler, a hollow coupling head having an open front, a coupling knuckle pivoted to the head at one side of the longitudinal axis thereof and projecting forward so as to protrude from within said head, said knuckle having on the outer side of the protruding portion a shoulder adapted to engage an abutment on a companion coupling head, the engaging surface of said shoulder being disposed at such an angle to the longitudinal axis of the coupler, when said surface is in position to engage the said abutment of a companion coupler, that further outward movement of the knuckle causes said surface to exert a camming action upon the abutment tending to take up wear and lost motion.



1,421,422. GATE. THOMAS J. DRAKE, Sadieville, Ky. Filed June 11, 1921. Serial No. 476,784. 2 Claims. (Cl. 39—45.)

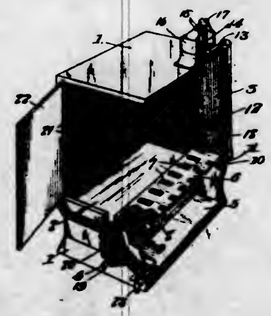
1. In a gate construction, fence posts, a central gate post, a guide track supported upon the gate and fence posts, a gate mounted upon the track for sliding movement for closing and opening the gate opening and provided with keeper pins, one at each end, a latch pivotally mounted on the gate post and provided with latching lugs to engage either one of the keeper pins, said latch having an opening, a pair of oscillatory levers mounted for movement on the gate post, means connecting the adjacent ends of the levers and the gate, whereby upon tilting either one of the levers the gate may be opened

or closed, said connecting means passing through the opening of the latch, which is so disposed to cause a bend in the cable, so that the latch may be tilted to disengage either one of its latching lugs from the keeper pins prior to the opening or closing movement of the gate.



1,421,423. VOTING BOOTH. ISAAC SAMUEL DRAPER, Sullivan, Ind. Filed Jan. 28, 1918. Serial No. 214,165. 4 Claims. (Cl. 20—3.)

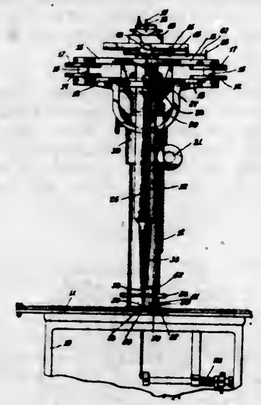
1. A voting booth, including a series of substantially rigid end and intermediate frames arranged face to face, foldable two-part braces connecting adjacent frames at the tops and bottoms of said frames and pivoted thereto at their front and rear edges, and in such positions that when the booth is collapsed said braces will substantially coincide with two of the abutting frames, and pivoted diagonally arranged braces detachable at their ends and extending each from one frame to another frame.



1,421,424. FINGER GUARD FOR PRINTING PRESSES. GEORGE H. DUFOUR, Oak Park, Ill., assignor to Marshall Field & Company, Chicago, Ill., a Corporation of Illinois. Filed June 24, 1920. Serial No. 391,314. 8 Claims. (Cl. 74—105.)

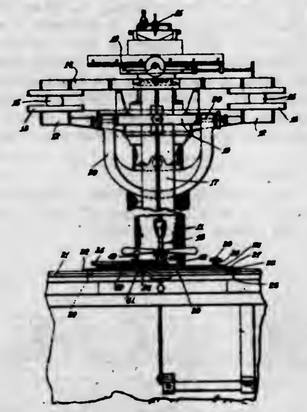
1. In a printing press, a finger guard adapted to normally assume a position to bar access to the space between the impression members of the press, but movable to a position remote therefrom, a detent for holding the guard

in its last-named position, and means for controlling the press which also controls said detent.



1,421,425. STEAM COOKER. WAYNE A. DUNCAN, Chicago, Ill. Filed May 23, 1921. Serial No. 471,692. 3 Claims. (Cl. 126—20.)

1. In a cooker comprising an oven chamber, the combination with a steam generating compartment, perforations in the top of said compartment for admitting the steam to the oven, a perforated plate for opening and closing the perforations in the top of said steam generating compartment, said perforated plate also provided with means for permitting the exhaust of the steam upon the closing of the perforations in the top of the steam compartment.

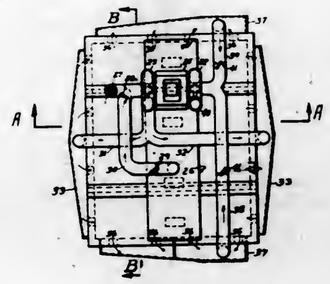


1,421,426. ETCHING OR LIKE MACHINE. WILLIAM S. EATON, Sag Harbor, N. Y. Filed Dec. 13, 1921. Serial No. 522,019. 6 Claims. (Cl. 33—32.)

1. An etching or like machine embodying therein the combination with a pattern table, a work support including therein a work table, supporting means therefor having laterally extending parallel slideways upon which said work table is mounted, and means for imparting continuous movement to said table along said slideways, a work point supporting carriage capable of universal movement upon a single plane, a work point carrying arm mounted upon said carriage and capable of movement toward and from said work table, means whereby the movement of said work supporting arm may be controlled to engage the work point with, or disengage it from, a work plate, a transmitter arm, a universal connection between said transmitter arm and said carriage, and a tracing stylus

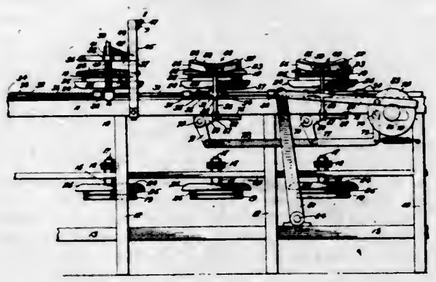
carried by said transmitter arm, of a member adapted to engage said stylus and hold said transmitter arm and said carriage immobile, and means whereby a step by step movement of said last named member longitudinally of the machine may be effected.

1,421,427. ETCHING OR LIKE MACHINE. WILLIAM S. EATON, Sag Harbor, N. Y. Filed July 1, 1921. Serial No. 481,923. 16 Claims. (Cl. 33—24.)



1. An etching or like machine embodying therein a work plate support, a carrier for a work point or tool, said support and said carrier being capable of relative universal movement upon a single plane, a transmitter arm adapted to cause such relative movement, a tracing stylus carried thereby, a pattern table, a base secured thereto, a circular pattern plate rotatably mounted on said base in operative relation to said stylus and having depressed letters, digits or other characters circularly arranged thereon about a common center, and a layout sheet carried by said base and projecting beyond the edge of said plate, whereby succeeding movements of said rotary plate necessary to secure the completed design, may be indicated.

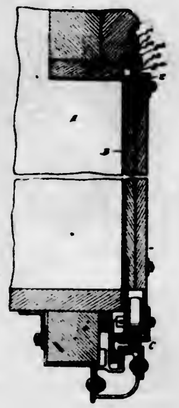
1,421,428. FIRE-EXTINGUISHING SOLUTION. LUIS E. ECKELMANN, New York, N. Y., assignor to Pyrene Manufacturing Company, a Corporation of Delaware. Filed Oct. 23, 1919. Serial No. 332,802. 27 Claims. (Cl. 23—5.)



27. A fire extinguishing agent containing a mixture of a plurality of different polychlorinated hydrocarbons and ingredients adapted to produce a tenacious foam.

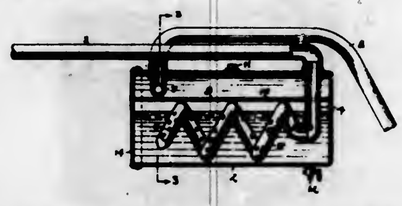
1,421,429. AIR-CIRCULATING SYSTEM FOR INDUSTRIAL OVENS. WILLIAM C. EHMKA, Detroit, Mich., assignor to Detroit Sheet Metal Works, Detroit, Mich., a Partnership Firm. Original application filed June 14, 1920, Serial No. 388,974. Divided and this application filed Jan. 3, 1921. Serial No. 434,777. 4 Claims. (Cl. 34—19.)

4. An oven in combination with an air heating apparatus, a circulating system, a circulating fan, an exhaust fan, means for operating same, upper and lower exhaust chambers, an intake pipe connecting the circulating fan with the upper exhaust chamber of the oven, a separate air intake breather also connected with the circulating fan intake, means for regulating the proportions of hot air from the exhaust chamber to the fresh air from the intake breather as it enters the fan, and means for distributing same through the oven, and means for exhausting the air from the oven through the exhaust fan.



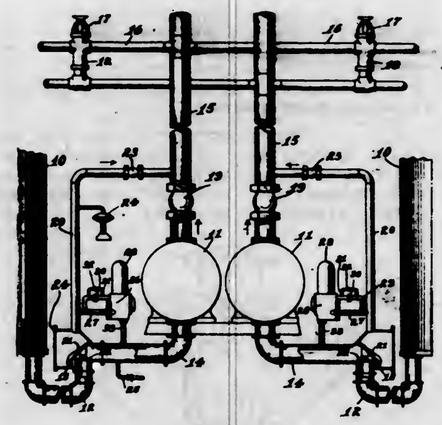
1,421,430. PIE-MAKING MACHINE. FROM C. EILERSEN, Jersey City, N. J. Filed Oct. 27, 1921. Serial No. 510,841. 12 Claims. (Cl. 107—1.)

1. In a machine for treating the crust-dough of pies at the rim thereof, a support for a pie-tin, a conveyer for carrying said support along a fixed path, segmental trimmers at opposite sides of the path of the pie-tin having concave surfaces adapted to the edge of the pie-tin, means for closing said trimmers toward each other and against the pie-tin for squeezing overhanging dough therefrom and means for effecting the travel of said trimmers for a limited distance with the pie-tin while in operative engagement therewith.



6. In a machine for treating the crust-dough of pies at the rim thereof, a support for a pie-tin, a conveyer for carrying said support along a fixed path, a pressing-ring normally located above the path of the pie, means for pressing said ring downwardly against the pie at the rim thereof, means for effecting the travel of said ring for a limited distance with the pie while in engagement therewith, segmental trimmers in advance of said ring and at opposite sides of the path of the pie-tin having concave surfaces adapted to the edge of the pie-tin, means for closing said trimmers toward each other and against the pie-tin for squeezing overhanging dough from opposite edges thereof, means for effecting the travel of said trimmers for a limited distance with the pie-tin while in operative engagement therewith, means for thereafter turning said support and pie-tin a part of a rotation during the continued travel of the same to present the untrimmed portions of the crust-dough outwardly, a second pair of segmental trimmers having concave facing surfaces to engage the edge of the pie-tin and disposed at opposite sides of the path of travel thereof and in advance of the first trimmers, means for closing said second trimmers toward each other and against the pie-tin for squeezing overhanging dough therefrom, and means for effecting the travel of said second trimmers for a limited distance with the pie-tin while in operative engagement therewith.

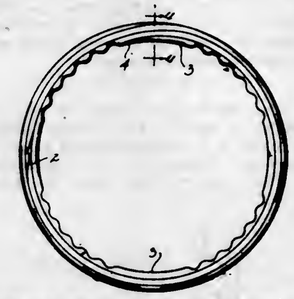
1,421,431. CAR-DOOR TOP GUIDE. PERCY M. ELLIOTT, Chicago, Ill. Filed May 3, 1919. Serial No. 294,496. 1 Claim. (Cl. 20—22.)



In combination with a car and its sliding door, means normally affording traversing support for the door upon the car, and a guide and emergency support for said door comprising a guide rail and a curb bar; said guide rail comprising a verticlaly extending attaching base and symmetrically depending guide walls providing between them, and substantially within inner and outer vertical planes of the door, a guideway with a downwardly presented restricted throat; and said curb bar comprising an attaching base, a vertically extending shank offset horizontally from the attaching base to bring it within the vertical plane of the restricted throat, and an integral head carried by said shank within the guide-way.

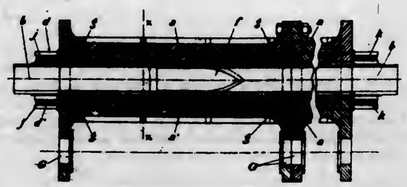
1,421,432. COMBINED MUFFLER AND DEODORIZER FOR EXPLOSIVE ENGINES. FRED EMBANKS, Cleveland, Ohio, assignor to Anastasya Koszyczarek, Cleveland, Ohio. Filed June 16, 1921, Serial No. 478,072. Renewed May 10, 1922. Serial No. 559,924. 3 Claims. (Cl. 183—15.)

1. A combined muffler and deodorizer for explosive engines, having inlet and outlet pipes at opposite ends and extending in opposite directions and crossing to prevent the escape of a liquid in tilting movement of said cylinder and to permit a free discharge of exhaust gases, and said inlet pipe having an outlet extension in the lower portion of the cylinder.



1,421,433. FIRE-EXTINGUISHING SYSTEM. FRANK A. EPPS, New York, N. Y., assignor to Foamite Firefoam Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 1, 1919. Serial No. 327,759. 21 Claims. (Cl. 169—13.)

3. In a fire extinguishing system, in combination, a source of supply for the extinguishing medium, means for conducting the medium to a distributing point, means connected to the source of supply and to the conducting means for forcing the medium from the source of supply through the conducting means, compressed air filling said conducting means, means for preventing the flow of the compressed air into the forcing means, and means for preventing the flow of the medium into the forcing means released by a reduction in pressure of the compressed air to permit the flow of the medium from the source to the forcing means.

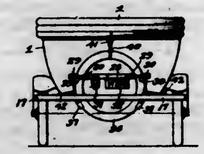


1,421,434. RIM FOR STEERING WHEELS. JULIUS ERICKSON, Chicago, Ill., assignor to Julian B. La Pierre, Chicago, Ill. Filed Feb. 26, 1921. Serial No. 448,002. 2 Claims. (Cl. 74—33.)

1. A wheel rim comprising a laminated structure formed of a plurality of flat strips of fibrous material disposed end to end and arranged in a spiral, the opposed ends of said strips having interlocking engagement, and

the laminations being disposed one within another and glued together.

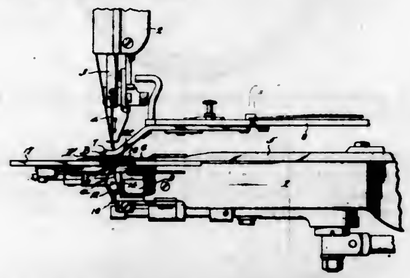
1,421,435. ELECTRIC APPARATUS FOR PROPELLING PROJECTILES. ANDRÉ LOUIS OCTAVE FAUCHON-VILLEPLEE, Paris, France. Filed Apr. 1, 1919. Serial No. 286,798. 5 Claims. (Cl. 172—285.)



1. An electric gun comprising in combination a winding adapted to create a field of electric force extending over the whole length of the gun, and two diametrically opposed rails adapted to supply the projectile with an electric current and guide the same in a direction at right angles to the field of force, the rails having guiding surfaces which are so curved that a projectile having a circular cross section may be received therebetween.

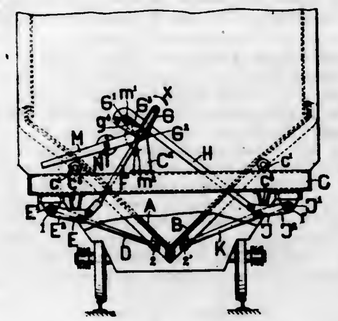
1,421,436. FIRE-EXTINGUISHING AGENT. GEORGE E. FERGUSON and LUIS E. ECKELMANN, New York, N. Y., assignors to Pyrene Manufacturing Company, a Corporation of Delaware. Filed Oct. 23, 1919. Serial No. 332,810. 19 Claims. (Cl. 23—5.)

19. A fire extinguishing agent comprising a solution of sodium bicarbonate and sodium carbonate and a solution of aluminum sulphate and ferric chloride, said solutions when mixed forming a foam and a precipitate of aluminum hydroxide and ferric hydroxide, said combined precipitate forming a better medium for holding the bubbles of foam than the aluminum hydroxide alone, said sodium carbonate serving to neutralize the ferric chloride.



1,421,437. AUTOMOBILE GUARD. VENERANDO FERNANDEZ, Habana, Cuba. Filed Nov. 29, 1919. Serial No. 341,449. 1 Claim. (Cl. 293—55.)

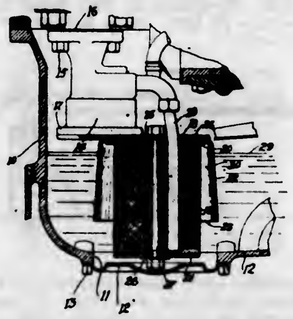
A rear automobile guard comprising a pair of extension arms, means to secure the front ends of the same to the



rear portions of the side bars of a chassis, a cross bar connecting the rear ends of the extension arms, standards on the extension arms at points spaced from their rear ends, a transverse bar connecting the upper ends of the standards and provided with tire securing means, and tire supporting stirrups attached to the said extension arms and arranged therebetween.

1,421,438. STITCH-FORMING MECHANISM FOR CHAIN-STITCH SEWING MACHINES. ALBERT F. FIFIELD, Newark, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Sept. 2, 1920. Serial No. 407,622. 12 Claims. (Cl. 112—201.)

1. In a sewing machine, in combination, a reciprocating needle, a rotary looper having a loop-seizing beak and a loop-spreading wing, means adapted to position the loop at one side of the needle-path, and means on the looper to temporarily detain a limb of the loop after it has been passed around the outer end of the looper.

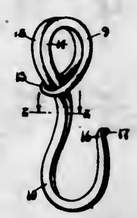


1,421,439. OPERATING MECHANISM FOR THE DOORS OF SELF-DISCHARGING RECEPTACLES. FRITZ FINCKH, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed June 2, 1921. Serial No. 474,532. 5 Claims. (Cl. 105—250.)

1. In combination with a door member, a plural system of interconnected dead center locks the one dead center lock actuated by another of the dead center locks above referred to, the one dead center lock reaching a substantially dead center position before its actuating dead center lock.

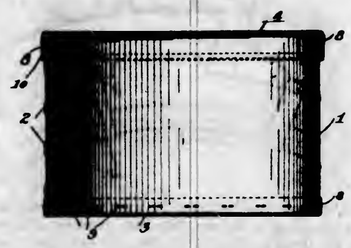
1,421,440. SUCTION INTAKE FOR PUMPS. JAMES B. FISHER, Waukesha, Wis., assignor to Waukesha Motor Company, Waukesha, Wis., a Corporation of Wisconsin. Filed Jan. 14, 1920. Serial No. 351,304. 8 Claims. (Cl. 184—6.)

5. In an intake, a cylindrical screen, and a cup-shaped shield over the upper end of said screen, said shield terminating above the lower end of said screen to expose the entire lower end of said screen directly to the liquid surrounding the intake, and sealing said intake from air as long as the liquid level is above its lower end.



1,421,441. SHIM. FRANCIS J. FLINN, Brooklyn, N. Y. Filed Jan. 29, 1920. Serial No. 354,923. 3 Claims. (Cl. 64—10.)

1. A shim comprising a blank of metal folded upon itself to provide a plurality of leaves.

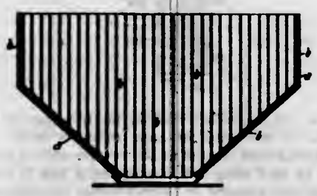


1,421,442. TACKLE HOOK. JOHN H. FLYNN, Jr., Cincinnati, Ohio, assignor to The Eureka Tackle Block Company, Cincinnati, Ohio. Filed May 1, 1920. Serial No. 378,152. 2 Claims. (Cl. 24—230.5.)

1. A hook consisting of a length of material bent centrally of its length to form a loop and having the ends beyond the loop brought together to form a hook.

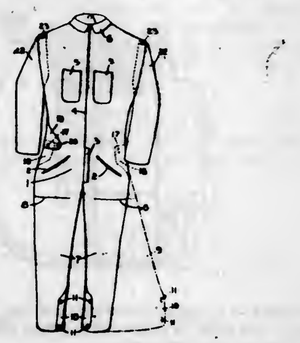
1,421,443. HAT BOX. ABRAHAM FOGEL, Montreal, Quebec, Canada. Filed Dec. 26, 1918. Serial No. 268,314. 1 Claim. (Cl. 229—45.)

As a new article of manufacture a paper box comprising a body portion consisting of a sheet of material having its opposite ends connected together, a top and bottom, each consisting of a single disk of material placed to form a disk body portion and a depending marginal flange integral therewith and of a single thickness, the flange of the bottom of the box being rigidly connected to the body portion thereof, and a reinforcing strip secured to and covering substantially the entire outer surface of the single flange of the top of the box and inturned and folded around the lower edge of the said flange of the top and extended upwardly on the inner face of such flange at the lower portion of the same, the inturned or folded portion of the reinforcing strip providing an engaging or gripping portion and being spaced from the upper edge of the body of the box when the top is placed on the same to permit the body of the box to expand above the gripping or engaging portion of the reinforcing strip to retain the top of the box on the body portion.

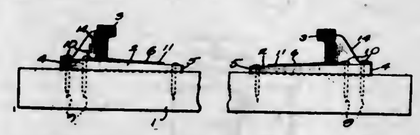


1,421,444. RAILWAY SWITCH. THOMAS COSON FOLSOM, Tampa, Fla. Filed Jan. 19, 1922. Serial No. 530,285. 4 Claims. (Cl. 246—320.)

2. A switch including a supporting base having an integral rail portion one end of which connects with one rail section and the other end of which connects with a second rail section, an elongated detachable switch tongue rigidly secured at one end to said supporting base in alignment with a third rail section and being tapered so that its other end merges into alignment with said second rail section, said tongue being adapted to be sprung out of alignment with said second rail section.



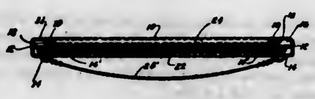
1,421,445. COKE-QUENCHING RECEPTACLE. ARWED FRÄNKEL, Berlin, Germany. Filed Nov. 3, 1920. Serial No. 421,587. 4 Claims. (Cl. 202—11.)



1. A coke quenching receptacle, comprising an outer solid receptacle and an inner perforated receptacle, comprising bars preventing the glowing coke from touching the walls of the outer receptacle and adapted to be fastened to the inside of the wall of said outer receptacle.

1,421,446. GARMENT. DUDLEY FREEMAN, Roxbury, Mass. Filed July 23, 1921. Serial No. 486,950. 7 Claims. (Cl. 2—144.)

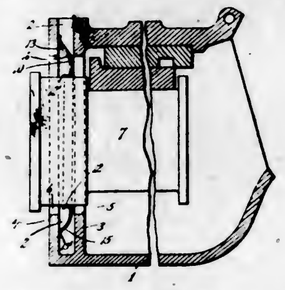
1. A garment comprising an obverse trunk section, depending leg flaps connected to the obverse trunk section to cover the obverse portions of the legs, a reverse flap connected to the inner edges of the leg flaps to cover the reverse portion of the trunk, separable fastening means for securing the upper outer corners of the obverse trunk section and reverse flap together, a side extension connected to the outer edge of each leg flap, the said extensions acting, when wrapped around the legs to cover with the reverse flap the reverse portions of the legs, and separable fastening means for securing the lower outer corner of each extension in position.



1,421,447. SWITCH PLATE. ANTONIO FRINSI, Easton, Pa. Filed Sept. 19, 1921. Serial No. 501,790. 1 Claim. (Cl. 246—453.)

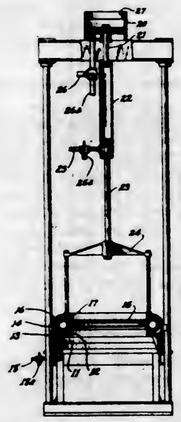
A switch plate adapted to be arranged on the top of a tie to receive a rail, said switch plate being of greater thickness at one end than at the other, and being provided with openings adjacent each end for the reception of suitable securing means, said plate being further provided with a plurality of openings disposed adjacent the portion of the switch plate at which the side of a rail will be positioned, an upwardly projecting portion spaced from said openings adapted to engage the opposite side of the rail, and ribs arranged on the bottom of said plate and extending diagonally thereof.

1,421,448. PICTURE FRAME. LEWIS FRITZ, Chicago, Ill. Filed Nov. 30, 1921. Serial No. 518,784. 8 Claims. (Cl. 40—154.)



2. An article of the class described comprising a frame, there being lateral flanges on said frame and bent inwardly thereupon forming channels; a back removably positioned in said channels; an upwardly turned lip formed on said back to facilitate removing said back from said channels; and a shoulder traversing said frame at the entrance thereof for releasably holding said back against removal from said frame.

1,421,449. DUST GUARD. HARRY C. GAMAGE, New York, N. Y., assignor to D. P. Company, a Corporation of New Jersey. Filed Jan. 4, 1916. Serial No. 70,093. 9 Claims. (Cl. 64—22.)

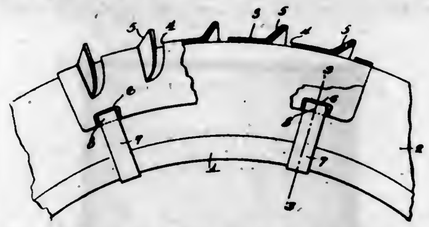


1. A dust guard for car axle boxes consisting of a single resilient plate provided with an opening for the car axle

and having integral flanges at its upper and lower edges, the flange at its upper edge being straight and its lower

edge being of semi-circular outline and bent away from the body of the plate to constitute a flange extending around said semi-circular lower edge.

1,421,450. METHOD AND APPARATUS FOR MANIPULATING FLEXIBLE ARTICLES. JOHN R. GAMMETER, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Continuation of application Serial No. 484,328, filed July 13, 1921. This application filed Jan. 16, 1922. Serial No. 529,500. 28 Claims. (Cl. 18—2.)



1. The method of spreading a hollow article which comprises holding one side of the article, holding the opposite side by means of a vacuum, and relatively separating the two holding means, while the vacuum is applied, to separate the sides of said article.

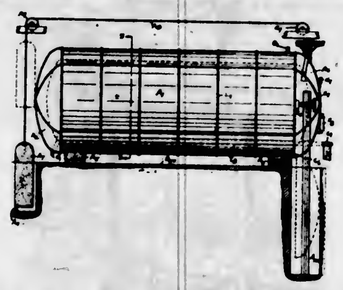
1,421,451. BELT. ANGELO F. GARBERDING, Goodland, Minn. Filed Mar. 21, 1921. Serial No. 454,085. 4 Claims. (Cl. 224—5.)

3. A combination cartridge and money belt formed of three strips of material, one strip of material forming the body and provided with slits, another strip trained through the slits to form cartridge receiving compartments, and the remaining strip attached to the body to reinforce the same and provide pockets for receiving money and the like.

1,421,452. MUD HOOK. CARL NAPOLION GEROSA, Augusta, Ga. Filed Sept. 28, 1920. Serial No. 413,287. 1 Claim. (Cl. 152—14.)

In a mud hook, the combination with an automobile tire mounted on a rim, a channel like body member adapted to embrace the tread portion of the tire, the said body portion being provided with a plurality of transverse slits extending the width of the tire, the material embracing the slits being bent upwardly to form angularly disposed cleats, said cleats being curved transversely to conform with the curvature of the tire, and means to secure said body plate around the rim of the tire.

1,421,453. COIN-CONTROLLED VENDING MACHINE. HARVEY GILES, Brooklyn, N. Y., assignor to Artemas Ward, New York, N. Y. Filed Sept. 18, 1920. Serial No. 411,233. 2 Claims. (Cl. 194—87.)

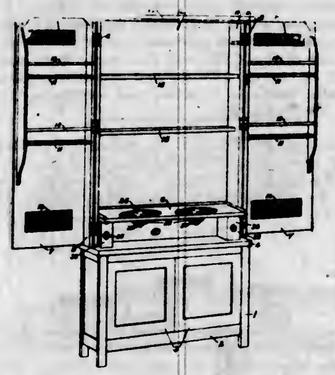


2. In a coin-controlled vending machine having a plate containing a plurality of coin entrance slots, washer catcher mechanism located at the reverse side of said plate adjacent to said slots and comprising a dog at each slot having an arm adapted to project across the slot, and also to enter a hole in a washer should the washer be present, means normally acting on said dogs to move them to their operative position, and means for restraining all said dogs in their inoperative position and adapted on the introduction of a coin or a washer into any coin slot to be engaged thereby and release all said dogs to automatically and simultaneously move to their operative position, whereby on the use of any coin-slot of the series, the washer-catcher dogs at all of the other slots will thereby move to operative position across said other slots and bar the entrance of coins therethrough until the slot used has been freed of its coin or washer.

1,421,454. TANK AND CLOSURE. CHARLES E. GLESSNER, Portland, Oreg. Filed Sept. 29, 1919. Serial No. 327,110. 2 Claims. (Cl. 72—14.)

1. The combination of a tank and closure member with an expansible metal covering hermetically enclosing the

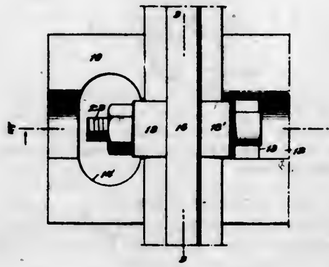
inner, outer and end surfaces of the structure of said tank, a vacuum creating means adapted to exhaust the air from between said tank coverings, an expansible metal covering hermetically enclosing the structure of said closure mem-



ber, a vacuum creating means adapted to exhaust the air between the covering which surrounds said closure member, a means for exhausting the air from within the tank itself, and a means for sealing the union of said tank member and said closure member.

1,421,455. RULING PEN. CHARLES A. GREEN and HENRY F. SCHUH, Chicago, Ill., assignors to The C. F. Pease Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 29, 1919. Serial No. 348,177. 3 Claims. (Cl. 120—109.5.)

1. In a ruling pen, a stationary blade having a threaded bore in its butt end, a swinging blade pivotally connected with said stationary blade adjacent said bore and provided adjacent its pivot with a cam face, a member mounted within the bore, a compression spring within the bore projecting said member for engagement with said cam face and an externally threaded member extending within said bore and engaging the spring and having its upper end extending outwardly from the butt end of said stationary blade to provide means for attaching a handle.



1,421,456. KITCHENETTE CABINET. DARIUS O. GREEN, Toledo, Ohio. Filed Aug. 4, 1921. Serial No. 489,668. 2 Claims. (Cl. 126—38.)

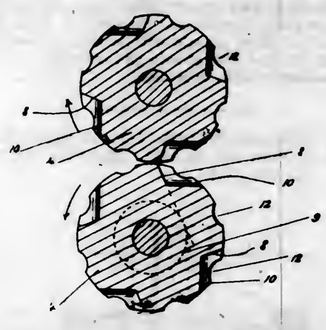
1. In a cabinet the combination of a loosely mounted hotplate, a separately mounted pipe system and a station-

ary pan mounted on a shelf, said pan having upstanding walls at the rear and two sides thereof, the extreme upper marginal portions of said walls having outward turned flanges, the front side of pan being open, the bottom of said pan extending forward past the two end walls, the extreme marginal edges of said bottom having downturned flanges and the rear wall of said pan provided with openings for passing of pipes to burners.

1,421,457. RAIL FASTENING. LOUIS D. GREGG, Hackensack, N. J. Filed Oct. 20, 1921. Serial No. 509,039. 5 Claims. (Cl. 238—332.)

5. A fastening-device for securing a flanged rail upon a cross-tie, comprising two similar but oppositely-disposed apertured clips of malleable material each having two jaws adapted to engage respectively the under surface of said tie and the inclined upper surface of the adjacent rail-flange, the inner face of the vertical portion of each clip being of greater height than the distance between said bottom bearing-surface of the tie and the outer upper edge of the rail-flanges, said upper jaw extending at less than a right-angle from said vertical inner face, a headed bolt passed through said apertures in said clips, and a nut screwed upon said bolt to draw said clips together under tension and clamp said flanges upon said ties.

1,421,458. APPARATUS FOR CHOPPING FOODSTUFFS. GEORGE WRIGHT GREGORY, London, England. Filed Dec. 27, 1921. Serial No. 525,162. 2 Claims. (Cl. 17—22.)



1. In apparatus for chopping food stuffs in which a plurality of blades are employed and having a spring actuated ejector, the combination therewith of a U-shaped fork for the purpose of retaining the blades in position and allowing of easy replacement as set forth.

1,421,459. SNAPPING ROLL. HENRY F. GRITZMACHER, Le Sueur, Minn. Filed Mar. 15, 1922. Serial No. 543,944. 2 Claims. (Cl. 130—5.)

1. A snapping roll provided with a series of pockets in its periphery, each pocket having a flat segment-shaped bottom arranged tangentially of a circle formed concentric

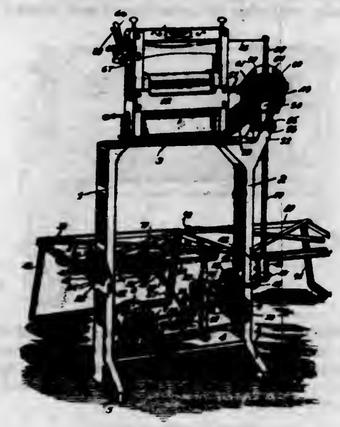
with the roll and substantially one-half of it in diameter, and having a curved side portion which corresponds in cur-

vature with the arc of the segment-shaped bottom and which has its middle part arranged at an obtuse angle to the said flat bottom.

1,421,460. PROPELLER. FRANÇOIS LEONIDAS GUILLEMET, San Francisco, Calif. Filed Oct. 3, 1919. Serial No. 328,273. 8 Claims. (Cl. 170—159.)

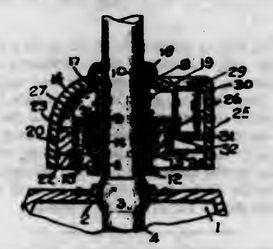
1. A propeller comprising a hub, a plurality of outwardly extending blades carried by the hub, the blades being curved transversely throughout their entire lengths, transversely extending arcuate partition plates carried by the blades, the plates being scribed on an arc with the hub as their center, and of substantially elliptical form and terminating flush with the side edges of the blades.

8. In a propeller, the combination of a body formed of relatively heavy material having a plurality of perforations therein to lighten the weight thereof, and plugs of relatively light material fitted within the said perforations.



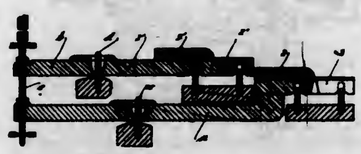
1,421,461. MANIFOLD SALES BOOK AND COVER THEREFOR. FREDERICK HACHMANN, St. Louis, Mo., assignor to William H. Gregg, St. Louis, Mo. Filed Mar. 25, 1921. Serial No. 455,422. 6 Claims. (Cl. 282—9.)

3. A manifold sales book, comprising a plurality of original and duplicate sales tickets, a plurality of tissue sheets interposed between the original and duplicate tickets, said tissue sheets projecting beyond the edges of the original and duplicate tickets, a projection secured to one end of said duplicate tickets, and a back of relatively stiff material to which the projections of the duplicate tickets and of the tissue sheets are secured.



1,421,462. WASHING MACHINE. CHARLES G. HALL, Akron, Ohio. Filed Nov. 22, 1920. Serial No. 425,752. 7 Claims. (Cl. 68—35.)

1. A washing machine comprising a vertical main frame, motive means mounted thereon, a bench hingedly connected to the vertical frame, washing means arranged to be supported upon said bench, a shaft on said bench having



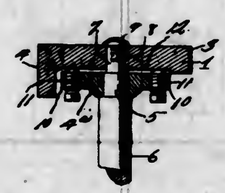
a detachable coupling with the washing means and an operative connection between the motive means and shaft.

1,421,463. TRANSMISSION-LEVER-LOCKING DEVICE. ALEXANDER MACDOWALL HAMILTON, Toronto, Ontario, Canada. Filed May 16, 1921. Serial No. 469,991. 5 Claims. (Cl. 70—128.)

4. In a transmission lever locking device, the combination with a transmission housing and a transmission lever carried by the housing so as to swing, of a ball engaging member carried by the transmission lever, a spring pressed bell movable longitudinally towards the housing against such spring pressure, a ball, means automatically operated simultaneously with the movement of the bell towards the housing for carrying the ball into engagement with and holding it in contact with the ball engaging member, and key operated means for releasing such holding means.

1,421,464. KEYBOARD FOR MUSICAL INSTRUMENTS. PIERRE HANS, Brussels, Belgium. Filed Mar. 5, 1920. Serial No. 363,599. 5 Claims. (Cl. 84—424.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

2. In a musical instrument having a conventional keyboard consisting of seven white and five black keys to the

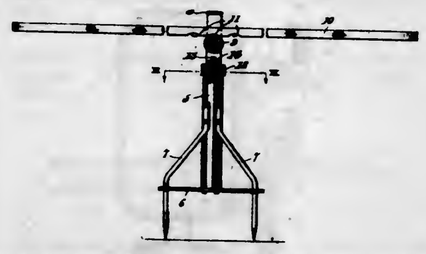


octave, each of said keys being adapted to operate an actuating element for a different note in the chromatic scale, the combination of a second keyboard having similar keys, each black key on the second keyboard being permanently connected with the actuating element of a white key on the first keyboard, all keys on both keyboards being simultaneously accessible.

1,421,465. GAUGE FOR EYEGLASS MOUNTINGS. MARINIUS HANSEN, Brooklyn, N. Y. Filed May 20, 1920. Serial No. 382,906. 4 Claims. (Cl. 81—15.)

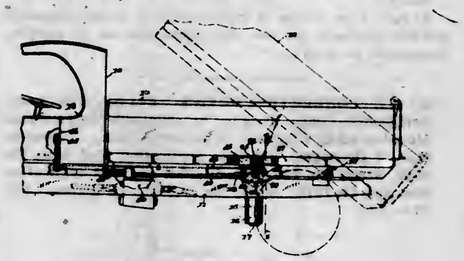
1. A guage for eyeglass mountings, comprising a curved body section to rest between the straps, and a flange carried with the body section for its entire length and extending equal distances from its sides.

1,421,466. RING-RAIL BRACE FOR SPINNING MACHINES. JAMES B. HANSON and JOHN R. SHEPHERD, Anderson, S. C. Filed June 24, 1921. Serial No. 480,065. 4 Claims. (Cl. 118—68.)



2. The combination with a ring rail secured to a lifting rod, of means for preventing movement and warping of said ring rail in one direction and for straightening the rail after warping, said means comprising a transversely disposed plate carried by the lifting rod adjacent one side of the ring rail and adjusting screws extending through the transversely disposed plate and engaging the surface of the ring rail.

1,421,467. WINDSHIELD ATTACHMENT. ALBERT S. HARDEN, Newark, N. J. Filed Sept. 28, 1921. Serial No. 503,853. 7 Claims. (Cl. 296—97.)

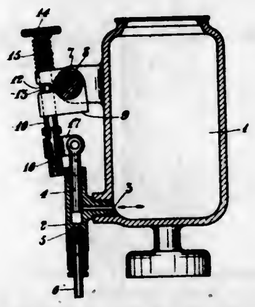


4. An attachment for a wind-shield, comprising an elongated plate of transparent material, and a pair of supporting members, each comprising a pair of links pivoted together at one end, one link of each pair being pivoted to the plate adjacent one corner and the other link being pivoted to a spring clip, and a bar secured to the clips.

1,421,468. COMBINED MERRY-GO-ROUND AND TEETER BOARD. ANTON F. HAUMERSON, Fort Atkinson, Wis., assignor to Pounder Harrow Company, Fort Atkinson, Wis. Filed July 23, 1921. Serial No. 487,018. 6 Claims. (Cl. 46—22.)

1. A combined merry-go-round and teeter board comprising a support, a frame supported in a vertical position upon the upper end of said support and swiveled upon the latter about a vertical axis, a transverse member supported by said frame, a teeter board extending through the frame and resting upon said transverse board, said transverse member comprising a horizontal roller, and said board being provided with transverse grooves near its central portion for selective reception of said roller.

1,421,469. FLUID HOIST. JULIUS P. HEIL, Milwaukee, Wis. Filed Apr. 2, 1919. Serial No. 286,872. 10 Claims. (Cl. 298—22.)

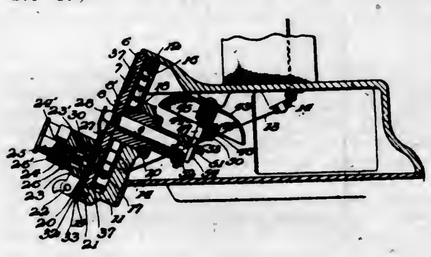


1. A fluid hoist, comprising a pair of cylinders having ports at their opposite end portions, pistons within the cylinders and between the ports of the respective cylinders and having piston rods extending through the cylinders, means connecting said piston rods together, a tank in communication with both cylinders, ducts connecting the ports of the cylinders together in pairs, a pump intersecting the pairs of ducts between the respective ports thereof for moving a fluid medium within the cylinders from one side of the pistons to the other to move the pistons to predetermined positions of rest, said positions of rest of the pistons closing the ports which are supplying the fluid medium to the pump and thereby automatically stopping the movement of the pistons, and a valve controlled duct in communication with the ducts connecting the pairs of ducts to permit the passage of the fluid medium from one side of each piston to the other side without passing through the pump.

1,421,470. FORCED-LUBRICATION APPARATUS PROVIDED WITH PUMPS. KARL GUSTAF FREDOLF HELLSING, Stockholm, Sweden, assignor to J. & C. G. Bolinders Mekaniska Verkstads Aktiebolag, Stockholm, Sweden, a Manufacturing Company registered under the laws of Sweden. Filed Oct. 4, 1920. Serial No. 414,600. 6 Claims. (Cl. 184—27.)

3. In a forced lubrication apparatus, the combination of a receptacle for lubricant, pumps connected with said re-

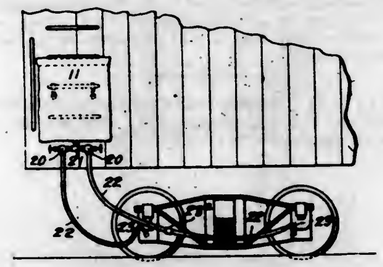
ceptacle and adapted to pump the lubricant from the same, pistons in said pumps, a driving means for each of said pump pistons, a stem connected with each pump piston, a stud on said stem, a member connected with each driving



means and having an aperture in which said stem is rotatable and movable longitudinally, and having a slot in the longitudinal direction of said aperture and a notch transverse to said slot in which slot and notch said stud is movable.

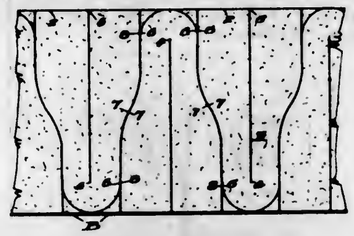
1,421,471. METAL COMPOUND POWDER AND PROCESS FOR THE PRODUCTION OF THE SAME. WALTER PROSSER HESKETT, Castlecliff, New Zealand. Filed Nov. 17, 1919. Serial No. 338,737. 8 Claims. (Cl. 75—1.)

1. As a new article of manufacture, a metal compound powder produced by the self disintegration of metallic compounds or alloys.



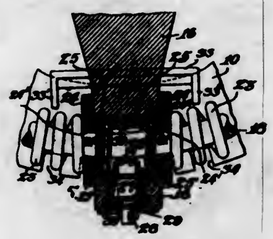
1,421,472. CORRECTION DEVICE. FRANK C. HINCKLEY, Bridgeport, Conn., assignor to Columbia Graphophone Manufacturing Company, Bridgeport, Conn., a Corporation of Delaware. Original application filed Mar. 20, 1917, Serial No. 156,044. Divided and this application filed Apr. 11, 1918. Serial No. 227,941. 18 Claims. (Cl. 274—17.)

1. The combination in a sound-recording or reproducing machine, of a record-tablet support and a sound-box having relative movement between them, a disc-shaped support for a correction-sheet, means for causing a relative rotation of said correction-sheet support simultaneously with and proportionately to said relative movement, and marking means comprising cooperating members disposed above and below the correction-sheet, the disc-shaped support having a circumferential recessed portion adapted to receive the lower member of the marking means.



1,421,473. JOURNAL-BOX COOLER. JOHN HINSON, Montreal, Quebec, Canada. Filed Oct. 19, 1920. Serial No. 418,021. 6 Claims. (Cl. 64—28.)

1. A device of the class described comprising a reservoir, means for attaching same to a car, a water conduit leading from the reservoir and a goose-neck at the outlet end of the conduit adapted to hook into a journal box, said goose-



neck having a large tip to resist withdrawal from the journal box.

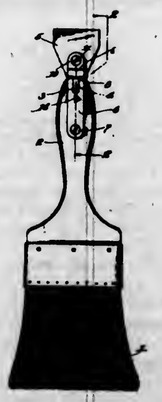
1,421,474. BLANK FOR SLIPPERS. MORRIS HIRSHFIELD, Brooklyn, N. Y. Filed Mar. 17, 1922. Serial No. 544,582. 3 Claims. (Cl. 36—47.)

1. A blank for the uppers of slippers comprising a single piece of material with a straight cut heel or base, and curved sides, the curve of approximately one half of each side being a reverse of the curve of the other half, so that the sides of two blanks lying adjacent each other and pointing in opposite directions will coincide throughout almost their entire length.

1,421,475. SAFETY LATCH FOR STEERING CONTROLLERS. JOSEPH HOFFMAN, Camden, N. J. Filed June 15, 1921. Serial No. 477,693. 5 Claims. (Cl. 74—5.)

1. In a steering controlling device of the class described, a sector lever, a ball lever mounted on said sector lever at its support and co-axially therewith, springs, positioned on said sector lever, adapted for compression between said sector lever and said ball lever and latch mechanism operably positioned within said ball lever adapted to engage said sector lever upon the breaking of a spring thereon, substantially as described.

1,421,476. STUD AND SOCKET FASTENER. GEORGE A. HOLMES, Newton Center, Mass., assignor to United States Fastener Company, a Corporation of Maine. Filed June 3, 1921. Serial No. 474,818. 2 Claims. (Cl. 24—208.)

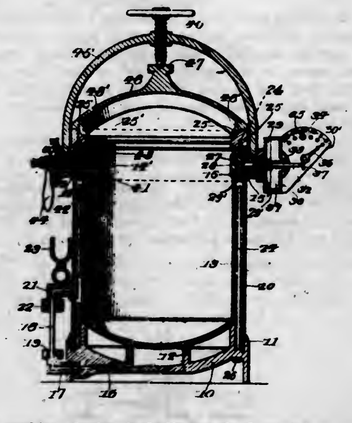


1. A stud and socket fastener comprising a socket member having a stud receiving socket and base flange and being provided with an annular ridge between the mouth of the socket and the base flange, said socket and ridge projecting from opposite faces of the base flange combined with a stud member having a bulbous head and a base flange provided with an annular ridge adapted to surround and co-operate with the ridge of the socket member.

1,421,477. FAN. JOHN T. HOPE, Kansas City, Mo. Filed June 16, 1921. Serial No. 478,001. 2 Claims. (Cl. 170—168.)

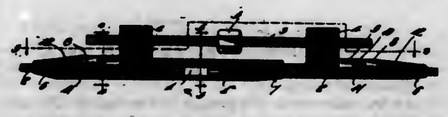
1. A fan comprising a hub and a ring disposed in different parallel planes with their axes alined, and forwardly bowed blades converging forwardly around the common axis of said hub and ring, the cutting edges of the blades being straight and their opposite or discharge edges being outwardly bowed; the front portions of said curved edges of the blades respectively overlapping the corresponding ends of the cutting edges of the following blades, the rear ends of said edges of the blades being spaced apart and said edges from front to rear occupying intersecting planes.

1,421,478. SCRAPER ATTACHMENT FOR PAINT-BRUSHES. OLE J. HOPE, Chicago, Ill. Filed Oct. 27, 1920. Serial No. 419,802. 4 Claims. (Cl. 15—111.)



1. The combination of a handle; a pair of clamping arms secured to opposite sides of the handle at one end thereof and projecting beyond the same, and a scraper blade engaged between the extending portions of said arms, together with a member connecting said extensions and engaging an opening in the blade, and means by which said blade is positively engaged with the handle at a distance from said member to prevent pivotal movement of the blade thereon.

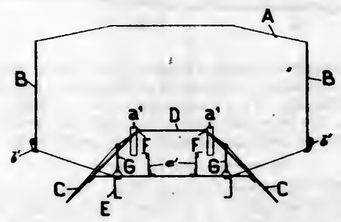
1,421,479. EMBROIDERY NEEDLE. LEE D. HOVER, Chicago, Ill. Filed Apr. 11, 1921. Serial No. 460,394. 1 Claim. (Cl. 112—80.)



The combination with an embroidery needle, of a gage device comprising a loop passing around the body of the needle obliquely to its longitudinal axis, a resilient shank carrying the loop and seating alongside the needle body, and means for locking the shank to the needle body.

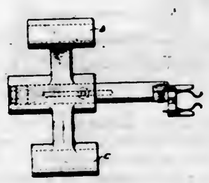
1,421,480. COOKER. HORACE HULL, Denver, Colo., assignor of one-half to L. A. Bastin and one-half to John H. Post, both of Denver, Colo. Filed Feb. 2, 1921, Serial No. 441,856. Renewed Jan. 19, 1922. Serial No. 530,492. 4 Claims. (Cl. 53—1.)

1. A cooking device including a food container and a surrounding jacket spaced therefrom, the space between the jacket and container constituting a steam generating chamber, and a single means for exhausting steam from the steam chamber, exhausting steam from the container, and conducting steam from the steam chamber to the container.



1,421,481. COMBINATION TROLLEY-WIRE STRETCHER AND SPLICE. DEMPSIE RAY HUNLEY, Cofoco, W. Va. Filed Aug. 22, 1921. Serial No. 494,289. 3 Claims. (Cl. 191—44.1.)

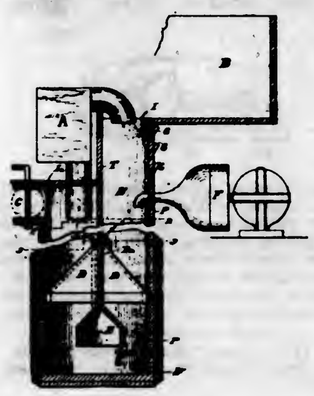
1. A combined trolley wire stretcher and splice comprising two slidably connected tubular splice members adapted to receive the adjacent ends of a broken trolley wire,



means for securing the wire ends in said splice members, and means for relatively sliding said splice members to draw said wire ends toward each other; said splice members being adapted to remain permanently on the wire ends and being shaped to allow free passage of a trolley wheel or like device along them.

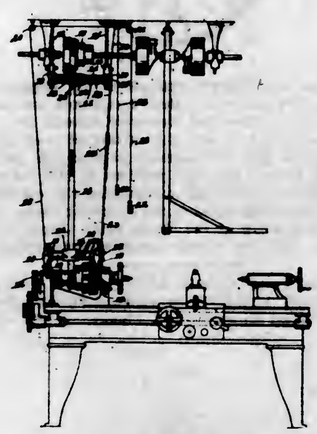
1,421,482. SELF-DISCHARGING CAR. GERHARD IMMAND, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Jan. 14, 1921. Serial No. 437,371. 2 Claims. (Cl. 105—246.)

1. In combination with a receptacle, a substantially single central movable bottom member and a plurality of outer bottom members, said bottom members linked together, means to keep at least one of said outer bottom members fast, and further means for permitting the tilting of at least one of the other of said outer members whilst raising its inner end.



1,421,483. BACK GAUGE. GEORGE W. JACQUES, Stratford, Conn., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed Aug. 23, 1919. Serial No. 319,401. 4 Claims. (Cl. 218—15.2.)

1. In combination, an edge-gauge, a hollow stem projecting therefrom, a hollow internally threaded support within which said stem is slidingly mounted, and means permitting adjustment of the operative position of the edge-gauge comprising an adjusting screw journaled in said stem and coacting with said internally threaded support.

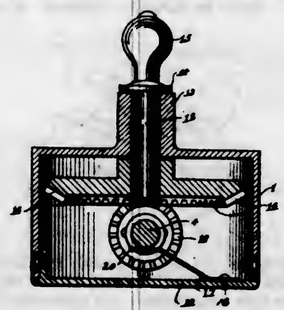


1,421,484. AIR COMPRESSOR. ARTHUR B. JENNINGS, New York, N. Y. Filed Oct. 30, 1917. Serial No. 199,286. 3 Claims. (Cl. 183—26.)

1. An air compressor comprising a descending, and an ascending column of water, said columns being in communication at both top and bottom, means to introduce air and water into one column, means to maintain the water at a lower level in the other column, and a plurality of pockets arranged at intervals in the descending column adapted to receive air from the flowing water, said pockets

being spaced apart and arranged whereby the water may flow inwardly between said pockets.

1,421,485. CONE BELT SHIFTER. EMERALD E. JONES, Chicago, Ill. Filed Mar. 10, 1919. Serial No. 281,645. 6 Claims. (Cl. 64—4.)

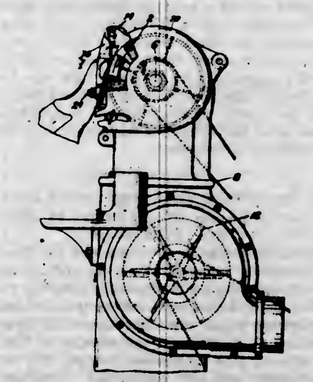


1. The combination with two oppositely arranged cone pulleys and a belt therefor, of a guide adjacent each pulley; a carriage slidable on each guide; a belt guide on each carriage engaging said belt; means for positively operating each of said carriages to shift the corresponding portion of the belt from a larger onto a smaller pulley; and a tension spring associated with said carriages for effecting delayed operation of one of the carriages for shifting said belt from a smaller onto a larger pulley, substantially as described.

1,421,486. OPERATING DEVICE FOR VALVE GRINDERS. ERWIN R. JONES, Columbus, Ohio. Filed May 29, 1919. Serial No. 300,777. 2 Claims. (Cl. 74—50.)

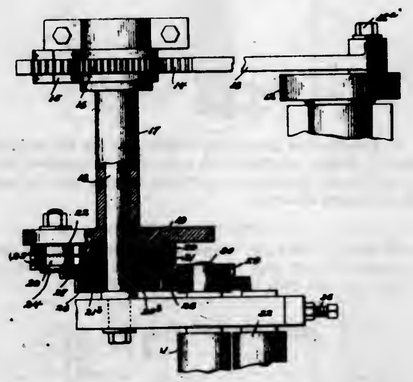
1. In a valve, a casing, a valve rotating shaft journaled in said casing, a pair of spaced pinions carried by said shaft, a gear element capable upon being revolved of successively meshing with said pinions to alternately oscillate

the shaft first in one direction and then in the other, a removable closure plate for said casing, and a leaf spring having one end thereof fixed to said plate and its opposite



or free end disposed to engage with said shaft, whereby said spring will serve to maintain said shaft substantially stationary during the period of repose when the gear element is out of mesh with said pinions.

1,421,487. LUBRICATOR. SAMUEL P. JONES, Columbia, S. C. Filed Apr. 29, 1921. Serial No. 465,417. 7 Claims. (Cl. 184—48.)



7. The combination of a grease cup, and a closure applicable thereto and adjustable thereon for forcing the lubricant from the same, the connection between said cup and its closure being a threaded one, a means for locking the closure to the cup to positively prevent turning of said closure in a direction to unscrew, and means carried by the plug for disengaging the locking means, said disengaging means being also operable to turn the closure in a direction to unscrew from the cup.

1,421,488. MACHINE FOR REMOVING SURPLUS MATERIAL. BERNHARDT JORGENSEN, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Nov. 16, 1918. Serial No. 262,856. 22 Claims. (Cl. 12—83.5.)

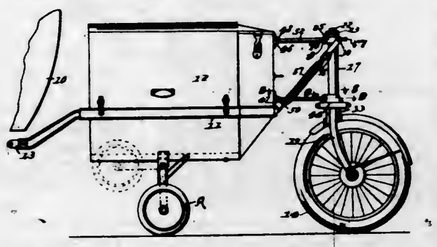
1. In a machine for removing surplus material from the bottom of a lasted shoe, the combination with trimming means, of a shoe positioning device constructed and arranged to position longitudinally an end of a shoe held in the hands of the operator with its bottom facing said trimming means and movable with the shoe in a path transverse to the plane of the shoe bottom to present the surplus material in the field of action of said means.

1,421,489. STRIP-FEEDING MECHANISM. FRANK M. JOSLIN, Amsterdam, N. Y., assignor to Inman Manufacturing Company, Inc., Amsterdam, N. Y., a Corporation of New York. Original application filed Mar. 29, 1920, Serial No. 369,487. Divided and this application filed June 25, 1920. Serial No. 391,842. 17 Claims. (Cl. 273.)

4. In a strip feeding mechanism, a feed roll, two gears secured to said roll, two other gears cooperating with said first named gears, and separate means operating alternately and intermittently at predetermined intervals for driving said last named gears.

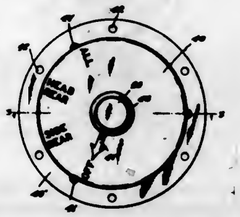
1,421,490. PERMANENT AIR GAUGE FOR PNEUMATIC TIRES. ERNST JUNG, St. Louis, Mo. Filed Dec. 20, 1920. Serial No. 431,998. 1 Claim. (Cl. 152—11.5.)

An air gauge, comprising a closed housing provided with a sight opening, a dial and a co-operating movable indicator arranged inside of said housing in proximity to said sight opening, a tubular member on the underside of said housing that is adapted to be screwed onto the valve stem of a pneumatic tire, said tubular member being of such length that the housing will be spaced away from the extreme upper end of the valve stem, a hose connection on the upper side of said housing to which an air line can be



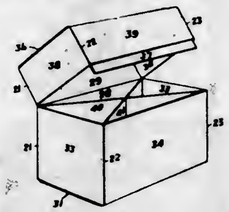
connected, a check valve in said hose connection, an air inlet pipe extending downwardly from said check valve and arranged with its lower end projecting into the valve stem of the tire, and an actuating device for said movable indicator provided at one end with an air inlet arranged substantially parallel to the air inlet pipe through which air is supplied to the inner tube of the tire.

1,421,491. METHOD OF PRODUCING HOLLOW WIRE FOR MANUFACTURING OF CHAINS AND THE LIKE. FRIEDRICH KAMMERER, Pforsheim, Germany. Filed Aug. 9, 1920. Serial No. 402,493. 2 Claims. (Cl. 29—188.)



1. A method of producing hollow wire for the manufacture of chains, consisting in embedding dehydrated borax as flux in the hollow wire and then drawing out the latter in the known manner.

1,421,492. TRAILER. HENRY KAPFERER, Billancourt, France. Filed May 14, 1921. Serial No. 469,672. 11 Claims. (Cl. 288—33.4.)



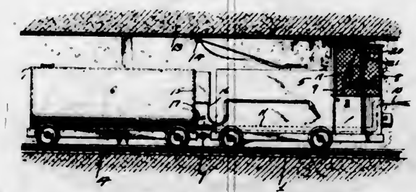
1. In a trailer, a chassis, a traction wheel, a head, a mounting for the traction wheel rotatable in the head, means for resisting the rotation of the mounting, oscillatable means for connecting the head to a chassis frame, and springs connecting the said head and chassis frame.

1,421,493. IGNITION AND LIGHTING SWITCH. LEROY D. KELLOGG, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 5, 1916. Serial No. 89,013. 16 Claims. (Cl. 200—4.)

1. An ignition switch and a lighting switch for automobiles, an enclosing casing therefor, and a removable common actuating means for said switches, said means being required to register in irregularly shaped apertures in said casing and said lighting switch before said lighting switch can be effectively operated by said actuating means.

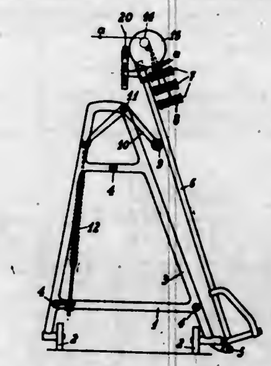
1,421,494. PAPER BOX. HARRY C. KESSLER, Warrington, Pa., assignor to Brenker & Kessler Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 11, 1921. Serial No. 451,565. 2 Claims. (Cl. 229—38.)

1. A box having a body and a cover formed from an integral folded paper blank, the back of the cover and the back of the body being formed of a continuous piece so as to form a hinge connection between said body and cover, foldable members for closing one end of the body, and foldable members for closing one end of the cover, one of the foldable members of the cover extending parallel with and beyond the front of the cover and arranged to be tucked in the body in back of the front forming member of the body when the cover is closed.



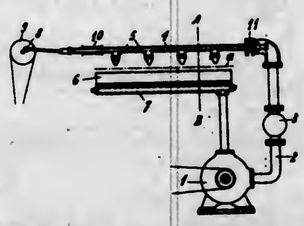
1,421,495. AUTOMOBILE SPARK INDICATOR. JOSEPH L. KLAVON, Jackson, Mich. Filed Mar. 8, 1921. Serial No. 450,644. 1 Claim. (Cl. 175—183.)

A spark indicating device comprising an elongated member formed from insulating material and provided with a plurality of apertures, axially disposed threaded conductors threaded in the elongated member and having their adjacent ends disposed in the apertures, the upper and lower edges of said elongated member being provided with a plurality of notches, conductor plates disposed in said notches, the outer ends of the conductor screws being threaded through said conductor plates, means whereby said conductor screws may be adjusted in relation to each other, said conductor plates being provided with rearwardly extending binding screws, an auxiliary casing formed from insulating material surrounding the elongated member, said elongated member and auxiliary casing being disposed within a metallic casing, said metallic casing being provided with a horizontal flange and vertical flanges engaging the upper side of the casing and the ends of the elongated member, the lower ends of said vertical flanges being provided with inturned lugs, the lower side of the insulating casing being removable and disposed upon said lugs, and means passing through the flanges of the casing and into the elongated member for holding said member against displacement.



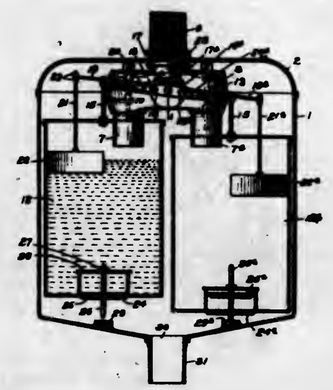
1,421,496. MINE FIRE-FIGHTING APPARATUS. JOHN KLEWANECH, Royalton, Ill. Filed May 25, 1920. Serial No. 384,080. 1 Claim. (Cl. 169—24.)

A fire fighting apparatus for mines and the like, said apparatus comprising a motor driven car and a trailed tank adapted to be run into a mine tunnel, a coupling connection between the motor driven car and the trailed tank, a horizontally disposed nozzle extending forwardly from the motor driven car at its forward end at a point spaced from its lower side, a pipe connection between the nozzle and the trailed tank, said pipe connection extending through the motor driven car and entirely housed therein, a flexible connection in said pipe located substantially above the coupling between the motor driven car and the trailed tank and a plurality of hose connections carried by the forward end of the tank and forming means whereby hose lines may



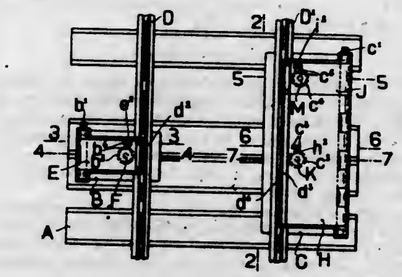
be connected for extinguishing fires in wing tunnels after water from the forwardly extending nozzle has extinguished fire in the main tunnel beyond the entrance to the wing tunnel.

1,421,497. REEL FRAME. HANS KOCH and HANS MÜLLER, Dietikon, Switzerland. Filed Apr. 21, 1920. Serial No. 375,574. 5 Claims. (Cl. 28—54.)



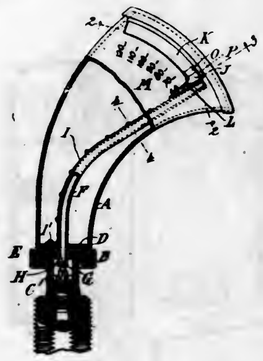
2. A reel frame comprising in combination a frame, a reel carrier movably mounted on said frame springs acting on said carrier, a reed, a roller rotatably mounted for guiding the threads drawn from the reels means actuated by said roller to change the place of passage of the threads through the reed.

1,421,498. DEVICE FOR DAMPENING THE WARP ON LOOMS, ETC. HANS KOCH, Dietikon, Switzerland. Filed Sept. 3, 1921. Serial No. 498,462. 1 Claim. (Cl. 139—82.)



A device for moistening warp threads on looms and the like comprising in combination an air pump, air discharge nozzles connected to said air pump and arranged above the warp threads, air intake means below the warp threads and connected to said air pump, means connected with the delivery end of said air pump to humidify the air discharged from the nozzles, and means to reciprocate the nozzles which deliver the air to the warp threads.

1,421,499. LIQUID-MEASURING APPARATUS. HOWARD R. KOEHLER, Monaca, Pa. Filed June 30, 1921. Serial No. 481,530. 7 Claims. (Cl. 73—28.)



1. In a liquid measuring apparatus, the combination of a manifold having an inlet and two outlets, valves controlling flow through said outlets, a pivoted walking beam, releasable means for holding said beam in alternate positions, a pair of measuring tanks attached one to each end of said beam and each provided with an opening communicating with one of said manifold outlets, each tank being provided with an outlet, valves controlling flow through the tank outlets and operated by movements of said tanks, and means including a float in each tank for controlling said manifold inlet valves and the movements of said tanks.

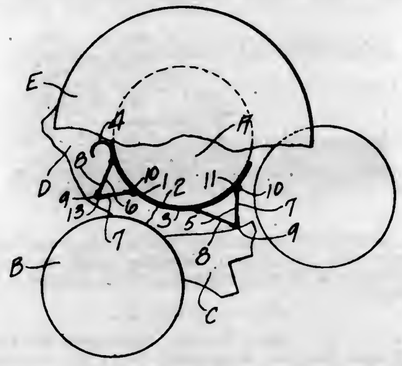
1,421,500. AXLE-RECORDING DEVICE FOR RAILWAYS. WERNER KOLBE and JOHANNES FRITZEN, Essen-on-the-Ruhr, Germany, assignors to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Feb. 14, 1921. Serial No. 445,046. 5 Claims. (Cl. 234—12.5.)

3. An axle recording device for railways comprising electric contact devices adapted to be disposed adjacent the rails of said railway, each contact device including a pivoted flap, a power accumulator disposed under said flap, the rails of said railway being formed with a recess to accommodate the edge of said flap, said flap being adapted to be moved against the tension of its corresponding power accumulator by the wheels of a car passing over said railway, electrically operated recording apparatus connected to said contact devices and adapted to function when said contact devices are operated.

1,421,501. GAUGE. HENRY P. KRAFT, Ridgewood, and MAXIMILIAN CHARLES SCHWEINERT, West Hoboken, N. J. Filed Mar. 25, 1916. Serial No. 86,733. 4 Claims. (Cl. 73—109.)

1. A pressure gauge having a Bourdon tube and a visual indicating part adapted to be directly engaged by said tube and moved to an indicating position, said indicating part and tube being disconnected, whereby the tube may return to its initial position without moving said indicating part.

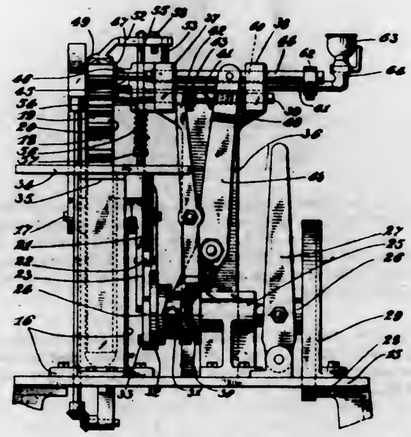
1,421,502. BATH-CABINET VAPORIZER. JOHN F. KRUSE, Indianapolis, Ind. Filed Oct. 31, 1921. Serial No. 511,679. 2 Claims. (Cl. 126—350.)



2. A vaporizer for vapor baths comprising a frame, a casing secured to said frame, an end opening in said casing, a pan slidable in said opening, guides for said pan, a nipple in the top of said casing, a pipe slidably connected to said nipple, and a second pipe slidably connected with the first named pipe.

1,421,503. BLEACHING POWDER. EDWARD THORNDIKE LADD and EBEN CHARLES SPEIDEN, Niagara Falls, N. Y., assignors to Isco Chemical Company, Inc., Niagara Falls, N. Y., a Corporation of New York. Original application filed Mar. 5, 1921, Serial No. 449,901. Divided and this application filed Feb. 7, 1922. Serial No. 534,764. 1 Claim. (Cl. 23—13.)

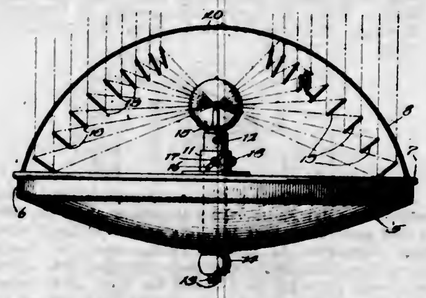
The herein described new bleaching powder consisting of a screened chlorinated lime hydrate from which, before chlorination, a substantial proportion of its smaller sized naturally occurring particles had been further removed, substantially as described.



1,421,504. INDICATOR AND CALIPER GAUGE FOR CANE MILLS. WILLIAM LANOMEIER, St. Louis, Mo. Filed May 18, 1921. Serial No. 470,703. 5 Claims. (Cl. 33—182.)

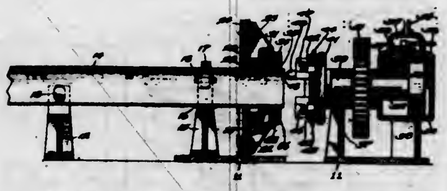
1. An indicator and gauge for the turn plate of cane mills, comprising a flexible base strip; a flexible indicator slide thereon and adapted to slide thereover and parallel thereto; and two sets of hinged caliper arms mounted over the indicator slide at opposite ends thereof, each set comprising two arms hingedly connected together at one end and having their other ends hingedly connected to the base strip and to the indicator slide, respectively, the two

sets of caliper arms being thus adapted to spread and close equally as the indicator slide moves back and forth over the base strip.



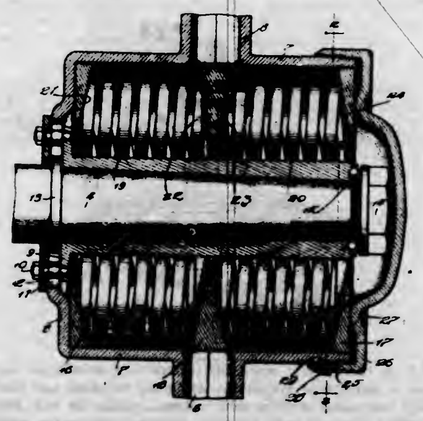
1,421,505. DATE-DEPITTING MACHINE. CHESTER S. LEONARD, Lansdowne, Pa. Filed Sept. 1, 1921. Serial No. 497,463. 8 Claims. (Cl. 146—6.)

1. In a fruit stoning machine, the combination with a rotary fruit conveyor having recesses receptive of the fruit, of a power driven reciprocating plunger adapted to pierce the fruit in a horizontal plane and expel the stone, and a single knife combined with said plunger adapted to slit the fruit on one side only.



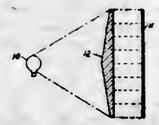
1,421,506. HEADLIGHT. ALEXANDER S. LIMPERT, Pittsburgh, Pa. Filed July 17, 1920. Serial No. 396,895. 4 Claims. (Cl. 240—41.)

1. An automobile headlight comprising a source of light, a series of concentrically arranged annular reflectors adapted to reflect in substantial parallelism intercepted light rays emanating at various angles from said source, said reflectors being of progressively diminishing diameters from the rear to the front of said headlight and each being respectively disposed at different angles with respect to said source of light and the front reflector being



in advance of said light and the rear reflector being behind said light.

1,421,507. METHOD OF LAPPING METAL PIPES. SAM J. LINDBERG, Chicago, Ill., assignor to Crane Company, Chicago, Ill., a Corporation of Illinois. Filed June 21, 1920. Serial No. 390,428. 12 Claims. (Cl. 29—156.)

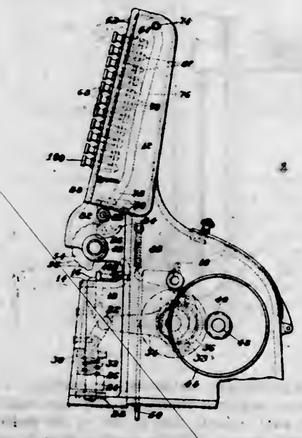


1. The method of lapping pipes, which consists in exerting a pressure against the end of a pipe to upset and thicken the walls thereof, embracing the pipe near said end to limit the length of the upset, exerting a pressure radially and longitudinally against said thickened walls to displace the metal thereof, and first yieldably and then positively opposing the movement of the metal under the action of said pressure to thereby cause the metal to flow into the required flange form.

1,421,508. RESILIENT WHEEL FOR VEHICLES. ROBERT LINN, Chicago, Ill. Filed July 11, 1919. Serial No. 310,025. 8 Claims. (Cl. 152—45.)

1. A resilient wheel for vehicles having coiled compression springs engaging longitudinally with the axle, and having means for transmitting the load from the axle longitudinally through said springs to the outer portions of the wheel.

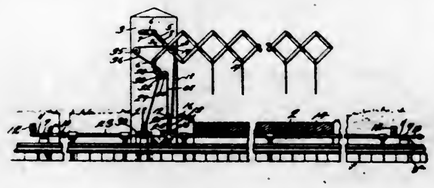
1,421,509. ILLUMINATING APPARATUS. JOHN A. LOCKWOOD, Fillmore, N. Y. Filed Jan. 31, 1921. Serial No. 441,320. 2 Claims. (Cl. 240—106.)



2. In combination, a lens of varying translucency and a source of light, the translucency of the lens being such that the amount of light passing through the lens is substantially equal at any two given points in a plane at right angles to a perpendicular passing through the lens and light and at that side of the lens remote from the source of light.

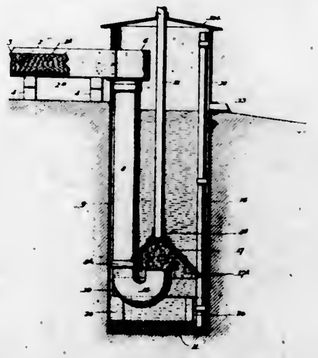
1,421,510. VIOLIN BOW. GUSTAVE M. LOTH, Chicago, Ill. Filed Oct. 24, 1921. Serial No. 510,020. 5 Claims. (Cl. 84—282.)

2. A bowing device for violins comprising a mouthpiece adapted to be grasped by the player's teeth, and bow-supporting means connected to the outer end of the mouth-piece.



1,421,511. STAMPING MACHINE. THOMAS LUND, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed May 1, 1918. Serial No. 231,842. 12 Claims. (Cl. 101—18.)

1. In a stamping machine, a work support, a rotatable stamping member co-operating with the support and having a plurality of impression surfaces, a series of mov-

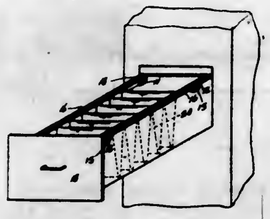


able keys of equal length, corresponding to the impression surfaces, a lever with which the keys contact at different distances from its fulcrum, and connections between the lever and stamping member arranged to rotate said member positively to bring the proper impression surfaces into and out of their working positions.

1,421,512. TRAIN-OPERATED GATE. HENRY CLAY MCCONNELL, Grand River, Iowa. Filed Mar. 8, 1921. Serial No. 450,545. 1 Claim. (Cl. 246—311.)

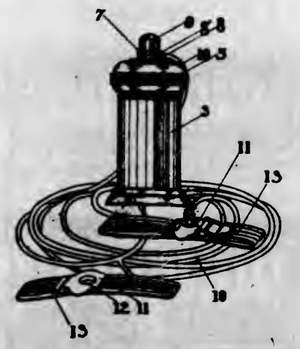
A train operated gate, said gate comprising a lazy tong supported by a post and horizontally disposed, cables having their ends secured to the lazy tongs adjacent their rear pivotal point, one of said cables passing rearwardly over a pulley and downwardly over a pulley and leading to an operating lever adapted to be engaged by a train, the other cable leading away from the supported end of the lazy tongs and over a pulley and downwardly and to a lever located remotely from the post and adapted to be operated by a train, a lever pivoted adjacent the post and adapted to be operated by a train, a cable connected to said last named lever and passing between horizontally disposed pulleys and upwardly and having its end connected to the rearwardly extending cable and forming means whereby upon a downward pull on the same the lazy tongs will be folded.

1,421,513. AUTOMATICALLY-OPERATING HYDRO-PNEUMATIC WATER-LIFTING APPARATUS. ROBERT B. MCCONNEY, Denver, Colo., assignor of sixteen and two-thirds one-hundredths to De Witt Clinton Gates, Denver, Colo. Filed Apr. 26, 1921. Serial No. 464,513. 11 Claims. (Cl. 103—84.)



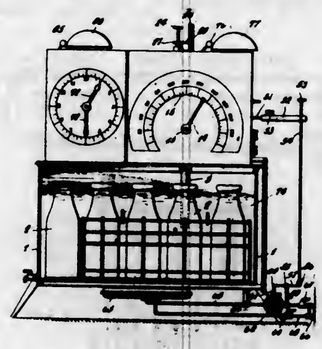
1. A hydro-pneumatic water lift, comprising a water conduit, means connected therewith for commingling air and water in said conduit, and means at the end of said conduit whereby the air raises a portion of said water; a hood in said casing in which said commingled air and water discharges and a protector plate inside of said hood.

1,421,514. TROUSERS SUPPORTER. WILLIAM M. MCFARLAND, Norwich, N. Y., assignor of one-fifth to William Reed Turner, one-fifth to Warren E. Eaton, one-fifth to Melvin C. Eaton, and one-fifth to Burton J. Fernalld. Filed Feb. 17, 1920. Serial No. 359,310. 1 Claim. (Cl. 24—222.)



A fastening device for adjustable garment supporters comprising a flat, substantially triangular plate, the sides of said plate being bent inwardly and their edges rolled upon themselves to provide button engaging flanges spaced from each other and from the inner side of the plate, said plate having a closed flat apex at the meeting edges of the flanges, the opposite open end of the plate being adapted to receive various sized buttons and converging from end to end to provide a wedge shaped slot for the engaged button.

1,421,515. FILING DEVICE. RICHARD MCKNIGHT, Chicago, Ill. Filed Feb. 12, 1921. Serial No. 444,394. 7 Claims. (Cl. 129—16.)

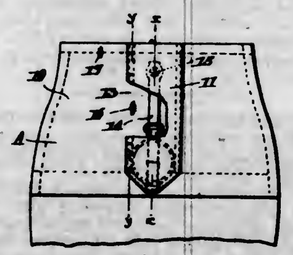


1. The combination with a filing receptacle, of supporting clips fitting over and detachably engaging the sides thereof; and guides detachably supported by said clips, substantially as described.

1,421,516. MAGNETIC HEALING APPARATUS. SHINTARO MAESHIMA, Tokyo, Japan. Filed May 2, 1918. Serial No. 232,184. 2 Claims. (Cl. 174—88.)

1. A therapeutic appliance comprising a metallic casing, a mixture of magnetite, antimony sulphide and charcoal contained within said casing, copper in rod form passing through said mixture, terminal plates for application to the body and electrical connections from said plates to the casing, substantially as described.

1,421,517. AUTOMATIC ALARM MECHANISM FOR PASTEURIZING MILK. PHILIP MALCAMP, New Orleans, La. Filed Jan. 9, 1922. Serial No. 528,121. 6 Claims. (Cl. 236—94.)

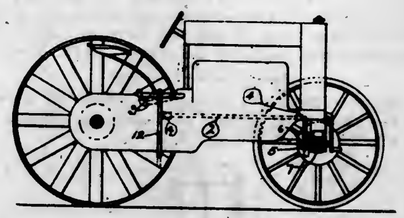


1. In a pasteurizing apparatus, the combination of a liquid container in which the material to be pasteurized is placed; means for heating said container comprising a fuel supply; an expansible and contractible thermostatic element adapted to be moved by changes in temperature of the material being treated; an alarm mechanism controlled by the movements of said thermostatic element; means to regulate said fuel supply controlled by said thermostatic element; and a second alarm mechanism adapted to be set off from said first named alarm mechanism, substantially as described.

1,421,518. ADJUSTABLE THRUST BEARING. CLAUDE A. MARIS, Terre Haute, Ind. Filed Jan. 7, 1921. Serial No. 435,589. 5 Claims. (Cl. 64—25.)

1. As an article of manufacture, a bearing cap comprising a main body having a shaft bearing extending through a portion of its length, a cooperating half-bearing bushing axially movable in the main body, and means for axially adjusting said bushing, said means comprising a temper screw cam mounted in the main body and cooperating with a cam surface formed on the bushing.

1,421,519. WATCH POCKET FOR OVERALLS, WORKING SHIRTS, AND THE LIKE. CHARLES TOLMIE MASSON, Wood Bay, Manitoba, Canada. Filed Aug. 6, 1921. Serial No. 490,309. 2 Claims. (Cl. 2—154.)

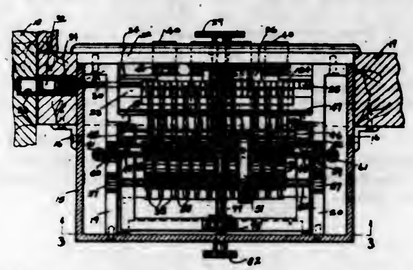


2. The combination with a garment of the character described, of a relatively long and narrow watch pocket, and a retaining strip in the pocket secured to the inner end of the pocket and extending to a point adjacent to the outer end of the pocket, and being releasably connected near the outer end to the garment, said strip being designed to extend through the ring on a watch and being of sufficient length to permit the watch to be moved up and down in the pocket, the watch in its uppermost position in the pocket being visible through the top thereof.

1,421,520. SAW. JULIUS GEORGE MATTSON, Heretaunga, New Zealand. Filed Jan. 4, 1922. Serial No. 526,890. 2 Claims. (Cl. 143—133.)

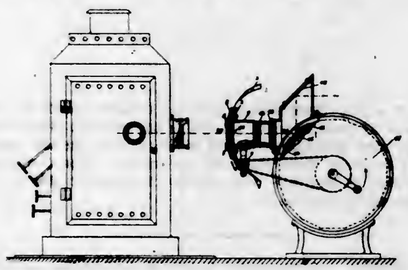
1. A saw blade having pairs of cross-cut teeth and rip teeth alternating with the pairs of cross-cut teeth, each rip tooth having a point at its forward edge and tapering inwardly from the point to its rear edge and being beveled on one side face, and on the opposite side to the succeeding rip tooth.

1,421,521. AUTOMATIC CLUTCH RELEASE. GEORGE E. MAXWELL, New Ulysses, Kans. Filed Aug. 10, 1920. Serial No. 402,713. 2 Claims. (Cl. 180—82.)



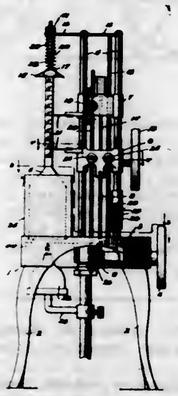
1. A safety attachment for tractors, comprising a rock-shaft, a front arm on said rock-shaft, a horizontal slot in the end of said front arm, an elongated pin adapted to form a pivot for the front axle and project through said slot, a downwardly arched rear arm on the rock-shaft extending parallel to the front arm, said rear arm being bent upwardly and having a hook at the end of the upwardly bent portion, for engagement with the clutch pedal lever of the tractor.

1,421,522. LOCK. GEORGE F. MAYER, Chicago, Ill. Filed Oct. 15, 1920. Serial No. 417,070. 47 Claims. (Cl. 70—54.)



1. A lock comprising a slidably mounted bolt; manually operable means for moving said bolt; a longitudinally movable tumbler mounted adjacent to said bolt adapted, by a movement across the bolt, to lock the bolt

against movement; means for moving the tumbler into locking position; and similarly actuating independently

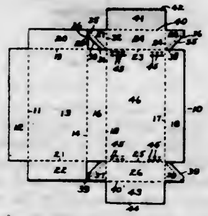


acting means for rocking the tumbler out of locking position, substantially as described.

1,421,523. CINEMATOGRAPHIC APPARATUS. EMIL MECHAU, Rastatt, Germany. Filed Aug. 20, 1921. Serial No. 493,979. 3 Claims. (Cl. 88—24.)

1. In cinematographic projectors with continuously moving flexible picture band in combination, a projection lens with spherically curved field of image, a lens system with at least one torical surface, arranged near to the picture band between the latter and the projection lens and adapted to produce of the cylindrically curved picture band a virtual image of spherical curvature, and a cylindrically curved guide for the flexible picture band.

1,421,524. BUTTER-FAT GAUGE. JOHN A. MEEKER, Potsdam, N. Y. Filed Apr. 16, 1921. Serial No. 462,009. 12 Claims. (Cl 73—51.)

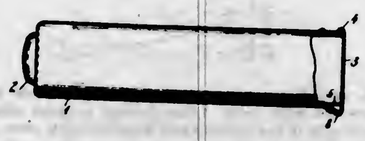


2. A gauge comprising a support, vertical guides carried thereby, a cross head carrying a pointer and adapted to reciprocate on the said guides, a second pointer adjustable with relation to the first pointer, rotary means fixed to the support for adjusting the cross head, and means carried by the cross head for adjusting the second pointer, and supplementary friction means for holding the pointers in set position.

1,421,525. NUMBERING HEAD. CHARLES A. MEISEL, Boston, Mass., assignor to Meisel Press Manufacturing Company, Boston, Mass., a Corporation of Massachusetts. Filed Apr. 28, 1921. Serial No. 465,144. 3 Claims. (Cl. 101—85.)

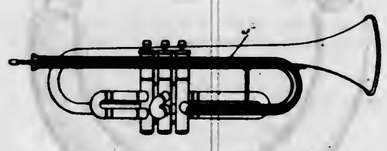
1. A numbering head comprising a series of type wheels for the powers of ten, ratchets and pawls for operating the same and shiftable means adapted to be brought into cooperation with one or another pawl for holding it from its ratchet.

1,421,526. FOLDING BOX. CHARLES C. MILLER, Fort Wayne, Ind. Filed Apr. 16, 1921. Serial No. 462,002. 4 Claims. (Cl. 229—30.)



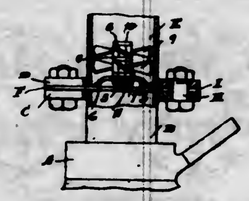
1. A folding box comprising a bottom section and a cover section, the bottom section having two side flaps and two end flaps each foldable on the bottom section, each end flap being hinged at its opposite ends to the side flaps and the hinges tending to draw all said flaps upwardly and inwardly relatively to the bottom section and each end flap being of width sufficient to be folded upon itself and to frictionally engage and brace against the bottom section for locking the said end flaps and side flaps in substantial upright position relatively to the bottom section.

1,421,527. FIRE-EXTINGUISHING COMPOSITION AND PROCESS OF PREPARING SAME. JOSEPH BRUCE MILLER, Indianapolis, Ind. Filed Feb. 4, 1922. Serial No. 534,192. 8 Claims. (Cl. 23—5.)



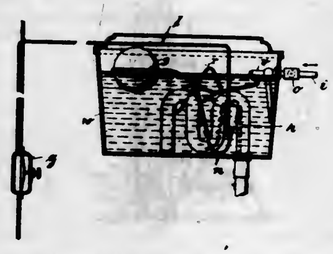
2. A fire extinguishing composition comprising a combination of chemical elements producing, after chemical reaction with each other, calcium sulphate, sodium chloride, and sodium sulphate, intermixed with surplus of hydrated lime, sodium bicarbonate, silica, and rock salt, all inter-mixed and in powder form, substantially as set forth.

1,421,528. FLASH LIGHT. LOUIS A. MILLER, New Haven, Conn., assignor to Winchester Repeating Arms Company, New Haven, Conn., a Corporation of Connecticut. Filed July 14, 1921. Serial No. 484,589. 3 Claims. (Cl. 240—8.5.)



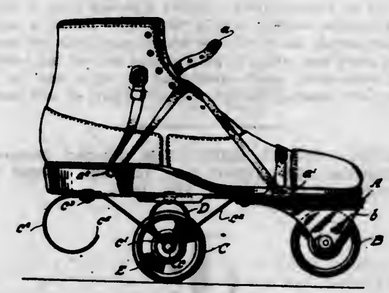
1. In a flashlight, the combination with the case, and the cover hinged at one side to the case and latch mechanism for holding the cover to he case, and comprising a tongue on the cover and a catch on the case wall, that portion of the wall carrying the catch being offset outwardly beyond the plane of the wall thereby to leave the interior of the case unobstructed by the latch mechanism.

1,421,529. CLEANING DEVICE. ROSS MILLHOUSE, Los Angeles, Calif. Filed Sept. 30, 1921. Serial No. 504,320. 1 Claim. (Cl. 15—100.)



A wind musical instrument cleaner comprising a relatively long resilient lineal member composed of a spiral spring having its adjacent windings in contact, and a cleaning member formed of a wire doubled upon itself, bristles clamped between the doubled portion of the wire, and means encircling a portion of said wire for wedging the same within the coils of said lineal member.

1,421,530. CARBURETOR ATTACHMENT. FRANK MOORE and ALEXANDER GRAY, Toronto, Ontario, Canada. Filed Jan. 24, 1921. Serial No. 439,359. 2 Claims. (Cl. 48—180.)

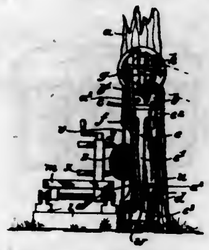


2. In combination an intake pipe for internal combustion engines, and a rotary mixing device comprising two rotary devices of substantially the same diameter, adapted to be mounted in said pipe and to have the desired clearance therewith, and to be actuated by a common current of flowing fluid to essentially revolve at different rates of speed, each consisting of a hub; a common spindle on which said hubs rotate, and a set of vanes carried by each of the said hubs, as set forth and for the purpose specified.

1,421,531. DOUBLE-KNEE SIPHON. FERDINAND MOHAS, Sommerfeld, Germany. Filed Sept. 8, 1920. Serial No. 409,028. 2 Claims. (Cl. 4—5.)

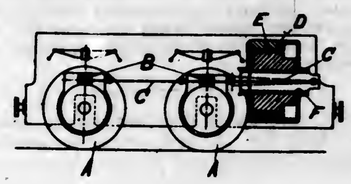
1. A double acting siphon, comprising two U-shaped members and a member connecting the lower end of their adjacent legs, said siphon being adapted to be operated by forcing out the air, in combination with the push button arrangement, adapted to effect the starting of the operation of said siphon, an air pressure balance pipe connecting the air spaces of said siphon with each other and serving to balance the air pressure within the siphon and an auxiliary siphon serving to remove the balance of water, accumulating in the connecting member of the main siphon.

1,421,532. ROLLER SKATE. JOHN MUCK, Milwaukee, Wis. Filed Nov. 17, 1919. Serial No. 338,486. 3 Claims. (Cl. 46—51.)



1. A roller skate comprising a plate for the reception of the foot, a pair of wheels one at each side of the said plate, an axle upon which the said wheels are mounted, and yielding bearings for supporting the axle, the said yielding bearings comprising a spring strip attached at its forward end and slidably engaging the foot plate of the skate at the other.

1,421,533. FRAME SAW. GOTTFRIED MÜLLER, Sumiswald, Switzerland. Filed Dec. 3, 1920. Serial No. 428,089. 1 Claim. (Cl. 143—60.)



A transportable saw mill mechanism of the character set forth, comprising in combination, a saw carrying frame, a power shaft with a connection to said saw frame for vertically reciprocating the latter, a supporting board, means thereon for supporting and guiding said saw frame, shaft mounting means associated with said board, and a

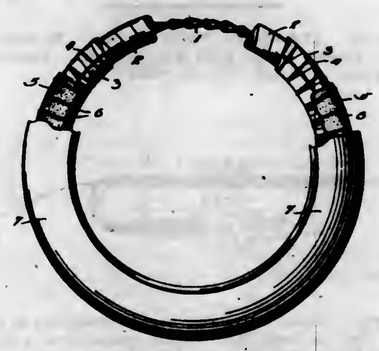
separate shaft mounting means, the two said mounting means adapted to journal said power shaft transversely of said guide means, and said supporting board and said

shaft mounting means adapted to be mounted on opposite sides of a standing column perforated to freely receive said shaft.

1,421,534. WORM DRIVE FOR ELECTRIC CARS, ESPECIALLY MINE LOCOMOTIVES. GOTTWALT MÜLLER, Berlin-Weissensee, Germany. Filed Oct. 7, 1921. Serial No. 506,139. 3 Claims. (Cl. 105—119.)

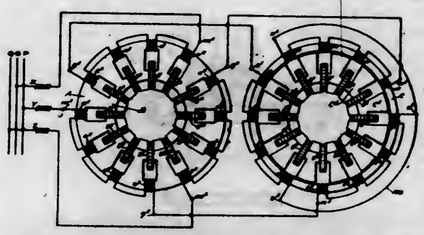
1. In an electric vehicle having a hollow axle, a worm-drive located entirely within the vehicle frame, a motor located outside the wheel base and co-axial with the worm-drive shaft and with the longitudinal axis of the vehicle, said worm-drive shaft pivoted at its outer end to the motor, and passing through the hollow axle of said motor.

1,421,535. PENCIL GRIP. VAN QUINTON MURDOCK, Columbus, Ohio. Filed June 13, 1921. Serial No. 477,240. 2 Claims. (Cl. 120—108.)



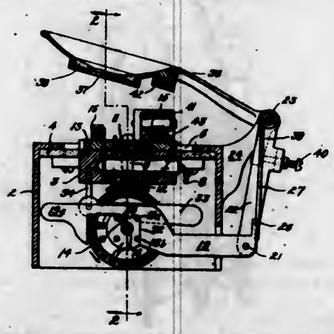
1. In a device of the character described, the combination with a pencil of spaced rings or carriers positioned on said pencil, said rings or carriers being provided on their opposed faces with sockets, a flexible sleeve interposed between said rings or carriers and having its end portions fitting into said sockets, and an insert carried by said sleeve between the same and said pencil, substantially as described.

1,421,536. WRENCH. BERT MYER and JOHN BROWN, Elkhart, Kans. Filed Dec. 21, 1921. Serial No. 523,891. 4 Claims. (Cl. 81—159.)



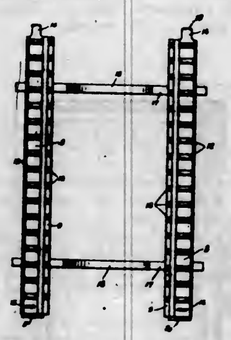
1. A wrench comprising a stock having a guide opening provided with teeth, a jaw having a shank slidable and rotatable in the opening and provided with teeth that move into and out of interlocking engagement with the teeth of the stock on the rotation of the shank, and a holding device that enters the opening to prevent the rotation of the shank.

1,421,537. SOFT-RUBBER TIRE FILLER. MOSES W. NEEDHAM, Waco, Tex. Filed Dec. 22, 1920. Serial No. 432,461. 2 Claims. (Cl. 152—5.)



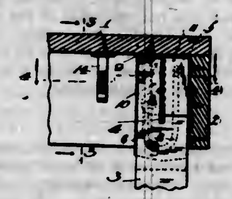
1. In a reinforced soft rubber tire filler, the combination of a chain forming a complete ring, a layer formed of strips of rubber, said strips being disposed in reverse direction, an outer strip of soft rubber, and means for securing the strips against unravelling, for the purpose described.

1,421,538. DIRECT-CURRENT TRANSFORMER. ARTHUR F. NESBIT, Wilkinsburg, Pa. Filed Mar. 9, 1921. Serial No. 450,988. 4 Claims. (Cl. 171—123.)



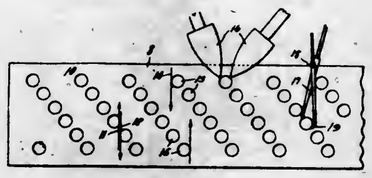
1. A transformer comprising a main field having integrated primary and secondary cores, a plurality of coils on said primary and secondary cores, a core having a plurality of coils forming a commutating field, said commutating field being angularly adjustable about the axis of said primary and secondary cores, each group of commutating field coils being in series with a corresponding group of the primary or stator coils, a commutator group connected to the coils of said secondary core, and collectors for said commutator group.

1,421,539. ELECTRIC FRUIT-MARKING MACHINE. LEWIS NEUENSCHWANDER, Los Angeles, Calif., assignor to Electric Fruit Marking Co., San Francisco, Calif., a Corporation of California. Filed June 3, 1919. Serial No. 301,531. 15 Claims. (Cl. 101—35.)



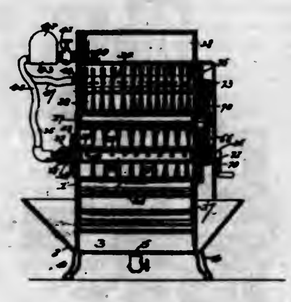
1. A fruit marking machine comprising a disk, means for mounting the disk for rotation in a fixed plane and about a fixed axis, dies on said disk, a movably mounted arm arranged adjacent the disk, and means operated by said arm for rotating said disk to place one of said dies in marking position.

1,421,540. ANTIFRICTION SKID. GEORGE L. NOLL, Madison, N. J. Filed Dec. 5, 1921. Serial No. 519,881. 4 Claims. (Cl. 193—41.)



1. A skid comprising a pair of skid beams, cross bars connecting therebetween, means secured near the ends of said skid beams adapted to engage a clamping wedge, metal channel strips attached to the upper surfaces of said beams, a plurality of spaced rolls rotatable in said channels, and hooks at one end of the strips adapted to engage oblong recesses formed through the other end of said strip.

1,421,541. FOLDING TABLE. LEWIS NOLTY, Lancaster, Pa. Filed Mar. 11, 1922. Serial No. 542,996. 7 Claims. (Cl. 45—48.)

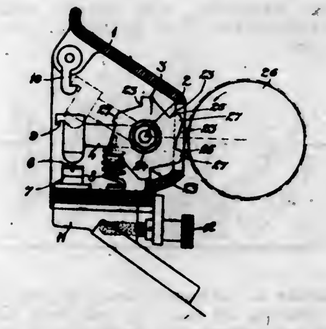


1. In a folding table, the combination with the top of a fixed depending cruciform member thereon consisting of intersecting plates one of which has a U-slot, and a table leg slotted to engage said plates, and having a pin engaging the U-slot.

1,421,542. RADIATOR. EMIL OCHSNER, Sutton, Nebr. Filed June 10, 1920. Serial No. 387,957. 1 Claim. (Cl. 257—129.)

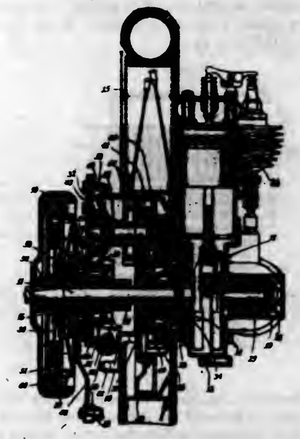
A radiator for automobiles having headers and water tubes connecting the same, the tubes being disposed in banks or series arranged in or in like relation to the path of movement of the radiator, with adjacent tubes in each bank overlapping each other transversely with relation to planes parallel with the path of movement and with the front and rear ends of adjacent banks or series overlapping each other transversely with relation to planes parallel with the path of movement, the banks being spaced transversely to give access for repair to all of the tubes in each series.

1,421,543. DISHWASHING MACHINE. CHARLE OLSON, Lafayette, Minn. Filed June 5, 1920. Serial No. 386,694. 4 Claims. (Cl. 15—74.)



3. In a washing apparatus for the purpose indicated, a base, a housing supported on the base and having a water reservoir, dish washing means including rotary fountain brushes mounted in the housing, a spray pipe above the dish washing means, an auxiliary chamber having a valve controlled connection with the reservoir, and means connecting the auxiliary chamber and the respective rotary brushes and the spray pipe.

1,421,544. MEANS FOR AUTOMATICALLY CUTTING OFF THE FEED MOTION OF MACHINE TOOLS. NILS JOSEF OLSSON, Gottenborg, Sweden, assignor to Aktiebolaget Svenska Kullagerfabriken, Gottenborg, Sweden, a Corporation of Sweden. Original application filed Aug. 1, 1918, Serial No. 247,784. Divided and this application filed Aug. 23, 1919. Serial No. 319,424. 2 Claims. (Cl. 51—165.)



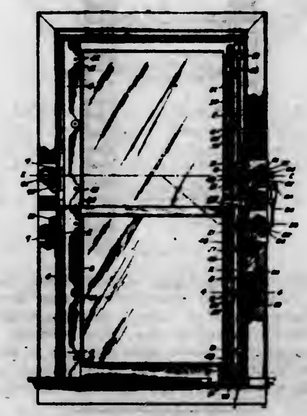
1. The combination in an apparatus for cutting off the feed motion of a machine tool when the work has reached its predetermined size, of controlling means therefor, and a trip lever adapted to co-operate with said means, comprising an actuating arm and a work-engaging disc having teeth of different radial length, said disc angularly adjust-

able relatively to said arm to bring either of said teeth into position to engage the work and hold the arm out of engagement with the controlling means until the work has

reached the required size and then to clear the work and permit the arm to actuate said means, thereby stopping the feed motion of the machine tool.

1,421,545. MOTOR VEHICLE. ALDEN E. OSBORN, New York, N. Y. Filed Sept. 1, 1920. Serial No. 407,373. 2 Claims. (Cl. 180—55.)

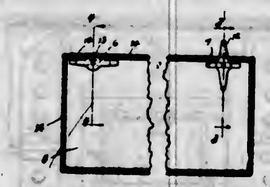
1. In a motor vehicle the combination of a traction wheel, a hub for said wheel, a supporting member passing through said wheel hub and having a bearing for said hub, a main shaft passing through said bearing, a propelling motor connected to said main shaft at one side of said wheel, a secondary shaft substantially parallel with said main shaft, a gear on said secondary shaft, a gear on the wheel hub and intermeshing with the first named gear, and controllable means for rotating said secondary shaft from said main shaft or for allowing said main shaft to turn independently of said secondary shaft, said secondary shaft, said gearing and said controllable means being on the other side of the said wheel from the said motor connection to the main shaft.



1,421,546. RADIATOR. DAVID O. PARKIN, Venice, Calif. Filed Apr. 28, 1920. Serial No. 377,823. 3 Claims. (Cl. 257—130.)

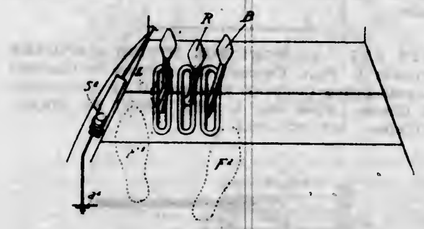
1. In a radiator, a pair of complementary blanks having vertical V-shaped corrugations, said blanks arranged in nested engagement with each other with one wall only of each of the corrugations on one blank abutting against the

corresponding corrugation on the other blank; the other opposed walls of the corrugations being spaced apart to form a vertical water space therebetween.



1,421,547. WINDOW-OPERATING MEANS. JESSE PARSONS, Seattle, Wash., assignor to Parsons Appliance Company, Seattle, Wash. Filed June 9, 1919. Serial No. 302,655. Renewed Nov. 1, 1920. Serial No. 421,156. 8 Claims. (Cl. 20—42.)

1. The combination with a window sash of a permanently projecting guide block pivoted at one end of the sash and adapted to enter the sash retaining groove of the window frame and to permit swinging of the sash thereon as upon a pivot, and a guide strip alined therewith at the same side of the sash and adapted to be projected and withdrawn at will, to enter and withdraw it from the sash retaining groove of the window frame.



1,421,548. FASTENER FOR LICENSE PLATES. GEORGE PENDERGAST and RAYMOND F. ETHIER, Milwaukee, Wis. Filed Apr. 13, 1921. Serial No. 461,065. 7 Claims. (Cl. 40—125.)

2. A fastening device comprising a T-shaped member of substantially uniform thickness, a spring in the form of a bow secured intermediate its ends upon the shank of the T-shaped member and transversely of the head thereof,

and means for preventing rotation of the spring relative to the T-shaped member.

1,421,549. LIGHTING SYSTEM FOR AUTOMOBILES. WILLIAM FRANKLIN PENROD, Blanchester, Ohio, assignor of two-thirds to Anthony J. Wissel and Max S. Wise, both of Cincinnati, Ohio, partners doing business as Auto Sales and Service Company. Filed Aug. 15, 1917. Serial No. 186,315. 3 Claims. (Cl. 171—97.)

3. In an electric lighting system for automobiles, the combination with a variable potential generator, a headlight lamp; an electric circuit connecting said generator and said lamp; voltage reducing means in said circuit for reducing the voltage supplied to said lamp; and a gear control pedal biased to high gear position; of control means for rendering said voltage reducing means ineffective; said control means being biased to inoperative position and situated adjacent to said gear pedal, and being operable alternately with said pedal by the same foot.

1,421,550. AEROPLANE. CARL PFEIFER, St. Louis, Mo. Filed June 11, 1918. Serial No. 239,382. 2 Claims. (Cl. 244—15.)

1. A flying machine comprising a tractor propeller, propellers disposed adjacent to the ends of its sustaining surface or surfaces and rotating in a plane substantially parallel thereto, mechanism under control of the operator for altering the pitch or angle of the blades of said propellers to lift the machine vertically, a member pivotally suspended from the machine adapted to operate said mechanism in response to lateral inclination of said surface or surfaces to correct such inclination, sustaining propellers disposed beneath the tail of the machine and rotating in a plane substantially parallel thereto, means for altering the pitch or angle of the blades of said tractor during flight to control the speed of the machine independent of the speed of the engine and automatic means for reducing the pitch or angle of the blades of said sustaining propellers during movement of the machine by said tractor.

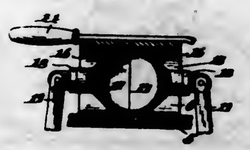
1,421,551. SPRING LUBRICATOR. JAMES F. A. PHILLIPS, Trenton, N. J. Filed Sept. 29, 1921. Serial No. 504,029. 1 Claim. (Cl. 267—50.)

A leaf spring comprising a plurality of leaves contacting with each other throughout their widths, said leaves having drilled therethrough a series of circular longitudinally spaced oil holes each of which extends from one flat side of a leaf to the other, and an oil cup for supplying oil to one of the endmost of the series of oil holes, said cup having a flat discharge end secured directly and integrally to the exposed flat side of one of the leaves around its oil hole to reinforce this leaf and overcome the necessity of weakening the leaf by drilling a relatively large hole therein for attaching the cup; the ends of all of said oil holes except the end communicating with said oil cup being entirely closed by the adjacent spring leaves, whereby the flow of oil is dependent upon the opening and closing action of the leaves during operation of the spring.

1,421,552. REAR BRAKE FOR MOTOR AND OTHER CYCLES. FRITZ PLETSCHER, Lucerne, Switzerland. Filed Sept. 2, 1921. Serial No. 498,025. 3 Claims. (Cl. 192—5.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

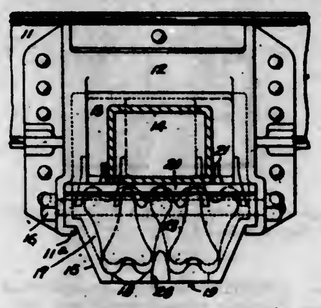
1. In the herein-described brake for motor and other cycles fitted at the rear of the cycle frame and comprising spring-controlled jaws adapted to act on the rim of the hind-wheel, the combination, with the pedals and chain-drive of the cycle, of an intermediate chain-wheel meshing with the driving chain, means to support the said chain-wheel and allow it to rotate in a forward direction only, gearing to connect the movable support with the brake, and means to actuate the gearing and the brake when the pedals are turned in a backward direction, all as and for the purpose set forth.

1,421,553. GUN SIGHT. CHARLES POHL, Los Angeles, Calif. Filed Apr. 21, 1920. Serial No. 375,451. 2 Claims. (Cl. 33—51.)



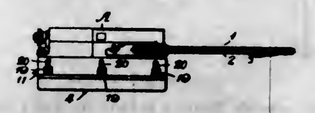
1. A gun sight comprising a bar adapted to be positioned transversely of a gun barrel and formed with a series of sight openings arranged in a row extending on the opposite sides of the center and radially from a point on a line passing through the center of the bar at right angles thereto.

1,421,554. AUXILIARY INLET DEVICE FOR INTERNAL-COMBUSTION ENGINES. CHARLES POHL, Los Angeles, Calif. Filed Aug. 10, 1920. Serial No. 402,587. 3 Claims. (Cl. 251—92.)



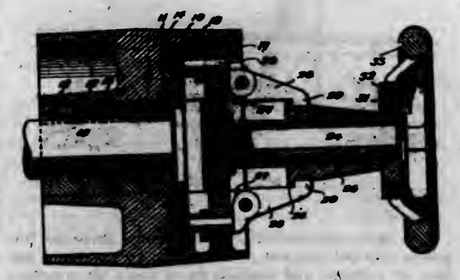
1. In an auxiliary inlet device for internal combustion engines, the combination of a member containing a plurality of intake ports and having an outlet port adapted to communicate with the intake manifold of an engine, and a valve member having two series of ports, the ports of each series being of different diameters and the ports of one series corresponding in diameter with the respective ports of the other series, and said valve member being adjustable to different positions and the ports being spaced so that when the valve member is in some positions ports of like diameter will register with the intake ports and so that when the valve member is in a different position ports of different diameters will register with the intake ports.

1,421,555. POP-CORN MOLD. NATHANIEL B. POST, Chicago, Ill. Filed Oct. 29, 1919. Serial No. 334,131. 6 Claims. (Cl. 107—16.)



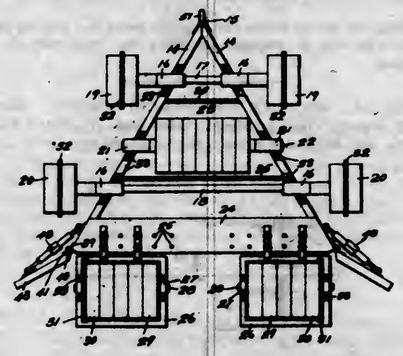
1. A mold comprising a support; a mold member rigidly mounted on said support and provided at one side with a mold recess therein open at its ends; a mold board pivotally mounted on said support to swing into and out of operative position with relation to said first mentioned mold member; a mold member secured to said mold board and provided with a mold recess cooperating with said first named recess to form a mold chamber open at its opposite ends; a pair of oppositely arranged mold heads slidably mounted in said mold chamber; and means for simultaneously forcing said mold heads toward and away from each other, substantially as described.

1,421,556. COUPLING-CENTERING DEVICE. ROBERT E. POWERS, Montreal, Quebec, Canada. Filed Dec. 8, 1920. Serial No. 428,019. 9 Claims. (Cl. 213—42.)



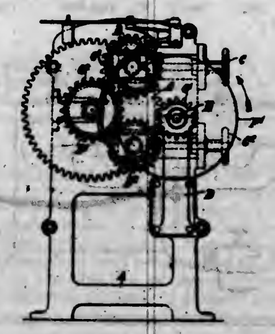
1. A coupler centering device comprising a U shaped throat, a coupler support connected between the arms of the throat, a coupler supporting carriage, rockers supporting the carriage on the support, and a bolt connecting the arms of the throat and holding the support and the rockers.

1,421,557. SUPPORT FOR MINING MACHINES. THOMAS E. PRAY, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed May 6, 1920. Serial No. 379,210. 6 Claims. (Cl. 262—30.)



1. In combination with a mining machine having suitable cutting mechanism for cutting a continuous kerf, an auxiliary support adapted to be connected to said mining machine, to carry the latter with its cutting mechanism at a higher level, said support comprising two members having telescoping side walls, means for adjusting the height of said members, comprising a plurality of lifting devices, and means for actuating said lifting devices simultaneously.

1,421,558. FRICTION-CLUTCH PULLEY. ALOIS L. PREIMESBERGER, Menasha, Wis. Filed July 31, 1920. Serial No. 400,555. 1 Claim. (Cl. 192—68.)

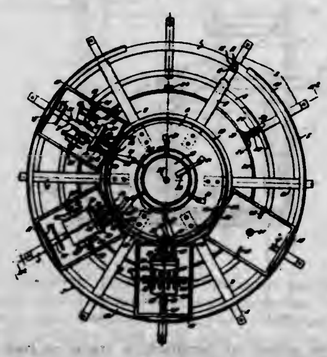


In a friction clutch, a pulley, a plurality of clutch disks associated with the pulley for rotation therewith, a shaft, an additional clutch disk fixed upon said shaft and interposed between the aforementioned disks upon which said pulley is loosely mounted, said pulley including an end wall, a shaft projecting from said end wall, a tapered collar slidable on said second mentioned shaft, means for adjusting said collar, plungers movable in bores provided in said end wall, and levers pivoted upon the end wall and actuated by said collar to move the plungers into engagement with the adjacent disk, whereby all of said disks are operatively associated to fix said pulley to the shaft.

1,421,559. GRADING MACHINE. EDWARD PRENDERGAST, St. Louis, Mo. Filed May 10, 1920. Serial No. 380,019. 4 Claims. (Cl. 37—5.)

1. A grading machine comprising an A frame formed of channels, a plurality of cutter blade sections secured to the underside of the said frame, wheels adjustably carried by the frame and rollers adjustably carried by the frame, and a cutter blade mounted on each side of the rear end of the frame.

1,421,560. MACHINE FOR BREAKING COCOA CAKE OR THE LIKE. WILLIAM HOWARD PRESCOTT, London, England, assignor to Joseph Baker and Sons Limited, London, England. Filed July 16, 1920. Serial No. 396,734. 1 Claim. (Cl. 83—12.)

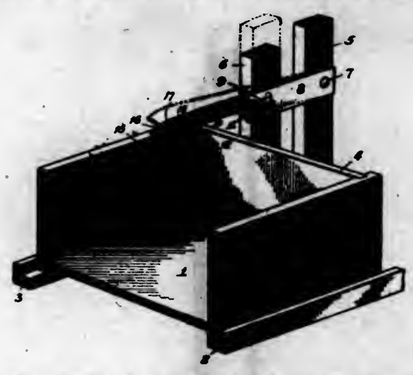


A machine for breaking cocoa cake or like material comprising three toothed rollers disposed with their taxes in three superposed planes and cooperating for passage of the material between them, the first roller cooperating with the second roller, and the second with the third, one of the upper pair of rollers being of a general oval form and section in order that during rotation of said rollers the width of space between said upper pair of rollers is periodically varied.

1,421,561. BATTERY CANDLE. EDWIN PUGSLEY, New Haven, Conn., assignor to The Winchester Repeating Arms Company, a Corporation of Connecticut. Filed Nov. 8, 1921. Serial No. 512,415. 7 Claims. (Cl. 240—8.5.)

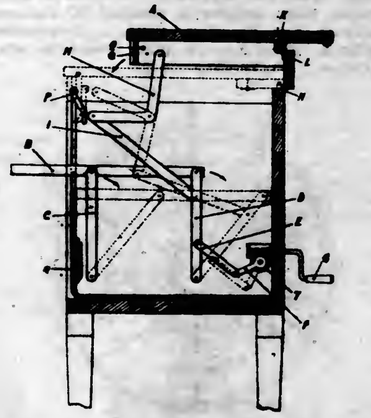
1. In a battery hand lamp, a tubular casing of paper having its front end turned back in a crimp into which an incandescent lamp bulb may be threaded, substantially as described.

1,421,562. TESTING MACHINE. WILLIAM J. RAFTERY, Berkeley, Calif., assignor to Standard Oil Company of California, San Francisco, Calif., a Corporation of California. Filed Apr. 14, 1921. Serial No. 461,187. 10 Claims. (Cl. 73—51.)



1. In a device of the class described, a test tank adapted to contain liquid, a reciprocating member, gripper devices carried by the reciprocating member and adapted to grip the sides of a receptacle to be tested, independent means carried by said member for sealing the filling opening of the receptacle, independent means automatically operating to force the receptacle against said sealing means during the submergence of the receptacle, and means for operating the reciprocating member.

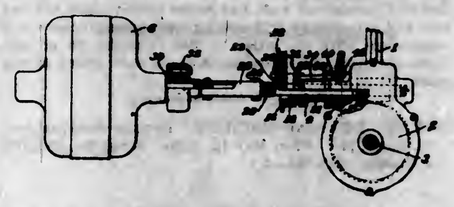
1,421,563. LOCKING MEANS. DANTE A. RAGGIO, Chicago, Ill. Filed Jan. 11, 1919. Serial No. 270,636. 1 Claim. (Cl. 45—64.)



A desk-hook stamped from sheet metal and adapted for use with wooden or other soft material drawers, said hook comprising a strong light-weight body portion hav-

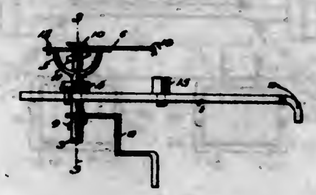
ing a notch or recess in the lower edge thereof adapted to engage and lock the drawer, the forward end of said hook being cam shaped to ride over the edge of the drawer, a portion of the sheet metal forming said hook being bent laterally at substantially right angles to the body thereof

to form an integral continuous flange extending along the drawer engaging edge of the cam and the forward portion of the notch or recess forming the hook, thereby providing a light-weight hook having a continuous wide bearing surface adapted to engage the drawer.



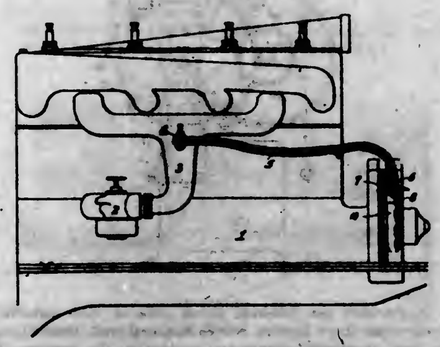
1,421,564. OFFICE DESK. FERNANDO BIANCHI Y RECHE, Madrid, Spain. Filed Feb. 26, 1920. Serial No. 361,508. 2 Claims. (Cl. 45—52.)

1. In an article of furniture, a frame, a leaf loosely pivotally connected to the rear upper side of the frame, a top pivotally connected to said leaf, a bell-crank lever pivotally mounted in the frame and having one of its arms pivotally connected to the upper board, a lower board, levers having their lower ends pivotally mounted in the frame and their upper ends pivotally connected to the lower board, and a link connecting the other arm of said bell-crank lever to one of the last named levers.



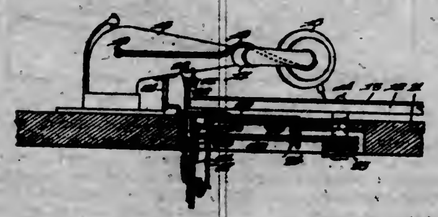
1,421,565. POWER-TRANSMISSION APPARATUS. WALTER C. ESSE, Dalton, Mass. Filed Apr. 19, 1920. Serial No. 374,843. 3 Claims. (Cl. 192—55.)

1. In combination, a shaft, a sleeve rotatably and slidably surrounding it, having a driven stud, a helical driving spring loose on the shaft with one end fastened to the shaft and with its other end free and extending outward from the shaft in direction to engage and disengage freely a body rotating about the shaft's axis and means for



sliding the sleeve along the shaft to move the driving stud into and out of engagement with the free end of the spring.

1,421,566. MACHINE FOR MAKING SPRINGS. REESE D. REESE, Virginia, Minn. Filed Aug. 18, 1920. Serial No. 404,404. 4 Claims. (Cl. 153—64.)



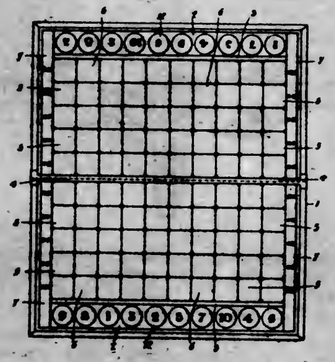
1. A machine of the character described comprising a base plate, a shaft journaled vertically in the said plate and provided at its lower end with a detachable crank, said shaft being forked at its upper end, a disk supported by the arms of the fork substantially parallel with the plate, said disk having a central opening, and a headed pin passing through the opening, said pin having a transverse slot below the plate, and a key engaging the slot, said disk having an annular series of openings near its periphery, and a pin for engaging one of the openings.

1,421,567. GASOLINE AND OIL SAVER. WILLIAM A. RICHEY and CLEM H. ROWLES, Akron, Ohio. Filed Feb. 28, 1921. Serial No. 448,668. 4 Claims. (Cl. 123—119.)

1. An automobile accessory comprising a flexible pipe, a stopcock secured to one end thereof and adapted to be screwed into the intake manifold of an automobile, and a substantially cylindrical cap secured to the other end of the pipe and adapted to be used either as a funnel or as a cap for the breather pipe of the automobile.

1,421,568. APPARATUS FOR RESETTING SOUND REPRODUCERS. JACOB J. RISER, Shelbyville, Ind. Filed Sept. 21, 1921. Serial No. 502,198. 8 Claims. (Cl. 274—15.)

1. The combination with a record holder and a reproducer arm that moves thereover, of a swinging support for moving the reproducer arm over the record holder, said support having a shiftable pivot axis, and means for effecting a shifting movement of the support and its pivot axis to engage the support with the arm and for effecting a swinging movement of the arm to move said arm over the support.



1,421,569. ARTICLE-FEEDING MACHINE. OSCAR N. RITCHIE, Hamilton, and HERMAN C. BOYKIN, Middletown, Ohio, assignors to P. Lorillard Company, New York, N. Y., a Corporation of New Jersey. Filed May 9, 1921. Serial No. 467,986. 10 Claims. (Cl. 271—50.)

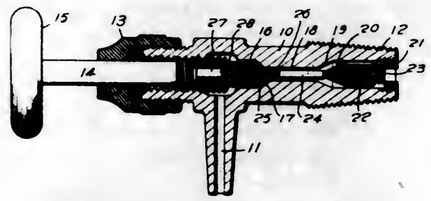
1. In a machine for feeding articles, an endless conveyer provided with a plurality of spaced article engaging elements, feed wheels over which the conveyer is trained, movement of the conveyer being operative to feed the articles in a predetermined path, provisions arranged for receiving the articles from the conveyer to feed the same forward and means for first moving the conveyer in a direction to feed the articles in the said path and for then moving the conveyer in a given direction at an angle thereto to cause the conveyer and the article engaging elements thereon to drop or move below the said predetermined path before rounding a feed wheel, the change in the direction of movement taking place in a region spaced a prearranged distance from the said provisions.

1,421,570. GAME. ALBERT EDWARD DAY'S BAY ROD, Wellington, New Zealand. Filed Jan. 22, 1920. Serial No. 353,297. Renewed May 23, 1922. Serial No. 563,122. 3 Claims. (Cl. 46—64.)

2. Apparatus for playing a game, consisting of a board with parallel trenches at opposite sides, rows of squares parallel with each other and at right angles to the trenches and extending from one of the latter to the other; scoring numerals at the ends of the rows of squares parallel with the trenches, increasing in value from the

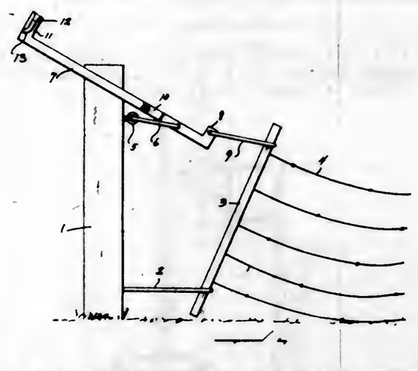
trenches towards the center of the board, and consecutively numbered men for moving on said board.

1,421,571. POWER-OPERATED CHURN. JOHN M. ROSENA, Chicago, Ill. Filed Oct. 3, 1919. Serial No. 328,145. 4 Claims. (Cl. 74—14.)



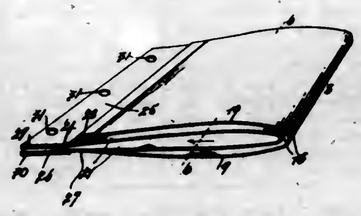
1. An agitating device of the character described comprising a base member, standards extending upwardly from said base member, a base plate supported by said standards, a motor secured to said base plate, a worm driven by said motor, a worm wheel meshing with said worm, a sector gear, a link connecting said worm wheel to said sector gear, a double pinion having two pinions of different diameters, the pinion of smaller diameter meshing with said sector gear, an operated member, and a rack carried by said operated member and meshing with the larger pinion of said double pinion.

1,421,572. VALVE FOR GAUGE COCKS. HENRY W. RYALLS, Thurmond, W. Va. Filed Oct. 11, 1920. Serial No. 416,266. 2 Claims. (Cl. 277—37.)



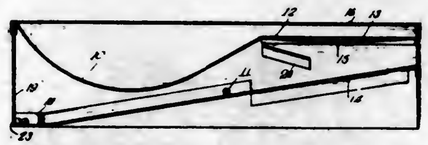
1. A gauge cock having two valves, one being hand movable to its seat and the other being a check valve, the latter consisting of a solid block with a cylindrical portion and a conical end, a groove or grooves extending along the cylindrical portion and opening to the conical

end, and a stem carried by the hand seated valve unconnected with but reaching to said check valve and adapted to engage the small end of the check valve, said



stem being longitudinally adjustable to compensate for changes in the distances between the valve seats from grinding.

1,421,573. GATE FASTENER. HENRY H. SCHAEFER, Weldona, Colo. Filed July 23, 1921. Serial No. 487,040. 5 Claims. (Cl. 292—247.)

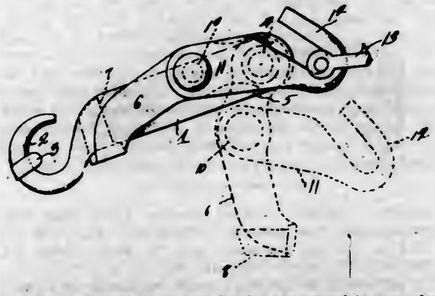


1. In a wire gate fastener, the combination with a support, of a securing member adjustably attached to the support, a locking lever, a link pivotally connected intermediate the ends of the locking lever and pivoted to the securing member to swing about the member as a vertical axis, and a link arranged for connection between a part on the gate and one end of the lever.

1,421,574. DISPLAY BOOK. MORRIS SCHLOSSER, New York, N. Y. Filed Sept. 15, 1921. Serial No. 500,887. 3 Claims. (Cl. 129—20.)

2. A page for a display book consisting of a sheet of suitable material folded over to form pockets, and a fastening element secured to outermost members of each pocket portion at the free ends thereof, the free ends of the innermost members of the pocket portions being unsecured.

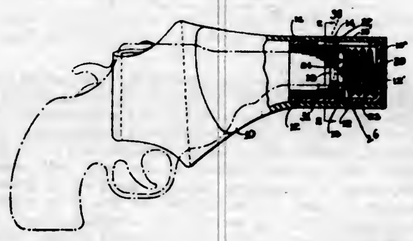
1,421,575. GAME. EDWARD F. SCHMIDT, Chicago, Ill. Filed Dec. 20, 1919. Serial No. 346,293. 6 Claims. (Cl. 46—61.)



1. A game comprising a rollable object, and a floor for said object to roll on comprising a portion inclining downwardly from the starting point, a second portion inclining upwardly therefrom, and a third substantially horizontal portion onto which said object rolls, said third portion being dished, and provided with a plurality of openings into which said object may roll, whereby said object will roll down said first portion, up said second portion, and around on said horizontal portion until it falls into one of said openings.

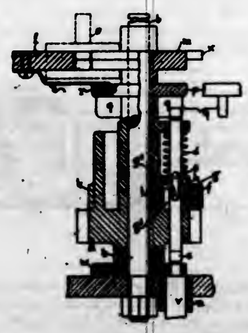
1,421,576. COMPRESSED-AIR RECUPERATOR FOR GUNS. EUGÈNE SCHNEIDER, Paris, France, assignor to Schneider & Cie., Paris, France, a Limited Joint-Stock Company of France. Filed Dec. 28, 1920. Serial No. 433,660. 11 Claims. (Cl. 89—43.)

1. In a recuperator for guns having a stationary part and a movable part, a reservoir attached to one of said parts, a hollow rod attached to the other of said parts and extending within said reservoir, said hollow rod having communication with said reservoir and being adapted to receive a fluid under compression, and means confining the fluid between the inner surface of the reservoir and the wall of said hollow rod, said means comprising a pair of packing members slidably mounted in spaced relation on said rod, one of the packing members being movable with said rod to compress the fluid on rearward movement of the gun and the other packing member being movable with said rod to compress the fluid on forward movement of the gun.



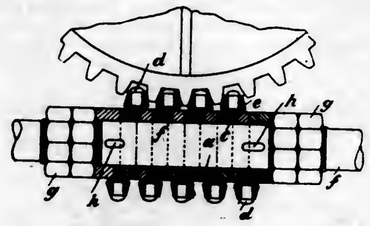
1,421,577. AUTOMOBILE TIRE-CHAIN HOOK. HARRY SCHUCHMAN, Little York, Ill. Filed Mar. 22, 1921. Serial No. 454,464. 1 Claim. (Cl. 24—68.)

A chain securing hook and take up comprising an elongated member having a hook at one of its ends, an operating lever pivoted to the other end of said elongated



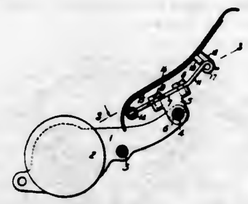
member, a chain receiving hook pivoted to the operating lever at a point spaced from its ends, the free end of said operating lever being provided with an offset arm adapted to receive the elongated member, the operating lever having its inner face provided with a compound curve, the convexed portion of which is disposed adjacent the offset arm of the operating lever and forming means for frictionally engaging the side of the elongated member and holding the operating lever frictionally against displacement.

1,421,578. SAFETY REVOLVER HOLSTER. JOSEPH SCHUSSLER, Bethlehem, Pa. Filed Mar. 25, 1921. Serial No. 455,447. 5 Claims. (Cl. 224—1.)



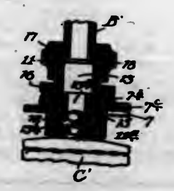
1. In a pistol holster, a locking member adapted to engage the forward sight member of the pistol, and resilient means holding said locking member in engagement with said sight member.

1,421,579. BOBBINET-MAKING MACHINE. OTHMAR SHEBERGER, Brugg, Switzerland. Filed Apr. 13, 1921. Serial No. 460,884. 3 Claims. (Cl. 96—11.)



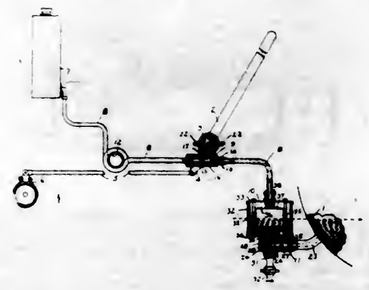
1. A bobbinet making machine of the kind described, comprising a stationary stem, a drive wheel rotatably mounted on said stationary stem, a clutch pin axially slidable in the drive wheel and turning with the same, a pattern mechanism to control the upward movement of the clutch pin, a spring to control the downward movement of the clutch pin, a spring pressed bar radially slidable in the drive wheel and capable of locking the clutch pin in the raised position and of being locked in the inner position by the clutch pin, a projection provided on the drive wheel diametrically opposite the bar, a disc adapted to rotate freely around the said stem and having recesses forming noses to drive the bobbins and having also two diametrically opposite radially extending lugs capable of being engaged by the clutch pin and means for accurately and yieldingly stopping the disc.

1,421,580. WORM FOR WORM GEARINGS. HENRY SEEMANN, Hamburg, Germany. Filed Sept. 3, 1921. Serial No. 498,468. 3 Claims. (Cl. 74—36.)



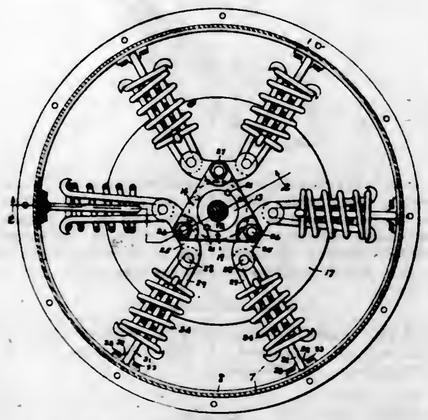
1. A worm for worm gearings, comprising rollers arranged in rows forming the screw threads of the worm, studs forming the pivot pins for the rollers, a series of rings on the shaft of the worm, each ring provided with recesses, each recess registering with a recess of the next following ring to form a circular hole, the pivot studs of the rollers screwed into these holes.

1,421,581. TYPEWRITING MACHINE. GEORGE A. SEIB, Ilion, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed Dec. 10, 1921. Serial No. 521,411. 11 Claims. (Cl. 197—143.)



1. In a typewriting machine, the combination of a carriage, a paper table, and means for detachably connecting the paper table to the carriage, said means comprising a hand released pivoted member which in one pivotal position connects the paper table to its support and in another pivotal position releases the paper table for detachment.

1,421,582. LUBRICATING DEVICE. WENDELIN P. SENO, Chicago, Ill. Filed Dec. 13, 1918. Serial No. 266,575. 12 Claims. (Cl. 137—104.)

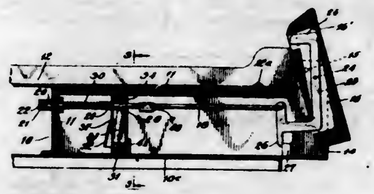


1. In means of the character set forth, the combination of a source of fluid supply, a float-chamber, a conduit from said source of supply, a valve-housing with which said conduit communicates, said valve-housing having a cylindrical passage opening toward the float-chamber, a float fitting loosely in said float-chamber, a spherical headed piston-valve operated by said float and working in closing contact in said cylindrical passage, a chamber wherein a working level of fluid is to be maintained, and a discharge-conduit for conducting fluid from the float-chamber to said last-named chamber.

1,421,583. OILING DEVICE. WENDELIN P. SENG, Chicago, Ill. Filed Oct. 10, 1919, Serial No. 329,836. Renewed Nov. 25, 1921. Serial No. 517,811. 13 Claims. (Cl. 184—103.)

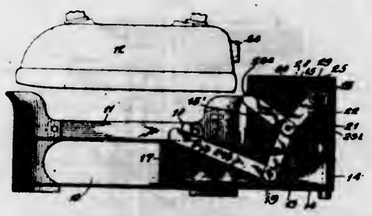
3. The combination with an engine having an oil containing crank case, of a float controlled feed therefor, and means intermediate the feed and the crank case for automatically shutting off the oil feed flow therein when the engine is inclined in either direction from its normal horizontal position.

1,421,584. RESILIENT WHEEL. HOMER R. SHAFER, Detroit, Mich. Filed Jan. 19, 1921. Serial No. 438,314. 4 Claims. (Cl. 152—44.)



1. In a resilient wheel, the combination of a hub member, a series of equally spaced pins mounted on the hub member parallel to the axis thereof, a lever mounted on each pin, an outer cylindrical portion of the wheel, and resilient tension members extending in the same plane from both ends of the levers at equal distances from the pivots thereof radially to the outer cylindrical portion.

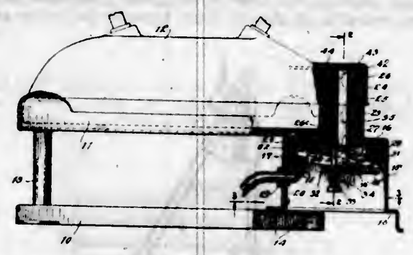
1,421,585. CONCENTRATION OF ORES BY FLOTATION. GUY E. SHERIDAN and GEORGE G. GRISWOLD, Jr., Butte, Mont. Filed Jan. 13, 1921. Serial No. 437,030. 21 Claims. (Cl. 83—85.)



1. A process of concentrating by flotation an ore containing lead sulfide and one or more other metallic sulfides including iron sulfide which comprises treating the ore with a cyanide and an alkaline salt, and subjecting the thus treated ore to a flotation operation whereby the lead sulfide is in large part recovered in the resulting froth and the flotation of the iron sulfide is in large part inhibited.

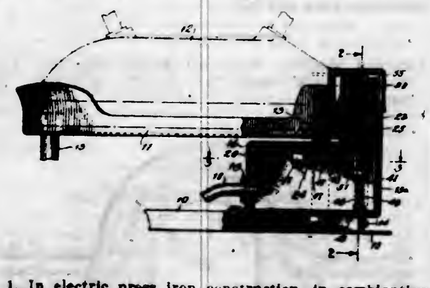
1,421,586. STAND AND AUTOMATIC SWITCH FOR ELECTRIC IRONS. ART J. SHIRK and SOLOMON COHEN, New York, N. Y., assignors to Abraham S. Iserson, New York, N. Y. Filed Jan. 28, 1920. Serial No. 354,616. 11 Claims. (Cl. 219—25.)

1. In combination with an electric sad iron having contacts thereon, an electric heating stand having electrical contact members for said contacts, and means adapted to be operated by the iron when being placed in position on the stand to connect said contact members to the electric supply and to said contacts on the iron, said means comprising a conducting member carrying a contact member, a circuit making member for the latter pivoted below said conducting member and a spring member secured at one end to said circuit making member below the pivotal center thereof and at the other end to said conducting member, whereby a lateral displacement of said conducting member snaps said circuit making member into and out of contact with said contact member on said conducting member.



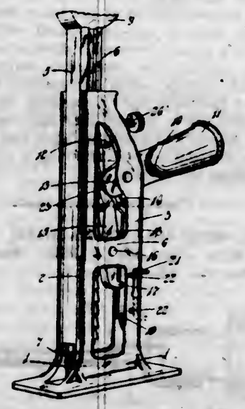
1,421,587. ELECTRIC PRESS IRON. ART J. SHIRK and SOLOMON COHEN, New York, N. Y., assignors to Abraham S. Iserson, New York, N. Y. Filed Mar. 6, 1920. Serial No. 363,913. 3 Claims. (Cl. 219—25.)

1. In an electric heating stand for sad irons and the like, a support for the iron, an actuating member extending normally above the surface of said support, said actuating member adapted to be adjusted to be operated by different weights of iron when placed in position on the support, a contact making arm, means for transmitting motion from said actuating member to said contact making arm whereby the latter connects the electric circuit to the iron, and means for normally maintaining said actuating arm above the support in position to be operated by the iron.



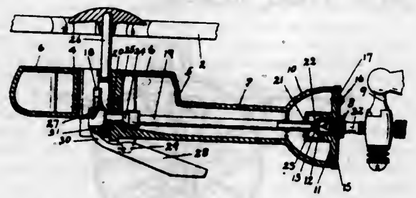
1,421,588. ELECTRIC PRESS IRON. ART J. SHIRK and SOLOMON COHEN, New York, N. Y., assignors to Abraham S. Iserson, New York, N. Y. Filed Apr. 1, 1920. Serial No. 370,496. 5 Claims. (Cl. 219—25.)

1. In an electric heating stand for electric irons and the like apparatus, an automatic switch for connecting the electric supply to the iron comprising a pair of contact members connected to the electric supply, a pair of switch members, actuating means for said switch members adapted to electrically connect the same to said contact mem-



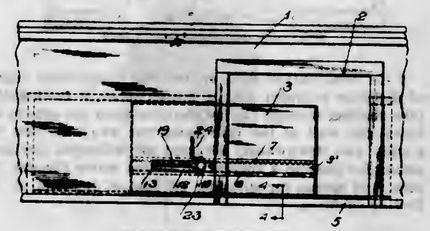
bers, and means for preventing the operation of one of said switch members independently of the other.

1,421,589. ELECTRIC PRESS IRON. ART J. SHIRK and SOLOMON COHEN, New York, N. Y., assignors to Abraham S. Iserson, New York, N. Y. Filed May 4, 1920. Serial No. 378,750. 18 Claims. (Cl. 219—25.)



1. In electric press iron construction, in combination, an iron, a stand, means adapted to lead current from said stand to said iron, comprising a contact member on said iron and a co-acting contact on said stand adapted to embrace and resiliently grip said first contact.

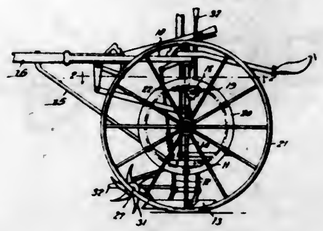
1,421,590. LIFTING JACK. ALBERT SHRIEVES and HENRY EDWIN SHRIEVES, Sutton Coldfield, England. Filed June 4, 1920. Serial No. 386,422. 1 Claim. (Cl. 254—111.)



In a lifting jack, a frame, a rack vertically movable therein, a lever pivotally mounted in the frame, a pawl for engaging the rack and pivotally connected to said lever, a second pawl below the lever, for engaging the rack, means coacting with said lever to operate said second pawl, and an adjustable abutment member mounted in the frame and arranged for engagement with and disengagement from the first named pawl, to cause the said pawl to engage the rack earlier in the operative movement or to take up wear in the parts, and to also enable the jack to be locked in any position.

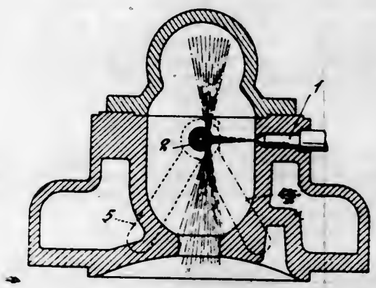
1,421,591. GAS BURNER. EDWIN H. SHULER, Lansing, and MAX C. SHULER, Charlotte, Mich. Filed Aug. 11, 1921. Serial No. 491,536. 8 Claims. (Cl. 126—52.)

1. In a structure of the class described, the combination of a grid, a main burner disposed below the grid and provided with a Bunsen tube and a nozzle delivering thereto having a valve seat at its inner end, a pilot burner operatively associated with said main burner, a pilot burner supply tube carrying said pilot burner and mounted to reciprocate longitudinally in said Bunsen tube and through the wall at the inner end thereof, said supply tube being provided with a packing valve coacting with a seat in the wall surrounding the tube, and with a nozzle valve at its outer end coacting with the valve seat in said nozzle to control the delivery of gas to the main burner and an inlet opening registering with the nozzle opening when said nozzle valve is closed permitting the passage of gas to the pilot burner, a valve actuating member mounted on said burner to reciprocate vertically and adapted to be actuated by an object placed on said grid, a link connecting said valve actuating member to said pilot burner, and a weight pivotally mounted on said main burner for returning said valve actuating member to its initial position and provided with an arm engaging the pilot burner when the said actuating member is in its normal position whereby said nozzle valve is held in its seat by said weight.



1,421,592. GRAIN-CAR DOOR. JURGEN SIEMSEN, Broken Bow, Nebr., assignor to Berton C. Empfield, Broken Bow, Nebr. Filed Nov. 17, 1921. Serial No. 515,891. 4 Claims. (Cl. 265—7.)

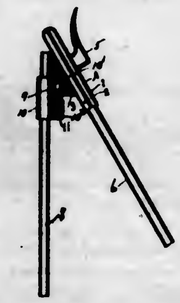
1. A car having a doorway, a door slidable into and out of position for closing the doorway, actuating means for the door including a bracket carried by the wall of the car and having an outstanding arm, a rotatable shaft extending through the wall of the car, a turning and locking bar loosely mounted upon said shaft and movable longitudinally thereof from a position permitting free swinging of the bar upon the shaft to a position causing rotation of the



shaft when the bar is swung, the bar when in the first position being movable longitudinally of itself to bring its free end into and out of engagement with the outstanding arm of the bracket, the bar when engaged with the outstanding arm being held against swinging movement upon the shaft, and means for releasably holding the bar in the second mentioned position upon the shaft to hold the shaft against turning when the bar is in engagement with the arm of the bracket.

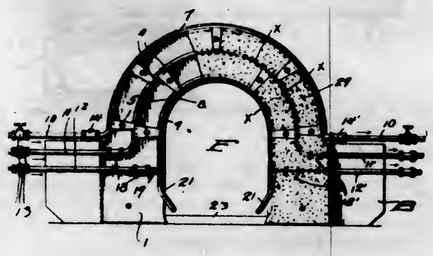
1,421,593. CULTIVATOR ATTACHMENT. MILFORD R. SIMS, Saunemin, Ill. Filed May 1, 1920. Serial No. 378,140. 2 Claims. (Cl. 55—64.)

1. A weed destroying attachment for a surface cultivator including earth working elements for lifting weeds, stationary cutting elements adjacent the earth working elements, and rotary cutting elements cooperating with the stationary cutting elements and mounted to initially lift the weeds from the earth working elements to the stationary cutting elements to sever the same.



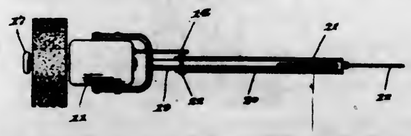
1,421,594. INTERNAL-COMBUSTION ENGINE. ANTON IVERSEN SLETTEN, Christiania, Norway. Filed June 16, 1920. Serial No. 389,354. 2 Claims. (Cl. 123—32.)

1. In combination with an internal combustion engine of the type provided with a hot chamber, a thick-walled tube running through the hot chamber from one side to the other, the wall of the tube being cut away to form upwardly and downwardly directed oil deflecting surfaces, means for passing a current of cooling water through the tube, and means for spraying oil against the said oil deflecting surfaces.



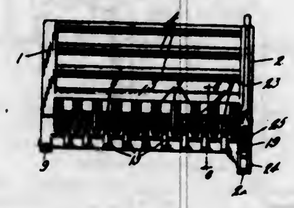
1,421,595. EASEL FOR FLORISTS' USE. CHARLES SMITH, Providence, R. I. Filed Mar. 11, 1922. Serial No. 543,041. 7 Claims. (Cl. 248—41.)

5. In an easel the combination of a clamping member pierced in its lower portion and having at its inner edge a lateral extension and a laterally directed threaded shank, a nut engaging said shank, a holder for one leg of the easel the same consisting of a tubular body open at one side throughout its length, and having laterally extending wings disposed on each side of said opening and spaced a distance apart laterally and longitudinally, said wings pierced, a bolt engaging the pierced upper wings of the holder and



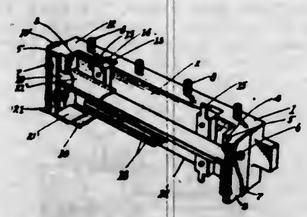
the pierced lower portion of the clamping member to thereby form a hinge pivot, an easel leg held in said holder and means engaging said pierced lower wings to thereby clamp said holder upon said leg.

1,421,596. CHILL. WILLIAM I. SMITH, Gary, Ind. Filed Dec. 10, 1918. Serial No. 266,079. 1 Claim. (Cl. 122—65.)



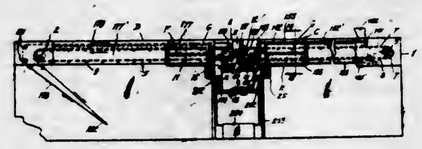
In a furnace of the character described, the combination with an arched hearth wall having a flue, an inner face fixed to the outer face of said wall, a curved tube pipe skirting the extreme inner and outer edges of said plate, a curved tube pipe and a plurality of radially disposed spacing blocks between the outer and inner chill pipe for maintaining the same in parallel, spaced relation, said inner pipe having a lateral, outwardly directed extension at each end and a straight pipe connection continuing from each of said ends and extending horizontally within said flue, supply and discharge pipes connecting the ends of the respective chill pipes, an auxiliary pipe cooling section between the supply and discharge pipes and valve controlled means for introducing and receiving a continuous flow of water through the system.

1,421,597. SHOE-SHINING MACHINE. JAMES SMYTHE, Dines, Wyo. Filed Jan. 5, 1921. Serial No. 435,137. 1 Claim. (Cl. 15—36.)



In a shoe polishing machine, a motor, a rod secured to said motor, a connector rod, the first mentioned rod being pivoted to said connector rod inwardly from one of its ends, said connector rod being arcuate in cross section to receive and accommodate the first mentioned rod when in one position, and a shoe cleaner operated by said motor.

1,421,598. SHAKER GRATE. SAMUEL H. SORRELL, Ashland, Ala. Filed Apr. 13, 1921. Serial No. 460,917. 3 Claims. (Cl. 126—173.)



1. In a device of the class described, a frame embodying front posts, a front bar connecting the posts, a back piece, and grate bars connecting the front bar with the back piece; a shaft mounted to rock on the back piece; fingers carried by the shaft and located between the grate bars; a lever mounted to swing on one post; and a link forming a connection between the lever and the shaft, the said post having an opening for the reception of the link.

1,421,599. WOODWORKING TOOL. SIGVARD SORENSON, St. Paul, Minn., assignor of one-half to Arie Vollegraaf, St. Paul, Minn. Filed Oct. 24, 1921. Serial No. 510,001. 2 Claims. (Cl. 145—31.)

2. In a wood working tool of the class described, the combination, a long stock recessed intermediate its ends to form transverse parallel end walls, a groove parallel with the bottom of said recess, in the inner vertical face of each of said end walls adjacent the outer edge thereof, a plurality of spreader bars adapted to be superposed upon one another, fitting slidably endwise between said end walls and extending slidably into said grooves, so as to be flush with the outer edges of said walls, a plate extending between said end walls, so as to form a wall on one side of salid recess, a detachable plate similar to said first named plate forming a wall on the opposite side of said recess, clamping means for detachably clamping said last named plate to said stock, and saw blades superposed in alternate order with said spreader bars, the teeth thereof projecting beyond the outer edge of the latter, said blades extending between said end walls, so that they may be inserted, from a position in front of said spreader bars, sidewise between said walls, and edgewise between said spreader bars, said superposed spreader bars and saw blades extending when assembled, into contact with said last named plate, to be clamped together, thereby, in the process of clamping said plate to said stock.

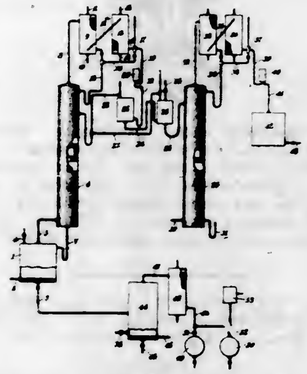
1,421,600. METHOD OF MAKING CONFECTIONS. CLIFFORD P. SPECK, Oakland, Calif. Filed May 17, 1920. Serial No. 381,848. 5 Claims. (Cl. 107—54.)

1. The method of making confections which consists in depositing a charge of confection forming material in a plastic condition into a mold through an opening therein, then forming a shell thereof having an open end, by forcibly distributing the plastic material over the inner wall of the mold by injecting an air blast into the mold through its opening, then supplying the formed shell through the opening therein with a charge of filling material, then closing the opening in the shell forming material and causing the same to unite with the edges of the shell opening, and then discharging the formed confection from the mold through the opening through which the material was supplied thereto.

1,421,601. CONFE. TION MOLD. CLIFFORD P. SPECK, Oakland, Calif. Filed June 21, 1921. Serial No. 479,208. 11 Claims. (Cl. 107—8.)

2. An expansible mold, comprising a cupped mold member consisting of a plurality of co-operating sections permanently associated together, a stem mounting said sections, a guide within which said stem is longitudinally movable, and means associated with said stem and guide for causing a separation of said mold sections on longitudinal movement being imparted to said stem in one direction.

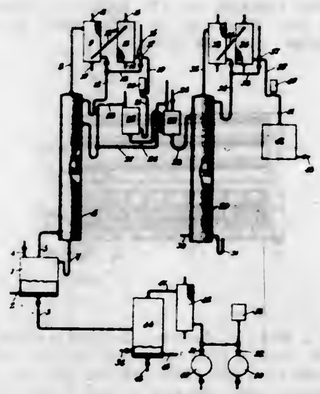
1,421,602. KNITTED CAP. BENJAMIN SPECTOR and LOUIS E. ROSENBERG, Brooklyn, N. Y. Filed Dec. 23, 1920. Serial No. 432,668. 3 Claims. (Cl. 2—106.)



1. A knitted cap comprising a flat strip of fabric of herring-bone weave having pairs of oppositely inclined transverse areas interposed between single oppositely inclined transverse areas of greater longitudinal extent throughout the length of the strip, the ends of said strip and the irregular upper margin thereof being secured together to form the back and top of the cap.

1,421,603. MEANS FOR SUPPORTING SIGNS OR SIMILAR ARTICLES. HOWARD M. STANTON, Indianapolis, Ind. Filed Feb. 3, 1921. Serial No. 442,056. 6 Claims. (Cl. 40—125.)

1. The combination of a supported member having a pair of guide ways extended therethrough and at an angle to each other, and a pair of supporting legs projecting through said guide ways which guide ways permit only relative linear movement of the legs, said legs having their bottom ends imbedded in the ground and held by the ground against lateral and angular relative movement and in a desired spaced relationship, the vertical movement of said member on said legs in either direction being prevented solely by the angular spaced relationship of said legs maintained by the ground.

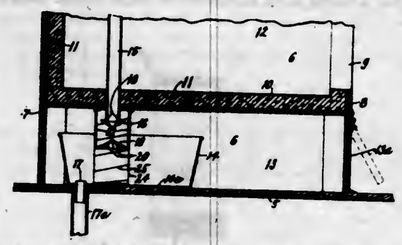


1,421,604. PROCESS FOR THE MANUFACTURE OF ESTERS. JOHN A. STEFFENS, Baltimore, Md., assignor to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed Apr. 5, 1921. Serial No. 458,837. 25 Claims. (Cl. 260—106.)

14. The process which comprises esterifying an alcohol and an acid in the absence of a catalyst and in the presence of a third liquid miscible with the alcohol but substantially immiscible with water, while removing from the reaction mixture vapors of water, the alcohol and the third-liquid, rectifying said vapors, separating the condensate into two liquid layers, containing respectively high and low percentages of the third liquid, subjecting the liquid layer containing the low percentages of the third liquid to washing to remove said liquid therefrom, and rectifying the remaining liquid containing water and the alcohol.

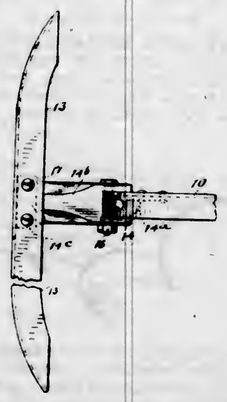
1,421,605. PROCESS FOR MANUFACTURING ESTERS. JOHN A. STEFFENS, Baltimore, Md., assignor to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed Apr. 5, 1921. Serial No. 458,838. 25 Claims. (Cl. 260—106.)

14. The process which comprises esterifying an alcohol and an acid with a catalyst in the presence of a third liquid miscible with the alcohol but substantially immiscible with water, while removing from the reaction mixture vapors of water, the alcohol and the third liquid, rectifying said vapors, separating the condensate into two liquid layers, containing respectively high and low percentages of the third liquid, subjecting the liquid layer containing the low percentage of the third liquid to washing to remove said liquid therefrom, and rectifying the remaining liquid containing water and the alcohol.



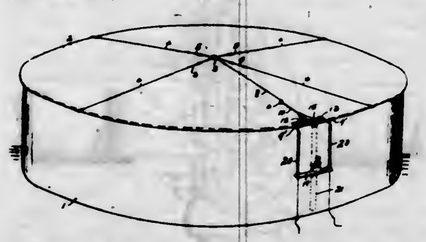
1,421,606. FUEL VAPORIZING AND ECONOMIZING APPARATUS. CECIL VINCENT STEVENSON, Sydney, New South Wales, Australia, assignor of five-eighths to Thomas Ernest Rofe, Sydney, New South Wales, Australia, and three-eighths to Sidney Le Fevre Varvel, Wahroonga, near Sydney, New South Wales, Australia. Filed Feb. 28, 1921. Serial No. 448,542. 12 Claims. (Cl 219—38.)

1. A vaporizing and fuel economizing apparatus for internal combustion engines comprising, an electrical resistance heating coil disposed in the path of the fuel charge, a gauze screen co-acting with said coil to radiate heat and further functioning to atomize the fuel and protect the vaporized fuel against contact with said coil, and means for admitting additional air and directing same over said coil to the fuel charge.



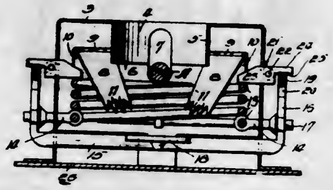
1,421,607. REFRIGERATOR ATTACHMENT. CARL F. STIEL, St. Paul, Minn. Filed July 25, 1921. Serial No. 487,561. 5 Claims. (Cl. 62—73.)

1. In a device of the class described, a longitudinally compressible tube of absorbent material, yieldable means within the tube for holding it expanded and normally in vertical position about the drip pipe of a refrigerator, with one end in contact with the under side of the bottom of the cooling chamber of the refrigerator and the other end resting upon the bottom of a drip pan below the drip



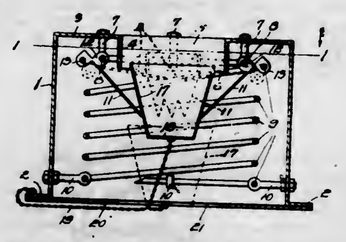
pipe, and means within the compressible tube for spreading the dripping water against the inner side of said tube, for the purpose set forth.

1,421,608. COMBINED SPRING HORN AND BUMPER SUPPORT. WILLIAM R. STRICKLAND, East Cleveland, Ohio, assignor to The Peerless Motor Car Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 10, 1921. Serial No. 443,812. 6 Claims. (Cl. 293—55.)



1. In an automobile having a chassis frame and front springs, a unitary combined spring horn and bumper support attached to the forward end of the chassis frame at each side, and having integral bumper supporting arms projecting forwardly from the frame, and a bumper attached to said arms.

1,421,609. MOVABLE PAINTER'S PLATFORM. EARL J. STURM and MORRIS SUENSON, Houston, Tex., assignors of one-third to A. M. Bowman, Houston, Tex. Filed Jan. 20, 1920. Serial No. 352,670. 2 Claims. (Cl. 304—17.)

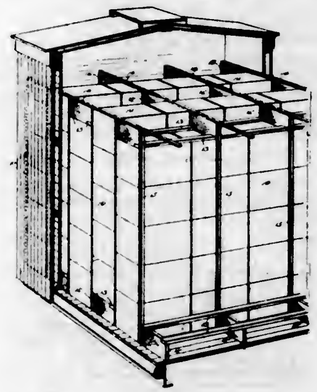


1. A device of the character described including a framework, composed of side members, carrier wheels upon which the framework is mounted, a laterally extending arm carried by the framework, an anti-friction roller carried by the free end of said arm, a stay rod, one end of which is attached to the free end of said arm, a spindle, cables for securing said spindle at the center of a circular roof, the other end of said rod being attached to said spindle said stay rod being adapted to retain said device in position to be supported by said carrier wheels engaging the margin of said roof, a platform, means suspending said platform from said framework through which the platform may be elevated and lowered and a mechanism through which one of said carrier wheels may be rotated to move said device around said margin.

1,421,610. GAME TRAP. MARTIN J. SVEHLA, Sutherland, Iowa. Filed Nov. 22, 1920. Serial No. 425,704. 4 Claims. (Cl. 43—88.)

1. In a trap of the class described, comprising a hollow case having a central opening in the top thereof, hinged jaw members arranged in opposed pairs having pronged inner ends, a coiled spring supported within the case, means for compressing the spring to permit setting of the jaw-members, means for holding the spring in its compressed position, and means adapted to be stepped upon by the foot of an animal for releasing the spring from its compressed position so that it will act against the jaw-members and close them in upon and firmly engage the leg of the trapped animal until released by the trapper.

1,421,611. GAME TRAP. MARTIN J. SVEHLA, Sutherland, Iowa. Filed Nov. 22, 1920. Serial No. 425,705. 3 Claims. (Cl. 43—88.)

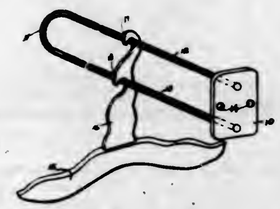


1. In a trap of the class described, comprising a hollow case having a central opening in the top thereof, hingedly supported jaw-members having pronged inner ends arranged in opposed pairs within the case, a plunger for setting and releasing the jaw-members, spring means acting upon the jaw-members after being released from engagement with the plunger, and means to limit the upward movement of the pronged ends of said jaw-members.

1,421,612. LOAD BRACING AND VENTILATING DEVICE FOR VEHICLES. GEORGE SYKES, San Francisco, Calif., assignor of one-half to Thomas B. Blackburn and one-half to Charles F. Potter, both of Los Angeles County, Calif. Filed Mar. 18, 1922. Serial No. 544,893. 8 Claims. (Cl. 105—373.)

1. The method of arranging fruits and other vegetable products in the natural state for shipment in vehicles,

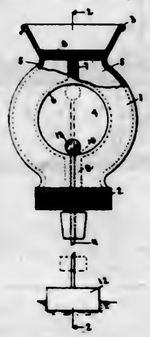
which consists in dividing the load of crated goods in transverse load parts by light frame members and adding members for transmitting from each of said parts to the



end portions of the vehicle strains longitudinal with respect to the latter, whereby each part is protected from force developed in other parts of the load.

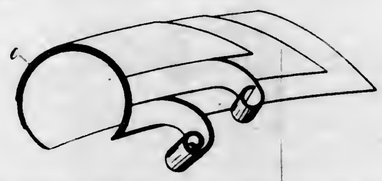
1,421,613. PROCESS OF TREATING TEXTILE AND OTHER FABRICS, THREAD, YARN, AND THE LIKE. JOKICHI TAKAMINE, New York, N. Y., and JOKICHI TAKAMINE, Jr., Clifton, N. J. Filed Oct. 8, 1920. Serial No. 415,519. 11 Claims. (Cl. 8—2.)

1. The process of treating textiles for the removal therefrom of starches, gums and other substances, which comprises subjecting the textile to a bath containing proteolytic and diastatic enzymes, and permitting said enzymes to act on said substances to dissolve the same, and then washing the textile in water.



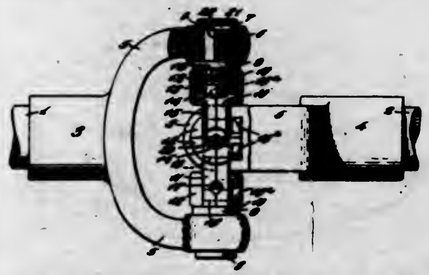
1,421,614. GARMENT HANGER. HERMAN TAUBMAN, Sturgeon Bay, Wis. Filed Sept. 27, 1920. Serial No. 412,992. Renewed May 19, 1922. Serial No. 562,267. 7 Claims. (Cl. 211—13.)

2. A hanger comprising a cross-bar of wood; and a hook member connected thereto by means of a barbed tongue and an auxiliary tongue on said hook member driven into the cross-bar, substantially as described.



1,421,615. WATER GAUGE FOR AUTOMOBILE RADIATORS. THOMAS I. TAYLOR, Newton, Mass., assignor to Taylor Machinery Company, Boston, Mass., a Corporation of Massachusetts. Filed June 14, 1921. Serial No. 477,367. 6 Claims. (Cl. 73—82.)

1. A water level indicator comprising a member supportable from the filling opening of an automobile radiator and having an opening transversely therethrough, and also having a water passage in the wall bounding such opening, a float adapted to be supported by water in the radiator,



and an indicator exposed within the opening of said member in operative connection with said float to be raised and lowered by corresponding movements of the latter.

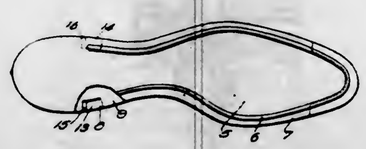
1,421,616. METHOD OF MAKING LINERS FOR REENFORCING THE COVERS OF PNEUMATIC TIRES. WILLIAM HENRY ALEXANDER THEED, South Kensington, and ARTHUR THOMAS PHILLIPS, Hammersmith, England. Filed June 3, 1920. Serial No. 386,384. 1 Claim. (Cl. 154—14.)

The process of making liners for reenforcing the covers of pneumatic tires from old or disused covers of such tires consisting in removing the beaded or thickened edges and the tread of the cover, cutting the foundation of the cover across so as to form an open ended band, and scarfing or stepping both the sides and the ends of the band by cutting and stripping successive layers of the fabric forming the foundation, substantially as herein described.

1,421,617. UNIVERSAL JOINT. WILLIAM H. THIEMER, Cleveland, Ohio, assignor to The Peters Machine and Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 20, 1919. Serial No. 305,643. 3 Claims. (Cl. 64—102.)

3. In a universal joint, the combination of a pair of yokes each having arms provided each with a bore, a

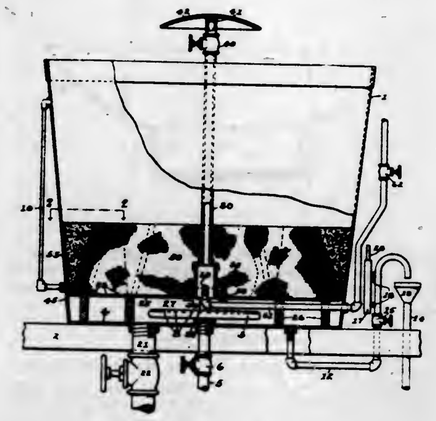
trunnion mounted in each bore and having a pin or stud projecting inwardly therefrom, a two-part connecting member having bores provided between the two parts thereof adapted to receive said pins or studs, and means for securing together the two parts of said member and for preventing rotation of said pins or studs with respect to said connecting member.



1,421,618. STRIP OR SHEET METAL STRUCTURE. ALBERT PETER THURSTON, London, England. Filed Jan. 6, 1920. Serial No. 349,788. 16 Claims. (Cl. 189—37.)

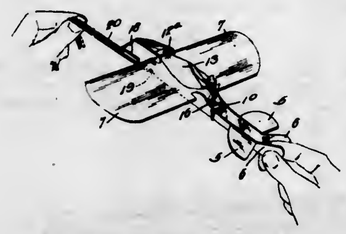
1. A strip or sheet metal structure of substantially I-girder section consisting of corrugated webs connected to corrugated flanges and hollow closed tubular portions connected and disposed along the edges of the flanges.

13. As an article of manufacture a strip or sheet metal structure of substantially I-girder section having longitudinal extending closed hollow portions on the flanges and on the web members.



1,421,619. INSOLE. LAURENCE E. TOPHAM, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 14, 1918. Serial No. 249,857. 10 Claims. (Cl. 36—22.)

3. A manufactured insole comprising a layer provided with a marginal sewing-rib forming a sewing-surface, a sock-surface layer and a central body-layer, said body-layer being cut away at an end portion of the insole between the sewing-rib and the edge of the insole permitting the sewing-layer at this point to lie in contact with the sock-surface layer.

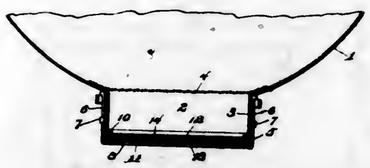


1,421,620. APPARATUS FOR THE EXTRACTION OF GLUE, GELATIN, AND THE LIKE. FREDERIC H. TUNNELL, Philadelphia, Pa. Filed Dec. 10, 1920. Serial No. 429,606. 2 Claims. (Cl. 87—7.)

1. An apparatus for the extraction of glue, gelatin and the like comprising an open tank having a perforated false floor spaced from the bottom and sides thereof, a standpipe extending from said floor to a point above the top of the tank and having openings and a deflecting means adjacent its upper extremity, means for withdrawing liquid from the tank, heating means between said false floor and the bottom of said tank, a screen disposed around the peripheral edge of the false floor and inwardly

inclined with respect thereto, and means adjacent the bottom of said standpipe adapted to direct a column of fluid upwardly therein.

1,421,621. TOY AEROPLANE. JOHN C. VAN ETTEN, Portland, Oreg. Filed May 24, 1920. Serial No. 383,717. 10 Claims. (Cl. 244—12.)

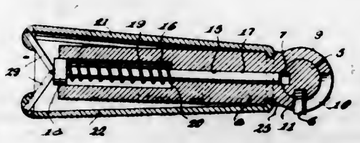


2. In a toy aeroplane, the combination of a fuselage, a wing or supporting surface at the forward portion of the fuselage and provided with a rearwardly projecting part extending between the walls of the fuselage, said part having its terminal portion bent upwardly to provide a pocket, means for securing the wing or supporting surface to the fuselage in the position named, and a parachute releasably secured on said supporting surface by said means, the parachute weight being supported in said pocket.

1,421,622. STRAINER FOR MILK CANS, PAILS, AND THE LIKE. NORMAN J. VAN NESS, Wysox Township, Bradford County, Pa. Filed Mar. 27, 1920. Serial No. 369,229. 1 Claim. (Cl. 210—158.)

A filling funnel for milk cans having a discharge neck, a cap fitted upon the neck and formed with a discharge opening and an inturned horizontal flange surrounding said opening and underlying the edge of the neck, a strainer resting against said flange and composed of upper and lower layers of wire gauze, and an intermediate layer of absorbent cotton disposed therebetween, an elastic gasket sealing the joint between the side wall of

the cap and the edge of the neck, said gasket being of greater width than the thickness of the neck and being arranged in parallel relation to the flange of the cap and coextensive in width with said flange and disposed between

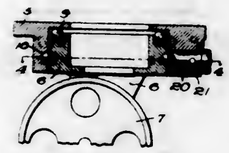


the edge of the neck and said strainer, and means connecting the cap with the neck whereby the strainer may be clamped with a variable yielding pressure between said flange of the cap and the gasket.

1,421,623. FLEXIBLE SHAFT AND METHOD OF MAKING SAME. CURTIS HUSSEY VEEDER, Hartford, Conn., assignor to The Veeder Manufacturing Company, Hartford, Conn., a Corporation of Connecticut. Filed Feb. 16, 1921. Serial No. 445,333. 4 Claims. (Cl. 29—148.2.)

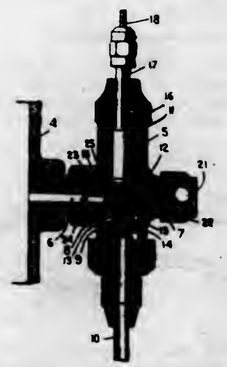
1. The improvement in the manufacture of coiled wire flexible shafts which consists in placing on the shafting a closely fitting tube and thereafter swaging the tube and the shafting to polygonal form.

1,421,624. SAFETY CRANK FOR INTERNAL-COMBUSTION MOTORS. SPENCER C. WAITS, Pine Bluff, Ark. Filed May 26, 1921. Serial No. 472,838. 5 Claims. (Cl. 74—33.)



1. In a safety crank for internal combustion motors, a crank element, a handle having an eye rotatably mounted on the crank element, means for limiting the oscillatable movement of the handle on the said element, means for returning the handle to a normal position, hand engaging devices operated by pressure due to the grasping of the handle, a bolt for connecting the handle to the crank element, means for communicating the motion of the hand engaged portions of the said bolt, and means for retracting the bolt when the hand engaged elements are released.

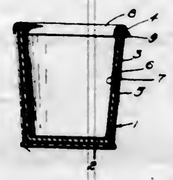
1,421,625. PAINT AND PROCESS OF MAKING SAME. CLARENCE A. WARD, Brooklyn, N. Y. Filed Feb. 11, 1920. Serial No. 357,892. 4 Claims. (Cl. 134—39.)



3. A paint comprising a vehicle, a pigment and a mixture of aluminum and zinc stearates intimately mixed with said pigment and suspended in the vehicle.

1,421,626. CASTER. AMOS W. WARNOCK, Everett, Mass., assignor to Economic Steel Rack Company, Everett, Mass., a corporation of Massachusetts. Filed Oct. 9, 1920. Serial No. 415,711. 5 Claims. (Cl. 16—21.)

4. A caster having a housing providing a recess therein, one side of a ball race in the housing adjacent said recess, a swivelling frame having a projecting portion loosely fitting said recess, the other side of said ball race in said projecting portion, and a series of balls in said ball race providing a lateral ball bearing, said housing and said frame also providing bearing surfaces for an annular thrust ball bearing, said thrust ball bearing of smaller effective diameter than said recess and said lateral ball bearing of substantially the same effective diameter as said recess.



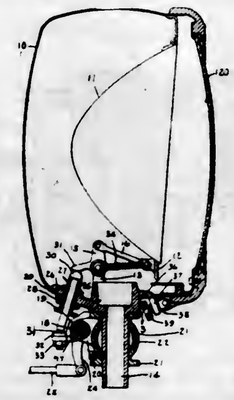
1,421,627. PRIMER FOR INTERNAL-COMBUSTION ENGINES. HAROLD D. WATERHOUSE, Quincy, Mass., assignor, by mesne assignments, to Walter S. Crane, Joshua Crane, and Frank V. Stone, trustees. Filed Dec. 17, 1917. Serial No. 207,592. 8 Claims. (Cl. 123—180.)

1. A primer for internal combustion engines comprising a valve device having an air passage which is contracted at some portion of its length and is adapted to be registered by operator controlled means with the intake pipe of the engine, a gasoline supply duct which is arranged to communicate with said contracted portion, said valve device constituting means to open and close said passage and duct.

1,421,628. SANITARY WASTE BASKET. DWIGHT EVERETT WATKINS, Galesburg, Ill. Filed Sept. 8, 1919. Serial No. 322,411. 2 Claims. (Cl. 220—65.)

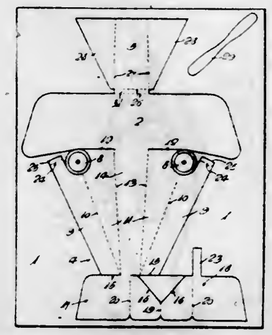
1. A basket comprising a supporting frame, the sides thereof being formed of spaced rods, a waterproof receptacle detachably mounted within said frame and having the upper marginal edge thereof extending upwardly of the tops of said frame rods, a substantially U-shaped ring member adapted for detachable disposition over the upper marginal edge of said receptacle to overlap the same

adjacent the tops of said frame rods, said ring member having transversely spaced apertures therein, and flexible fastening members for engaging through the apertures in said ring member and about said frame rods for detachably holding said ring member in assembled relation upon the frame and receptacle of said basket.



1,421,629. OIL PUMP. HERBERT H. WATKINS, Homer, La. Filed May 11, 1921. Serial No. 468,534. 2 Claims. (Cl. 103—80.)

1. In combination with an oil pump, a working barrel having an internally screw threaded portion, a hollow cylindrical standing valve casing provided with an externally screw threaded portion engageable with the screw threaded portion of the working barrel, a head for said standing valve casing, internal spring pressed catches carried by said head, and a traveling valve casing having a substantially U-shaped extension formed on its lower end receivable in said head and adapted to be engaged by said spring pressed catches, as and for the purpose set forth.

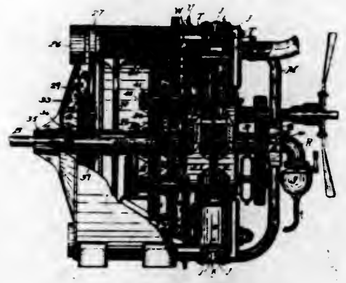


1,421,630. TILTING REFLECTOR FOR MOTOR VEHICLES. HARVEY L. WATSON, Indianapolis, Ind., assignor, by mesne assignments, to C. M. Hall Lamp Company, Detroit, Mich. Filed Feb. 24, 1920. Serial No. 360,579. 11 Claims. (Cl. 240—41.)

2. In a lamp construction, the combination of a lamp casing, a reflector pivotally supported therein, a bell crank pivotally supported in said casing, a link member operatively connecting one end of said bell crank and reflector for tilting the latter, spring means having one end associated with said operative connection for maintaining said reflector in one position, a sleeve mounted in said casing, a plunger extending through said casing and slidable longitudinally of said sleeve and therein and

limited in movement and engaging the other end of said bell crank, and lever means without the casing for actuating said plunger in opposition to said spring means.

1,421,631. TOY AEROPLANE. HARRY M. WATTS, Shawnee, Okla. Filed Mar. 17, 1921. Serial No. 452,905. 4 Claims. (Cl. 244—12.)

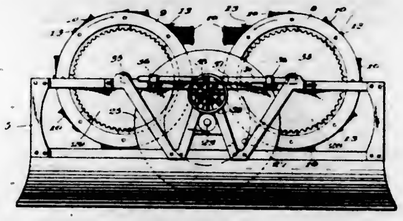


1. A toy aeroplane comprising a body portion, and an integral tail-forming strip extending transversely of the body at the rear end thereof and beyond the sides thereof and extending for the greater portion of its length beyond one side of the center of the body portion, the tail-forming strip being bent upwardly at a point intermediate the width of the body and then folded downwardly upon itself and having its free end portion bent to extend outwardly beyond the side of the body, the tail-forming strip when folded forming a horizontal stabilizer carrying an upwardly extending vertical stabilizer.

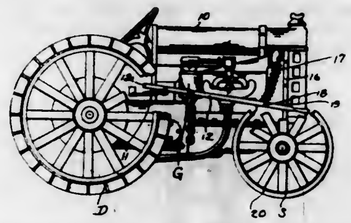
1,421,632. INTERNAL-COMBUSTION ENGINE. JOHN H. WEDIG, Granite City, Ill., assignor, by mesne assignments, to Sun Motors Corporation, Granite City, Ill., a Corporation of Illinois. Filed Apr. 29, 1918. Serial No. 231,352. 6 Claims. (Cl. 60—41.)

1. An internal combustion engine provided with bearings, a turbine shaft and a crank shaft mounted in said bearings, a turbine wheel mounted on its shaft, a train of wheel work connecting said turbine shaft and crank

shaft, a multiple number of cylinders radially disposed about said crank shaft and operatively connected thereto, a source of fuel supply connected to a central distributing drum, pipes connecting said drum to the respective cylinders, helicoidal spirals mounted at the inlet and outlet openings of said drum to give a whirling motion to the fuel charge being drawn into said cylinders successively, operative valves and means for ignition, all substantially as described.



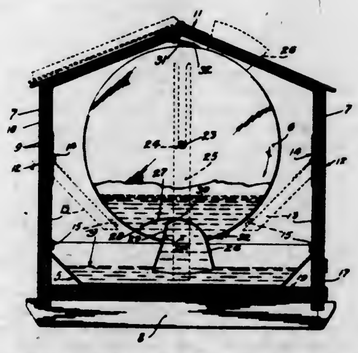
1,421,633. INCENSE BURNER AND PERFUMER. LOUIS WEIDLICH and ALFRED J. FLAUDER, Bridgeport, Conn., assignors to The Weidlich Bros. Mfg. Co., Bridgeport, Conn., a Corporation of Connecticut. Filed Mar. 31, 1921. Serial No. 457,561. 2 Claims. (Cl. 219—41.)



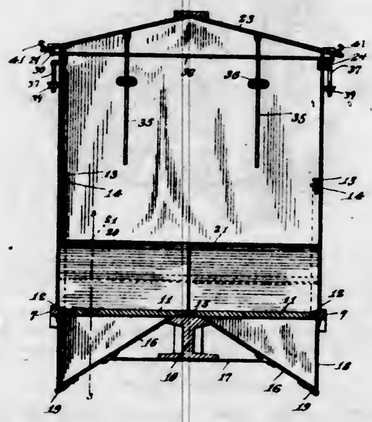
1. In a perfumer of the class described, the combination with a hollow receptacle, of a removable cover therefor having a lamp socket upon its inside and an electric wire connected through the cover to the socket, a hanger also secured to the cover, a liquid container removably supported in the hanger, an electric lamp supported in the socket and extended into the container to engage the liquid when carried therein.

1,421,634. ELECTRIC MOTOR. CORLISS L. WELTNER, Looneyville, W. Va. Filed June 21, 1921. Serial No. 479,357. 5 Claims. (Cl. 172—126.)

1. An electric motor comprising a pair of parallel shafts, wheels carried by said shafts and having their rims facing each other, electro-magnets carried by said wheel rims and having their poles so positioned that the poles of the magnets of one wheel face the pole of the magnets of the other wheel during that portion of the travel of the wheels when the magnets thereof are approaching each other, and means for energizing the magnets during the period they approach each other.

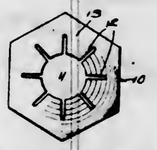


1,421,635. TRACTOR. ENOS WESTENBERGER, Laketon, Ind. Filed May 28, 1921. Serial No. 473,371. 4 Claims. (Cl. 180—82.)



1. The combination with a tractor embodying the usual drive, rear power axle, clutch operating lever for connecting and disconnecting the drive to and from the power axle and front axle pivoted for oscillation, of a pivoted lever mounted at the side of the tractor and engaging said clutch at its rear end and adapted to shift the clutch to disconnect the drive from the power axle when the front end thereof is elevated, means tending to elevate the front end of the lever, means preventing such elevation, and means carried by the front axle and coacting with the lever to release the same from the last named means when the supporting wheels of the front axle are elevated from the ground.

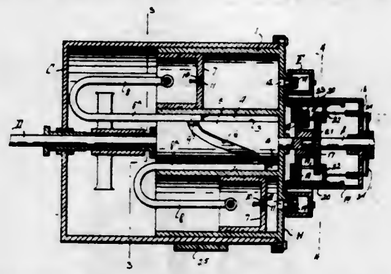
1,421,636. STOCK WATERER. ADOLPH C. WESTBY, Porter, Minn. Filed Dec. 8, 1919. Serial No. 343,373. 3 Claims. (Cl. 119—77.)



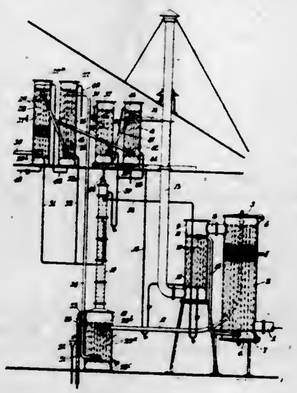
1. A stock waterer including a drinking trough, a reservoir mounted to turn from a filling to an emptying position and having a combined filling and discharge cup, the bottom of said cup being located within the reservoir and having an opening therein, and a guard arranged, when the reservoir is turned from a filling to an emptying position, to extend above the opening in the bottom of the cup and away from the same in the direction of the turning movement of the reservoir, from a filling to an emptying position.

1,421,637. FREIGHT CAR. MARTIN J. WHELAN, Clifton Heights, Pa. Filed Nov. 4, 1919. Serial No. 335,738. 6 Claims. (Cl. 105—377.)

1. The combination with a car and a one piece top therefor; of means cooperating with the top and car and forming a double hinge with the top whereby the top will open from eacher side of the car.



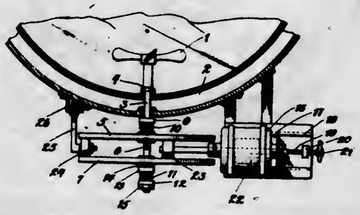
1,421,638. NUT. JOHN A. WHEELER, Bloomington, Calif., assignor of one-tenth to Eber M. Lash, Rialto, Calif. Filed May 14, 1921. Serial No. 469,487. 9 Claims. (Cl. 85—32.)



1. A nut concavo-convex in form, the central aperture of the nut being formed with a screw-thread, one of the faces of the thread throughout its length being approximately parallel to the outer face of the nut, the opposite face of the thread being outwardly inclined and toward the concave face of the nut.

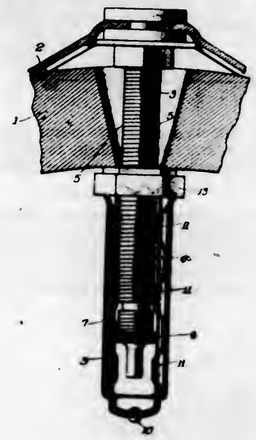
1,421,639. SPEED-CHANGING MECHANISM. WILLIAM I. WHEELER, Scottville, Ill. Filed Feb. 24, 1920. Serial No. 360,955. 2 Claims. (Cl. 192—59.)

1. In a speed changing mechaniam, a driving shaft, a driven shaft, a connection between said driving shaft and driven shaft including a casing mounted upon the driving shaft, said driving shaft and casing being capable of independent relative movement, cylinders arranged within the casing and movable therewith, a chamber in communication with each of the cylinders and the casing, means carried by the driving shaft and positioned within the casing for imparting rectilinear movement to the pistons, each of said pistons being provided with a port affording communication within the cylinder at opposite sides of the piston, said casing, cylinders and chamber being adapted to contain a mobile medium and a single means interposed in the chamber and operating automatically to control the flow of the mobile medium through the chamber and the cylinders.



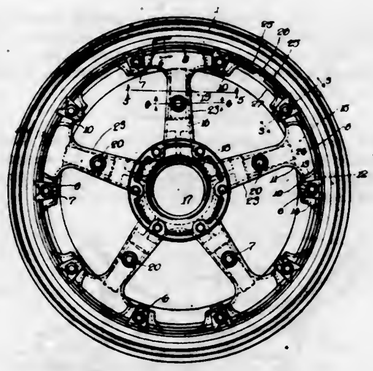
1,421,640. PROCESS OF PRODUCING ETHYLENE. MILTON C. WHITAKER, New York, N. Y., and ARTHUR A. BACKHAUS, Baltimore, Md., assignors to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed July 11, 1919. Serial No. 310,123. 4 Claims. (Cl. 260—170.)

1. The process of manufacturing ethylene from alcohol comprising preheating the alcohol to a temperature of from 300 to 500° C., and passing the resulting vapors of alcohol through a catalyzer maintained at a similar temperature in order to form ethylene.



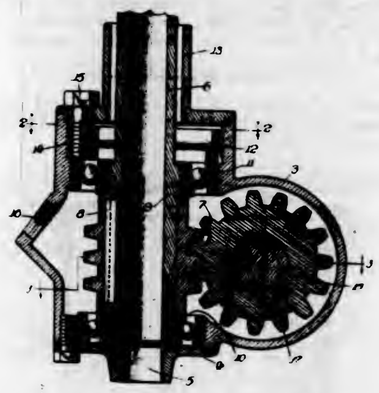
1,421,641. FRICTION DRIVE FOR MILK TANKS. GEORGE HALL WHITE, Washington, D. C., assignor to George P. Sacks, Bradley Hills, Md. Filed Sept. 9, 1921. Serial No. 499,502. 5 Claims. (Cl. 74—26.)

1. A friction drive having a shaft, opposing friction discs mounted thereon, a driving element cooperating with



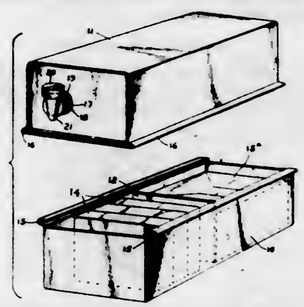
said discs, and means to adjust the pressure of said discs independently with respect to the element without inducing a corresponding endwise pressure of the shaft.

1,421,642. QUICK-DETACHABLE DUST CAP FOR PNEUMATIC TIRES. WILLIAM ERASTUS WILLIAMS, Chicago, Ill. Filed July 6, 1920. Serial No. 394,153. 4 Claims. (Cl. 152—12.)



1. A tubular dust cap having a short section provided with internal mutilated threads and with a stem-pressing spring fixed to the cap, lying in a non-threaded portion thereof and normally projecting within the circle of the threaded portion of a valve stem upon which it may be placed.

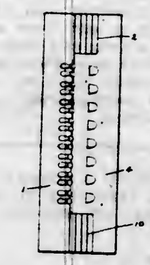
1,421,643. CAST WHEEL FOR AUTOMOBILES. WILLIAM ERASTUS WILLIAMS, Chicago, Ill. Filed July 9, 1920. Serial No. 394,996. 5 Claims. (Cl. 301—65.)



3. The combination with a flat rim-receiving felloe member carried inward at intervals to form peripheral recesses, of spokes terminally secured on each side to the adjacent inwardly carried portions of the felloe.

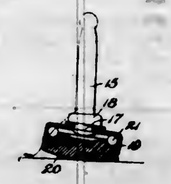
1,421,644. BEARING ASSEMBLY. CHILDE HAROLD WILLS, Marysville, Mich. Filed Nov. 6, 1920. Serial No. 422,158. 7 Claims. (Cl. 74—79.)

1. In a bearing housing, a shaft passing into said housing and a thrust bearing associated with said shaft, a removable member secured to the housing adapted to retain the bearing in an adjusted position, and means whereby the removable member may be removed and returned, the means being adapted to stop the return at the adjusted position.



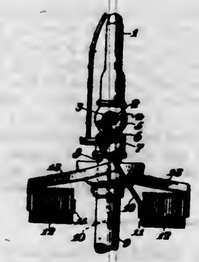
1,421,645. TOILET CASE. DONALD STUART WILSON, Greenwich, Conn. Filed Jan. 4, 1921. Serial No. 434,873. 1 Claim. (Cl. 220—20.)

In a toilet case of the character described, the combination of a container having one end open and including parallel oppositely disposed grooves defining two edges of the open end, and an enclosed container having a restricted outlet at one end and provided with parallel flanges projecting outwardly from opposite corners and extending the maximum length of said enclosed container and adapted to slidably engage in the grooves of said first named container, whereby relative movement of the two elements will either expose or enclose the open end of said first named container.



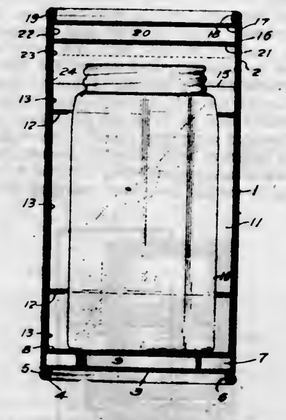
1,421,646. SHOE-SHINING PARLOR. DANIEL D. WOLFE, Washington, D. C., assignor of one-half to Harry Cohen, Washington, D. C. Filed Mar. 8, 1921. Serial No. 450,713. 11 Claims. (Cl. 20—1.)

9. A shoe shining parlor comprising an elevated platform, chairs and foot-rests on said platform, a passageway on said platform behind said chairs, an entrance stairway leading to said passageway at one end thereof,



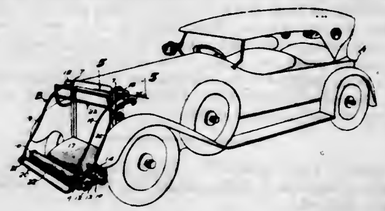
and an exit stairway leading from said passageway at the opposite end thereof.

1,421,647. CASTER. JEAN F. WOLFS, Newark, N. J. Filed Oct. 11, 1921. Serial No. 507,104. 5 Claims. (Cl. 16—42.)



4. A caster comprising a rotatable element of substantially flat form with a rounded face, and rotatable means for securing the rotatable element to the leg of a piece of furniture so that the element rotates in a plane slightly inclined relative to the horizontal, and the axis of rotation of the element is eccentric to the axis of rotation of said means.

1,421,648. ELECTRICALLY-OPERATED VALVE OF A GAS BURNER OR GAS SUPPLY. JULIUS WOLFSON, Philadelphia, Pa. Filed Jan. 29, 1919. Serial No. 273,743. 1 Claim. (Cl. 137—139.)

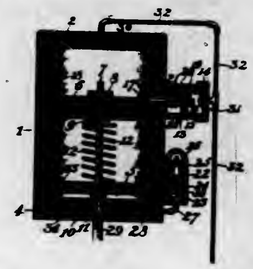


A rotary gas valve of the character stated comprising oscillatory gears one connected with each end of the plug of the valve, pivotally mounted gears meshing therewith, a support attachable to the supply pipe, horizontal magnets supported thereby, armatures for said magnets movable with the last-named gears and means carrying said armatures and connected with said last-named gears, said means being extended in substantially opposite directions and the magnets being disposed upon opposite sides of the supply pipe.

1,421,649. INSULATING CONTAINER AND THE LIKE. WILBUR L. WRIGHT, Fulton, N. Y., assignor to Sealright Co., Inc., Fulton, N. Y., a Corporation of New York. Filed Oct. 20, 1919. Serial No. 331,796. 15 Claims. (Cl. 229—45.)

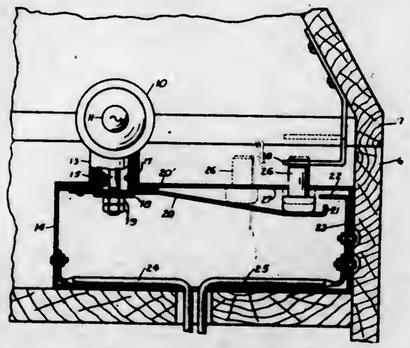
1. The combination with a storage receptacle, of a container therefor having false ends spaced from its outer ends and internal spacing members for positioning said receptacle out of contact with the walls of said container, said receptacle being of less height than the space between said false ends, and of less cross-sectional area than the space within said spacing members.

1,421,650. LIFE-SAVING FENDER. JOSEPH E. WYCKOFF, Los Angeles, Calif., assignor of one-half to David B. Wyckoff, Glendale, Calif. Filed Dec. 27, 1921. Serial No. 524,889. 5 Claims. (Cl. 293—15.)



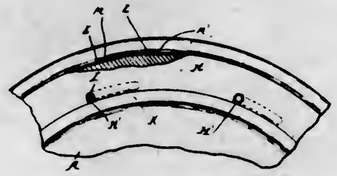
1. In combination with a vehicle, a device of the character described comprising a flexible curtain, means to secure said curtain to the front of the vehicle adjacent the ground, said means being arranged to hold said curtain folded, and means operated by collision of a person with the front of a vehicle to draw said curtain across the front of the vehicle to prevent said person from being projected forwardly.

1,421,651. AIR-BRAKE PRESSURE RETAINER. ABRAHAM YOUNG, Montevideo, Minn. Filed Oct. 23, 1920. Serial No. 418,952. 13 Claims. (Cl. 303—77.)



1. The combination with an air brake having an exhaust port, of a primary and a secondary closure for sad port, the secondary closure being operated in one direction by air pressure and in the opposite direction by spring pressure; means under the control of the operator for operating said secondary closure independently of the primary closure, whereby the escape of air from said exhaust port may be prevented when the primary closure is open; and means interposed between said closures for the escape of air above a given pressure.

5. A pressure retainer for air brakes, comprising a retainer cylinder having a chamber therein in communication with the outer air; a passageway leading from the exhaust port of the air brake into said chamber; a valve for controlling the passage of air through said passageway; a piston in said chamber connected with said valve and movable back and forth to open and close the valve; a locking cylinder connected with said retainer cylinder and having a piston movable back and forth carrying a locking stem for engaging and locking the piston of the retainer cylinder when it has moved into position to close the valve carried thereby; a pipe leading from the train line or auxiliary into the head end of each of said cylinders to introduced train line pressure thereinto, the pistons in said cylinders being movable inwardly by said air pressure, each of said pistons being provided with a spring for resisting its inward movement; said retainer cylinder



having a bore extending inwardly from its outer side and tapping said valved passageway to form a by-path for the escape of air therefrom when the exhaust port of the triple at one end thereof is open and the valve at the other end thereof closed; a spring-pressed valve at the outer end of said by-path for holding the same normally closed to only permit the escape therethrough of air above a given pressure, the spring in the retainer cylinder being adapted to overcome a greater air pressure than the normal pressure of the train line when the train is running on level track with the brakes idle, the spring in the locking cylinder being adapted to be overcome by a less pressure than said normal train line pressure, and the spring pressure on the valve at the outlet of the by-path being adapted to be overcome by an air pressure still less than that required to overcome the pressure of the spring in the locking cylinder.

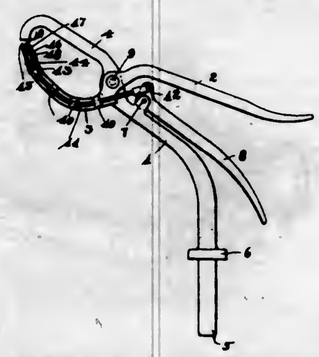
1,421,652. PHONOGRAPH. JOHN YOUNQUIST, Chicago, Ill. Filed Feb. 3, 1921. Serial No. 442,249. 3 Claims. (Cl. 240—2.)

1. In an illuminating device for phonographs comprising a metallic supporting surface having an aperture therein; a metallic sleeve resting on said supporting surface over said aperture; an electric light casing rotatably supported on said sleeve; a switch member disposed across said aperture on the under side of said supporting surface and being insulated therefrom; and a bolt for rotatably retaining said casing on said sleeve and engaging said switch member for securing said sleeve on said supporting surface, said switch member and said bolt forming a conductor to said electric light, the circuit being completed through said sleeve and said supporting surface, substantially as described.

1,421,653. CAR WHEEL. CHARLES C. ZABRISKIE, Highland Park, Mich. Filed May 27, 1921. Serial No. 473,116. 6 Claims. (Cl. 295—10.)

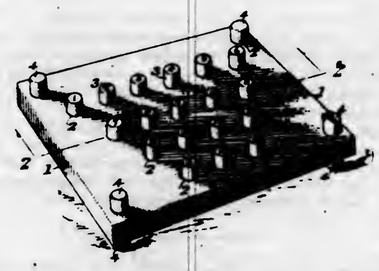
1. In a vehicle wheel, the combination with a rim having a tread portion, and a ring forming a complementary tread portion rotatively adjustable to throw out of registration any flat spots therein.

1,421,654. GLUE ROLL. PHILIP ZALKIND, New York, N. Y. Filed July 8, 1920. Serial No. 394,604. 3 Claims. (Cl. 91—48.)



1. In an apparatus of the class described, a stationary shaft, a cylinder mounted to revolve on the said shaft and having an opening therein, a plunger fitting the opening in the cylinder, a cam connected with the said plunger, means for normally maintaining the cam and plunger in such a position that the face of the plunger conforms to the surface of the cylinder, and a cam connected to the said shaft and adapted at predetermined times in the revolution of the cylinder to engage the aforesaid cam to move the same and the plunger to cause the face of the plunger to assume a position beneath the surface of the cylinder.

1,421,655. SOLE TACKER. CHARLES F. ZIEGLER, Los Angeles, Calif. Filed Sept. 25, 1920. Serial No. 412,742. 3 Claims. (Cl. 1—47.)

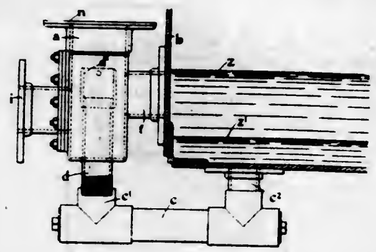


2. In a sole tacking device, in combination with tongs having a longitudinal passage in the front end of one of the jaw members for receiving and guiding nails to a certain point against the opposite jaw member, the hollow jaw member having a form to reach into a shoe to allow a placing of a tack through a seam in the direction from the inside of the shoe towards the outside, an engaging member at the end of the hollow jaw member extending beyond the front end of the jaw member parallel with the

longitudinal axis of the passage through the jaw member, and a spring guiding member at the end of said hollow jaw member having a notched termination in alignment

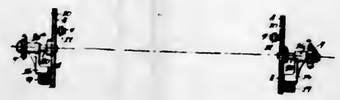
with the passage through the jaw member to guide a nail from the passage and beyond the passage in a certain direction in alignment with the passage.

1,421,656. GAME. JOSEPH B. ABELE, Philadelphia, Pa. Filed May 21, 1920. Serial No. 383,029. 1 Claim. (Cl. 46—41.)



A game consisting of a two-faced board having openings therethrough, pins adapted to partly occupy said openings and movable therein to and from the opposite faces of the board, means on the opposite faces of the board adapted to raise the under face of the latter above the support on which the board is placed allowing the pins when the game is played to be reset for replaying the game when the board is reversed and elbow-like spring members having limbs connected respectively with the sides of said pins and projecting therefrom, the projecting limbs being adapted to engage the walls of said openings and being movable with the pins.

1,421,657. PENCIL AND PEN CLIP. ALFRED ALLEN, Birmingham, England. Filed Dec. 12, 1921. Serial No. 521,882. 2 Claims. (Cl. 24—11.)

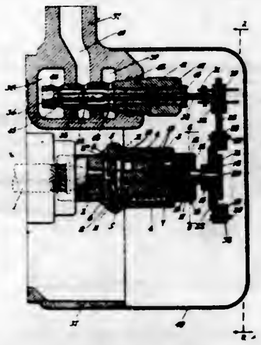


1. A pen or pencil clip consisting of an extension secured at one end to a pen or pencil, lateral hinge projections at the free end of the extension, a claw formed with apertures engaged by the said projections, and a coiled spring on the extension acting on the claw for moving it into operative position, substantially as described.

1,421,658. SEPARATOR EMPLOYED FOR THE SEPARATION OF LIQUIDS OF DIFFERENT DENSITY. WILLIAM HENRY BATEMAN, London, England. Filed Jan. 17, 1922. Serial No. 529,973. 6 Claims. (Cl. 210—51.)

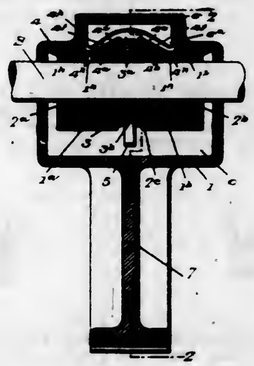
1. An outflow regulator for separators employed for the separation of liquids settling at different levels according to their densities, comprising a casing formed into two adjacent compartments, connections between the said respective compartments and the separator adapted for the admission into the respective compartments of the denser and less dense liquids from the separator, means comprising an outlet pipe in one of the said compartments, said outlet pipe being open at its upper end and adapted to serve as the downward path of discharge of the denser liquid from the said compartment, and a weir in the second compartment for determining the maximum height of the combined column of liquids within the separator, said weir serving as the path of discharge of the less dense liquid from the separator, substantially as described.

1,421,659. LAPPING MACHINE. WALTER S. BECKER, Little Falls, N. Y., assignor to Little Falls Fibre Company, Little Falls, N. Y., a Corporation. Filed Jan. 25, 1921. Serial No. 439,786. 2 Claims. (Cl. 19—163.)



1. In a machine of the character described, the combination with the main frame and a supplemental supporting frame, the carriage of the "camel back" lapper and the transverse apron or conveyer mounted on said supplemental frame; means for directly reciprocating the lapper carriage across said apron or conveyor, said means comprising rotating disks mounted on said supplemental frame, pitman bars having one of their ends connected to said carriage and having their other ends radially adjustably connected to said rotating disks, and means for rotating said disks, said disks and their rotating means being located on said supplemental frame above the plane in which said carriage moves and beneath the "camel back" conveyer.

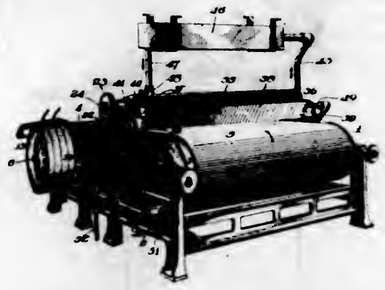
1,421,660. GOVERNOR. ELI J. BLAKE, Buffalo, N. Y., assignor to Gould Coupler Company, a Corporation of New York. Filed Feb. 10, 1919. Serial No. 275,967. 10 Claims. (Cl. 264—7.)



1. In a governor mechanism the combination of a control valve having a sliding valve member, a member rotating on an axis parallel to the movement of said sliding valve member, a pivoted frame, means connecting said sliding valve member with said pivoted frame, said valve

being unbalanced whereby the valve member normally tends to swing said frame about its pivot and close the valve, a spring acting on said frame opposing the closing

of the valve, and centrifugal means operated by said rotating member and acting on said spring to permit the valve to close responsive to speed variations of the rotating member.

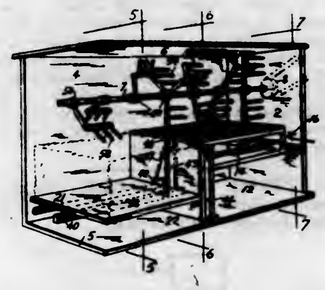


1,421,661. SPLIT LUBRICATING BEARING FOR SHAFTS, ETC. PAUL G. BOGDANOFF, Battle Creek, Mich. Filed Nov. 10, 1919. Serial No. 336,790. 17 Claims. (Cl. 64—31.)

1. In a journal box, a casing divided longitudinally into upper and lower parts, each containing transverse bearing members to support sections of a bushing: the upper part having oppositely inclined portions and holes at the lowermost part of such inclined portions to direct oil to the bushing: a bushing divided longitudinally and transversely into four sections, each section being fitted to a corresponding bearing member of the casing, the bushing sections being spaced apart longitudinally; a shaft journaled in the bushing; and a collar on said shaft intermediate the transversely spaced bushing sections.

1,421,662. MACHINE FOR TREATING HIDES AND SKINS. CHARLES P. BOSSERT, Milwaukee, Wis., assignor to Pfister & Vogel Leather Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Dec. 16, 1920. Serial No. 431,151. 26 Claims. (Cl. 91—44.)

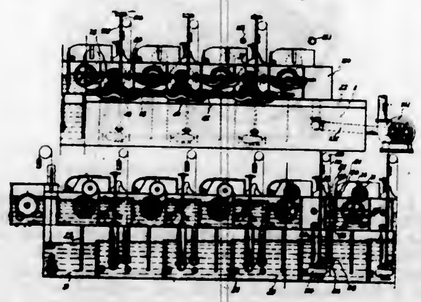
1. An apparatus for applying substances to hides and the like having means for delivering the substance to a position adjacent the hide, a flexible strip for receiving a portion of the substance therefrom, means for moving said strip at a comparatively high velocity to throw the substance received thereby onto said hide and an agitating device located in proximity to said substance delivering means.



12. In an apparatus for applying plastic substances to hides or other articles, the combination of a conveyor, means for delivering the plastic substance to a point adjacent the conveyor, a strip for removing portions of the substance from said means and throwing such substance onto an article on the conveyor, a scraper for removing the substance which falls on the conveyor and a water spray pipe discharging against the bottom of said conveyor.

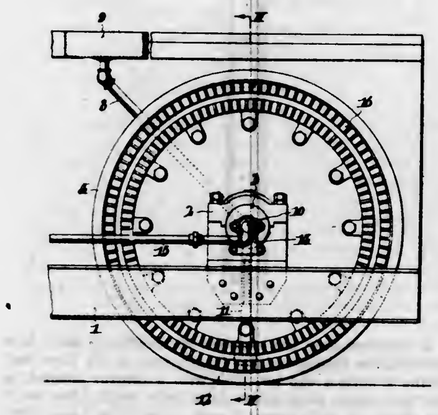
19. In a machine of the character described, the combination of an agitator made up in sections, each section having oppositely disposed ridges thereon, a feed roll in proximity to said agitator, and a distributing device in proximity to said feed roll and having a flexible strip adapted to contact therewith.

24. In a hide treating machine, a hopper for the sulfid compound having detachable end pieces, and a body portion provided with end brackets having flanges thereon, a housing having flanges to which said bracket flanges are secured, an agitator in said hopper, and means for actuating said agitator.



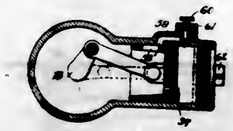
1,421,663. HANDLING KAPOK. LOUIS GRAND BROEL, Leichhardt, near Sydney, New South Wales, Australia. Filed Feb. 23, 1921. Serial No. 447,359. 6 Claims. (Cl. 19—90.)

6. In an apparatus for teasing and cleaning stuffing material, the combination with the elements claimed in claim 2, of a rotary exhaust fan and blower in communication with said delivery outlet adapted to draw air into said chamber and to exhaust it therefrom, said fan comprising a shaft, a wheel carried by the shaft and being provided with a series of tangentially disposed ribs projecting from a back plate to form pockets between adjacent ribs, a solid metal pipe attached at one end to said fan and the opposite end thereof being adapted to project into an air impermeable cover which is to be stuffed,



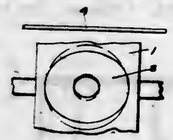
and a perforated metal sleeve disposed about said pipe and attached thereto at the free end of the latter and adapted to be connected with said pipe to said cover and to by-pass to atmosphere air which has been blown into said cover with the said stuffing material.

1,421,664. METHOD OF AND APPARATUS FOR WASHING PULP. ORTON B. BROWN, HUGH K. MOORE, and HOWARD PARKER, Berlin, N. H., and HERMAN M. MARTINSON, La Tuque, Quebec, Canada, assignors to Brown Company, Portland, Me., a Corporation of Maine. Filed Oct. 22, 1919. Serial No. 332,402. 40 Claims. (Cl. 141—12.)



8. An apparatus for washing fibrous material, which comprises a series of associated washing and screening tanks provided with agitators and rotary screens, means for causing the wash liquor to be passed continuously and successively therethrough in one direction, and means for causing the fibrous material to be passed therethrough in the opposite direction, whereby the said fibrous material and the wash liquor are delivered at opposite ends of the apparatus.

1,421,665. TANDEM ROLLER. FRANK A. BROWNE, Buffalo, N. Y., assignor to The Barber Asphalt Company, Philadelphia, Pa., a Corporation of West Virginia. Filed Nov. 18, 1916. Serial No. 132,235. 2 Claims. (Cl. 94—50.)



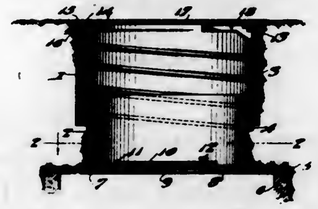
1. In a tandem roller, the combination of a completely closed hollow steam engine-driven roller, with axially pierced trunnions, a storage receptacle for water, for the steam engine, and pipe connections communicating with the interior of the roller only through the axis of each trunnion, one of which communicates with the storage reservoir, so that withdrawal of water through the other connection from the roller to supply the engine, occasions replacement thereof by a similar amount of water drawn by the first mentioned connection from the storage reservoir, thus keeping the roller continuously filled with water.

1,421,666. DOOR CLOSER AND CHECK. WILLIAM J. BRYON, New York, N. Y. Filed Aug. 20, 1920. Serial No. 404,801. 26 Claims. (Cl. 16—66.)

6. In a device of the class described, a cylinder, a piston operable in said cylinder, a movable part having operative connection with the piston, said connection including a spindle having a crank-arm and a link between the crank-arm and the piston, a passageway establishing communication between opposite ends of the cylinder, said passage-way having a port adapted to be closed over by the piston near the end of its stroke to produce a short positive cushion, and closing means for putting the piston and checking mechanism of which the piston forms a part, into play.

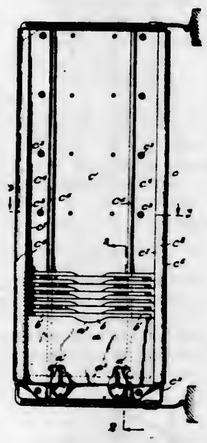
1,421,667. METHOD OF MAKING WHEEL DISKS. EDWARD G. BUDD, Philadelphia, Pa., assignor, by mesne assignments, to Budd Wheel Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 24, 1919. Serial No. 299,685. 2 Claims. (Cl. 80—16.)

1. The method of forming a tapered wheel disk from a metal blank comprising passing said blank between a pair of rolls, one of which has an elliptical recess, with its major axis lengthwise of the roll, said recess increasing gradually in depth from the periphery to its center, and having a central elliptical recess of greater and uniform depth, with its major axis lengthwise of the roll.



1,421,668. SECOND-HAND-SETTING MECHANISM FOR WATCHES. ABRAHAM BURNSTINE, Washington, D. C. Original application filed Mar. 31, 1922, Serial No. 548,324. Divided and this application filed May 25, 1922. Serial No. 563,476. 5 Claims. (Cl. 58—63.)

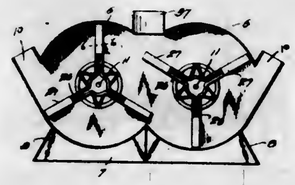
5. In a watch, in combination with the watch movement, the winding stem having thereon a grooved clutch member, the winding and setting lever and a seconds-hand wheel, a bracket on said lever, a bar spring passing



through said bracket, a yoke on the upper end of said spring disposed within the groove of said clutch member, the lower end of said spring being disposed in proximity to said seconds-hand wheel and adapted to be moved through the operation of said clutch member into and out of engagement therewith.

1,421,669. METER BOX COVER. JOHN W. CALHOUN, Chester, Pa. Original application filed Mar. 20, 1919, Serial No. 283,713. Divided and this application filed May 28, 1921. Serial No. 473,516. 4 Claims. (Cl. 94—34.)

1. A cover for meter boxes including upper and lower casing members having openings therethrough, a door for the opening of the upper casing member, a cover ring fitted with opening of the lower casing member, and a door to close the opening of said covering.

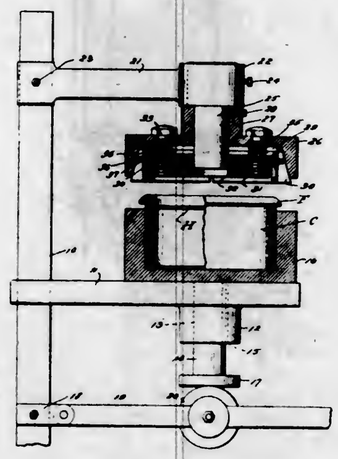


1,421,670. INDEX OR FILE. CHARLES S. CAMPBELL, New Haven, and WILLIAM H. DAY, East Haven, Conn., assignors to Index Visible, Inc., New Haven, Conn., a Corporation of New York. Filed Nov. 30, 1920. Serial No. 427,302. 5 Claims. (Cl. 129—16.)

1. In an index or file, a sheet metal support comprising a main body portion and lateral strips secured thereon and having their edge portions turned forward and inward to form guard flanges, inwardly directed retaining flanges being formed on said support.

2. In an index or file the combination of a support having retaining flanges, index cards having die cut portions or ears to engage said flanges and to maintain the cards in overlapped relation, and record cards of less width in a vertical direction than the index cards and bearing at one edge against the die cut portions or ears of the corresponding index cards.

1,421,671. DUAL ROTARY SNOWPLOW. JOSEPH C. CHLADEK, Mount Horeb, Wis., assignor of one fourth to Roy A. Beat and one-fourth to John Beat, both of Mount Horeb, Wis. Filed Jan. 13, 1921. Serial No. 436,927. 6 Claims. (Cl. 37—63.)



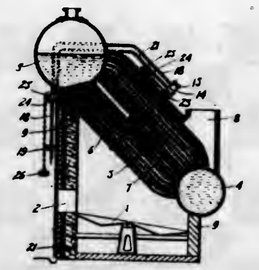
1. In a dual rotary snow plow adapted to plow through deep drifts, the combination of a scoop, dual semi-circular fan casings positioned to receive snow from the scoop, fan blades of suitable length to sweep in the respective casings, each of the casings having lateral passages opening out of the lower portion thereof and positioned and shaped to discharge snow upwardly and outwardly from the casings when the lowermost fan blades are rotating away from each other, the fan blades being positioned to overlap without contact, and means for driving the fans in a direction to throw the snow laterally and upwardly from the lateral discharge passages of the respective casings.

1,421,672. DEEP-SEA SOUNDER. WILLIAM E. CLARKE, Buffalo, N. Y. Filed June 3, 1920. Serial No. 386,171. 1 Claim. (Cl. 73—5.)

A valveless deep sea sounder, comprising a main tube irrefrangible throughout its length and on all sides and having a bottom cap provided with a central opening, a valveless open-ended water inlet tube having its lower end fitted in said opening, said inlet tube being irrefrangible and the portion thereof above said cap being bent toward the wall of said main tube and extended upwardly along the same nearly to its top whereby the central portion of the main tube is left unobstructed to receive a scale-bar, and a removable cap applied to the upper end of said main tube.

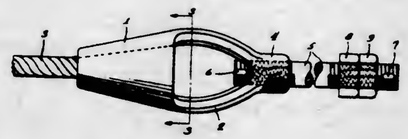
1,421,673. CAN-CAPPING TOOL. FREDERICK COATES, Cincinnati, Ohio, assignor to Federal Products Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Apr. 27, 1921. Serial No. 464,832. 12 Claims. (Cl. 93—55.)

1. In a machine of the class described, a can supporting head, a crimping head including means to primarily bend a can top flange downward and thereafter force said flange inward, and means to move one of said heads toward the other.



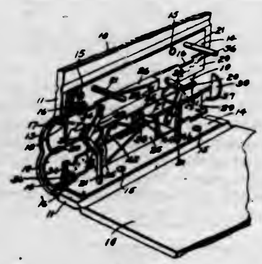
1,421,674. NURSERY LABEL. GLEN I. COLBURN, Geneva, N. Y. Filed Mar. 6, 1922. Serial No. 541,360. 2 Claims. (Cl. 40—6.)

2. A tag comprising a sheet of material perforated transversely adjacent its ends and bearing a legend on one side between said perforations and the longitudinal edges, said sheet having its sides folded inwardly upon the central portion of the sheet to cover the legend thereon, the resultant strip being folded transversely at its center with the ends and said perforations alining respectively, and eyelets secured at the longitudinal centers of the ends of the sheet and alining when said sheet is folded, the other side of the sheet being provided between the lines of longitudinal folding with indicia and adjacent one eyelet with corresponding indicia, the legend portion of the sheet being detachable.



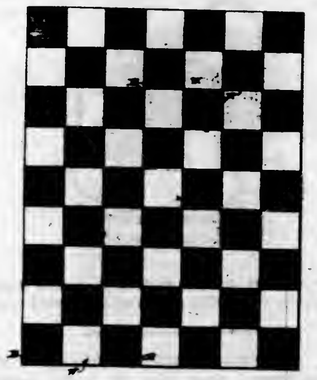
1,421,675. SOOT BLOWER. JAMES M. COLVEN, Yonkers, N. Y., and ARTHUR LOWY, Newark, N. J., assignors to New York Engineering Company, a Corporation of New York. Filed May 29, 1918. Serial No. 237,336. 10 Claims. (Cl. 122—392.)

1. A boiler soot blower comprising a relatively movable nozzle and supply pipe, a port to open and close communication from said supply pipe to said nozzle, a vent for said supply pipe, means normally holding said nozzle and supply pipe to close said port and open said vent, and



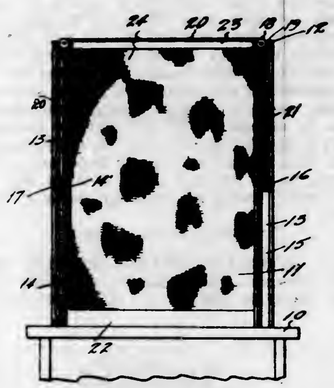
means for effecting relative movement of said nozzle and supply pipe to open said port and close said vent.

1,421,676. WIRE-ROPE SOCKET. EDWARD W. DANIEL, Cleveland, Ohio. Filed Nov. 25, 1921. Serial No. 517,708. 1 Claim. (Cl. 24—123.)



A wire rope socket comprising a tapered cup and symmetrically arranged arms integral with said cup and extending from the larger end thereof, said arms terminating in an integrally formed head, said cup being provided with an aperture through the smaller end thereof in the direction of the longitudinal axis of said cup, and said head having a threaded aperture extending therethrough in alignment with the aperture through said cup, and a threaded shank having one end portion engaging the threaded aperture of said head, and adjustable connecting means provided upon the other end of said shank, thereby providing means for taking up slack in the cable.

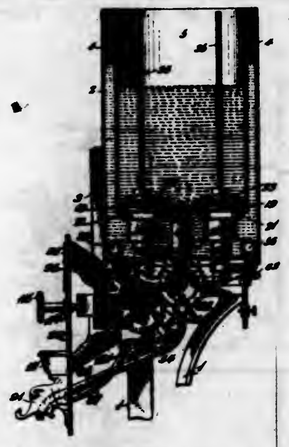
1,421,677. LOOSE-LEAF BINDER OR FILE. WILLIAM FRED DUNNING, Washington, D. C. Filed Aug. 24, 1920. Serial No. 405,648. 6 Claims. (Cl. 129—8.)



1. In a device of the class described a pair of side sections, a back hingedly uniting said side sections, latches carried by said side sections, straight binding posts projecting from said side sections, and automatic means cooperating with said latches for retaining the binding posts in closed position.

1,421,678. GAME BOARD AND GAME. RUDOLPH G. EBERT, Portland, Oreg. Filed Apr. 26, 1920. Serial No. 376,775. 2 Claims. (Cl. 46—64.)

1. In a game of the kind described, a game board consisting of sixty-three squares of three alternating colors and three sets of twenty-one paying pieces each colored as are the squares, the arrangement of the board being nine rows of seven squares each, substantially as shown and described.

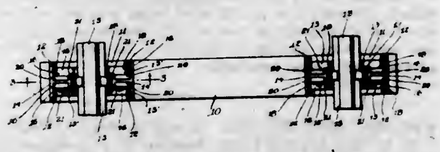


1,421,679. ORDER-FILLING COUNTER. FLOYD A. FERRIS, Dallas, Tex. Filed Aug. 26, 1921. Serial No. 495,574. 2 Claims. (Cl. 211—11.)

1. In a device of the character described, an elongated counter, uprights mounted on each side of the counter, transverse partitions extending from the uprights on one side of the countr to uprights on the opposite side of the counter, sashes slidable between the uprights, pulleys disposed between the upper ends of the uprights, and flexible connections extending from the sashes on one side over the pulleys to the sashes on the other side.

1,421,680. LIQUID-VENDING MACHINE. JOHN FRITSCHE. Philadelphia, Pa. Filed Sept. 16, 1919. Serial No. 324,154. 13 Claims. (Cl. 221—116.)

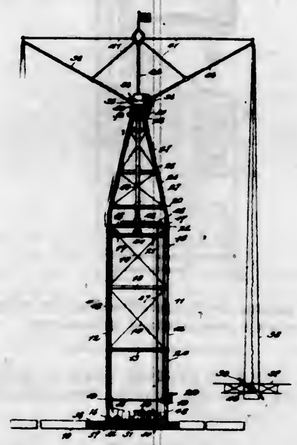
1. In a liquid vending machine, a liquid container comprising an inner and an outer casing having a chamber between them to receive a temperature changing medium, a plurality of measuring cups in said chamber, a valve exterior of said container to alternately admit liquid from said inner casing into said cups and to alternately



permit the discharge of liquid from said cups, a source of heat in proximity to said valve, and means to control said valve.

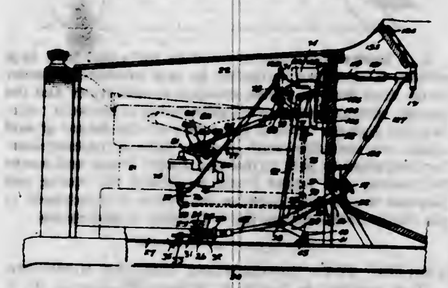
1,421,681. LUBRICATING DEVICE. GOTTLOB FUEGEL and HERMAN SCHMID, Brooklyn, N. Y., assignors, by mesne assignments, to Apollo Magneto Corporation, Brooklyn, N. Y., a Corporation of Delaware. Original application filed Dec. 27, 1918, Serial No. 268,554. Divided and this application filed Aug. 30, 1919. Serial No. 320,912. 4 Claims. (Cl. 64—24.)

1. The combination of a support having an aperture and a recess in said aperture, an eccentric sleeve in said support to engage a shaft, absorbent material in said recess and engaging said sleeve, said sleeve having holes therethrough containing absorbent material to make contact with the absorbent material in the recess and conduct lubricant to the inside of the sleeve.



1,421,682. RAIL FASTENER. JOHN P. GARDNER, Soldiers Home, Calif. Filed Sept. 27, 1921. Serial No. 503,606. 3 Claims. (Cl. 238—331.)

1. A rail fastener for attachment to a rail tie, the same consisting of a base plate provided at opposite sides of and perpendicular to the rail seat with guides which are thus disposed perpendicular to a rail arranged on said seat, bolts slidingly fitted in said guides and provided at



their inner ends with means for engaging the rail foot or base, and means for locking said bolts in rail engaging position, said guides consisting of complemental clips having base flanges riveted to the base plate and upstanding parallel flanges arranged in spaced relation.

1,421,683. CAPTIVE AEROPLANE. RICHARD GARVEY and THEODORE J. MINER, New York, N. Y. Filed Dec. 13, 1920. Serial No. 430,238. 3 Claims. (Cl. 46—27.)

1. In a device of the class described, a base portion, a pair of telescoping tower portions, arms removably supported by one of said tower portions, cars suspended from said arms, a shaft for each of said tower sections, gearing adapted to connect said shafts, and means supported on said base portion for operating said shafts to effect rotary movement of said arms and cars.

1,421,684. LOCKING DEVICE FOR AUTOMOBILES. JOHN P. GERAGHTY, Jersey City, N. J. Filed Nov. 18, 1920. Serial No. 424,937. 6 Claims. (Cl. 180—82.)

1. In a motor driven vehicle, a motor, a hood inclosing the motor, a locking device within the hood for locking the latter, a plurality of motor controlling devices arranged within the hood and mounted with different members of the motor for rendering the latter ineffective, a rock shaft within the hood and connected with the said motor controlling devices, an operating means controlled by an operator and connected with the said shaft and with the said hood locking device, and locking means controlled by an operator and connected with the said shaft and said operating means to lock the shaft and operating means against movement after the hood locking device and the said plurality of motor controlling devices have been moved into operative position by the said operating means.

1,421,685. VACUUM CONTAINER. CHARLES E. GLEASNER, Portland, Oreg. Filed Jan. 20, 1919. Serial No. 272,068. 3 Claims. (Cl. 72—13.)

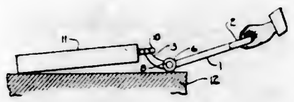
2. A vacuum container consisting of a concrete tank of sufficient strength to withstand atmospheric pressure, enveloped by an air-tight metallic covering, and having expansion joints in said covering produced by butting the angular flanges formed on the edges of the sheets to form an X with the upper V hermetically joined with solder.

1,421,686. ZINC ALLOY. HANS GOLDSCHMIDT and KARL MÜLLER, Essen, Germany, assignors, by mesne assignments, to The Chemical Foundation, Inc., a Corporation of Delaware. Filed Apr. 19, 1917. Serial No. 163,261. 3 Claims. (Cl. 75—1.)

1. An alloy consisting predominantly of zinc and from about 0.5 to 4% manganese.

1,421,687. VALVE. GEORGE P. HAYNES, Brooklyn, N. Y. Filed Dec. 15, 1920. Serial No. 431,031. 6 Claims. (Cl. 251—18.)

1. In a valve, a casing having inlet and outlet openings and provided with an internal rack, valves for controlling said openings, a spring intermediate said valves, a pinion formed on one of said valves and in mesh with said rack, an operating post journalled in said casing and a gear carried by said operating post and in mesh with said pinion.



1,421,688. METHOD OF TREATING ACIDS. INGENUIN HECHENBLEIKNER and THOMAS C. OLIVER, Charlotte, N. C., assignors to Chemical Construction Company, New York, N. Y., a Corporation of North Carolina. Filed June 16, 1921. Serial No. 477,936. 19 Claims. (Cl. 23—1.)

1. The method of treating sludge acids or separated sludge acids which consists in first subjecting a body of the acid to heat treatment while keeping the same at a strength below the charring or coking point thereof and in thereafter subjecting the acid to further heat treatment.

1,421,689. STEREOTYPER'S AND PRINTER'S TOOL. SYDNEY B. HOPKINS, Summit, N. J., and CHARLES JELINEK, Richmond Hill, N. Y. Filed Dec. 14, 1920. Serial No. 430,777. 5 Claims. (Cl. 294—1.)

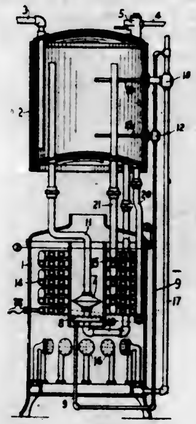
1. A stereotyper's and printer's hand tool adapted to engage and raise one end of a chase or slab and slide it in and out upon the steam table, said tool having a longitudinally extending stem with a hand grip at the top

thereof, the lower end of the stem terminating in an upwardly curved portion adapted to engage with the

chase or slab, and a pair of outwardly extending rollers, one at either side of the stem, at the beginning of said upwardly curved portion.

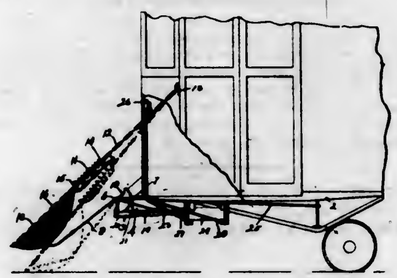
1,421,690. RUBBER GARTER. EDWARD G. HOWARD, Cincinnati, Ohio. Filed Sept. 16, 1920. Serial No. 410,606. 1 Claim. (Cl. 241—5.)

A garter comprising a button having a shank, a band of rubber material, having button-receiving perforations at its opposite ends, for connecting the ends of the band, the perforations being of reduced size to the size of the button shank inserted through the perforation, whereby the material must be expanded to enlarge the opening for admitting the button.



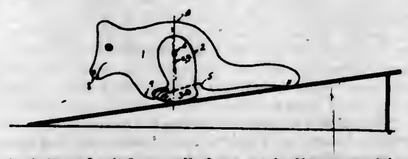
1,421,691. DOOR-HOLDING DEVICE. NORMAN B. HURD, New Britain, Conn., assignor to The American Hardware Corporation, New Britain, Conn., a Corporation of Connecticut. Filed June 22, 1921. Serial No. 479,455. 7 Claims. (Cl. 292—262.)

1. A door holder comprising, a bar adapted to be pivotally connected at one end to a door, said bar being rockable on its own longitudinal axis, an abutment having a passage therethrough for said bar and adapted to be carried by an overhead portion of a door casing, a latch device on said bar at one side of the longitudinal axis of the same and arranged to detachably engage a portion of said stationary abutment when said bar is in one position, a buffer device, and means for rocking said bar on its longitudinal axis to disengage said latch from said stationary abutment whereby said rod may be moved longitudinally through the abutment passage.



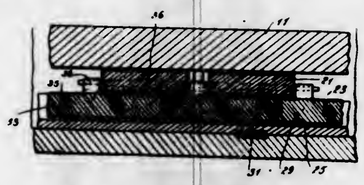
1,421,692. WATER HEATER. RUFUS J. HUTCHINS, Middletown, Ohio. Filed Nov. 10, 1921. Serial No. 514,421. 8 Claims. (Cl. 236—33.)

1. In a water heater, a tank connected with a source of water supply, a normally operative heating device, a circulation system connecting said heating device with said tank, a normally inoperative heating device, a separate circulation system connecting the last mentioned heating device with said tank, and means for rendering said last



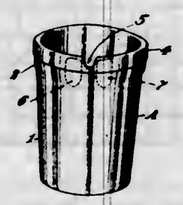
mentioned heating device operative when the water in said tank falls below a predetermined temperature.

1,421,693. VEHICLE FENDER. OMAR G. JONES, Philadelphia, Pa. Filed Oct. 9, 1920. Serial No. 415,849. 3 Claims. (Cl. 293—45.)



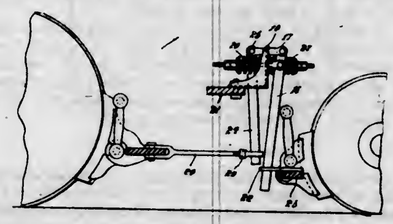
2. A fender consisting of brackets for attachment to a vehicle, a cross bar journalled in said brackets, a fender frame fixed thereto, chains attached to said frame and the vehicle, springs interposed in said chains to normally maintain the distance between the points of attachment of said chains less than the length of said chains, a catching member supported by said chains and fender frame and means for moving said fender frame to expand the spring and increase the distance between the points of attachment of the chains until equal to the full length of said chains.

1,421,694. TOY. EDWARD FRANK JUERGENS, Middletown, Ohio, assignor to Joseph H. Wilson, Washington, D. C. Filed Jan. 7, 1921. Serial No. 435,689. 11 Claims. (Cl. 46—40.)



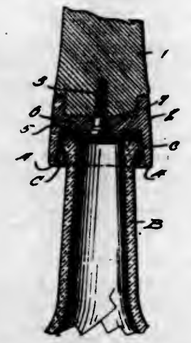
1. A toy adapted to walk down an incline comprising in combination a body portion, a leg device pivoted to said body at a point adjacent the center of gravity of said body and having a curved foot surface outside the contour of the body, a fulcrum surface on the body adapted to alternate with the device in supporting the body, said device adapted to swing forwardly to a point where a portion of the curved foot surface is in advance of said fulcrum and means to limit the extent of the swinging movement of said device.

1,421,695. BEARING. ALBERT KINGSBURY, Pittsburgh, Pa. Filed Jan. 23, 1918. Serial No. 213,287. 23 Claims. (Cl. 64—25.)



1. In a bearing, the combination with bearing means, of an equalizing system for distributing the pressure thereon comprising a plurality of interdependent members, and means for reducing the friction between said members and increasing the flexibility of the equalizing system.

1,421,696. PITCHER, TUMBLER, AND PACKAGE. PETER KUCERA, Connellsville, Pa., assignor to Capstan Glass Company, Connellsville, Pa., a Corporation of Delaware. Filed July 12, 1921. Serial No. 484,070. 17 Claims. (Cl. 215—1.)



1. An article of manufacture a packer's jar or the like comprising a jar with a substantially cylindrical mouth, a dam on the interior of the mouth and adjacent the edge of the jar with the longitudinal crest of the dam substantially a continuation of the inner wall of the jar, and a pouring notch adjacent said dam.

1,421,697. BRAKE RELEASE SPRING MECHANISM FOR TRAM AND THE LIKE CARS. HOWARD LEAH, Wellington, New Zealand. Filed July 20, 1921. Serial No. 486,140. 2 Claims. (Cl. 188—216.)

2. The combination with a car truck having movably mounted brake beams and a transverse member, of a bracket secured to said transverse member, a pair of horizontally arranged arms extending in opposite directions and formed integral with said bracket, a lever pivoted to and depending from the outer end of each arm, the lower free ends of said levers being operatively connected to said brake beams, a rod pivotally connected to each lever adjacent its pivoted connection to said arms, said rods adapted to extend through openings formed within said bracket in opposite directions, an adjustable washer arranged upon each rod and a coil spring encircling each rod and arranged between said bracket and said washer substantially as and for the purpose specified.

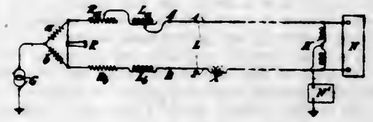
1,421,698. HAND CROWNER FOR APPLYING CROWN CAPS TO BOTTLES. HARRY J. LEBHERZ, Frederick, Md. Filed Mar. 11, 1921. Serial No. 451,525. 4 Claims. (Cl. 226—84.)

1. As a new article of manufacture, a hand crowner for capping bottles consisting of a handle member of suitable size for manual operation, a bottle capper head having a deep chambered portion of suitable size to permit the device to engage over a crown cap and constrict and lock same on the neck of the bottle to which it is applied, the chambered portion of the capper head having an annular recessed portion disposed to overlie the portion of the cap above the edge of the neck of the bottle, and the capper head having a central projecting portion of suitable size to press the central portion of the crown cap downwardly into the neck of the bottle, and a screw securing the bottle capper head to the handle, said screw when applied having its head aligned with the surface of the central projecting portion of the bottle capper head to operate as a part thereof in contact with the crown cap when applying the crown cap.

1,421,699. AEROPLANE PROPELLER. WILLIAM LINDSAY, Chicago, Ill. Filed June 19, 1918. Serial No. 240,745. 9 Claims. (Cl. 170—164.)

2. An aeroplane propeller having the longitudinal centre ine of its vanes so disposed during flight that it lies in the

direction of a line which is the resultant of the thrust, torsional, and centrifugal forces, and said vanes being disposed in operative state when the aeroplane is at rest.



1,421,700. MEANS FOR STIFFENING TEXTILE FABRICS. OSKAR LOBECK, Leipzig, Germany, assignor, by mesne assignments, to The Chemical Foundation, Inc., a Corporation of Delaware. Filed May 8, 1918. Serial No. 233,389. 6 Claims. (Cl. 134—20.)

1. A soluble composition for stiffening linen comprising of powdered gelatin in admixture with a desiccating agent.

1,421,701. TANNING SUBSTANCE FOR TANNING ANIMAL HIDES AND PROCESS OF PREPARING THE SAME. OSCAR LÖW-BERNS, Frankfort-on-the-Main, Germany, assignor, by mesne assignments, to The Chemical Foundation, Inc., a Corporation of Delaware. Filed Aug. 2, 1918. Serial No. 248,066. 12 Claims. (Cl. 260—3.)

1. The process for the preparation of a tanning material which comprises heating a hydroxyl derivative of a hydrocarbon, which derivative contains three or more carbon atoms and more than one hydroxyl group, an aromatic compound containing a sulfonic acid group and formaldehyde.

1,421,702. TESTING APPARATUS. RALPH G. MCCURDY, Cresskill, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Aug. 19, 1920. Serial No. 404,583. 10 Claims. (Cl. 179—175.)

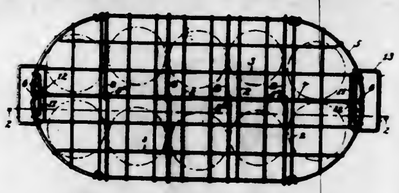
3. The method of determining the distance of an unbalance in a transmission circuit from a testing station, which consists in testing the circuit for an unbalancing impedance irregularity and calculating the distance of said irregularity from the testing station.

1,421,703. TREATMENT OF FIBROUS MATERIALS. DANIEL MCGILL, London, England, assignor to Volos Manufacture Limited, London, England. Filed Dec. 22, 1921. Serial No. 524,263. 5 Claims. (Cl. 134—12.)

4. A solution for the treatment of vegetable fibres comprising a mixture of the following in the approximate proportion specified:—

Glue	1 lb.
Potassium chloride from	½ to 1 oz.
Caustic soda	½ oz.
Black treacle	1 lb.
Graphite	1 to 2 ozs.
Potassium alum	2 ozs.

dissolved in water.



1,421,704. BATHING SUIT. GEORGE A. MATTERN, Berkeley, Calif. Filed Aug. 8, 1921. Serial No. 490,467. 2 Claims. (Cl. 2—144.)

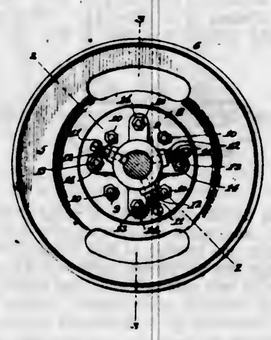
2. A bathing suit of knitted goods comprising a trunk portion, a leg portion, and a skirt portion, in all of which the elastic phase of the goods is circumferential; and a strip of knitted goods inserted in and extending across the width of the back only of the garment under the skirt portion and between the base of the trunk and the

top of the leg portions, said strip having its elastic phase at right angles to the elastic phase of said portions.

1,421,705. HOLDER FOR JARS. THOMAS G. MELISH, Cincinnati, Ohio. Filed May 3, 1919. Serial No. 294,440. 3 Claims. (Cl. 53—1.)

2. In a holder for jars the combination with a bottom frame and an upper frame collapsibly secured together and a wire secured in said upper frame at the ends thereof, of a wire at each end of said bottom frame and pivotally secured thereto, said wires being provided with hooks to engage the wire in said upper frame to lock the frames in open position, and spacers adjustably secured in said upper frame.

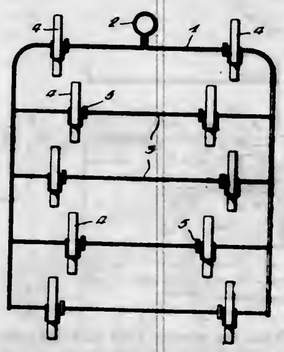
1,421,706. PROCESS OF EXCLUDING WATER FROM OIL AND GAS WELLS. RONALD VAN AUKEN MILLS, Sandy Spring, Md. Filed Oct. 15, 1918. Serial No. 258,260. 6 Claims. (Cl. 166—21.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)



1. A process of the character described which consists in introducing into a well or other rock cavity rock forming material and reagents adapted to react chemically with the dissolved constituents of natural rock solutions to form a precipitate adapted to render said rock forming material substantially impervious.

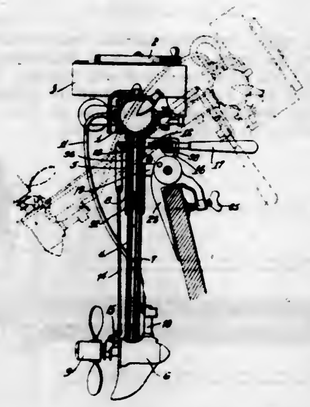
1,421,707. PROCESS OF PREPARING A PERMANENT AND SPINNABLE SOLUTION IN THE CUPRIC-AMMONIA PROCESS. PAUL HERMANN MINCK, Petersdorf, Germany, assignor, by mesne assignments, to The Chemical Foundation, Inc., a Corporation of Delaware. Filed July 23, 1918. Serial No. 246,419. 6 Claims. (Cl. 23—24.)

1. The process of preparing spinnable cupric-ammonia-cellulose solutions consisting in the reduction of the cupric salts present in the solution and dehydration of the cellulose by means of sugars of the grape sugar group and the



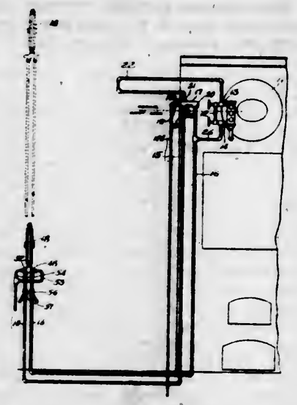
hydration of the cellulose by sugars of the cane sugar group, the amount of such sugars being not less than one-quarter of one per cent and not more than two and one-half per cent based on the weight of cellulose employed.

1,421,708. TIGHT BAND PULLEY. HENRY W. MORGAN and EDWARD P. HOLDER, Greenville, S. C. Filed Aug. 22, 1921. Serial No. 494,376. 1 Claim. (Cl. 64—17.)



In combination, a pulley body having a central hole and a series of bolt-holes around the same, a pulley-hub extending through said hole and provided with a radial flange overlapping the pulley body and provided with bolt-holes coinciding with the bolt-holes in the pulley body, clamp-bolts extending through said coinciding holes, and a plurality of set-screws tapped through said flange and bearing upon the adjacent face of the pulley body, for the purpose set forth.

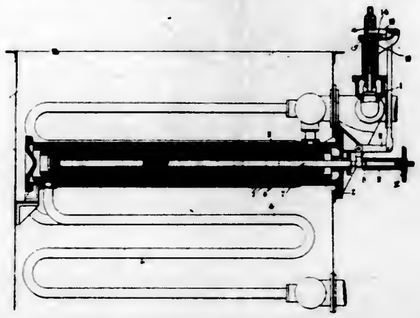
1,421,709. CLOTHES HANGER. FRANK C. NELSON, Clarksburg, W. Va. Filed Aug. 25, 1921. Serial No. 495,379. 1 Claim. (Cl. 211—13.)



A clothes hanger comprising a frame having sides and head portions, attaching means on said head portion, a plurality of relatively parallel rods disposed transversely of said frame and secured at their opposite ends to adjacent portions of the frame sides, a plurality of relatively staggered pairs of stops fixedly arranged upon said rods and head portion spaced inwardly from the sides thereof, and clasps pivotally and slidably arranged upon those portions of the rods and head portion capable of having independent lateral adjustment between their respective stops and the frame sides.

1,421,710. MOUNTING FOR OUTBOARD MOTORS. RICHARD B. OWEN, Washington, D. C. Filed Feb. 10, 1916. Serial No. 77,505. 17 Claims. (Cl. 115—18.)

1. An outboard motor propulsion unit consisting of an engine, a propeller, means for pivotally and slidably supporting said engine upon a support for permitting the engine to be swung from a position outboard to a position inboard and moved longitudinally of said support.

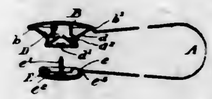


1,421,711. DISTANT BOILER-WATER-LEVEL INDICATOR. HARRY S. PARKS, Philadelphia, Pa., assignor to Pneumercator Company, New York, N. Y., a Corporation of Maine. Filed Apr. 12, 1917. Serial No. 161,545. 19 Claims. (Cl. 73—54.)

1. A means for indicating the level of water in a steam boiler comprising two rising pipe lines adjacent to one another and exposed to substantially the same external temperature, lower than the boiling point of water, one of said pipe lines being connected with the boiler below the normal water level therein, and the other rising above the said normal level and adapted to contain a high water column of fixed height, a condensing pipe leading from the steam space of the boiler and arranged mainly above the head of said high column pipe line with its discharge outlet arranged to drip into said pipe line, whereby the latter is kept full to overflowing, a separate connection below the outlet of said condensing pipe arranged to conduct

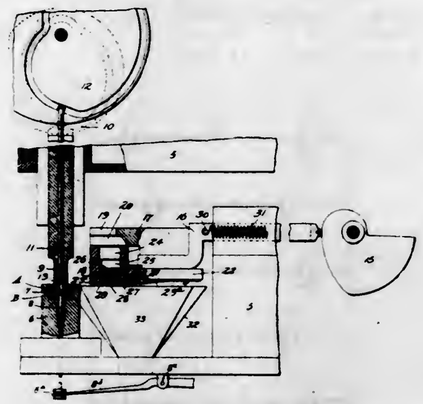
away such overflow, and a differential indicator connected to the two pipe lines and adapted to show the difference between the momentary boiler water level and the height of said high water column.

1,421,712. STEAM SUPERHEATER. CHARLES ALGERNON PARSONS and STANLEY SMITH COOK, Wallsend-on-Tyne, England; said Cook assignor to said Parsons. Original application filed Apr. 27, 1917, Serial No. 165,048. Divided and this application filed June 26, 1918. Serial No. 242,105. 5 Claims. (Cl. 122—479.)



2. In combination with a steam superheater for steam boilers, a relief valve controlling the exit of steam from the superheater, a thermostat associated with said superheater, and means for controlling said valve from said thermostat, whereby the valve will blow off when the temperature rises within the superheater, consequent upon the demand for steam being reduced or ceasing.

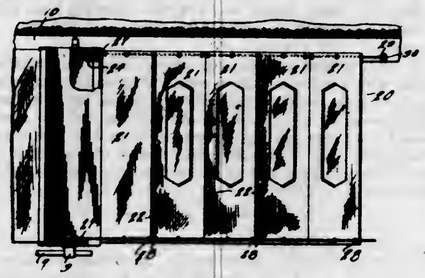
1,421,713. SELF-OILING ROTARY CUTTER. CHARLES J. PETRASEK, New York, N. Y. Filed Feb. 3, 1921. Serial No. 442,108. 4 Claims. (Cl. 10—126.)



4. The herein described oil receptacle comprising a hollow body, a plug for the delivery end of the body, a bolt projecting inward through said plug, a valve connected to the bolt and co-operating with the outer face of the plug, a finger piece projecting laterally from the valve, a pair of spaced plugs carried by the opposite end of the body, a bolt projecting through the inner one of these two valves, a heavy spring co-operating between the latter mentioned bolt and its plug serving to project the bolt outward, a tie member extending between the two plugs, a valve co-operating with the inner face of the outer plug of the pair of plugs, and a light spring located between the second mentioned bolt and the latter mentioned valve, substantially as set forth.

1,421,714. SEALING DEVICE. VOJTĚCH PUC, Prague-Vinohrady, Bohemia. Filed Aug. 1, 1919. Serial No. 314,763. 5 Claims. (Cl. 292—318.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. A sealing device, comprising a metal strip formed with enlarged ends which are permanently connected to locking members, one member of said locking device comprising a frame, the peripheral portion of which is embraced by one of said enlarged ends and which contains locking springs, and the other member having the edge of its frame embraced by a peripheral portion of the other enlarged end of the strip, and said last mentioned locking member having a shank which is adapted to enter said socket member.

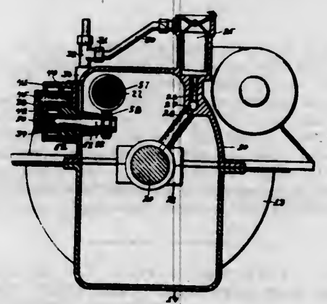


1,421,715. MECHANISM FOR SORTING THE SOCKET MEMBERS OF SNAP FASTENERS. VOJTĚCH PUC, Prague-Vinohrady, Bohemia. Filed Jan. 9, 1920. Serial No. 350,361. 12 Claims. (Cl. 79—3.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. A machine for sorting good and defective articles comprising a sorting pin for detachably locking to some of the articles, means for bringing the sorting pin into engagement with articles to be sorted, and means for stripping articles from the sorting pin.

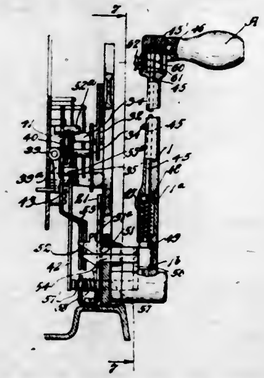
1,421,716. AUTOMOBILE STORM CURTAIN. ARTHUR F. RANDALL, Shreveport, La. Filed Jan. 26, 1921. Serial No. 440,022. 1 Claim. (Cl. 296—141.)

An automobile storm curtain comprising a bracket to be mounted on an automobile, a rectangular casing carried by the bracket and capable of being arranged in a vertical position at one side of the automobile to constitute a part of the curtain, a curtain section carried by the casing, spring-rotated drums journaled in the casing, and flexible



elements having slidable connection with the longitudinal edges of the curtain section and adapted to be wound about the drums to fold the curtain against the casing.

1,421,717. PAN WITH OVERFLOW-ALARM DEVICE. ANTHONY RENDA, New York, N. Y. Filed Feb. 23, 1921. Serial No. 447,276. 3 Claims. (Cl. 177—311.)



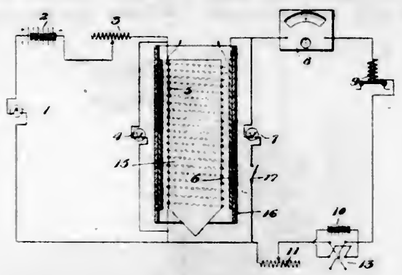
2. In combination with a drip pan of a receptacle disposed at one end of the pan, and a removable alarm device comprising in combination an adjustable non-metallic frame disposed within said receptacle, said frame being provided with a top member adapted to completely close said receptacle, a pair of metallic terminals secured in and extending within said frame, a lever pivotally connected to said frame, said lever being provided with a float secured at one of its ends and a metallic extension adapted to contact with said metallic terminals, when the float is in overflow position, a bell and batteries supported by said frame, and means for connecting said bell, batteries and terminals.

1,421,718. OIL PUMP. HARRY E. RHOADS, Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Sept. 16, 1918. Serial No. 254,226. 11 Claims. (Cl. 184—6.)

6. In combination with one of the operating shafts of an automobile engine and a casing therefor, a pump secured to said casing provided with a sleeve projecting into said casing, means in said sleeve actuated by said shaft for operating the pump, and a reservoir integrally formed with the casing, the said pump forcing oil to the reservoir and also from the sleeve to the casing.

1,421,719. CONTROL MECHANISM FOR CALCULATING MACHINES. JOHN F. ROBB, Cleveland, Ohio. Filed June 29, 1916, Serial No. 106,657. Renewed Nov. 6, 1919. Serial No. 336,235. 38 Claims. (Cl. 235—60.)

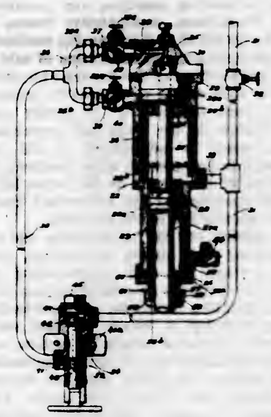
1. In an accounting machine, the combination, with accounting mechanism for taking totals, manipulative devices for predetermining the action thereof and handle means for effecting a normal operation of said mechanism for regular transactions of the machine, of means operable by initial movement of the handle means in the direction of its movement for effecting a normal operation of the machine whereby to compel total taking operation of the machine.



4. In an accounting machine, the combination, with accounting mechanism, manipulative means for predetermining the action of said accounting mechanism, handle means for effecting a normal operation of said mechanism for regular transactions of the machine including a crank, a handle for said crank, a connection intermediate the handle and crank for holding the handle rigid against movement relative to the crank and permitting rotative relative movement by adjustment of the handle, and means adapted to be operated as an incident to the rotative movement of the handle on the crank for compelling an abnormal operation of the accounting mechanism for an irregular transaction of the machine.

5. In an adding and listing machine, the combination of accumulating and listing mechanism, manipulative means for setting the said accumulating and listing mechanisms for ordinary accumulating and listing operations, main operating means for said mechanisms including a main actuator, a handle for said actuator, and means operable from said handle for causing sub-totalling action of the accumulating and listing mechanism.

6. In an adding and listing machine, the combination of accumulating and listing mechanism, manipulative means adapted to be set to control the said accumulating and listing mechanisms for ordinary accumulating and listing operations, main operating means for said mechanisms including a main actuator, a handle for said actuator, and means operable from said handle previous to the movement of the main actuator for normalising the manipulative means aforesaid.



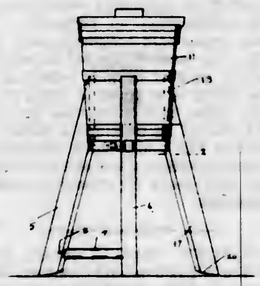
16. In a listing machine, the combination of listing mechanism, manipulative means adapted to be set to control the said listing mechanism for ordinary listing operations, main operating means for said mechanism including a main actuator, a handle to be grasped for moving said actuator, and means operable from said handle previous to the movement of the main actuator by the handle for effecting normalisation of the manipulative means aforesaid.

1,421,720. METHOD OF AND APPARATUS FOR DETECTING THE PRESENCE OF ONE GAS IN ANOTHER. CLAUDIUS H. M. ROBERTS, Washington, D. C. Filed June 3, 1920. Serial No. 386,392. 18 Claims. (Cl. 185—185.)

1. The herein described method of detecting the presence of one gas in another; consisting in passing the gaseous mixture to be tested between opposed spaced electrodes connected with a suitable source of low potential direct current electricity; the amount of current passing across the gap varying with the amount of the gas to be detected existing in the mixture being tested, and noting the changes in the current.

1,421,721. DOOR-OPERATING APPLIANCE. JAY G. ROBINSON, Chicago, Ill. Filed Jan. 25, 1915. Serial No. 4,358. 2 Claims. (Cl. 121—44.)

1. In a fluid-actuated operating mechanism, a cylinder, a piston in said cylinder, a piston rod upon which said piston is mounted, a metallic packing in the end of said cylinder around said piston rod, fluid pressure means for moving said piston towards said metallic packing, means to produce a reverse stroke, and an inlet valve to permit atmospheric air to flow into the chamber on the side of said piston adjacent said packing during said reverse stroke, said packing permitting the escape of air therethrough under a relatively high pressure, said cylinder being constructed to prevent the escape of air from the chamber on the side of said piston adjacent said packing except through said packing.



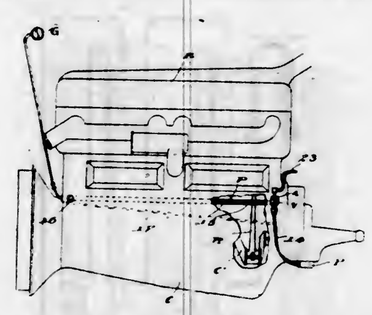
1,421,722. TANNING. ADOLF RÖHM, Stuttgart, and LOUIS BLANGEY, Mannheim, Germany, assignors, by mesne assignments, to The Chemical Foundation, Inc., a Corporation of Delaware. Original application filed Sept. 2, 1916, Serial No. 118,286. Divided and this application filed Apr. 27, 1917. Serial No. 165,000. 5 Claims. (Cl. 149—5.)

1. The process of tanning which comprises treating hides with a water-soluble aromatic compound of crystalline structure consisting of more than one aromatic nucleus connected to at least one carbon atom which is itself joined to at least one alkyl group and containing a mineral acid group, said compound being capable of precipitating glue from solutions thereof, substantially of the character described.

1,421,723. PROCESS FOR TANNING WITH ALUMINIUM SALTS. OTTO RÖHM, Darmstadt, Germany, assignor, by meane assignments, to The Chemical Foundation, Inc., a Corporation of Delaware. Filed Dec. 6, 1917. Serial No. 205,880. 11 Claims. (Cl. 149—5.)

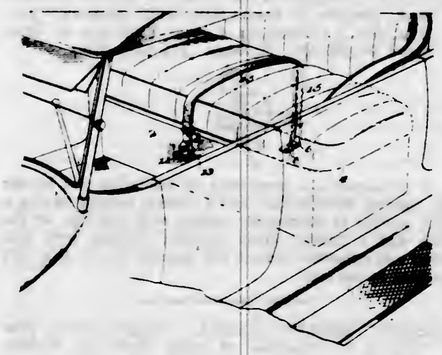
1. The process of tawing which comprises immersing hides or skins in a liquor containing 8 kg. potassium alum, 2½ kg. sodium chloride, 500 g. sodium formate, 10 kg. talcum, and 50 l. of water for each 100 kg. of hides or skins.

1,421,724. SUPPORT FOR ICE-CREAM FREEZERS. FRANK D. RUGG, Greenfield, Mass. Filed Jan. 15, 1920. Serial No. 351,692. 2 Claims. (Cl. 248—41.)



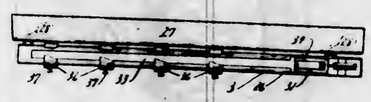
1. A pail or freezer support consisting of a pair of legs, each of the legs having a beveled pail engaging face on its upper end, a rung connecting the lower end portions of the legs to each other, a band adapted to form a seat for the pail, and having pivotal connection with the upper end portions of the legs, and a third leg pivotally connected with the band and provided with a pail engaging face on its upper end, the third leg being detachable and the band being capable of swinging into longitudinal relation with the legs to permit the support to be folded.

1,421,725. ATTACHMENT PLUG FOR OILING SYSTEMS FOR INTERNAL-COMBUSTION ENGINES. RANDALL WILLIAM SAUNDERS, Brooklyn, N. Y. Filed Oct. 8, 1921. Serial No. 506,418. 6 Claims. (Cl. 184—11.)



5. In an oiling system of the character described, including a pipe or conduit having an opening with a removable closure therefor, in combination, a plug adapted to be

substituted for the removable closure of the pipe, said plug having a nipple extension adapted to permit the connection



of a source of compressed air with the pipe for the purpose described.

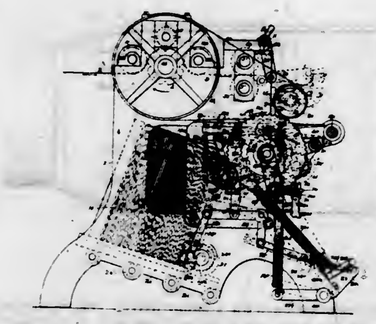
1,421,726. SAFETY STEEL STRAP CUSHION LOCK. RANDALL WILLIAM SAUNDERS, Brooklyn, N. Y. Filed Dec. 5, 1921. Serial No. 520,026. 5 Claims. (Cl. 70—27.)

1. As an article of manufacture, a longitudinal substantially flat metal band, a hinge attached to the band at one end thereof, a lock element attached to the band at its other end and adapted to engage a cooperating lock element.

1,421,727. DIRECTION INDICATOR. WILLIAM J. SCHAFER, Santa Cruz, Calif. Filed Mar. 21, 1921. Serial No. 455,164. 1 Claim. (Cl. 116—50.)

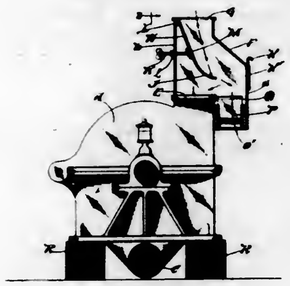
In means for actuating an indicating device of the character described, a tubular channel, a cylindrical member adapted to be reciprocated in said channel, an operative connection between said member and said indicating device and a plurality of clips adjustably fastened to said channel, each adapted to lock said cylindrical member.

1,421,728. METHOD OF MAKING AN INDESTRUCTIBLE BLACK STAMP DYE FOR DOCUMENTS. JOHANNES SCHIFFMANN, Ballenstedt, Germany. Filed Aug. 8, 1921. Serial No. 490,821. 1 Claim. (Cl. 134—34.)



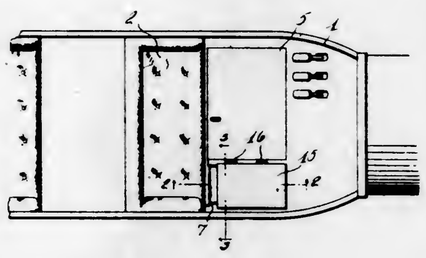
A method of making an indestructible black stamp-dye for documents, consisting in mixing a pigment that is insoluble in water, namely aniline-black that is soluble in alcohol, with gallotannate of iron, dissolving said mixture while hot in acetine, and adding lamp-black to said mixture, substantially as and for the purpose set forth.

1,421,729. OPHTHALMIC MOUNTING. ELMER L. SCHUMACHER, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Mar. 31, 1921. Serial No. 457,188. 3 Claims. (Cl. 88—42.)



1. In a device of the character described, the combination with a composition rim member having a semi-circular slot milled therethrough, of a fitting having a plate portion conforming in shape to the shape of the slot, and having projecting terminal portions embedded in the material of the rim for securing the parts together.

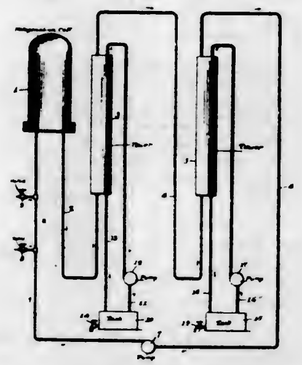
1,421,730. TOILET-PAPER WINDER. LINO SCUSA, Phoenix, N. Y. Filed Nov. 6, 1920. Serial No. 422,274. 14 Claims. (Cl. 216—9.)



1. In a toilet paper winder, the combination with the paper feeding and slitting parts, of a reel disposed in the path and rotatable in the direction of the travel of the paper, a plurality of mandrels journalled in said reel adapted to be successively moved towards the position for winding the slitted paper by the rotation of said reel, means for indexing said mandrels, means for driving the mandrels for winding the strips of paper, means for winding hollow cores upon said mandrels before they are moved to the paper winding position, and means carried by said reel for effecting the starting of the core winding mechanism.

1,421,731. GRINDER AND SHREDDER. HARRY J. SHELTON, St. Louis, Mo. Filed May 12, 1920, Serial No. 380,894. Renewed Apr. 24, 1922. Serial No. 556,360. 2 Claims. (Cl. 83—11.)

1. A suction fan in combination with a grinding and shredding machine having an inlet opening upwardly, a separator mounted on said inlet comprising a casing having vertical rear and side walls, the lower end of said rear wall and the parts of the lower end of said walls adjacent thereto resting on the upper edges of said inlet and said side walls extending downwardly in front of and below said inlet to form a pocket, a front wall following the contour of the front edges of said side walls, and an adjustable deflector pivotally attached to said rear wall near the upper end thereof and extending downwardly toward and terminating above said inlet.

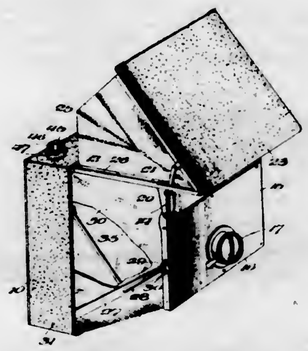


1,421,732. TOOL BOX. ALBERT BRINTON SLACK, San Antonio, Tex. Filed Aug. 12, 1921. Serial No. 491,794. 4 Claims. (Cl. 296—37.)

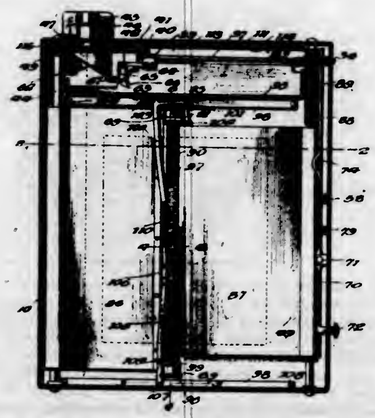
1. In combination with a motor driven vehicle having a portion of the floor board thereof removed, a tool box received in said removed portion having one end extended under the lower portion of the operator's seat support, means on one side of the box engageable with a portion of the vehicle body, other means on the opposite side of said box for receiving and supporting the adjacent end of the floor board, and a cover for the open top of said box.

1,421,733. PREPARATION OF HALOGEN COMPOUNDS. WALTER O. SNELLING, Allentown, Pa. Filed June 4, 1920. Serial No. 386,627. 4 Claims. (Cl. 260—166.)

3. In the preparation of hydrochloric acid, the process which comprises chlorinating methane with the production of methyl chloride and hydrochloric acid, contacting the resulting gaseous mixture with a solvent for methyl chloride, and thereafter contacting the residual gaseous product with a solvent for hydrochloric acid gas.



1,421,734. COMMUTATOR. WILLIAM SPARKS, Jackson, Mich., assignor to Sparks-Withington Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 16, 1920. Serial No. 396,801. 3 Claims. (Cl. 171—320.)

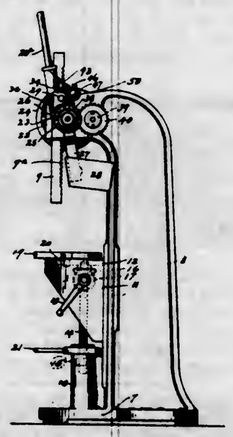


2. A commutator comprising an insulating disk having an opening therethrough, and a contact member having a web portion in substantial contact with one face of the disk and a tubular shank centrally engaged with said head and extended through the opening in the disk, and secured to the disk.

1,421,735. REFLEX CAMERA. CHARLES SPIRO, New York, N. Y. Filed Dec. 28, 1920. Serial No. 433,597. 28 Claims. (Cl. 95—42.)

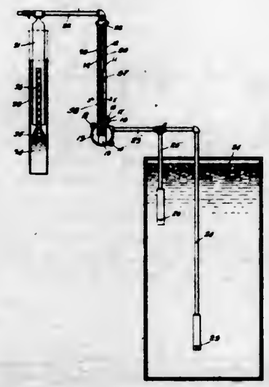
1. In a camera, a case, a finder plate pivoted thereto, a lens plate pivotally supported from the finder plate, and a cover plate connected to the lens plate to swing the latter toward and from the finder plate.

1,421,736. CURTAIN CAMERA SHUTTER. CHARLES SPIRO, New York, N. Y. Filed Dec. 28, 1920, Serial No. 433,598. Renewed Apr. 1, 1922. Serial No. 548,794. 22 Claims. (Cl. 95—57.)



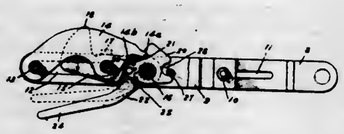
1. In a curtain shutter, separable curtains, means for moving said curtains in unison, means thereon for locking said curtains in contact, relatively fixed means for releasing said curtains for separation in their travel in one direction, and means upon one curtain for drawing said curtains into contact in their opposite travel.

1,421,737. ART OF PRODUCING CEREAL BEVERAGES. MAX STAHL, Chicago, Ill., assignor to The Wahl-Henius Research Laboratory, Chicago, Ill., a Corporation of Illinois. Filed Jan. 2, 1920. Serial No. 348,780. 5 Claims. (Cl. 99—11.)



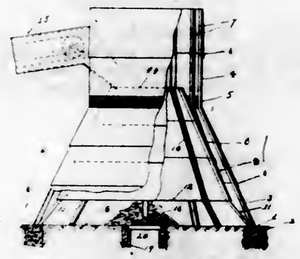
1. In the process of preparing low alcoholic cereal beverages, preparing a brew by subjecting a wort to controlled fermentation and checking the fermentation when the alcohol content reaches 0.3% to 0.7% and adding thereto dealcoholized beer.

1,421,738. ARBOR PRESS. JOSEPH H. STALEY, Columbus, Ind. Filed Mar. 1, 1921. Serial No. 448,877. 17 Claims. (Cl. 29—85.)



16. In an arbor press, a frame, a reciprocating ram supported by the frame, a lever, gear means for actuating the ram at different powers, and selective means for transmitting power from the lever to one of said ram-actuating means.

1,421,739. MANOMETER. CECIL W. STANCLIFFE, Toronto, Canada, assignor to Pneumercator Company, New York, N. Y., a Corporation of Maine. Filed Sept. 26, 1919. Serial No. 326,571. 12 Claims. (Cl. 73—31.)



1. The combination with a manometer, of a multiplying vernier comprising a container for liquid, and a conduit arranged to descend into the liquid in said container and having an open orifice adapted to be maintained beneath the surface of said liquid, said conduit containing air and being connected to the manometer in such manner that its air contents exert back pressure in the manometer, while exerting pressure on the liquid.

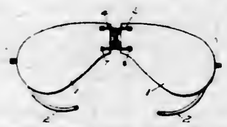
1,421,740. SWITCH MECHANISM. HARRY M. STEVENS, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Jan. 21, 1919. Serial No. 272,347. 12 Claims. (Cl. 200—106.)

11. In an operating mechanism for an electric switch, an operating member, a rigid connection between said switch and said operating member provided with a slot, a pin carried by said operating member movable in said slot, and means for transmitting the thrust of said operating member to said rigid connection including a collapsible connection between said rigid connection and said operating member, said collapsible connection comprising a toggle member carried by said operating member pivotally supported on said pin, a cooperating toggle member pivotally secured to said rigid connection, a main latch for holding said toggle members in thrust transmitting position and an auxiliary latch pivotally carried by said main latch and cooperating with said toggle members to hold said main latch in latching position.

1,421,741. REFUSE BURNER. JAMES T. STODDARD, Portland, Oreg. Filed Sept. 20, 1917. Serial No. 192,276. 5 Claims. (Cl. 110—18.)

1. A refuse burner comprising a hearth a shell having an open top and a flared base surmounting and surrounding the hearth and in closed juxtaposition thereto, in combination with a foraminous intermediate zone in the shell.

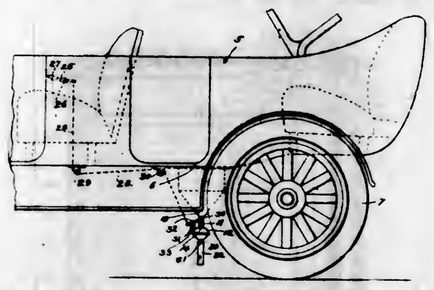
1,421,742. MAGAZINE PENCIL. JOHN STRAKA, Chicago, Ill., assignor of one-half to Joseph R. Lewis, Chicago, Ill. Filed Oct. 16, 1920. Serial No. 417,432. 8 Claims. (Cl. 120—17.)



6. A pencil comprising a casing, a stationary, transversely slotted tube therein, the ends of the slots being closed and one of the ends of the slots being inclined, a lengthwise slotted reciprocatory plunger actuating tube slidably mounted in said stationary tube, and a lead feeding plunger slidably mounted in said reciprocatory tube and having a laterally extending depressible part projecting through the slot of said reciprocatory tube and arranged to engage in the slots of said stationary tube.

1,421,743. PROCESS FOR THE MANUFACTURE OF PRODUCTS FROM ACETYLENE. BERNHARD CONRAD STUER and WALTER GROB, Aachen, Germany, assignors, by mesne assignments, to The Chemical Foundation, Inc., a Corporation of Delaware. Filed Nov. 11, 1916. Serial No. 130,928. 14 Claims. (Cl. 260—53.)

1. A process for the manufacture of products from acetylene which comprises passing acetylene in conjunction with another reaction gas over a hydrated metal compound at a temperature of 250° to 500° C.

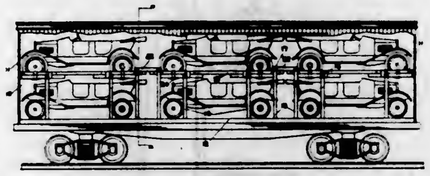


5. A catalyst for effecting reactions with acetylene containing an iron compound and hydrated alumina.

1,421,744. EYE PROTECTOR. HARRY H. STYLL, Southbridge, Mass. Original application filed Dec. 9, 1919, Serial No. 343,535. Divided and this application filed Dec. 3, 1920. Serial No. 428,658. 6 Claims. (Cl. 88—43.)

1. A device of the character described comprising a pair of members centrally rigidly united and having their ends extending outwardly, the two ends of one member being secured to one lens of a mounting and the two ends of the other being secured to the other lens.

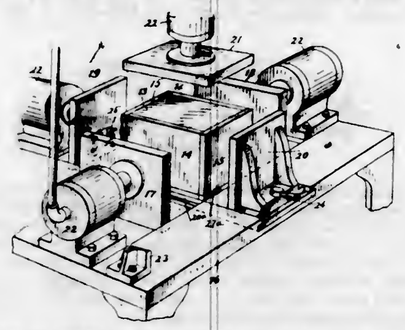
1,421,745. SAND-DELIVERY DEVICE FOR VEHICLES. JASON C. TAYLOR, Los Angeles, Calif. Filed Dec. 18, 1920. Serial No. 431,551. 3 Claims. (Cl. 291—25.)



1. A device of the class described, comprising a sand hopper mounted on a vehicle and adapted to receive a frictional material, a tube extending from the bottom of said hopper, a casing surrounding said tube, a valve mounted in said casing adapted to open and close the end of said tube and spread said frictional material when flowing therethrough, a delivery tube mounted for universal movement at the bottom of said casing, means for resiliently supporting said second mentioned tube, and means under the control of an occupant of said vehicle for operating said valve.

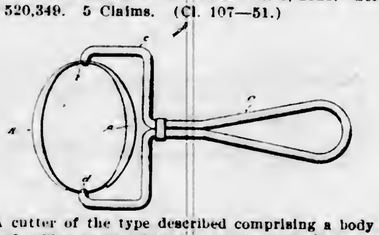
1,421,746. DOOR-SECURING DEVICE. HAROLD THORNE, New York, N. Y. Filed June 23, 1921. Serial No. 479,714. 3 Claims. (Cl. 16—137.)

3. As articles of manufacture for use supplemental to a hinge, interlocking pairs of door and jamb plates, comprising a mortise plate and a tenon plate, each formed with an interengaging depressed portion open at one side and formed with a flat face to form an abutment.



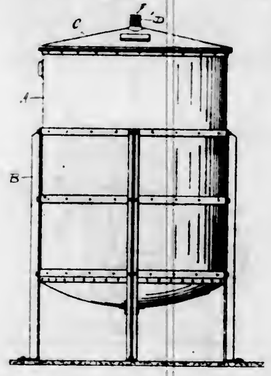
1,421,747. AUTOMOBILE DECKING. FRED H. THOMPSON and EDWARD HOLMES, Toledo, Ohio, assignors to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Feb. 3, 1921. Serial No. 442,105. 11 Claims. (Cl. 105—368.)

1. In an apparatus of the class described, a wheel support comprising a pair of parallel rails spaced the width of a wheel, a U shaped strap hung upon and between said rails so as to form a wheel stirrup, and means mounted upon and between said rails at either side of the stirrup for engagement with the periphery of the wheel.



1,421,748. METHOD OF MAKING STORAGE-BATTERY CONTAINERS. THEODORE A. WILLARD, Cleveland Heights, Ohio. Filed Feb. 11, 1921. Serial No. 444,249. 10 Claims. (Cl. 18—56.)

1. The method of forming a multi-compartment hard rubber storage battery container which comprises placing uncured rubber in sheet form between a series of cores, placing uncured rubber in sheet form about the sides and over the bottom ends of the cores and the intervening



layers of rubber so as to form a core and rubber assembly, applying pressure laterally and vertically to the sides and top and bottom of the assembly, and vulcanizing the container after the compression step.

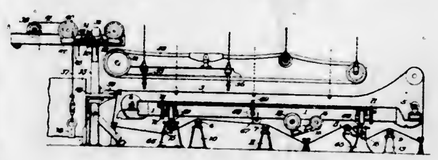
1,421,749. CAKE OR BISCUIT CUTTER. BENJAMIN S. WILLIAMS, Nashville, Tenn. Filed Dec. 6, 1921. Serial No. 520,349. 5 Claims. (Cl. 107—51.)

1. A cutter of the type described comprising a body of elliptical tubing having flaring outer edges, and a carrier comprising a handle and bearings engaging the transverse axis of said body.

1,421,750. PROCESS OF TREATING VEGETABLES IN PREPARATION FOR CANNING. WALTER WILLIAM WILLISON, Hastings, N. Y., assignor to Thermokept Products Corporation, New York, N. Y., a Corporation of Maine. Filed Aug. 30, 1920. Serial No. 406,932. 9 Claims. (Cl. 146—14.)

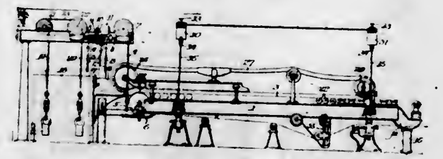
7. The herein described steps of washing and blanching vegetables which consists in subjecting said vegetables to warm water under a vacuum, and then suddenly breaking said vacuum.

1,421,751. COMPOSITION OF MATTER FOR PAVING BLOCKS, BUILDING BLOCKS, AND THE LIKE. GEORGE S. WRIGHT and CHARLES WESLEY WRIGHT, Philadelphia, Pa. Filed Aug. 6, 1921. Serial No. 490,313. 2 Claims. (Cl. 106—24.)



1. The herein described composition of matter for blocks and the like composed of fire clay, lime water, salt, asbestos cement, sand and graphite, commingled in substantially the proportions described.

1,421,752. PAPER-MAKING MACHINE. ALONZO ALDRICH and ALBERT L. LARSON, Beloit, Wis.; said Larson assignor to said Aldrich. Filed May 14, 1921. Serial No. 469,552. 47 Claims. (Cl. 92—44.)



1. A Fourdrinier machine having a table adjustable laterally as an entity, power means attached to the table for moving the table laterally as a unit, and means for supporting the table in a laterally adjusted position.

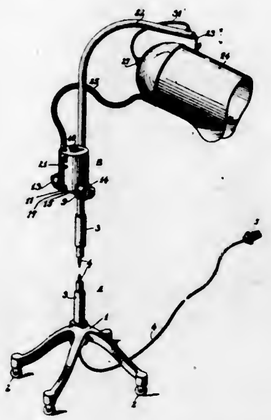
1,421,753. PAPER-MAKING MACHINE. ALONZO ALDRICH, Beloit, Wis. Filed July 5, 1921. Serial No. 482,441. 5 Claims. (Cl. 92—45.)

1. The combination of a Fourdrinier table made in sections and having its feed end made vertically and horizontally adjustable, and having its other end made stationary and pivotally connected with the feed end, means for elevating the first mentioned section of the table and separate means for elevating the other end thereof, wheels on both parts or sections of the table, a power generator with power transmitting connection for driving said wheels, and tracks therefor, on which said wheels may travel.

1,421,754. PAPER-MAKING MACHINE. ALONZO ALDRICH, Beloit, Wis. Filed July 16, 1921. Serial No. 485,180. 17 Claims. (Cl. 92—44.)

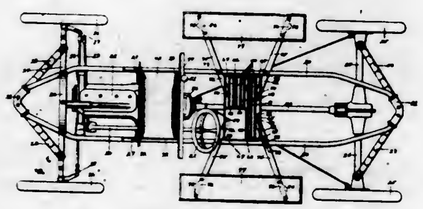
1. In a machine of the class specified, the combination of a laterally movable table, and overhead means for lifting the front edge of the table and moving the table laterally.

1,421,755. CUSHION TIRE AND RIM THEREFOR. ULRICH ANDERSON, Wausau, Wis. Filed Feb. 25, 1920. Serial No. 361,086. 5 Claims. (Cl. 152—1.)



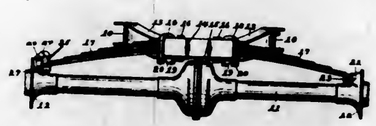
1. In combination with a tire having two inner circumferentially extending flanges; a transversely split rim hav-

ing a centrally disposed double walled flange and an upstanding marginal flange at each side thereof, said flanges



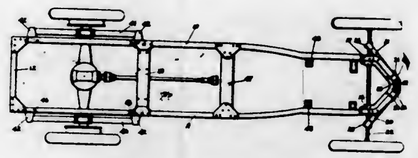
engaging and holding the flanges of the tire; and means for preventing expansion of the rim.

1,421,756. MASSAGE APPARATUS. CHARLES ARNAO, Brooklyn, N. Y. Filed Nov. 4, 1921. Serial No. 512,715. 10 Claims. (Cl. 174—177.)



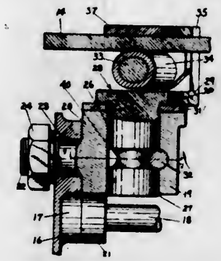
1. In a massage steamer, an open-ended hood for embracing the face; a steam supply connected with the interior of said hood; and a source of radiant energy within said hood for revitalizing the steam in its direct application to the face.

1,421,757. MOTOR VEHICLE. EDWARD H. BELDEN, Toledo, Ohio, assignor, by mesne assignments, to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Sept. 12, 1917. Serial No. 190,966. 11 Claims. (Cl. 280—106.)



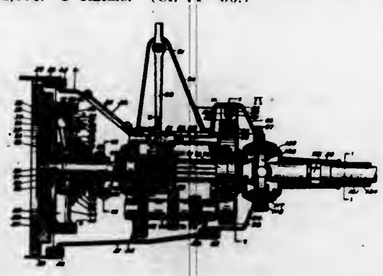
1. In a motor vehicle, the combination of a frame comprising a pair of longitudinally extending side bars; and a rigid box-like receptacle secured at its ends to said side bars intermediate the ends thereof, and forming a brace for the middle part of said frame.

1,421,758. SPRING SUSPENSION FOR VEHICLES. EDWARD H. BELDEN, Toledo, Ohio, assignor, by mesne assignments, to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Oct. 29, 1917. Serial No. 199,052. 26 Claims. (Cl. 267—54.)



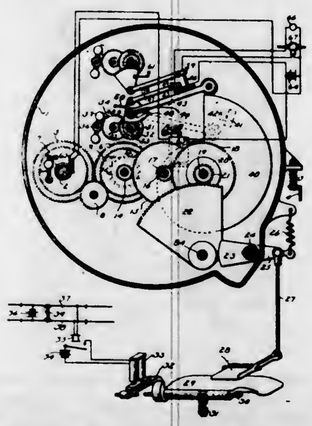
2. In a vehicle, the combination of a frame; an axle; a cantilever spring pivotally connected directly to the axle adjacent one end thereof; a link pivotally supported adjacent the other end of said axle; and a cantilever spring pivotally connected to the free end of said link, both of said cantilever springs being rigidly connected to said frame out of alignment with each other and near the longitudinal center line of the frame.

1,421,759. SPRING SUSPENSION. EDWARD H. BELDEN, Toledo, Ohio, assignor, to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Jan. 6, 1919. Serial No. 269,806. 22 Claims. (Cl. 267—36.)



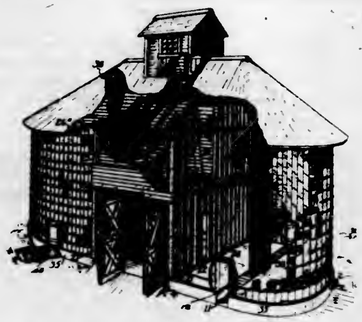
4. In a vehicle, the combination of a frame, front and rear axles, a pair of single arm cantilever springs connected to said front axle and converging forwardly to said frame, means for connecting said springs to said frame, a second pair of springs connected to the rear axle of the vehicle and extending longitudinally of the vehicle frame and means to connect said last mentioned springs and frame.

1,421,760. SPRING SUSPENSION FOR VEHICLES. EDWARD H. BELDEN, Toledo, Ohio, assignor, by mesne assignments, to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Jan. 13, 1919. Serial No. 270,885. 26 Claims. (Cl. 267—56.)



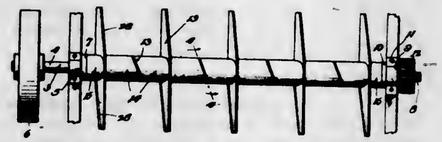
1. In a vehicle, the combination of a frame, an axle, spring supporting means mounted on said axle for rotation on a vertical axis, and a spring slidably supported by said supporting means and connected to said frame.

1,421,761. POWER-TRANSMITTING MECHANISM. EDWARD H. BELDEN, Toledo, Ohio, assignor, by mesne assignments, to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed July 19, 1917. Serial No. 181,556. Renewed Feb. 6, 1922. Serial No. 534,804. 3 Claims. (Cl. 74—56.)



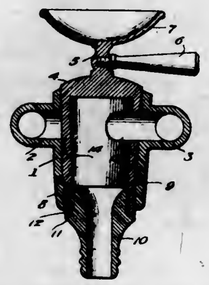
1. In a device of the class described, the combination of a driven member; a shaft; a clutch connecting said driven member and said shaft; transmission mechanism driven by said shaft; a propeller shaft; a universal joint connected with said transmission mechanism and connected with said propeller shaft by a slip joint; a casing housing said transmission mechanism and secured to the rear end of the engine casing; a transmission brake; a casing housing said transmission brake and secured to the rear end of said transmission casing; a casing for said propeller shaft provided with a ball shaped housing at its forward end, said transmission brake casing being provided with a socket adapted to receive said ball shaped housing; and a concave ring secured to said transmission brake housing and adapted to engage said ball shaped housing, whereby the casing for the propeller shaft has a universal connection with the rear end of said transmission brake housing.

1,421,762. TRAIN-CONTROL SYSTEM. ELI J. BLAKE, Buffalo, N. Y., assignor to Hall Switch & Signal Co., a Corporation of Maine. Filed Oct. 31, 1918. Serial No. 260,506. 14 Claims. (Cl. 246—182.)



5. A controlling mechanism carried by a train comprising a member whose motion is proportional to the linear motion of the train, means independent of the movement of the train tending to move said member at an excessive speed, a synchronous motor adapted to control the movement of said member, and means controlled by the movement of the train to restrain said motor from motion other than synchronous with the motion of the train.

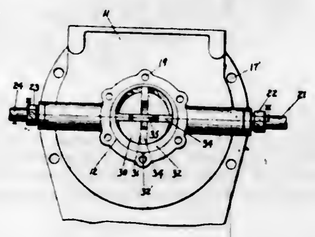
1,421,763. GRAIN CRIB. WARREN A. CALDWELL, Oskaloosa, Iowa. Filed May 31, 1921. Serial No. 474,025. 11 Claims. (Cl. 72—6.)



1. In a grain crib, in combination, crib sections spaced to provide an intermediate driveway, each section comprising an arcuate wall portion formed of a plurality of assembled stave units, an end wall closure adjacent the driveway, and means embracing the arcuate wall portion to maintain the unit stave members in assembled relation.

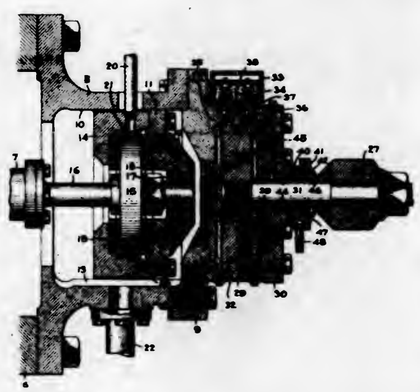
1,421,764. BAND CUTTER. SANDERS V. COCHRANE, Bridgetown, Tex. Filed June 30, 1921. Serial No. 481,602. 6 Claims. (Cl. 130—1.)

1. In band cutter mechanism, a rotatable shaft, spacing sleeves fitted onto the shaft and having their ends noncorrespondingly obliquely disposed, and knives interposed between the ends of the sleeves.



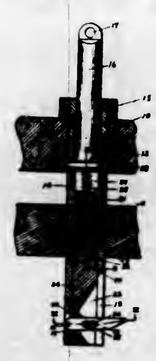
1,421,765. FAUCET VALVE. EMRY L. CUNNINGHAM, Sikeston, Mo. Filed June 15, 1920. Serial No. 389,122. 1 Claim. (Cl. 251—95.)

A faucet valve comprising a casing having both ends open and a pair of spaced inlet nipples, one of said nipples being connected with the hot water supply and the other with the cold water supply, a valve member fitted within said casing and formed to make a water tight fit therein, an upright supported by the upper end of said valve member and a handle secured to said upright, a soap cup



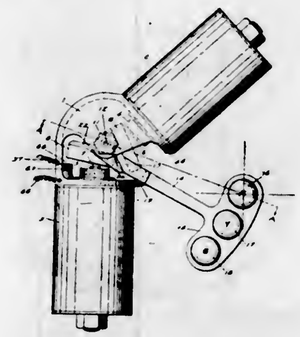
mounted on the top of said upright, said casing and valve having tapered formation and the lower end of said valve being screw threaded to receive a nut, a crimped steel washer located between the nut and the bottom of the casing, a nozzle fitted in the lower end of the valve member, a shoulder formed on said nozzle and a gasket located between the shoulder and the end of the valve member, the wall of said valve member having a slot formed therein of such a length as to leave a closure part of a size slightly greater than a half circle.

1,421,766. ROTARY PUMP. HENRY J. EDWARDS, Elyria, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Jan. 11, 1919. Serial No. 270,679. 7 Claims. (Cl. 103—44.)



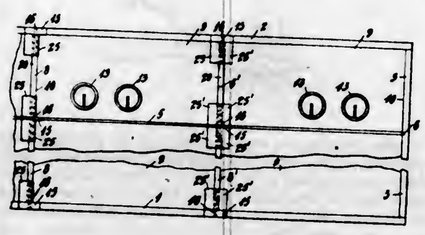
1. In a device of the class described, an eccentric chamber, a rotating drum positioned therein, and a plurality of pistons arranged in pairs and slidably positioned in said drum, the pistons of each pair being connected to each other by a leaf spring.

1,421,767. PACKING FOR MERCURY DASHPOTS. WILLIAM EDWARDS, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 30, 1920. Serial No. 420,804. 3 Claims. (Cl. 188—100.)



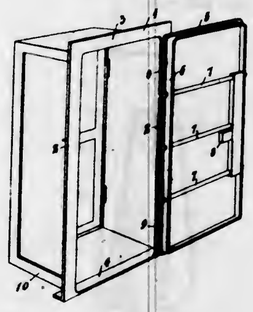
1. A dashpot comprising a cylinder, a piston therein having a rod which extends through the cylinder head, a reservoir, conduits for conveying liquid from the reservoir to the cylinder, and means for preventing leakage of air around the rod comprising two spaced packings having an annular chamber between them, and means defining a conduit which connects the chamber to the reservoir.

1,421,768. KINGBOLT. ALBERT EGBERT and EDWARD HOLMES, Toledo, Ohio. Filed Dec. 19, 1918. Serial No. 267,528. 6 Claims. (Cl. 85—3.)



1. In a device of the class described, a sleeve, a slotted member slidably mounted in the sleeve, a pin carried by the sleeve and extending through the slot formed in said member, a spring co-operating with said pin and member for yieldably urging the member in one direction relative to the pin, a detent, and co-operating means carried by said sleeve and member for retracting the detent upon relative movement of the sleeve and member against the tension exerted by the spring.

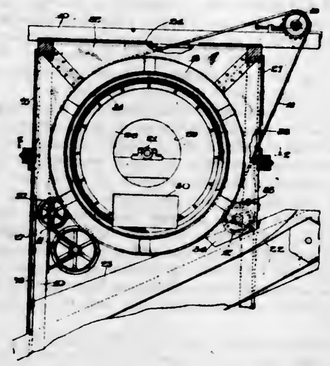
1,421,769. THREE-POSITION OPERATING MECHANISM. OSCAR S. FIELD, Roselle, N. J., assignor to Hall Switch & Signal Co., a Corporation of Maine. Filed July 6, 1918. Serial No. 243,654. 2 Claims. (Cl. 246—223.)



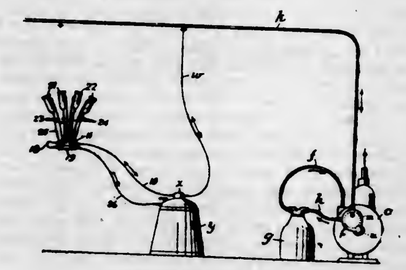
2. In a three position operating mechanism, two electromagnets, coacting armatures for said electromagnets, a movable element controlled by said armatures and biased to a neutral position, means whereby upon the energization of one of said electromagnets both armatures will be caused to move in unison to operate the movable element to one position, means upon the movement of the armatures for conditioning the circuit of the other electromagnet so that said electromagnet may be energized, and means whereby upon energization of said other electromagnet only one armature will be caused to move to operate the movable element to another position.

1,421,770. SAFETY-DEPOSIT CONSTRUCTION. JOSEPH FREIBERG and LEO F. WUBBOLDING, Newport, Ky., assignors to The J. Baum Safe & Lock Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Aug. 8, 1919. Serial No. 316,229. 29 Claims. (Cl. 109—7.)

1. In a construction of the character described, a case comprising a top and a bottom and sides and a back, formed of flat plates with their edges suitably joined at the corners of the case, transverse partitions or shelves extending from front to back and from side to side of the interior of said case and suitably secured to said sides and back, partitions extending upright between adjacent transverse partitions or shelves and extending to said back and suitably secured thereto, but terminating short of the front of said case, said transverse partitions or shelves having slots in front of the respective upright partitions, jambs extending from top to bottom of said case through said slots and retentively engaging said upright partitions, and closures abutting said jambs.



1,421,771. VAULT FRONT AND DOOR CONSTRUCTION. JOSEPH FREYBERG and LEO F. WUBBOLDING, Newport, Ky., assignors to The J. Baum Safe & Lock Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Aug. 18, 1919. Serial No. 318,230. 2 Claims. (Cl. 109—1.)



1. A vault front comprising a flat plate or sheet having an interior portion of the metal of said plate cut therefrom to form a door opening and having the lower end of said plate bent along the lower edge of said opening to form a door plate.

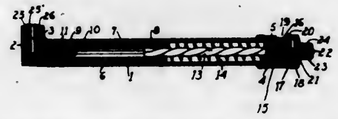
1,421,772. GREEN-PEA VINER. FRANK HAMACHER, Kewaunee, Wis. Filed Nov. 15, 1920. Serial No. 424,295. 8 Claims. (Cl. 130—30.)

1. In a green pea viner having a separating drum with end rings and screens and means engaging the end rings for supporting and rotating it, a guard for preventing the peas from being crushed by the supporting and rotating means consisting of a partition extending across the viner and fitted to an end ring of the separating drum between the engaged parts thereof and the screens.

1,421,773. MILKING-MACHINE SYSTEM. CYRUS HOWARD HAPGOOD, Nutley, N. J., assignor to The De Laval Separator Company, New York, N. Y., a Corporation of New Jersey. Filed May 28, 1921. Serial No. 473,254. 6 Claims. (Cl. 31—101.)

1. A milking machine system comprising a pneumatic pulsation pipe line, a master pulsator adapted to create pneumatic pulsations in said pipe line, a milk pail, said pipe line connecting with the pail, means to prevent flow of air from the pipe line to the milk pail while allowing flow of air from the pail to the pipe line, a set of double chamber teat cups, a claw comprising a milk chamber and a valve chamber, the latter having an air port, pipe connections between the outer chambers of the teat cups and the valve chamber, a secondary valve in the valve chamber, said pipe line connecting with the valve chamber and controlling the secondary valve, a pipe connection from the inner teat cup chambers to the milk chamber of the claw, a pipe connection from the milk chamber of the claw to the pail, and an air connection between the valve chamber and the milk chamber, said valve adapted to connect each outer teat cup chamber alternately with atmosphere and through the last named connection with the milk chamber of the claw.

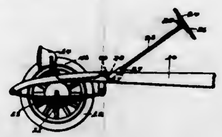
2. A milking machine system comprising a set of double chamber teat cups, a milk pail connected with the inner teat cup chambers, a pneumatic pulsation pipe line communicating with the milk pail, means to prevent flow of air from said pipe line to the pail, a master pulsator adapted to create pneumatic pulsations in said pipe line, a second-



ary valve adapted to connect each outer teat cup chamber alternately with pressure and with the milk pail, said pneumatic pulsation pipe line connecting also with the secondary valve and controlling its operation, whereby in a single pipe line system the primary pulsations therein effect exhaust of air from the milk pail and from the inner chambers of the teat cups and operate a secondary valve to admit air to the outer chambers of the teat cups and exhaust air therefrom into the milk discharge.

4. A milking machine system comprising a primary pneumatic pulsation pipe line, a master pulsator adapted to create pulsations therein, a set of double chamber teat cups, a milk pail connected with the inner chambers of the teat cups, a secondary pulsator adapted to admit air to each teat cup and exhaust air therefrom to the milk pail, a casing forming an air passage communicating with the milk pail, a check valve between said air passage and milk pail normally preventing inflow of air from said passage to the pail and allowing outflow of air from the pail to said passage, and pipe connections from said air passage to the primary pulsation pipe line and to the secondary pulsator.

5. A milking machine system comprising a set of double chamber teat cups, a milk pail connected with the inner chambers of the teat cups, a secondary pulsator adapted to admit air to each teat cup and exhaust air therefrom to the milk pail, a pulsation pipe line, means whereby the pneumatic pulsations in the latter control the operation of the secondary pulsator and exhaust air from the milk pail, a vacuum pump, a master pulsator applied direct to the pump and connected with a source of pressure and with the pulsation pipe line, a vacuum reservoir and stabilizer, and pipe connections therefrom to the master pulsator and to the pump respectively, the master pulsator operating to connect the pulsation pipe line alternately with the vacuum reservoir and stabilizer and with pressure.

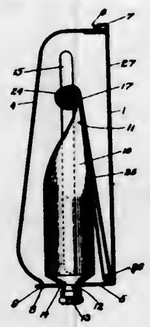


6. A milking machine system comprising a set of double chamber teat cups, a milk pail connected with the inner chambers of the teat cups, a secondary pulsator adapted to admit air to each teat cup and exhaust air therefrom to the milk pail, a pulsation pipe line, means whereby the pneumatic pulsations in the latter control the operation of the secondary pulsator and exhaust air from the milk pail, a vacuum pump, a master pulsator comprising a valve seat applied to the pump and a valve operating on said seat and connected with a source of pressure, the pulsation pipe line being connected with the valve seat, a vacuum reservoir and stabilizer, pipe connections therefrom respectively to the valve seat and to the vacuum chamber of the pump, there being ports and passages in the valve and valve seat adapted in the operation of the valve to connect the pulsation pipe line alternately with the vacuum reservoir and stabilizer and with said source of pressure.

1,421,774. PRESSURE GAUGE. HARRY E. HARDER, St. Louis, Mo., assignor of one-half to William F. Leschen, St. Louis, Mo. Filed Apr. 7, 1919. Serial No. 288,150. 8 Claims. (Cl. 73—111.)

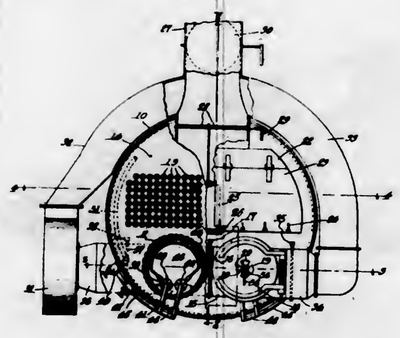
1. A pressure gauge comprising a barrel, a rotatable pressure indicator having a thrust-receiving abutment, a rotary driver having an abutment adapted to engage said thrust-receiving abutment on but one side to transmit rotary movement in only one direction to said rotatable indicator, said rotary driver being movable in the opposite direction independently of said indicator, a spiral member operatively connected to said driver and extending longitudinally of said barrel, and a fluid actuated plunger located in said barrel and cooperating with said spiral member to impart rotary movement to said driver.

1,421,775. HEADLIGHT-CONTROLLING MECHANISM. WILLIAM F. HARRINGTON, Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Oct. 29, 1917. Serial No. 199,042. 12 Claims. (Cl. 240—41.)



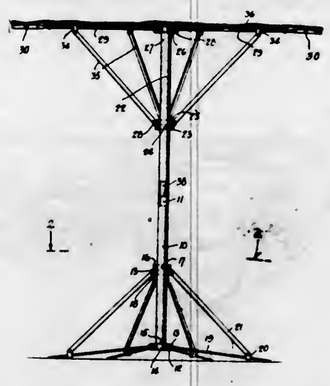
1. The combination with a motor vehicle provided with a steering column, of a headlight supported on said motor vehicle and provided with a reflector tiltable about a horizontal axis; a headlight control column disposed within said steering column; means for rotating said control column; and connections between said control column and said reflector, whereby the rotation of said control column will tilt the reflector.

1,421,776. MATERIAL FOR ARTIFICIAL INTERNAL MEMBERS OF THE HUMAN BODY. FRIEDRICH HAUPTMEYER, Essen, Germany. Filed Sept. 3, 1920. Serial No. 408,083. 5 Claims. (Cl. 32—12.)



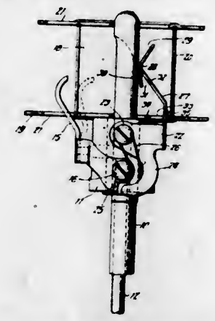
5. As a new article of manufacture, an artificial member to be used internally for living organisms made up of a chromium-nickel-steel alloy having the composition chromium 18 to 23 per cent, nickel 5 to 10 per cent, carbon .1 to .4 per cent.

1,421,777. DISPENSING DEVICE. JOEL E. HAWLEY, Kansas City, Mo., and ARTHUR W. CAPS, Topeka, Kans., assignors of one-fourth to William Jackson Riley, Kansas City, Mo. Filed Mar. 17, 1921. Serial No. 453,090. 3 Claims. (Cl. 221—60.)



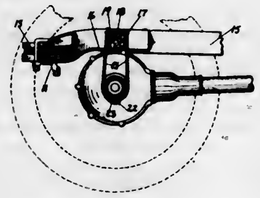
1. A material expressing device for flexible tubes comprising a cabinet, aligning, vertical grooves in the respective side walls thereof, means for supporting a paste containing tube having an open end and a closed end, a roller in the groove, means for rotating the roller to wind the closed end of the tube progressively about the roller to progressively apply pressure from the closed end of the tube toward the front end thereof, and an anchoring means for the roller comprising an anchor and a flexible connection adapted to wind upon the roller co-extensively with the winding of the tube thereabout.

1,421,778. BOILER. MAURICE J. HEALY, West Hoboken, N. J. Filed Apr. 28, 1921. Serial No. 465,183. 6 Claims. (Cl. 110—40.)



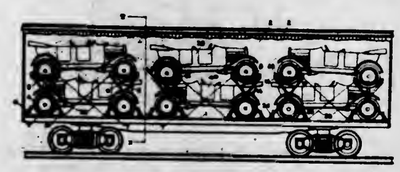
2. In a boiler, a shell, a plurality of separate combustion chambers in the shell, a corresponding number of sets of flues connected with the rear ends of the separate combustion chambers and extending to the forward end of said shell, a smoke box serving to connect the sets of flues at their forward ends, an air box connecting the forward ends of the combustion chambers, and means to withdraw gas from one end of the air box and force the same into the opposite end of the air box.

1,421,779. FOLDABLE CHAIR OR THE LIKE. WILLIAM HEERLING, New York, N. Y. Filed Dec. 24, 1921. Serial No. 524,657. 2 Claims. (Cl. 45—11.)



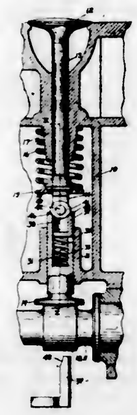
1. An article of furniture comprising a center post, a head therefor including a spider fixed to the upper end of the post, a plurality of ribs pivoted to the spider and radiating therefrom outward in a plane perpendicular to the post in operative position, each of said ribs comprising a plurality of sections articulated together around a horizontal pivot, one section of each rib being foldable upward and inward upon the other for use of the device as a chair, the jointed portions of each rib having interlocking connections on opposite sides of the pivot, one of said connections being positive to limit the movement of one section with respect to the other while the other interlocking connection comprises one member snapping into another, and braces between the ribs and the post.

1,421,780. RIBBON MECHANISM FOR TYPEWRITERS. OTTO A. HOKANSON, Woodstock, Ill., assignor to Woodstock Typewriter Company, Woodstock, Ill., a Corporation of Illinois. Filed Dec. 22, 1920. Serial No. 432,405. 17 Claims. (Cl. 197—160.)



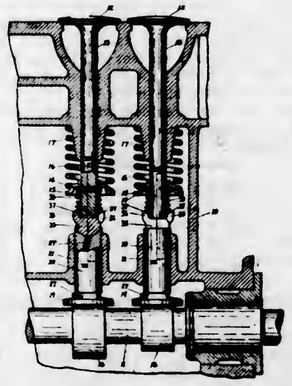
1. Ribbon mechanism for typewriters comprising a ribbon spool support, a device connected with said support and controlled by the ribbon on said spool, and means for automatically positioning said device relative to said spool prior to engagement between said device and spool when said spool is placed upon said support.

1,421,781. WIRE TIE. EDWARD HOLMES, Toledo, Ohio. Filed Aug. 30, 1920. Serial No. 407,022. 7 Claims. (Cl. 267—1.)



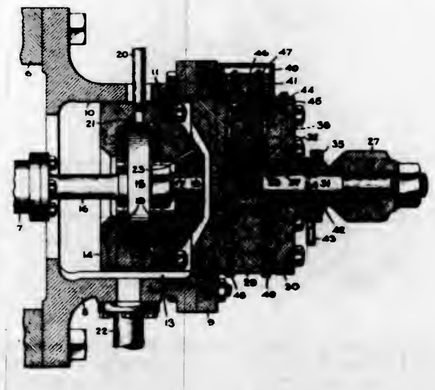
1. Means for holding compressed the springs of an automobile, comprising an element carried by the frame of the automobile, a holder made of resilient metal, adapted to bear upon the top of said element and having sides extending downwardly upon the opposite sides of the automobile axle, the ends of said holder being bent toward each other beneath the axle and provided with interlocking means adapted to be automatically engaged by pressure of the said ends together.

1,421,782. DECKING APPARATUS FOR VEHICLES. EDWARD HOLMES, Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Feb. 7, 1921. Serial No. 443,312. 19 Claims. (Cl. 105—368.)



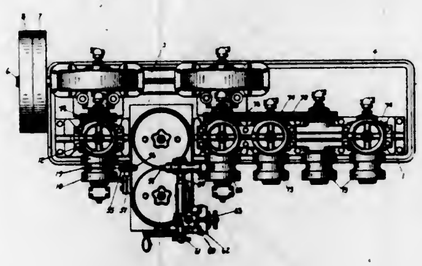
1. In a decking system for automobiles or the like, the combination of end supporting members, and transverse frame members connecting the end members together, the said end members comprising diagonally disposed standards crossing each other at a point intermediate their ends.

1,421,783. AUTOMATIC TAKE-UP DEVICE. FRANCIS JERDONE, Jr., Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Feb. 24, 1919. Serial No. 278,769. 14 Claims. (Cl. 123—90.)



1. In an automatic take-up device, the combination with the valve stem and push rod of an internal combustion engine, a cam shaft for actuating said parts, a cam between said valve stem and push rod, a spring carried by the push rod within a recess formed therein, and a cam operating member disposed between said spring and cam for actuating the latter to compensate for lost motion between the valve and cam shaft.

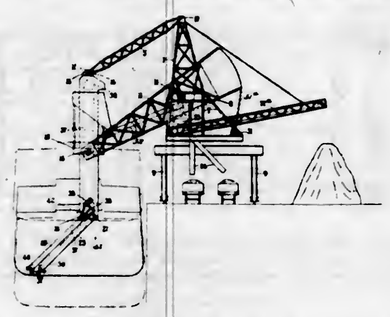
1,421,784. AUTOMATIC TAKE-UP DEVICE. FRANCIS JERDONE, Jr., Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Feb. 24, 1919. Serial No. 278,770. 17 Claims. (Cl. 123—90.)



1. In an automatic take-up device, the combination with two or more members to be actuated, and a spring actuated member interposed between the first mentioned members and rotatable about an axis extending transversely to and intersecting the longitudinal axis of the members to be actuated and tending to move the same in opposite directions.

1,421,785. VIBRATION DAMPER. OSCAR JUNGGREN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Jan. 24, 1920. Serial No. 353,753. 19 Claims. (Cl. 188—91.)

1. The combination with a rotor which is subject to axial vibrations, of thrust absorbing means connected to the rotor, said thrust absorbing means being capable of axial movement, a dashpot, and means connecting the movable member of the dash pot to the thrust absorbing means.

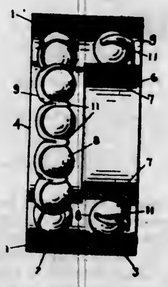


1,421,786. TUBE-WELDING MACHINE. EDWARD KAMPER, Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed June 26, 1919. Serial No. 306,832. 23 Claims. (Cl. 78—87.)

1. In a tube welding machine, a pair of feed rolls, a pair of co-operating pressure rolls, means for mounting said pressure rolls, means for clamping said pressure rolls together and means engaging said first means for yieldingly positioning said pressure rolls relative to said feed rolls.

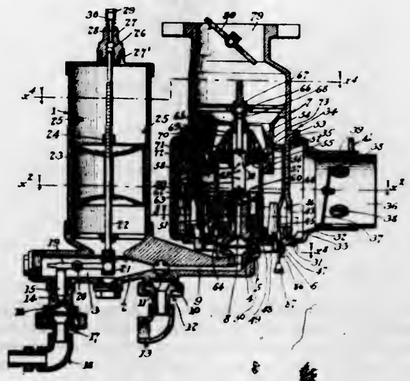
1,421,787. ELEVATOR. COLIN PETER KININMONTH, Manchester, England, assignor to Henry Simon Limited, Manchester, England. Filed Mar. 21, 1922. Serial No. 545,579. 3 Claims. (Cl. 198—117.)

1. In a device of the kind described, a vertical elevator, a parallel motion support for said elevator and having swivelling connection thereto to permit rotation of the elevator on its vertical axis, a leg at the bottom of said elevator including a pair of members pivoted to the elevator and arranged to swing in constant parallel position to each



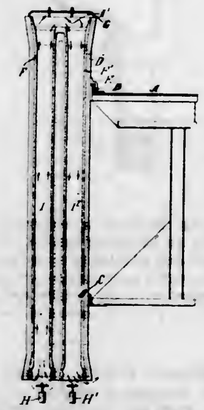
other, and a bucket chain carried by said members and extending at their free ends between the two members.

1,421,788. AUTOMOBILE BODY. WILBERT F. KINCAID, Gauley Bridge, W. Va., assignor of one-half to Albert H. Mason, Gauley Bridge, W. Va. Original application filed Sept. 3, 1920, Serial No. 407,919. Divided and this application filed Apr. 9, 1921. Serial No. 460,012. 1 Claim. (Cl. 280—124.)



In an automobile, the combination of a chassis including transverse bolsters, longitudinal sills secured rigidly on said bolsters at the ends thereof, transverse bars secured rigidly on said sills, longitudinally extending springs mounted on the ends of said transverse bars, a body including a platform extending over the bolsters or sills and the transverse bars, and detachable fastenings inserted through the depending side members of the platform and the end eyes of the springs.

1,421,789. BEARING. HARFORD C. KNOWLES, Elmira, N. Y., assignor, by mesne assignments, to The Willys-Morrow Company, Inc., a Corporation of Ohio. Filed Feb. 21, 1916. Serial No. 79,645. 6 Claims. (Cl. 64—50.)

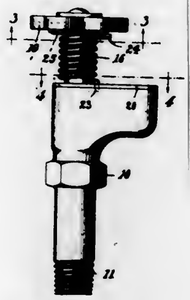


6. An annular bearing comprising inner and outer rings provided with opposite ball races, balls disposed in said races and an annular spacer having a base ring contacting with each of said balls at a single point in line with the axis of the revolution of the corresponding ball and provided with a plurality of fingers projecting from the base ring in a direction approximately parallel to the axis of the bearing, the free extremities of the fingers being yieldable radially of the bearing and each adapted to engage adjacent balls on the side opposite the said ring contact.

1,421,790. CARBURETOR. HERBERT V. LEAHY, Los Angeles, Calif., assignor to Hercules Carburetor Company, Los Angeles, Calif., a Corporation of California. Filed Apr. 14, 1919. Serial No. 289,981. 3 Claims. (Cl. 261—66.)

2. In a carburetor, the combination of a fuel chamber, a nozzle mounted on the upper end of the fuel chamber, a post extending into the fuel chamber and having a fuel duct, a valve to control the fuel duct and projecting into the nozzle, and a chambered stem for the valve having a port communicating with the fuel chamber and another port communicating with the interior of the nozzle.

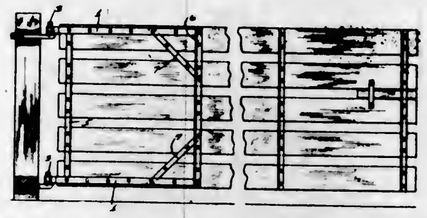
1,421,791. METHOD OF DRYING MOLDS. LOUIS R. LEMOINE, Philadelphia, Pa., assignor to United States Cast Iron Pipe & Foundry Company, Burlington, N. J., a Corporation of New Jersey. Filed May 27, 1921. Serial No. 473,101. 6 Claims. (Cl. 22—87.)



1. The method of drying molds which consists in connecting a plurality of molds in series and passing drying gases through the connected molds from one end to the other of the connected series.

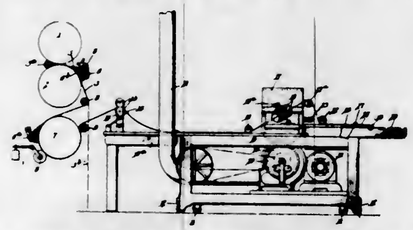
1,421,792. COMBINATION RATCHET TOOL. ALFRED R. LINDEN, Dorchester, Mass., assignor of one-half to Sarah W. Campbell, Newton, Mass. Filed Aug. 2, 1921. Serial No. 489,337. 14 Claims. (Cl. 81—60.)

1. A tool comprising two coaxial members, and means operable to permit relative rotation of said members in one direction, and to prevent relative rotation of said members in the other direction, each of said members being provided with an aperture for the reception of a lever bar.



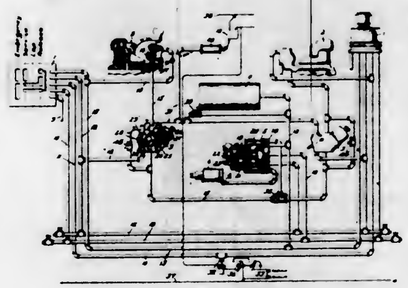
1,421,793. PRIMING VALVE. ROBERT W. LINLEY and PHILLIP B. LINLEY, Fairfield, Conn. Filed Jan. 14, 1921. Serial No. 437,314. 3 Claims. (Cl. 123—187.5.)

1. A priming cup including a reservoir, a valve and valve stem having an operating handle, a cover pivoted upon the valve stem and adapted to close the reservoir, and a spring upon the valve stem having one of its ends in frictional engagement with the handle and its other end directly secured to the cover, to open and close the same.



1,421,794. FARM-GATE HINGE. ROBERT MCLAUGHLIN, Monmouth, Ill., assignor of one-half to A. G. Patton, Monmouth, Ill. Filed Nov. 15, 1920. Serial No. 424,151. 2 Claims. (Cl. 39—87.)

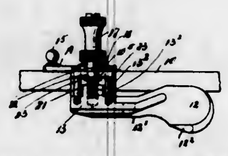
1. The combination with a gate, upper and lower hinges connected thereto and extending forward a distance equal to approximately the depth of said gate, a pair of vertical struts secured to the gate near the rear end thereof, a second pair of struts secured to said gate at the forward



end of said hinges, said hinges being connected to said struts, and members bracing said hinges with one pair of struts whereby a rectangular trussed frame is provided.

1,421,795. APPARATUS FOR PRODUCING THIN RUBBER SHEETS. OTTO H. MACKLIN, Akron, Ohio, assignor to The Miller Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Mar. 16, 1921. Serial No. 452,884. 13 Claims. (Cl. 18—10.)

1. Apparatus of the class described comprising calender means for forming rubber compound into a thin sheet, means associated with the calender means for applying powdered material to the sheet being formed thereby, and means for removing the surplus powder from the surface of the sheet.



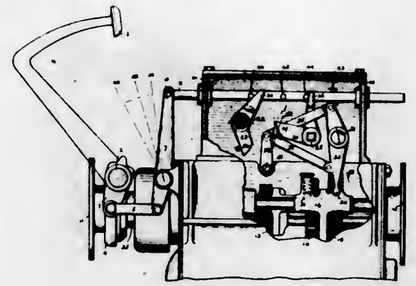
1,421,796. SAFETY CAR-CONTROL EQUIPMENT. GEORGE MACLOSKIE, Erie, Pa., assignor to General Electric Company, a Corporation of New York. Filed Feb. 19, 1921. Serial No. 446,433. 9 Claims. (Cl. 303—6.)

1. In a safety car control equipment, the combination of a source of fluid pressure, a brake cylinder, a safety control pipe, a valve device operated by venting fluid from said safety control pipe for establishing communications between said source and brake cylinder, a controller handle, a pilot valve operated upon the release of said handle for venting fluid from said control pipe, a fluid operated power circuit breaker, and a manually controlled valve adapted to control the communication through said control pipe and

the communication to said circuit breaker so that when said valve is in one position said valve device is operated to apply the brakes when said controller handle is released and said circuit breaker is closed, and when in another position said circuit breaker is opened and the release of said controller handle does not affect the operation of said emergency valve to apply the brakes.

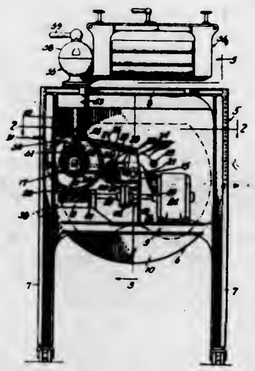
1,421,797. PRESSER-FOOT ATTACHMENT FOR SEWING MACHINES. EDWARD J. MALONEY, Long Island City, N. Y., assignor to Andrew Wolf, New York, N. Y. Filed Dec. 6, 1920. Serial No. 428,432. 2 Claims. (Cl. 112—235.)

1. In a presser foot attachment for sewing machines, the combination with a supporting arm, of a presser foot, a screw bolt rotatively supported in said arm so as to be held against relative upward movement and working in said foot and guide pins for guiding said foot vertically.



1,421,798. STORM-SASH FASTENER. WILLIAM MANDEL, Minneapolis, Minn. Filed Feb. 5, 1921. Serial No. 442,803. 2 Claims. (Cl. 292—262.)

1. A storm sash fastener comprising a rod having a curved outer portion, an eye member adapted to be secured to the middle of the lower sash member, said curved portion extending slidably through said eye member, a pin adapted to be secured to the middle of the window sill, and a looped portion on the inner end of said rod for engagement with said pin for holding the sash in open position, said pin being also adapted for engagement by said curved portion for holding the sash in closed position.

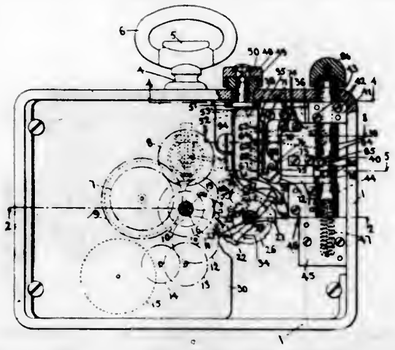


1,421,799. CHANGE-SPEED-GEAR MECHANISM. HENRY J. MANSELL, Oakland, and CONRAD D. FRY, Alameda, Calif. Filed Aug. 12, 1920. Serial No. 403,164. Renewed Mar. 9, 1922. Serial No. 542,481. 6 Claims. (Cl. 74—58.)

1. In gear shifting mechanism a plurality of gears constructed and adapted to be engaged in any of a plurality of combinations, a lever and connections for each combination, a plurality of cams adapted to actuate said levers to disengage any existing gear combination, a selector movable opposite to any of said levers and adapted when operated in said position to cause the

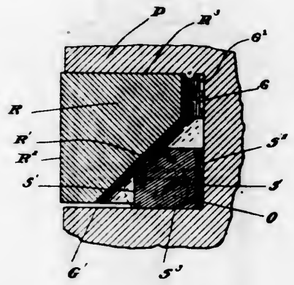
movement of the corresponding lever to establish a gear combination, and a pedal and connections actuating said cams and thereafter operating the selector to shift one of the levers depending upon its selected position.

1,421,800. GEARING. THOMAS H. MARS, Chicago, Ill., assignor to Federal Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 19, 1920. Serial No. 359,979. 4 Claims. (Cl. 74—50.)



1. In combination with a support including a bracket having an upright back flange and top and bottom platforms, an oscillating operating shaft journaled in said back flange and top platform, a crank arm loose on said operating shaft, means for operatively connecting and disconnecting said crank arm to said operating shaft, a second shaft on the top platform parallel with the operating shaft, a gear on said second shaft and a pitman connecting said gear with said crank arm, a motor on said bottom platform, and means between said platforms for operatively connecting the motor with the gear.

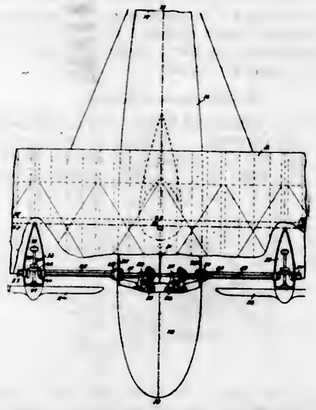
1,421,801. REPEATER TIMEPIECE. EDWARD A. MARSH, Newton, Mass., assignor to Waltham Watch Company, Waltham, Mass., a Corporation of Massachusetts. Filed June 13, 1921. Serial No. 477,046. 17 Claims. (Cl. 58—60.)



3. In a watch, a time movement including a hand-driving train adapted to be moved by setting the hands independently of said time movement, and a repeating

mechanism beside the time movement including a time element geared to said train to be actuated in unison

therewith, whether in running or in being set, and means cooperating with said element for giving invisible time indications.

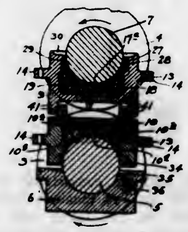


1,421,802. PISTON PACKING. LEWIS C. MARSHALL, Walpole, Mass., assignor to Pressure Proof Piston Ring Company, Boston, Mass., a Corporation of Massachusetts. Filed Apr. 14, 1920. Serial No. 373,912. 1 Claim. (Cl. 74—109.)

The combination, with a circumferentially grooved piston, of a packing ring provided with a beveled interior face, a spring ring of drawn wire having substantially the cross-section of a square with a rounded corner, and retaining the original cross-section produced by drawing, the rounded surface bearing expansively against the beveled face of the packing ring, and one of the plane surfaces seating on a plane surface of the circumferential groove in the piston.

1,421,803. TRACTOR BIPLANE. JAMES V. MARTIN, Elyria, Ohio. Filed May 26, 1917. Serial No. 171,102. Renewed Nov. 18, 1921. Serial No. 516,246. 14 Claims. (Cl. 244—25.)

1. In a device of the class described, the combination with a motive power element and a tractor screw, a mounting for the tractor screw capable of slight movement relative to the power element, of a series of rigid shafts connecting said element to drive said screw, driving gear couplings between adjacent ends of certain of said shafts to permit relative movement of the axes of said adjacent shafts while maintaining a driving connection therethrough and enclosures for certain of said shafts, said

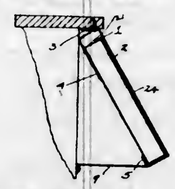


enclosures extending from front to rear of the device to provide stream line effects and means for flexibly connecting adjacent enclosures.

1,421,804. PROCESS OF REMOVING IRON FROM SOLUTIONS CONTAINING ALUMINIUM. THOR MEJDELL, Christiania, Norway, assignor to A/S Labrador, Christiania, Norway, a business entity of Christiania, Norway. Filed Feb. 27, 1920. Serial No. 361,808. 10 Claims. (Cl. 23—13.)

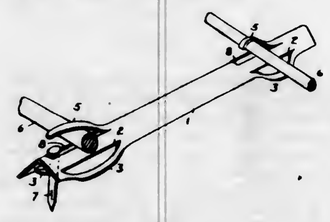
1. Process of removing iron from solutions containing an aluminium salt, which comprises adding a substance capable of neutralizing the acid liberated by hydrolysis in a quantity insufficient to neutralise all of said acid, and effecting precipitation of iron uncombined with other metals by heating.

1,421,805. LUBRICATING DEVICE FOR ROLLING MILLS. GEORGE E. MELOWN, McKeesport, Pa. Filed Nov. 5, 1920. Serial No. 422,090. 11 Claims. (Cl. 64—28.)



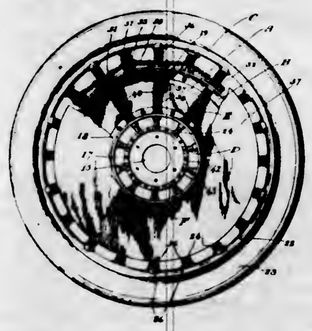
1. In a lubricating device for rolling mills, the combination with the housings, of rolls mounted therein, floating boxes for containing a lubricant held in proper position with reference to the necks of said rolls, and means for independently adjusting said boxes with respect to said roll necks.

1,421,806. DISPLAY ATTACHMENT FOR COUNTERS. WILLIAM O. MELVIN, Lakewood, Ohio. Filed July 1, 1921. Serial No. 481,751. 8 Claims. (Cl. 211—0.)



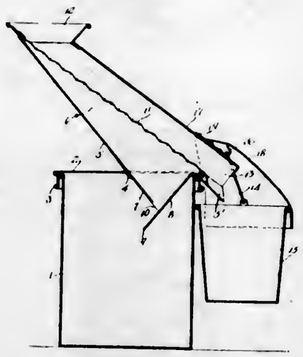
2. A display attachment for store fixtures comprising a casing provided with a series of display openings and having an inclined portion through which fastening means may be placed and series of inclined supporting strips at

the lower edge of said casing, an up-turned flange adjacent the base of said casing, and extending downwardly in the rear of each of said openings, a series of boxlike con-



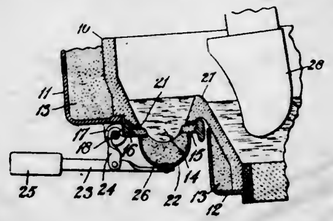
tainers provided with transparent covers and adapted to be seated within said up-turned flange and engaged by said resilient tongues.

1,421,807. SPACING BAR. FRITZ L. METZGER, Avalon, Pa. Filed Feb. 8, 1921. Serial No. 443,344. 5 Claims. (Cl. 72—122.)



1. In a spacing bar for reinforced concrete construction, a V-shaped bar of ductile sheet metal having at opposite edges thereof a series of one-piece legs bent therefrom at the same side of the bar and integral therewith at both ends, the outer faces of the legs being arranged in the same plane whereby they may contact from edge to edge with a support therefor.

1,421,808. VEHICLE SPRING WHEEL. CARL MIETHE, Chicago, Ill. Filed June 13, 1921. Serial No. 477,179. 5 Claims. (Cl. 152—28.)

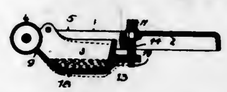


1. A spring wheel comprising a hub construction including a plurality of spaced annular bands, a felly construction surrounding the hub construction, a plurality of inwardly extending radially disposed spokes carried by the felly, the spaced bands formed on the hub construction having a plurality of slots therein arranged to receive the spokes, and shock absorbing springs coiled about said spokes and engaging respectively between the bands of the hub construction and between the outer band of the hub construction and the inner surface of the felly construction.

1,421,809. ASH SIFTER. PAUL MISCHKE, East Rutherford, N. J. Filed Oct. 22, 1921. Serial No. 509,477. 3 Claims. (Cl. 83—60.)

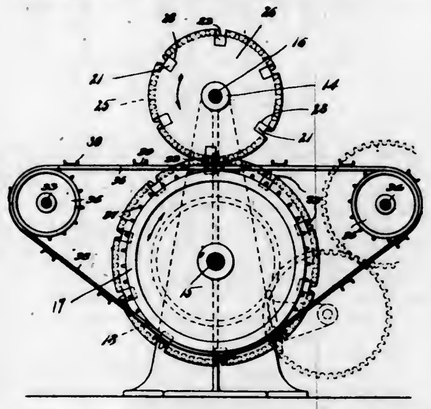
1. An ash sifter comprising a base having an opening on top, a chute arranged at an incline to the horizontal when in use, said chute being secured to said base and projecting through said opening, said chute having a bottom plate extending below the base and at right angles to the general direction of the chute, said chute adjacent the base having an opening so that ashes passing downwardly through said chute will strike said plate and be deflected so as to move at right angles through said opening whereby ash dust rising from beneath the chute cannot re-enter the chute, a wire mesh division member arranged in said chute so as to divide the chute into upper and lower compartments, the lower compartment acting as an ash guiding compartment and the upper compartment acting as a cinder guiding compartment.

1,421,810. CLOSURE FOR MOLTEN-GLASS OUTLETS. VERGIL MULHOLLAND, West Hartford, Conn., assignor to Hartford-Fairmont Company, Canajoharie, N. Y., a Corporation of New York. Filed July 26, 1921. Serial No. 487,585. 14 Claims. (Cl. 49—14.)



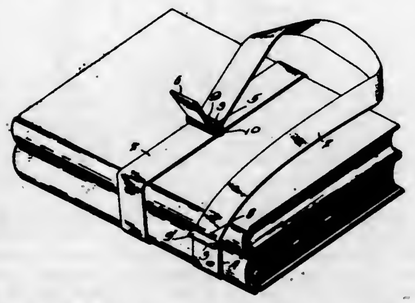
4. An insulating closure for the discharge outlet of a container for molten glass, comprising a holder provided with heat insulating material adapted to close the outlet, means for positioning the closure relative to the outlet, and means for yieldingly holding the closure against the outlet.

1,421,811. LIQUID-COATING MACHINE. EDUARD FELIX MÜLLER, Leipsig-Lindenau, Germany, assignor to E. A. Miller, Millvale Extension, Pa. Filed Apr. 8, 1922. Serial No. 550,782. 4 Claims. (Cl. 91—49.)



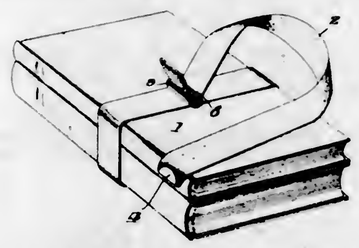
2. In a machine for applying a liquid coat on a surface, a roller, a frame connected to the ends of the roller, a

liquid-holding reservoir pivoted to the frame and having an opening close to the roller, and means for raising and



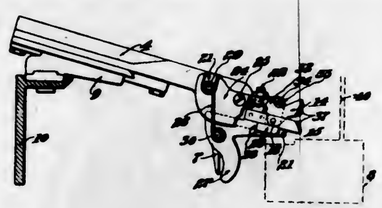
lowering the rear end of the reservoir to adjust the distance of the opening from the roller.

1,421,812. BROOM-BUNDLE-MAKING MACHINE. HARRY D. NEFF, Cambridge, Mass., assignor to Re-Fillt Broom Company, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 12, 1920. Serial No. 423,730. 5 Claims. (Cl. 300—12.)



1. In a machine of the character described, the combination of a pair of positively driven wheels, a plurality of half dies, in the periphery of said wheels, the half dies in each wheel being adapted to successively register with each other during the rotation of the wheels and means for feeding broom bundles to said half dies.

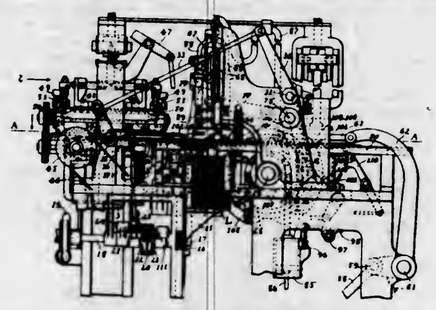
1,421,813. STRAP FASTENER. CLYDE S. NONNEMACHER, Wenonah, N. J. Filed Sept. 10, 1921. Serial No. 499,739. 7 Claims. (Cl. 24—17.)



1. In a strap fastener device, the combination of a metal member having a slot therethrough, a strap having a looped portion extending through said slot and adapted to encircle an article to be held, said slot being of a width adapted to receive not more than twice the thickness of said strap, one of the ends of said strap having a lateral projection formed of a thickened portion of the strap material and on the face thereof next adjacent the opposite end portion, said projection extending toward and having the tip end thereof frictionally engaging the adjacent opposite face of said opposite end portion, and being adapted to be drawn toward said slot and between the two strap ends projecting therethrough.

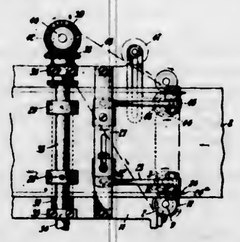
1,421,814. STRAP FASTENER. CLYDE S. NONNEMACHER, Wenonah, N. J. Filed Mar. 23, 1922. Serial No. 545,963. 3 Claims. (Cl. 24—17.)

1. In a strap fastener device the combination of a metal member having a slot therethrough, the wall on one side of said slot being of greater depth than the correspondingly opposite wall of said slot, a strap having a looped portion extending through said slot and adapted to encircle an article to be held, one of the ends of said strap having a lateral projection on the face thereof which projection is adapted to engage said metal member and bind against the adjacent face of the opposite end of the strap which opposite end extends beyond said metal member to be pulled to tighten the device.



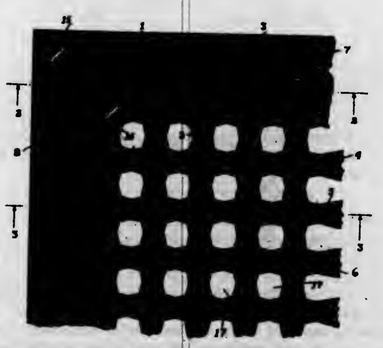
1,421,815. LOOM-TEMPLE THREAD CUTTER. JONAS NORTHROP, Hopedale, Mass., assignor to Hopedale Manufacturing Company, Milford, Mass., a Corporation of Massachusetts. Filed June 7, 1918. Serial No. 238,650. 8 Claims. (Cl. 139—36.)

1. A thread cutter for looms comprising a movable supporting member, cutter blades mounted thereon and capable of movement independently thereof, the cutter blades having beveled rear edges adapted to engage a strand of filling when the cutter blades are moved rearwardly in a closed position and to thereby position the filling under tension to be received between the blades when they are opened, and means for opening the blades at near the end of their rearward movement and for closing the blades at the beginning of their subsequent forward movement.



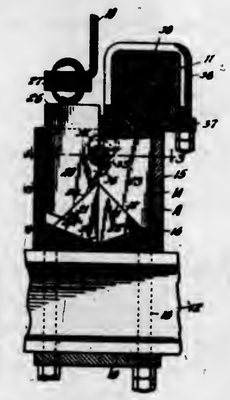
1,421,816. MACHINE FOR MAKING LINED ENVELOPES. ABRAHAM NOVICK, Brooklyn, N. Y., assignor to F. L. Smithe Machine Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 7, 1920. Serial No. 415,225. 11 Claims. (Cl. 93—61.)

1. In an envelope machine for making lined envelopes, the combination of a support for a pile of envelope blanks, a lining blank receiving station, means for moving an envelope blank from said support to said lining receiving station, another support for a pile of lining blanks, and



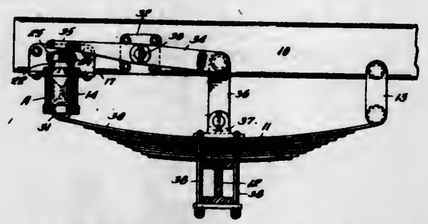
means for moving a lining blank in a rectangular path from said other support onto said envelope blank at the receiving station.

1,421,817. CREASING MECHANISM. ABRAHAM NOVICK, Brooklyn, N. Y., assignor to F. L. Smithe Machine Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 1, 1921. Serial No. 457,735. 9 Claims. (Cl. 93—58.)



1. In a creasing mechanism the combination of a pair of peripherally coacting rolls, means for feeding paper or the like over the faces of said rolls transverse their axes, and means for forming in the paper an offset portion along a line and for guiding said portion into the field of coaction of said rolls, whereby the paper is folded upon itself along said line.

1,421,818. RUBBER MAT. CLIFFORD H. OAKLEY, Trenton, N. J. Filed Feb. 12, 1920. Serial No. 358,014. 9 Claims. (Cl. 15—215.)

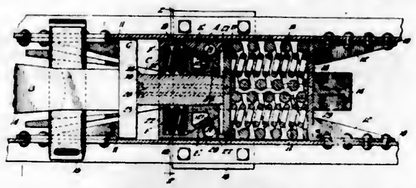


1. A mat comprising a plurality of separate strips woven together, said strips channeled to receive parts of other strips, the channels having varied widths throughout their lengths and interlocking with portions of correspondingly varying widths.

1,421,819. SHOCK ABSORBER. JOHN F. O'CONNOR, Chicago, Ill., assignor to William H. Miner, Chazy, N. Y. Filed June 6, 1919. Serial No. 302,254. 7 Claims. (Cl. 267—9.)

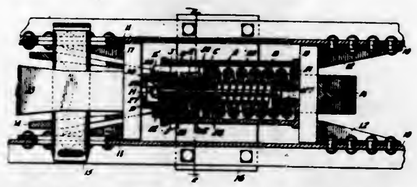
1. In a shock absorber for vehicles having a body member, an axle, and a main spring interposed therebetween; a shock absorbing mechanism interposed between said spring and the axle and forming a support for the spring on the axle, said shock absorbing mechanism being arranged for direct actuation by said body member upon relative approach of said body member and axle beyond a predetermined amount.

1,421,820. SHOCK ABSORBER. JOHN F. O'CONNOR, Chicago, Ill., assignor to William H. Miner, Chazy, N. Y. Filed June 6, 1919. Serial No. 302,255. 3 Claims. (Cl. 267—9.)



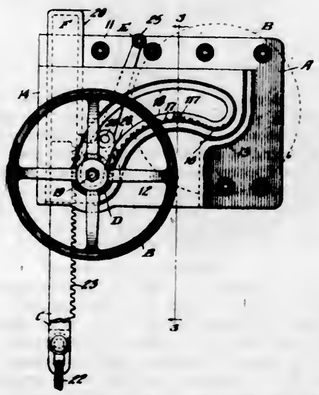
1. In a device of the character described, the combination with a vehicle body member, axle and spring interposed therebetween; of an auxiliary shock absorbing device including, a shell attached to the body member, a wedge, and friction shoes within the shell, said spring having one end thereof united to one of said elements; and independent means interposed between the axle and said device for actuating the latter after a predetermined relative approach of the axle and body member.

1,421,821. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor to William H. Miner, Chazy, N. Y. Filed June 13, 1921. Serial No. 476,987. 7 Claims. (Cl. 213—64.)



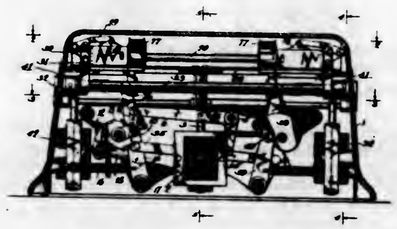
1. In a friction shock absorbing mechanism, the combination with a container provided on the interior with opposed wedge surfaces; of wedge-friction-shoes cooperable with said surfaces; spring means reacting between said container and said wedge-shoes normally tending to impel

the latter along said wedge surfaces; a friction plunger adapted to directly receive pressure at one end and fric-



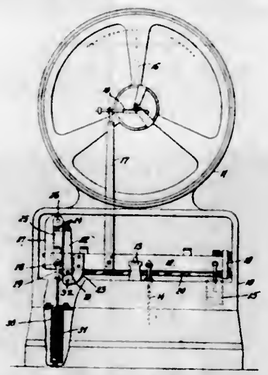
tionally slidable between said wedge-shoes; and a spring resistance cooperable with the opposite end of said plunger.

1,421,822. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor to William H. Miner, Chazy, N. Y. Filed June 13, 1921. Serial No. 476,988. 6 Claims. (Cl. 213—64.)



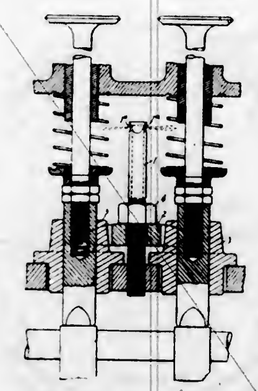
4. In a friction shock absorbing mechanism, the combination with a casting having integrally formed friction shell and spring cage sections each provided with cylindrical interior surfaces; of a main spring resistance within said cage; a wedge and a cooperating series of circularly arranged friction shoes within said shell; a spring follower within said casting located between said main spring resistance and the shoes and normally spaced from the latter, said spring follower being freely movable lengthwise within said shell and cage; a preliminary spring resistance interposed between said follower and the shoes; and means for maintaining a predetermined normal relation between said friction shoes and spring follower and an initial compression upon the preliminary spring and also for maintaining the overall length of the mechanism.

1,421,823. HAND BRAKE. JOHN F. O'CONNOR, Chicago, Ill., assignor to William H. Miner, Chazy, N. Y. Filed June 30, 1921. Serial No. 481,556. 9 Claims. (Cl. 74—119.)



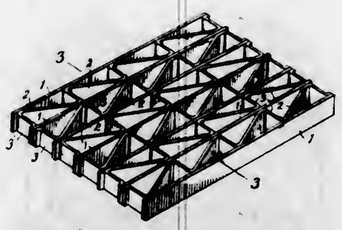
1. In a brake mechanism of the character described, the combination with a flexible element adapted to be connected at one end with the brake rigging proper and a rack by which said element is adapted to be pulled at its opposite end; of a fixed bracket having a rack extending for a portion of its length in a direction generally parallel to the initial line of pull on the flexible element and gradually changing to a direction generally transverse to said line of pull; a gear in mesh with both of said racks; means for rotating said gear; and means for locking the parts against a release movement.

1,421,824. TIME RECORDER. GEORGE WILLIAM ODELL, Binghamton, N. Y., assignor to The International Time Recording Company of New York, a Corporation of New York. Filed June 29, 1921. Serial No. 481,196. 5 Claims. (Cl. 234—43.)



1. In a recording machine, four knives in positions to cut out sections of varying lengths from the side edges of a workman's card at the four corners, in combination with time-controlled means for advancing the knives to positions corresponding to fractions of an hour and working hours, and means controlled by a card inserted into the machine for operating the said knives first on the "on" side and subsequently on the "off" side of the card.

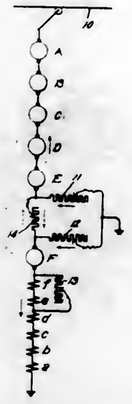
1,421,825. THERMOSTAT FOR PORTABLE SCALES. LOUIS A. OSGOOD, Dayton, Ohio, assignor to International Scale Company, Dayton, Ohio, a Corporation of Illinois. Filed Dec. 8, 1920. Serial No. 429,052. 6 Claims. (Cl. 265—69.)



1. In a weighing scale in combination a scale lever, a pair of brackets carried thereby, a pair of connected swinging arms mounted to swing thereon, a thermostat connected to one of said arms and to said lever, a load counterbalancing spring, and a connection between the other of said arms and said spring, for the purpose described.

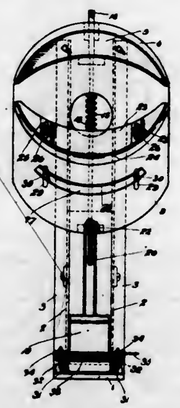
1,421,826. VALVE-STEM LUBRICATOR. EARL E. PARSLOW, San Diego, Calif. Filed May 6, 1921. Serial No. 467,412. 3 Claims. (Cl. 184—6.)

3. A device of the class described, including the combination with the intake and exhaust valves of a gas engine of a conductor interposed between said valve stems and its one end communicating with the interior of the crank case, its other end provided with oppositely disposed apertures facing toward said valve stem, comprising a hollow bolt threaded at one end, screwed in a threaded hole in the crank case and its extended end provided with apertures communicating with the interior of said bolt.



1,421,827. FLOOR GRATING. WILLIAM L. PATTISON, Rosedale, Kans. Filed Dec. 18, 1920. Serial No. 431,737. 4 Claims. (Cl. 94—30.)

1. In a floor grating a plurality of parallel bars, and an intermediate bar having a plurality of parallel obliquely disposed portions and a plurality of cross portions connecting adjacent ends of said oblique portions and attached at their ends and disposed at right angles to said parallel bars respectively, substantially as set forth.

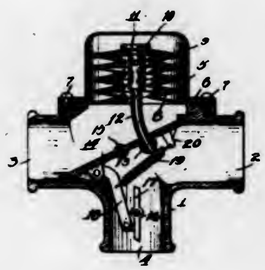


1,421,828. POWER TRANSMISSION AND ELECTRIC BRAKING. FRANKLIN H. PAITCHARD, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Sept. 11, 1920. Serial No. 409,639. 16 Claims. (Cl. 172—179.)

9. In a system of electric braking, a plurality of dynamo electric machines having severally armature and field windings, a portion of said machines operating as a self-excited exciter connected in a local circuit with the field windings of said machines, the armatures of the remainder of said machines operatively connected to each other, a resistor establishing a connection between the

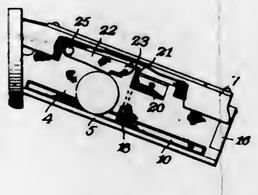
said remainder of the armatures and the field windings of said machines, and a plurality of resistors in the said local circuit connected in multiple by the first resistor.

1,421,829. HOOP-FORMING MACHINE. WILLIAM W. PUTNEY, Grand Rapids, Mich., assignor of one-fourth to Charles E. Cartier and one-fourth to Edward M. Holland, Grand Rapids, Mich. Filed Aug. 9, 1919. Serial No. 316,289. Renewed Apr. 3, 1922. Serial No. 549,164. 6 Claims. (Cl. 144—258.)



1. In combination, an upright support, a curved form secured at the upper end of the support, a plate slidably mounted on the support, a plurality of forms curved oppositely from the first form secured to the plate in vertical spaced relation, means tending to elevate the plate, means to operate the plate in a downward direction and means for controlling the extent of downward movement of the plate.

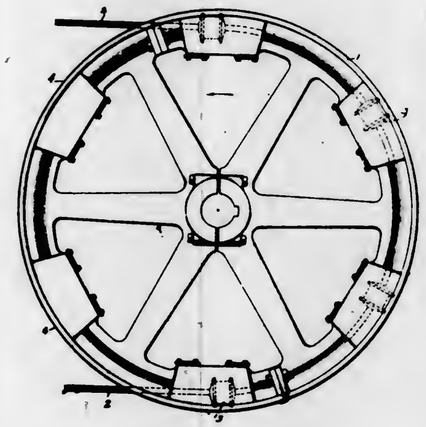
1,421,830. THERMOSTATIC DEVICE FOR COOLING SYSTEMS OF INTERNAL-COMBUSTION ENGINES. CHARLES L. RAYFIELD, Chicago, Ill., assignor to Beneke & Kropf Manufacturing Company, a Corporation of Illinois. Filed Oct. 2, 1919. Serial No. 328,022. 8 Claims. (Cl. 236—34.)



8. A device of the class described comprising valve means for controlling the flow of a fluid, a thermostat

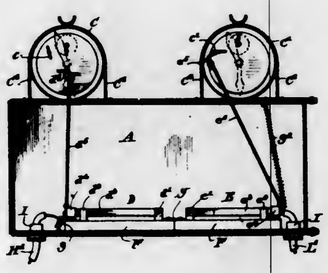
mounted on one side of the valve means, and means connected to the thermostat and extending to the other side

of the valve means to afford a limited circulation therethrough and provide an operative connection between the thermostat and the valve means.



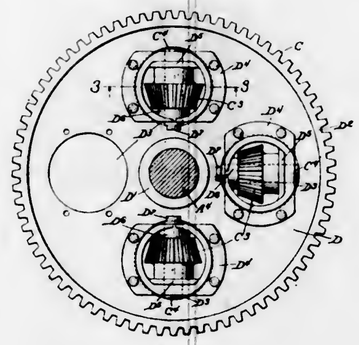
1,421,831. VENDING MACHINE AND THE LIKE. GEORGE C. REITH, Philadelphia, Pa., assignor, by mesne assignments, to National Sales Machine Company, Worcester, Mass., a Corporation of Massachusetts. Filed Dec. 14, 1917. Serial No. 207,035. 6 Claims. (Cl. 194—102.)

1. In an apparatus of the type specified, a coin chute having a track for the coin, a movable member normally positioned at one side of said track and movable transversely across the track for clearing the same, means whereby said member may be operated to clear said track by the insertion of a coin into said chute, a gate occupying normally an out-of-the-way position with relation to said track but movable to occupy an engaging position in the path of a coin moving over said track, and means for locking said gate in its engaging position whereby the gate may be released to occupy its out-of-the way position by the approach to the gate of a coin of predetermined diameter, said movable member and gate being arranged whereby the gate may be moved into its engaging position by the operation of said movable member for clearing said track.



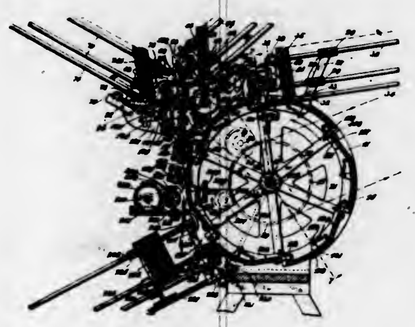
1,421,832. SPROCKET WHEEL. RALPH JAMES RILEY, Portland, Me. Filed Sept. 13, 1921. Serial No. 500,304. 4 Claims. (Cl. 74—42.)

1. A sprocket wheel having pockets spaced apart formed in the periphery of the wheel and between said pockets an annular channel, said pockets having guideways formed therein and wearing shoes adapted to fit into said guideways, said wearing shoes being tapered and each provided with a rectangular hole therethrough aligning with rectangular holes in the side faces of the



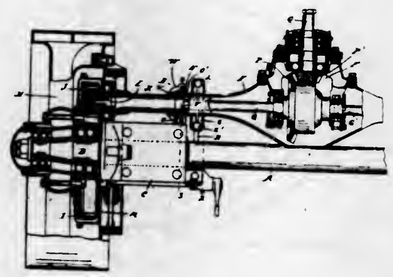
pocket for inserting a tapered pin therein for locking the wearing shoe in the guideways.

1,421,833. ELECTRIC TIME-SWITCH MECHANISM. ARTHUR R. ROSAMOND, Laramie, Wyo., assignor, by direct and mesne assignments, to Doris E. Soden, Kansas. Filed June 10, 1921. Serial No. 476,482. 1 Claim. (Cl. 200—39.)



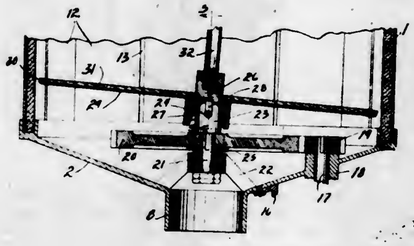
Electric time switch mechanism comprising two separately operable circuit controlling switches, a casing enclosing them, a piece of insulating fire-proof material on which the switches are mounted, two clocks mounted on the outside of the top of the casing and secured thereto, a spring associated with one of the switches and tending to open it, another spring associated with the other switch and tending to close it, a rod hinged to one of the switches and extending directly therefrom through the top of the casing and engaging the winding key of one of the clocks to hold said switch open and another similar rod hinged to the other switch and extending directly therefrom through the top of the casing and engaging the winding key of the other clock to hold the associated switch closed.

1,421,834. DIFFERENTIAL. JAMES ROSS, Laporte, Ind., assignor to Advance Rumely Company, Laporte, Ind., a Corporation of Indiana. Filed Mar. 9, 1921. Serial No. 450,814. 9 Claims. (Cl. 74—99.)



2. In a differential gear a plurality of separate pinion boxes flanged for attachment to the web of the gear, and pinions mounted for rotation in said boxes.

1,421,835. ENVELOPE FILLING AND CLOSING MACHINE. GEORGE F. RUSS, Jersey City, N. J. Filed Oct. 20, 1920. Serial No. 418,258. 25 Claims. (Cl. 93—6.)

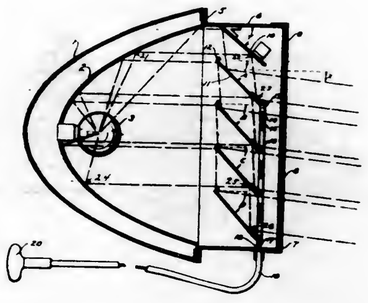


1. In a machine of the character described, the combination of a cylinder, means for rotating the same, an envelope holder, means for opening the flaps of the envelopes one at a time and laying the flap upon the periphery of the rotating cylinder, means attached to the cylinder for gripping such flap and drawing the envelopes from the holder, and means for inserting articles into the envelopes as it is drawn along.

1,421,836. VEHICLE AXLE. ALBERT W. RUSSEL, Detroit, Mich., assignor to Russel Motor Axle Company, Detroit, Mich., a Corporation of Michigan. Filed May 29, 1919. Serial No. 300,673. 12 Claims. (Cl. 180—73.)

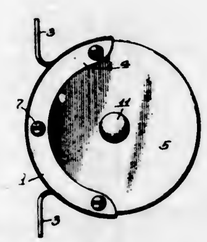
1. In a vehicle axle, the combination with a dead or load-carrying axle member, of spring supports mounted thereon, a jack-shaft housing extending between said spring supports, and universal bearings for said housing on said spring supports.

1,421,837. VEGETABLE-PARING MACHINE. FRANK M. SCHAEFER, Chicago, Ill., assignor, by direct and mesne assignments, of one-half to C. M. Bentley, Chicago, Ill., and one-half to Schaefer-De Lude-Wallace Company, a Corporation of Illinois. Filed Nov. 5, 1919, Serial No. 335,852. Renewed Dec. 7, 1921. Serial No. 520,692. 10 Claims. (Cl. 146—14.)



2. A vegetable paring machine comprising an abrasively lined casing, and an eccentrically controlled rotatable inclined abrasive disk removably disposed therein.

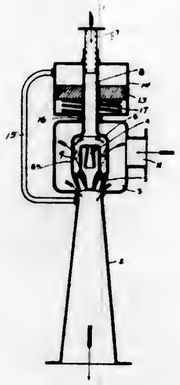
1,421,838. ILLUMINATING MECHANISM. DON W. SCHAEFFER, Dayton, Ohio. Filed Jan. 31, 1921. Serial No. 441,136. 2 Claims. (Cl. 240—45.2.)



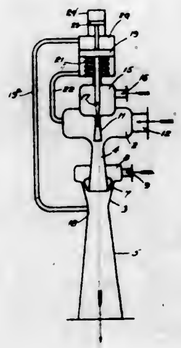
1. The combination with a headlight having a reflector and a source of illumination, of a series of deflecting and reflecting plates pivotally mounted at one edge forwardly of the source of illumination and arranged in spaced relation, extensible means connecting each plate to adjacent plates to permit the free edges of the plates to be adjusted relatively to one another, a stationary

deflecting plate arranged above the series of pivoted plates for constantly directing a portion of the light rays downwardly, and operating means associated with

said plates and extending from the same to permit said pivoted plates to be simultaneously swung about their pivot from a distance.



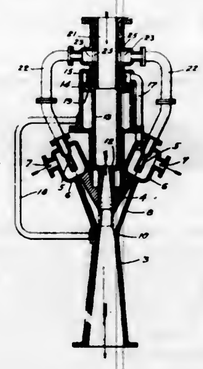
1,421,839. FISHLINE REEL. WILLIAM SCHMID, Bronson, Mich. Filed Jan. 24, 1921. Serial No. 439,354. 3 Claims. (Cl. 242—84.1.)



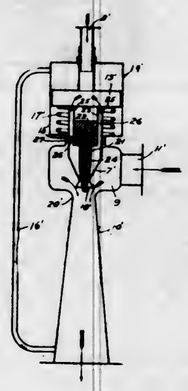
3. As a new article of manufacture, a substantially semi-cylindrical reel frame adapted for attachment to a fish rod and having end flanges in opposed relation affording reel head seats, said frame being formed from a semi-cylindrical member having end members cut away to provide the end flanges and the cylindrical wall cut and portions thereof bent outwardly to provide longitudinal reel seat engaging members.

1,421,840. FLUID TRANSLATING DEVICE. HENRY F. SCHMIDT, Swarthmore, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Original application filed Sept. 14, 1914, Serial No. 861,633. Divided and this application filed Apr. 16, 1920. Serial No. 374,371. 4 Claims. (Cl. 230—13.)

3. An ejector comprising a mixing chamber having an inlet for fluid to be translated, a diffuser communicating with the mixing chamber, a nozzle head cooperative with the inlet of the diffuser to vary the inlet of the diffuser, means responsive to the pressure of fluid in the mixing chamber to move the nozzle head to vary the inlet area, said nozzle head having a central diffusing nozzle and an annular series of converging diffusing nozzles surrounding and below the central diffusing nozzle, and said head also having ports for fluid to be translated cooperative with the central diffusing nozzle.

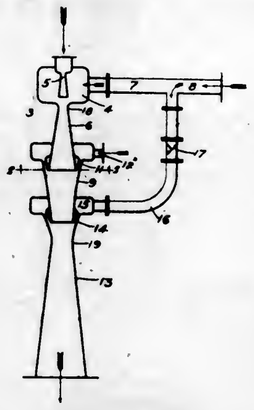


1,421,841. FLUID-TRANSLATING DEVICE. HENRY F. SCHMIDT, Swarthmore, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 14, 1914, Serial No. 861,630. Renewed Dec. 30, 1921. Serial No. 526,029. 20 Claims. (Cl. 230—13.)



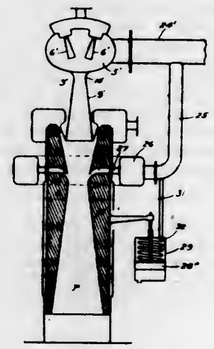
1. In combination in an apparatus of the character described, a chamber to which medium to be compressed is delivered, an ejector device communicating with said chamber for receiving medium therefrom and for compressing it to a relatively high pressure, means for delivering impelling fluid to said device for accelerating the medium of said chamber before delivering it to said device and for delivering a stream of filler fluid to the diffuser of said device, and means for varying the amount of filler fluid delivered in accordance with variations in the amount of fluid to be compressed.

1,421,842. FLUID-TRANSLATING DEVICE. HENRY F. SCHMIDT, Swarthmore, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 14, 1914, Serial No. 861,631. Renewed Dec. 30, 1921. Serial No. 526,030. 20 Claims. (Cl. 230—13.)



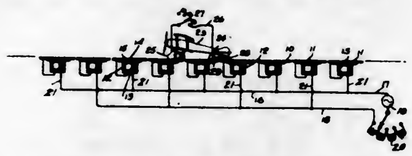
1. In combination in an apparatus of the character described, a diffuser, a chamber communicating with the diffuser receiving medium to be expelled, a main delivery nozzle for delivering expelling fluid through the diffuser, an accelerating nozzle for delivering expelling fluid through the diffuser, and means responsive to variations in the amount of medium entering the chamber for controlling the operation of said main nozzle and the delivery of fluid through said accelerating nozzle.

1,421,843. FLUID-TRANSLATING DEVICE. HENRY F. SCHMIDT, Swarthmore, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 14, 1914, Serial No. 861,633. Renewed Dec. 30, 1921. Serial No. 526,031. 21 Claims. (Cl. 230—13.)



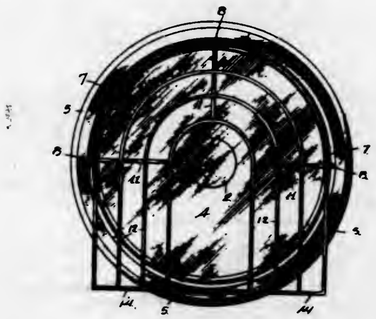
1. In combination in an apparatus of the character described, a diffuser communicating with a suction port of the apparatus, means for delivering a jet of fluid through the diffuser for translating medium entering the port through the diffuser, and means responsive to variations in the amount of medium entering the port for varying the position of the fluid delivery means relatively to the diffuser.

1,421,844. FLUID-TRANSLATING DEVICE. HENRY F. SCHMIDT, Swarthmore, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 14, 1914, Serial No. 861,634. Renewed Dec. 30, 1921. Serial No. 526,032. 15 Claims. (Cl. 230—13.)



1. In combination in an apparatus of the character described, a plurality of ejectors located in series, a passage from which medium is to be ejected by said ejectors, and means responsive to a variation in the amount of medium to be translated for causing said ejectors to operate in series or in parallel in receiving fluid from said passage.

1,421,845. FLUID-TRANSLATING DEVICE. HENRY F. SCHMIDT, Swarthmore, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 14, 1914, Serial No. 861,635. Renewed Dec. 30, 1921. Serial No. 526,033. 15 Claims. (Cl. 230—13.)

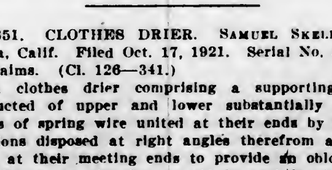


1. In combination in an apparatus of the character described, an ejector for expelling fluid, a second ejector receiving the impelling and the impelled fluid from the first ejector, and means responsive to pressure variations within the suction chamber of the first ejector for controlling the delivery of impelling fluid to the second ejector.

1,421,846. APPARATUS FOR AIRCRAFT. FREDERICK ERNEST SCHOLFIELD, Waterford, Conn. Filed Apr. 21, 1921. Serial No. 463,159. 3 Claims. (Cl. 244—2.)

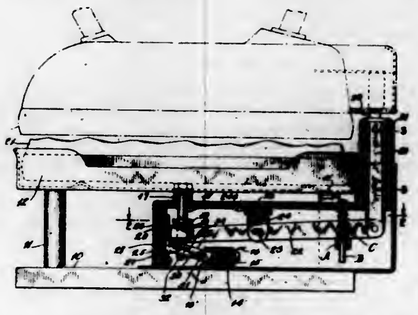
1. An apparatus for facilitating the launching, mooring or landing of aircraft, comprising a metallic platform, metallic shoes on the aircraft and electromagnetic means for setting up a braking force therebetween when said metallic members are brought in close contact, in combination with means located on the aircraft for rendering said means respectively active or inactive.

1,421,847. NONGLARING ATTACHMENT FOR HEADLIGHTS. CHARLIE SCHOPKE, San Francisco, Calif. Filed June 2, 1921. Serial No. 474,518. 1 Claim. (Cl. 240—48.4.)



A non-glaring attachment for motor vehicle headlights comprising a plurality of semi-circular reflecting members arranged on the upper portion of said headlight and parallel to the axis thereof to reflect upper diverging rays from said headlight onto the ground in advance thereof, said members having vertically disposed depending portions arranged to reflect lower diverging rays back towards the plane of the axis of said headlight; a ring detachably mounted between the front of the headlight and the lens rim thereof and having a semi-circular flange projecting through said rim; and means for detachably connecting said members to said flange.

1,421,848. HANDLE JOINT. WESLEY E. SEASTROM, Dubuque, Iowa, assignor to Schmid Manufacturing Company, Dubuque, Iowa, a Copartnership consisting of B. C. Schmid and F. W. Schmid. Filed Aug. 30, 1920. Serial No. 406,992. 10 Claims. (Cl. 16—112.)

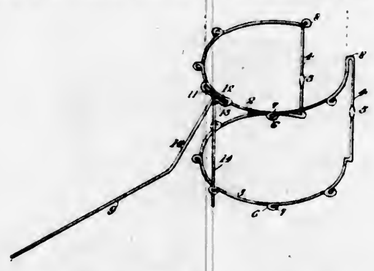


1. The combination with a base member having spaced openings of different sizes therein, of a handle engaged through the largest of said openings, and extensions on said handle engaged through the smaller openings and bent downwardly inside the base member.

1,421,849. GARMENT CONSTRUCTION. JOSEPH SHRWALD, Brooklyn, N. Y. Filed Jan. 10, 1922. Serial No. 528,161. 2 Claims. (Cl. 2—142.)

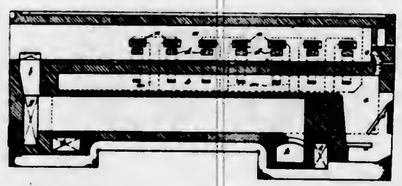
2. In a waistband construction for trousers, a pair of lining strips secured within the waistband of the trousers each having a plait formed therein adjacent the rear end thereof for receiving between the folds of said plait the upper portion of the outer edge of the material defining the rear seam of the trousers, and attaching means for securing the rear edge of the plait to the rear seam of the trousers.

1,421,850. STAND AND AUTOMATIC SWITCH FOR ELECTRIC IRONS. ART J. SHIRK and SOLOMON COHEN, New York, N. Y., assignors to Abraham S. Iserson, New York, N. Y. Filed Dec. 16, 1919. Serial No. 345,328. 20 Claims. (Cl. 219—23.)



1. In combination with an electric sad iron having contacts thereon, an electric heating stand having electrical terminals for said contacts adapted to make connection therewith when the iron is upon the stand, means adapted to be operated by the weight of the iron when placed in position on the stand to connect said terminals to the electric supply and means whereby said terminals are disconnected from the supply when the iron is moved from the stand and before said contacts are moved out of contact with said terminals.

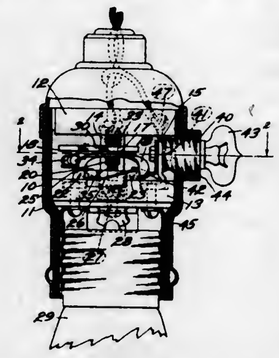
1,421,851. CLOTHES DRIER. SAMUEL SKELLY, Alameda, Calif. Filed Oct. 17, 1921. Serial No. 508,323. 8 Claims. (Cl. 126—341.)



1. A clothes drier comprising a supporting frame constructed of upper and lower substantially parallel strands of spring wire united at their ends by integral extensions disposed at right angles therefrom and connected at their meeting ends to provide an oblong substantially rectangular frame, said frame being bent into a substantially circular band with the frame ends lying adjacent to each other for frictionally engaging a substantially circular support, said upper and lower frame

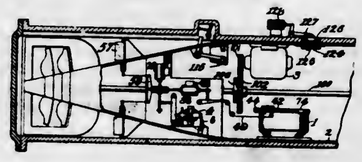
strands being outwardly bent or looped at corresponding intervals to provide a plurality of vertically disposed pairs of spring eyes, and a clothes supporting arm comprising a horizontal portion and a vertical portion con-

nected by a loop forming a supporting head, said vertical portion adapted for reception within one of said pairs of eyes with the supporting head resting on the upper strand.



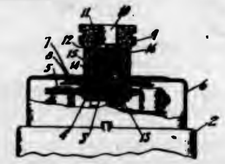
1,421,852. FURNACE. ALFRED SMALLWOOD, London, England. Filed Mar. 8, 1920. Serial No. 364,266. 1 Claim. (Cl. 263—15.)

A furnace, including a gas generator, a green gas flue communicating with said gas generators, a working chamber above said flue, a recuperator below said flue, a plurality of conduits extending from said flue to said working chamber and including individually regulable ports, discharge means connecting said working chamber and recuperator, air flues located on each side of the furnace and passing through said recuperator, and flues each extending vertically from said air flues to pairs of individually regulable ports admitting to the working chamber.



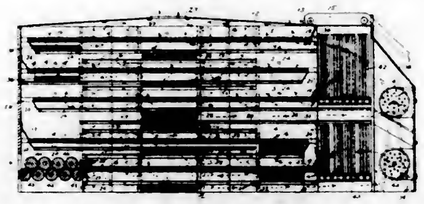
1,421,853. PULL-SOCKET SWITCH. RAYMOND D. SMITH, Boston, Mass., assignor to Shawmut Machine Works, Inc., a Corporation of Maine. Filed Oct. 27, 1916. Serial No. 128,132. Renewed Sept. 30, 1921. Serial No. 504,494. 16 Claims. (Cl. 173—336.)

5. In a pull-socket having supply credit terminals and including a body structure comprising top and bottom insulating blocks secured in spaced relation by conductive brackets extending therebetween, the combination with said structure, of a pawl-and-ratchet-actuated switch mechanism mounted between said blocks and including an oscillatory driving device with means to limit its stroke to a partial rotation and resilient means tending to restore it to a definite position at one end of the designed stroke; a rotatable conductive, double-ended current-switching member pivoted to be rotated by said device; a plurality of circuit contacts arranged to be successively engaged by said member in diametrically opposite pairs, with insulating supports for said contacts arranged cooperatively with said member to restrict retrogressive movement thereof between successive contacts; a main two-terminal lamp receptacle depending from the lower surface of said bottom insulating block; an auxiliary two-terminal plug receptacle carried by said body structure; insulated fixed circuit connections between one terminal of each of said receptacles and a common supply circuit terminal; and separate circuit connections between the other terminal of each of said receptacles and members of different pairs of said stationary contacts together with insulated fixed circuit connection between the related mem-



bers of said last mentioned pairs and another supply circuit terminal;—more than one of the said pairs of contacts being successively disposed within the travel of said member caused by a full stroke of said device, whereby different connection of said receptacles to the supply circuit may be had through a full or partial stroke respectively of said device.

1,421,854. GYROSCOPIC APPARATUS FOR TORPEDOES. ELMER A. SPERRY, Brooklyn, N. Y., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed Mar. 15, 1916. Serial No. 84,292. 22 Claims. (Cl. 114—24.)

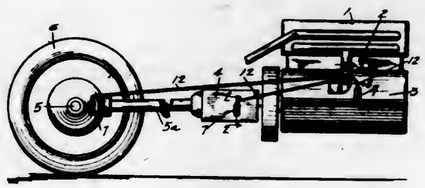


1. In an automobile torpedo, the combination with gyroscopic steering gear therefor, of means for stabilizing the reference plane, from which the steering is controlled, about the fore and aft axis of the torpedo.

1,421,855. ELECTRIC SWITCH. CLARENCE C. STIRLING, Hartford, Conn. Filed Jan. 5, 1921. Serial No. 435,062. 8 Claims. (Cl. 200—172.)

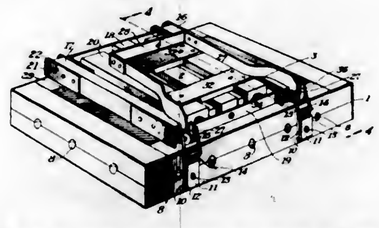
1. An electric snap-switch button, an internally-threaded screw rotative in the button, to fit the external threads of the spindle of the switch, and a spring coiled around the screw, one end of the spring being fixed with respect to the button and the other end being free of the button whereby the spring will be closed when the screw is turned in one direction and opened when turned in the opposite direction.

1,421,856. DRYING MACHINE. GEORGE STONE, North Andover, Mass., assignor of one-half to M. T. Stevens & Sons Company, North Andover, Mass., a Corporation of Massachusetts. Filed Dec. 15, 1921. Serial No. 522,491. 14 Claims. (Cl. 34—12.)



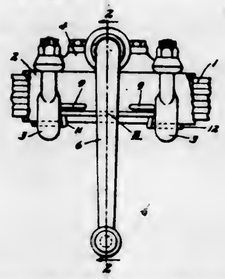
1. A drying-machine comprising a plurality of horizontal rows of conveying rolls arranged at different heights, and adapted to conduct material in a sinuous course through the machine, the rolls of each row being separated by air spaces; air-forcing and heating apparatus; and independent air conductors under said rows connected with said apparatus and adapted independently to conduct air under the rolls of each row, the conducted air being exhausted or discharged upwardly through said spaces into air chambers above the rolls, and utilized to both dry and lift material in transit on the rolls, each row of rolls and the accompanying conductor constituting a conveying and drying unit.

1,421,857. METHOD OF CONSTRUCTING SUBAQUEOUS CONCRETE STRUCTURES. JOHAN STÖRE, Christiania, Norway. Filed May 27, 1920. Serial No. 384,518. 11 Claims. (Cl. 61—46.)



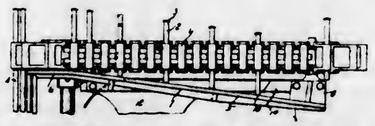
1. The herein described method of forming subaqueous structures, which consists in submerging a chamber below the surface of the water and thereafter feeding casting material into such chamber to inflate the same.

1,421,858. VACUUM OILING SYSTEM. FRANK W. THOMAS and MAYO D. KIMBALL, Pasadena, Calif. Filed Apr. 23, 1921. Serial No. 463,789. 2 Claims. (Cl. 184—55.)



1. The combination with a motor vehicle having a crank case, a transmission case and a differential gear case, of tubular receptacles connected to the crank case, the transmission case, and the differential gear case at points above the oil levels, baffles in the tubular receptacles, conduits connected to the upper ends of the tubular receptacles, a header connected to the intake manifold of the engine and to the opposite ends of the conduits from the tubular receptacles, a sleeve valve in the header, a tubular stem extending from the sleeve valve into the intake manifold, and a swinging abutment upon the inner end of the tubular stem in the passage of the intake manifold.

1,421,859. PRINTING FRAME. JOHN D. THOMPSON, Rochester, N. Y. Filed Oct. 17, 1918. Serial No. 258,659. 8 Claims. (Cl. 95—77.)

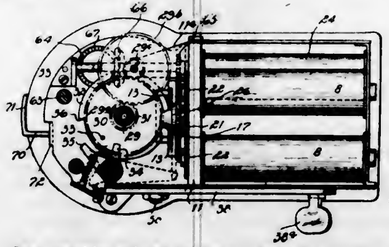


5. In a photographic printing apparatus, a frame, a back hinged thereto along one edge and carrying a pressure member which is adapted to fit within the frame when the back is swung over the frame, and a plurality of loops along the opposite edge of the frame, a plurality of locking and tensioning latches on the back and adapted to engage said loops, and a common handle for actuating said latches simultaneously.

1,421,860. CRANK HOLDER. MARTIN TIEU, Bakersfield, Calif. Filed Mar. 2, 1921. Serial No. 449,140. 1 Claim. (Cl. 74—33.)

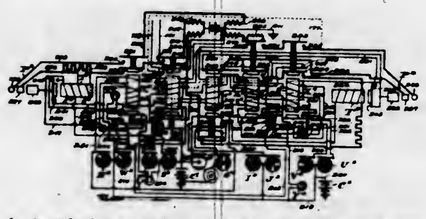
A crank holder comprising a wire having a central portion bent to form a notch adapted to receive a crank arm, second portions extending outwardly and backwardly from the central portion, said second portions being coiled, third portions extending backwardly from the second portions, fourth portions extending downwardly from the third portions, fifth portions extending backwardly from the fourth portions, and sixth portions extending outwardly from the fifth portions, the sixth portions forming pintles adapted to be mounted in the clips engaging the front spring of an automobile so that the holder may swing up and down into and out of engagement with the crank arm.

1,421,861. PIN GUIDE. GEORGE C. L. TISCH, Elizabeth, N. J., assignor to Tisch Machine & Tool Works, Elizabeth, N. J., a Corporation of New Jersey. Filed Dec. 1, 1921. Serial No. 519,219. 4 Claims. (Cl. 66—12.)



1. A pin guide for knitting machines comprising a plate having an inclined flat guiding section, and a straight guiding section merging therein, said plate being of such a length as to engage substantially half of the pins of said knitting machine at one time.

1,421,862. PROCESS OF COLLECTING AND PURIFYING MINERALS. WALTER E. TRENT, Washington, D. C., assignor to Trent Process Corporation, Washington, D. C., a Corporation of Delaware. Filed Apr. 9, 1920. Serial No. 372,447. 16 Claims. (Cl. 83—85.)

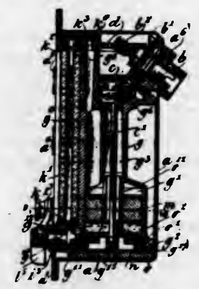


1. The process of collecting minerals suspended in water, consisting in mixing with the mineral a hydrocarbon oil and a comminuted carbonaceous material, in agitating the mixture until the mineral comminuted carbonaceous material and liquid hydrocarbon oil agglomerate, substantially free from froth and in then separating the agglomerated mass from the water.

1,421,863. LOCK FOR NOTCHING SHEARS OF MEASURING MACHINES. DOUGLAS TURNER, St. Louis, Mo., assignor to Measuregraph Company, St. Louis, Mo., a Corporation. Filed May 5, 1920. Serial No. 379,172. 9 Claims. (Cl. 33—130.)

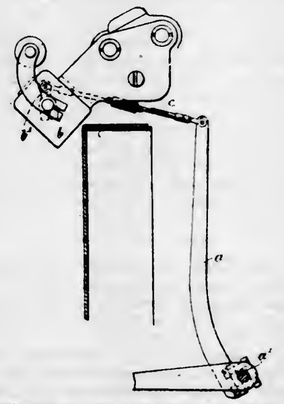
1. In a machine of the kind described, the combination of a measuring roller, indicating mechanism actuated thereby for measuring fabric pulled past the measuring roller, marking means independent of the indicating mechanism, and constructed to be operated at will for marking the fabric to indicate the point where it is to be cut off, locking means constructed to prevent said marking means from being actuated, said locking means being driven from the measuring roller in a definite relation to the indicating means and having means to permit the actuation of the marking means when the indicating mechanism is in any one of a plurality of predetermined positions.

1,421,864. TELEPHONY. HUBERT SYDNEY TURNER, Washington, D. C. Filed Aug. 12, 1915. Serial No. 45,232. 76 Claims. (Cl. 179—58.)



1. A telephone exchange system including telephone lines extending from substations to an exchange, link connectors to connect said substations, a relay for each of said link connectors, a source of intermittent current, means whereby current from said source initially energizes said relay when one of said link connectors is connected to an idle line, means other than said source to maintain said relay energized thereafter, and means to prevent said energization when said link connector is connected to a busy line.

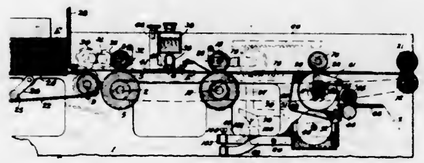
2. A telephone exchange system including telephone lines extending from substations to an exchange, link connectors to connect said substations, a relay for each of said link connectors, a source of intermittent current, means whereby current from said source initially energizes said relay when one of said link connectors is connected to an idle line, and means to prevent said energization when said link connector is connected to a busy line, a low resistance shunt, said last mentioned means comprising means for intermittently connecting said shunt around said relay in synchronism with the impressions of intermittent current through said relay from said source, said shunt being connected by the previous connection of another such link connector to the same line.



42. A telephone exchange system including telephone lines extending from substations to an exchange switchboard having a line signal individual to each substation line, a pilot signal individual to each operator's position at said switchboard and operated thereat upon the energization of one or more of said line signals of the lines assigned to said position for answering, means to operate said pilot signal at another operator's position, and means at said second mentioned position operative when said last mentioned pilot signal is operated thereat to operate the pilot signal individual to said second mentioned position at still another operator's position.

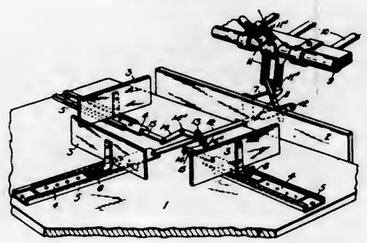
1,421,865. TACHOMETER. CURTIS HUSSEY VEEDER, Hartford, Conn., assignor to The Veeder Manufacturing Co., Hartford, Conn., a Corporation of Connecticut. Filed Mar. 23, 1921. Serial No. 454,646. 10 Claims. (Cl. 264—19.)

1. In an instrument of the character described, the combination of a main frame having an open base, two separate members fitted within the base and chambered to form a paddle wheel chamber, one of said members having formed in its face adjacent the other member a radial channel and a circumferential channel, and means to retain the said members in place.



1,421,866. TURNBUCKLE. CURTIS HUSSEY VEEDER, Hartford, Conn., assignor to The Veeder Manufacturing Company, Hartford, Conn., a Corporation of Connecticut. Filed Oct. 8, 1921. Serial No. 506,288. 2 Claims. (Cl. 85—36.5.)

1. A turnbuckle comprising two parts flattened to cooperate with each other and threaded reversely, and a

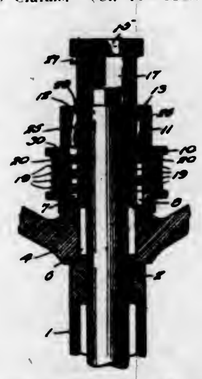


cross threaded nut engaging the threaded portions of both parts, the nut being split longitudinally so that it may fit tightly on said threaded portion.

1,421,867. MACHINE FOR SEALING AND STAMPING ENVELOPES. MAXWELL VIDAVER, New York, N. Y. Filed June 30, 1917. Serial No. 177,978. Renewed May 25, 1922. Serial No. 563,716. 16 Claims. (Cl. 216—3.)

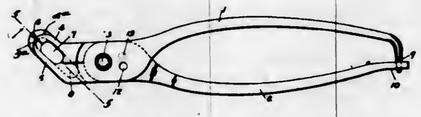
4. In a machine of the class described in combination, feeding mechanism for supplying envelopes to said machine, means for forwarding an envelope through said machine comprising several sets of rolls located in advance of one another so that an envelope is engaged by each set in advance before it leaves a preceding set of rolls, said feeding mechanism being automatically controlled by the engagement of an advancing envelope with said first set of rolls, and means co-acting with said first set of rolls, and means co-acting with said several sets of rolls for moistening and sealing the flap of the envelope and affixing a stamp to said envelope as it passes through said rolls.

1,421,868. SHEET-STRAIGHTENING APPARATUS. PAUL VOLKMERE, Auckland, New Zealand. Filed Oct. 21, 1920. Serial No. 418,365. 3 Claims. (Cl. 271—89.)



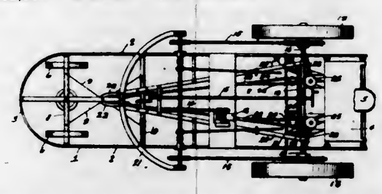
1. In apparatus of the class described, movable gage elements and means for operating said movable gage elements consisting in a reciprocable main bar arranged at right angles to the axis of the flyer, one of the movable gage elements being connected to said main bar, pivoted crank arms operated directly by the said main bar and to each of which one of the side movable gage elements is connected, a pivoted lever connected to the main bar, and a double armed bell crank mounted on the flyer axis and arranged to positively strike said lever in each direction of rotation.

1,421,869. PROCESS OF MAKING HYDROCHINON. HAROLD VON BRAMER, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed June 28, 1920. Serial No. 392,417. 12 Claims. (Cl. 260—154.)



6. In the process of making hydrochinon, the step of reacting on a paradihalogenbenzolsulfonate with a metallic hydroxid until the hydrochinon salt of said metal is produced, and recovering hydrochinon from the reaction mixture.

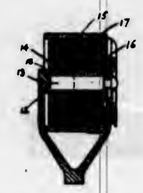
1,421,870. LOCKING DEVICE FOR AUTOMOBILE STEERING MECHANISMS. ERNEST L. B. VON DIEZELSKI, New York, N. Y. Filed Feb. 18, 1920. Serial No. 359,649. 9 Claims. (Cl. 70—128.)



1. In a device of the class described, an open ended steering column, a steering wheel journalled on the open end of said steering column, a circular casing carried on the upper face of the central portion of said steering wheel, a steering post extending upward within said steering column and having its free end projecting into the plane of the upper end of said casing, locking members within said casing, and a locking sleeve surrounding the free end of said steering post and adapted for vertical movement within said casing and with respect to said steering element and to said locking members.

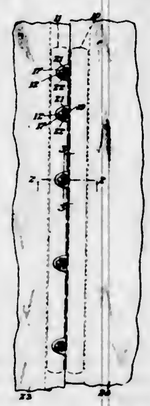
1,421,871. TOOL. CHRISTIAN H. WAGNER, Tiffin, Ohio. Filed Apr. 16, 1921. Serial No. 461,742. 1 Claim. (Cl. 81—3.)

A tool embodying a pair of pivotally connected members, handles at one end thereof, and a pair of offset jaws located at the opposite end, said jaws having transversely arranged openings therethrough and providing inwardly extending gripping noses, and the said openings extending from the gripping noses to the inner ends of the offset to provide an open-ended longitudinally-disposed recess.



1,421,872. CULTIVATOR. MAUDA F. WATKINS, Star Lime Works, Ky. Filed Nov. 4, 1918. Serial No. 261,052. 1 Claim. (Cl. 97—37.)

In a cultivator, a frame, an arch bar axle supporting the rear end of said frame, an arch bar for carrying cultivator elements positioned adjacent the first mentioned arch bar and having its lower ends turned outwardly, cultivator elements supporting members secured beneath said lower ends and extending rearwardly and forwardly of



said lower ends, pull bars each having one end pivoted to the forward part of the frame and its other end pivoted to the forward end portion of a respective supporting member, lift rods connected to the second arch bar adjacent its extremities, pivoted lift levers each having the usual connection with a respective lift rod, blade carrying yokes each connected to the rear end of a respective cultivator element supporting member and springs each connecting one of said yokes with the arch bar axle, said springs being arranged to hold the second arch bar and its connecting parts yieldably in a position central of the arch bar axle.

1,421,873. ADJUNCT FOR SEWING-MACHINE SHUTTLES. LUCIUS E. WEAVER, East Hampton, Conn., assignor to Summit Thread Company, East Hampton, Conn., a Corporation of Maine. Filed Feb. 28, 1921. Serial No. 448,689. 1 Claim. (Cl. 112—233.)

A bobbin-controlling adjunct for a bobbin case having a central post; said adjunct comprising a split sleeve of thin resilient material having an opening in one side, and adapted to fill an annular space between said post and a bobbin core; and a resilient tongue joined to the sleeve at one end of said opening, normally inclined outward from the sleeve, and adapted to be pressed into said opening, the sleeve being normally of smaller diameter than said post, and adapted to be expanded by and frictionally hug the latter to resist movement of the sleeve on the post, the sleeve, when expanded by the post, being adapted to closely fit the internal surface of a bobbin core, and the tongue being adapted to be forced by the core into said opening, and to exert a yielding outward rotation-resisting pressure on the core.

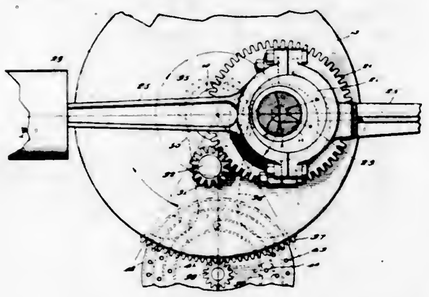
1,421,874. CLASP. WILLIAM G. WEBER, Ridgefield Park, N. J., assignor to Kops Bros., New York, N. Y., a Firm. Filed Sept. 15, 1921. Serial No. 500,884. 3 Claims. (Cl. 24—222.)

1. A clasp comprising a stud having a head, and a socket member having a slot therein with ribs on both sides of the slot intermediate of the ends thereof and having a continuously rounded surface sloping into the body of the socket member.

1,421,875. TOOTHBRUSH. WILLIAM LLOYD WEBSTER, New York, N. Y. Filed Oct. 26, 1921. Serial No. 510,577. 3 Claims. (Cl. 15—210.)

1. A holder for the rubbing material of a tooth-brush, having a socket provided with interrupted screw threads for retaining the rubbing material in the socket.

1,421,876. CONNECTING RING. EDWARD L. WEED, Providence, R. I., assignor to Potter & Buffinton Company, Providence, R. I., a Corporation of Rhode Island. Filed Mar. 12, 1921. Serial No. 451,852. 2 Claims. (24—236.)

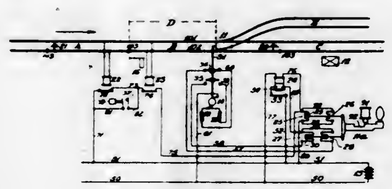


2. A ring of the character described having a spur with one end connected to one end of the ring at the joint to extend inwardly therefrom the opposite end of the ring being grooved to snap over the body of the spur to serve as a detent for the ring ends against too readily opening at the joint.

1,421,877. NURSING BOTTLE AND NIPPLE PROTECTOR. WILLIAM WEISSHEIER, Brooklyn, N. Y. Filed June 19, 1920. Serial No. 390,101. 1 Claim. (Cl. 215—11.)

A nursing bottle, comprising a bottle having a neck and provided with an annular ring adjacent the juncture of the neck and body of the bottle, the neck being adapted to carry a nipple, and a cap having an enlarged lower portion and an annular portion to receive the ring of the bottle and provided with vertical slits extending from its end a short distance to permit the cap to snap over said ring, the lower enlarged portion extending to about the top of the bottle neck, and the reduced upper portion being approximately of the shape of a nipple.

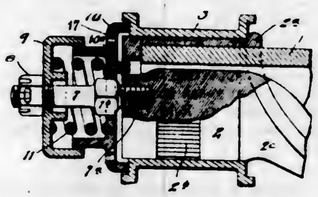
1,421,878. INTERNAL-COMBUSTION ENGINE. GRANVILLE G. WESTERFIELD, Indianapolis, Ind. Filed Apr. 19, 1920. Serial No. 374,934. 12 Claims. (Cl. 123—197.)



1. In an internal combustion engine, the combination of a cylinder, a piston movable therein, a crank shaft having a crank pin, an eccentric mounted on said crank pin and adjustable around the axis thereof, means for rotating said eccentric in space about the crank pin axis at a different angular speed from that of the crank shaft and so that it normally arrives at the same position at the end of each alternate revolution of the crank shaft, a connecting rod connecting said eccentric to said piston, and means for adjusting said eccentric about the axis of said crank pin while the engine is in operation to vary the position of the piston in the cylinder at the end of the compression stroke thereof.

1,421,879. ENGINE FUEL. MILTON C. WHITAKER, New York, N. Y., assignor to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed Nov. 12, 1919. Serial No. 337,396. 7 Claims. (Cl. 44—9.)

4. A fuel comprising from 90% to 92% of kerosene and thyl acetate.

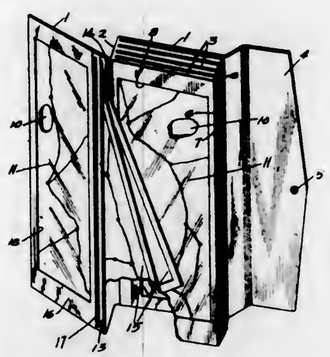


1,421,880. RAILWAY-TRAFFIC-CONTROLLING SYSTEM. GILBERT C. WHITNEY, New York, N. Y. Filed May 21, 1919. Serial No. 298,779. 20 Claims. (Cl. 246—136.)

19. In a power operated switch operating system, an electrical element controlled by a track circuit and maintained energized by the current flow in the switch circuit.

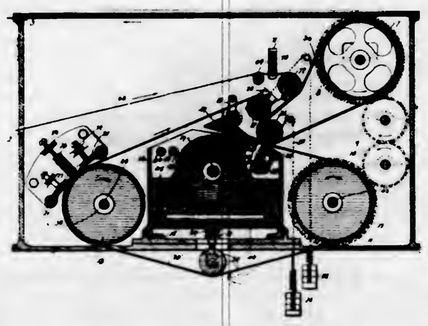
1,421,881. BRAKE BEAM. CHARLES HAINES WILLIAMS and EDWIN G. BUSSE, Chicago, Ill., assignors to Chicago Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed July 28, 1921. Serial No. 488,212. 7 Claims. (Cl. 188—223.)

7. The combination with a trunnion member of a brake beam, of a brake head mounted thereon, a locking member designed to marginally and directly engage said brake head, and exteriorly arranged yielding means which exerts pressure against the outer face of said locking



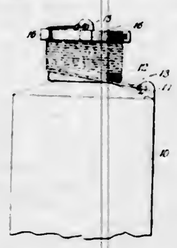
member, thereby permitting the head to move longitudinally along the trunnion, said locking member frictionally holding the head in rotatably adjusted position.

1,421,882. SHELL. HENRY E. WINANS, Belleville, Ill. Filed Jan. 31, 1920. Serial No. 355,297. 8 Claims. (Cl. 102—15.)



6. A shell containing a shot-driving wad, a shot-driven member, a body of shot between said shot-driving wad and shot-driven member, and means for connecting said shot-driving wad to said shot-driven member, said means comprising a wire-like spear passing through the body of shot and having a head engaging the outer face of the shot-driven member and also having a pointed end provided with a barb anchored in said shot-driving wad.

1,421,883. MAP HOLDER. WILLIAM W. WRIGHT, Hollywood, Calif. Filed Apr. 28, 1921. Serial No. 463,759. 1 Claim. (Cl. 129—20.)

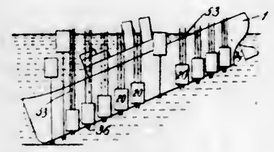


A holder comprising a pair of cover leaves and a plurality of intermediate leaves, each of said intermediate leaves including side walls forming a pocket between the same adapted to receive a map or the like, said walls having window openings therein for displaying said maps, transparent sheets covering said maps and received with the same in said pockets and one of the cover sheets being provided with a pair of pockets adapted to receive maps and one of said latter pockets having a window opening that is covered by a transparent sheet.

1,421,884. PATTERN-TRANSFER MACHINE. PAUL YOHNS, New York, N. Y. Filed July 19, 1919. Serial No. 312,089. 7 Claims. ((Cl. 101—122.)

1. A pattern transfer machine comprising a perforated master pattern, rolls supporting the same, and means to maintain the rolls and consequently the master pattern in a heated condition, whereby printing fluid upon lodging in the perforations is heated and caused to flow.

1,421,885. SCREW CAP. JOHN M. ABRAMS, Brooklyn, N. Y. Filed Dec. 13, 1921. Serial No. 521,985. 4 Claims. (Cl. 215—99.)

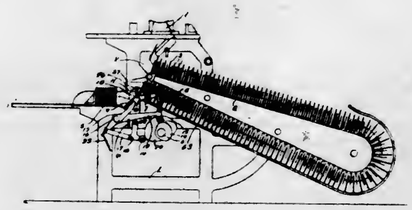


1. A container having a threaded neck portion, and a screw cap for detachable engagement with the outer end of the neck, and a flexible member connecting said cap with the container and adapted to be wound about the cap.

1,421,886. FRACTIONATING APPARATUS. HUGH LOGIE ALLAN, Ayr, Scotland. Filed Sept. 15, 1919. Serial No. 324,023. 6 Claims. (Cl. 196—5.)

1. Fractionating apparatus comprising in combination a plurality of rectifiers having each an upper and a lower compartment with vertical tubes connecting said compartments, condenser pipes connecting the upper compartments in series, and reflux pipes connecting each upper compartment with the lower compartment of the next lower rectifier.

1,421,887. METHOD OF AND APPARATUS FOR RAISING SUNKEN SHIPS. ALEXANDER ALLAN, Middletown, R. I. Filed Feb. 7, 1921. Serial No. 443,192. 7 Claims. (Cl. 114—52.)



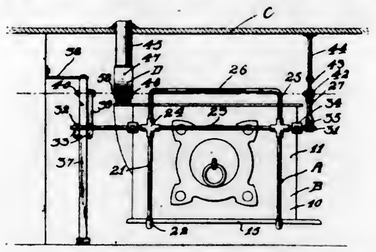
1. The method of salvaging a sunken vessel which comprises accurately locating the vessel, establishing guideways relative thereto, lowering pontoons upon said guideways, positioning them in operative relation to the vessel and raising the vessel by controlling the buoyancy of the pontoons, all operations being controlled from the surface of the water.

1,421,888. PROCESS FOR WEATHERPROOFING CLAY. WILLIAM H. ALLEN, Detroit, Mich. Filed Sept. 6, 1921. Serial No. 498,879. 6 Claims. (Cl. 91—68.)

2. The process of destroying the capillarity of the surface of a body of unbaked clay which consists in depositing calcium silicate in the interstices thereof by chemical action.

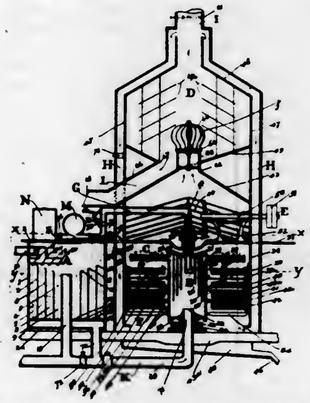
4. The process of coating clay which consists in chemically destroying its capillarity and then applying a weather resistant medium.

1,421,889. GRIPPER MECHANISM FOR ENVELOPE-MAKING MACHINES. ADDISON E. AUGUSTINE, Hackensack, N. J., assignor to Chester Machine Co. Inc., New York, N. Y., a Corporation of New York. Filed July 12, 1920. Serial No. 395,666. 12 Claims. (Cl. 271—82.)



1. A gripper device for envelope-making machines comprising gripping fingers mounted to move from one position to another and to be operated into gripping and non-gripping positions by striking obstructions at opposite ends of its path of movement, stop members constituting obstructions arranged at opposite ends of said path of movement to be engaged by said gripping fingers, and each of said stop members being pivotally mounted and having its striking surface portion lying in a plane eccentric to the pivotal axis of the stop for the purpose set forth.

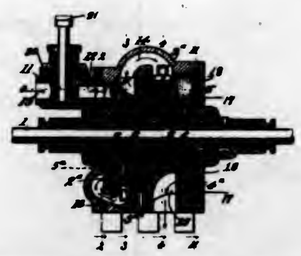
1,421,890. SELF-LEVELING STOVE FOR SHIPS. GEORGE W. BAKER, Jacksonville, Fla. Filed Apr. 29, 1921. Serial No. 465,535. 5 Claims. (Cl. 126—24.)



1. The combination with a galley stove, of a cradle therefor including transversely extending bars arranged under the stove, uprights secured to the terminals of the

bars, longitudinally extending side bars secured to the uprights, rigid supports secured to the ship, means pivot-

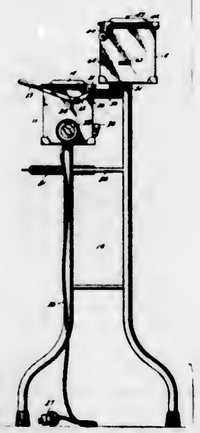
ally connecting the side bars with the rigid supports, and adjustable clamps carried by the side bars arranged to engage the stove.



1,421,891. SEWAGE PURIFIER. JOHN P. BALL, Chicago, Ill. Filed June 23, 1921. Serial No. 479,741. 16 Claims. (Cl. 71—8.)

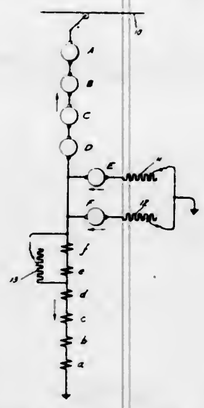
1. A system for purifying sewage comprising in combination, a sedimentation chamber containing a plurality of concentric compartments, an annular overflow weir communicating between each compartment at successive lower planes, a revoluble mounted dewatering chamber, a cylindrical filter chamber, surrounding said dewatering chamber, and a dust collecting drum superimposed upon said filter chamber, means for supplying sludge to the sedimentation chamber, communicating means for supplying sludge from the sedimentation chamber to the dewatering chamber, discharge means from said dewatering chamber into said filter chamber, aerating means through said filter chamber, and means for causing an upward current of air to flow through said filter, a sinuous current passage for extracting the particles carried in said filter current, discharge means for collecting said particles into said dust drum, and means affording an outlet passage for material collected in such drum.

1,421,892. ROTARY STEAM ENGINE. CARL OSCAR BANEB, San Francisco, Calif. Filed Nov. 23, 1920. Serial No. 426,066. 3 Claims. (Cl. 253—70.)



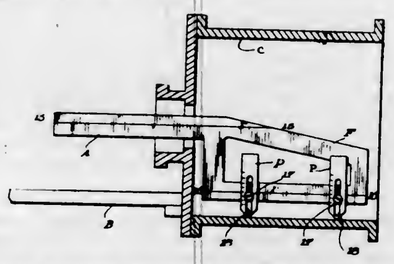
1. An engine of the character described, comprising a housing, a shaft rotatable therein, rotors mounted on the shaft and a stationary steam chest mounted between each two rotors, V-shaped blades on each rotor presenting symmetrical working faces in both directions, sets of steam passages in the steam chest on opposite sides communicating with adjacent rotors in opposite directions, the steam passages in each set being divided so as to lead into opposite directions, and means for controlling the steam passages allowing the rotors to be actuated in either direction.

2. An engine of the character described, comprising a housing, a shaft rotatable therein, rotors mounted on the shaft and a stationary steam chest mounted between each two rotors, V-shaped blades on each rotor presenting symmetrical working faces in both directions, sets of steam passages in the steam chests on opposite sides communicating with adjacent rotors in opposite directions, the steam passages in each set being divided so as to lead into opposite directions, and having expansion chambers associated therewith for allowing a plurality of blades to be attacked simultaneously, and means for controlling the steam passages allowing the rotors to be actuated in either direction.



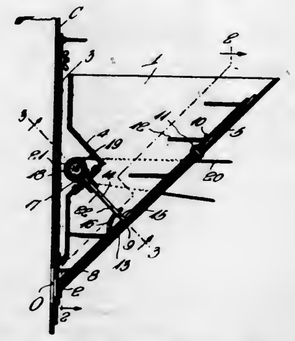
3. An engine of the character described, comprising a housing, a shaft rotatable therein, rotors mounted on the shaft and a stationary steam chest mounted between each two rotors, V-shaped blades on each rotor presenting symmetrical working faces in both directions, sets of steam passages in the steam chests on opposite sides communicating with adjacent rotors in opposite directions, the steam passages in each set being divided so as to lead into opposite directions, and means for controlling the steam passages allowing the rotors to be actuated in either direction, said means comprising sliding valves associated with the passages in each steam chest, a main steam admitting valve and an operative connection between the main valve and the sliding valves adapted to actuate both of them simultaneously.

1,421,893. STERILIZER FOR INSTRUMENTS AND DRESSINGS. OTTO BARTA, New York, N. Y. Filed Mar. 26, 1920. Serial No. 369,004. 3 Claims. (Cl. 167—3.)



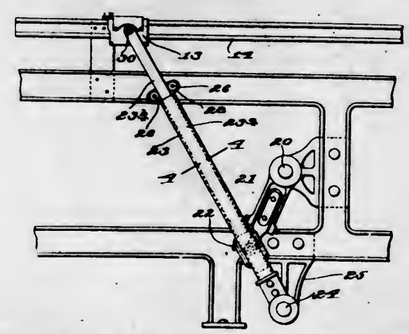
1. A sterilizer, comprising a stand, a sterilizing vessel supported upon the stand and provided with a removable support for the instruments to be sterilized and with a heater for the same, a second vessel supported upon the stand in a higher plane than the first vessel, a sterilizing chamber suspended in the second vessel and provided with a support for dressings, a tube leading from the upper part of the first vessel into the bottom of the second vessel, a second tube establishing communication between the first tube and the bottom of the said chamber, said second tube being provided with perforations opening into the second vessel, and a valve in said second tube.

1,421,894. POWER TRANSMISSION AND ELECTRIC BRAKING. ASA F. BATCHELDER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Sept. 11, 1920. Serial No. 409,647. 19 Claims. (Cl. 172—179.)



1. In a system of electric braking, a plurality of operatively connected dynamo electric machines having severally armature and field windings, a portion of said machines operating as a self-excited exciter connected in a local circuit with the fields of all of said machines, a resistance in the said local circuit, and connections whereby the braking current has a path through the said resistance and the armatures of said machines, the excitation of all of said machines is varied responsively to the variations of the braking current, and only the current in the local circuit passes through the field windings of said machines.

1,421,895. ALIGNING INSTRUMENT FOR CROSSHEAD GUIDE BARS. ARTHUR RUSSELL BATEMAN, Lynchburg, Va. Filed June 4, 1921. Serial No. 474,880. 2 Claims. (Cl. 33—174.)

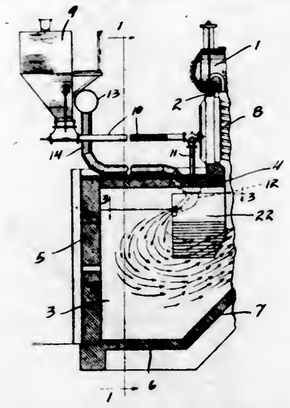


1. An instrument of the character described comprising a frame adapted to be inserted within an engine cylinder, an arm formed on the frame and adapted to extend exteriorly of the cylinder, said arm having a line formed thereon to extend longitudinally thereof, and sliding pointers supported on the frame to extend at right angles to said line and adapted to contact with the inner wall of the cylinder for the purpose described, the said frame and the said pointers being provided with cooperating means for indicating the right angular position of the pointer with respect to the said line.

1,421,896. FLOUR FEEDER. JOHN W. BENEDICT, Grand Ledge, Mich. Filed Mar. 2, 1922. Serial No. 540,561. 5 Claims. (Cl. 83—44.)

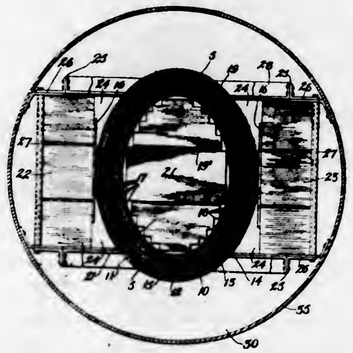
1. A device of the class described comprising a hopper, and a plurality of agitators arranged therein, said agitators being arranged in superposed relation, and each having portions working in the discharge opening of the hopper and being simultaneously operated in planes at right angles to each other.

1,421,897. WIRE MOTION FOR LOOMS. JOSEPH F. BENOIT, Sandford, Me. Filed Aug. 19, 1920. Serial No. 404,626. 3 Claims. (Cl. 139—64.)



1. Apparatus of the kind described comprising a carriage mounted for operative movement to engage the cutting wires of a loom, and operating mechanism therefor embodying a pivoted lever composed of two parts, telescopic with respect to each other, one of said parts directly engaging said carriage and the other part having an actuating crank engaged therewith.

1,421,898. PULVERIZED-FUEL FURNACE. LARS HUGO BERGMAN, Chicago, Ill. Filed Jan. 7, 1920. Serial No. 350,015. 2 Claims. (Cl. 110—28.)



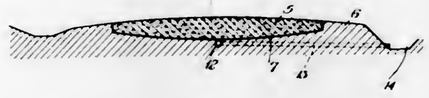
1. In a furnace for pulverized fuel, a combustion chamber, downwardly directed fuel conduits, air chambers one

surrounding the mouth of each fuel conduit, mixture conduits leading from each of said air chambers into the combustion chamber, said mixture conduits being curved so as to deliver streams inclined downwardly and toward the front of the combustion chamber, said inclined streams

converging toward the front of the combustion chamber, an outlet at the rear of said combustion chamber, means for conveying pulverized fuel to said fuel conduits, and means for conveying air under pressure to said air chambers.

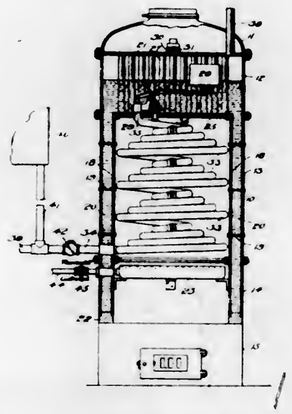
1,421,899. TRANSFORMER. ROBERT V. BINGAY, Pittsburgh, Pa., assignor to Pittsburgh Transformer Company, a Corporation of Pennsylvania. Filed Oct. 17, 1919. Serial No. 331,325. 11 Claims. (Cl. 175—361.)

2. In a transformer, the combination of a laminated core having a core leg comprising parallel laminæ, the cross section of said parallel laminæ having the dimension perpendicular to the planes of said parallel laminæ greater than the width of the laminæ of said core leg, and a coil around said leg of general elliptical form and having its major axis perpendicular to the planes of said laminæ, the convolutions of said coil having continuous arch shaped curva ure throughout.



1,421,900. SNUBBER. DÉSIRÉ V. BOUREAU, Detroit, Mich. Filed Jan. 14, 1920. Serial No. 351,383. 4 Claims. (Cl. 267—9.)

1. In a snubber, the combination of a casing adapted to be secured to one part of a vehicle and a circular wedge rotatably mounted therein and whose inclined surface extends from a shoulder around the wedge to said shoulder, means to connect the wedge to another portion of the vehicle so it may be turned when the two parts of the vehicle approach each other, a non-rotatable plate movable

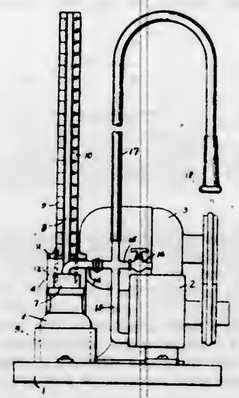


axially of the wedge by the wedge when the wedge is turned, and resilient means to resist such axial movement of the plate.

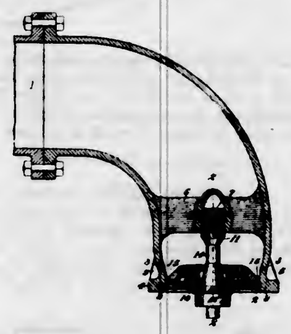
1,421,901. PAVEMENT. FREDERICK A. BROTSCH, JR., Rochester, N. Y. Filed Apr. 16, 1919. Serial No. 290,553. 7 Claims. (Cl. 94—10.)

1. A road pavement of rigidly combined material having a lower surface which is convex in shape transversely of the road throughout its length to provide varying thickness of material greater adjacent the center of the pavement than at the sides.

1,421,902. HEATING SYSTEM. JOHN H. BROWN, Spavinaw Creek, Okla. Filed Jan. 10, 1922. Serial No. 528,334. 3 Claims. (Cl. 122—451.)



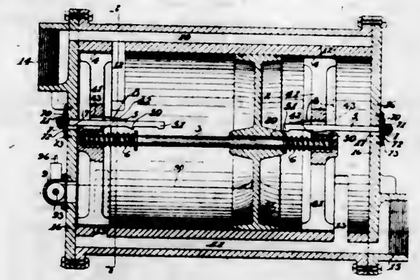
1. In a steam generator, a fire tube section, a water tube section connected thereto, a check valve at the entrance to said water tube section, a float valve for controlling the passage of water from the water tube section to the fire tube section, and a safety valve between said water tube section and said fire tube section.



1,421,903. APPARATUS FOR INDICATING POROSITY. CARL BUBERL, Detroit, Mich. Filed May 21, 1921. Serial No. 471,376. 4 Claims. (Cl. 73—51.)

1. An apparatus for indicating porosity, comprising means for compressing air, a receiver for the compressed air, an indicator of the air pressure in said

receiver, regulable means for venting said receiver, and a mouth-piece in communication with the receiver applicable to a body to be tested to afford an escape of air from the receiver proportionate to the porosity of the body being tested.

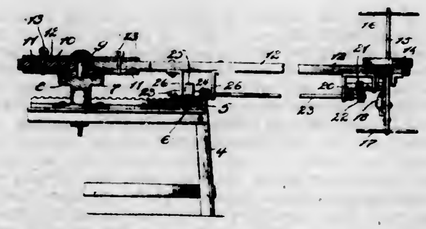


1,421,904. SAFETY CONTROL FOR HYDRAULIC PIPE LINES. ERICH BUEHLE, San Francisco, and ELY C. HUTCHINSON, Oakland, Calif., assignors to Pelton Water Wheel Co., San Francisco, Calif., a Corporation of California. Filed June 6, 1921. Serial No. 475,515. 5 Claims. (Cl. 220—88.)

5. A safety control for hydraulic pipe lines comprising a pipe affording a chamber and connected at one end to a hydraulic pressure container, and open for the full area of its opposite end, a spider extended across said pipe within its open end, a head removably received within the open end of the pipe for normally closing the same, said head provided with a central aperture, a headed securing bolt extended through said aperture and threaded into said web for retaining said head in position to close said pipe, said bolt adapted for rupture to release said head on the same being subjected to a pressure below the bursting pressure of said pipe and above the normal pressure within said pipe.

1,421,905. METER. ENOS B. CADE, Portland, Oreg. Filed May 17, 1920. Serial No. 381,811. Renewed Apr. 10, 1922. Serial No. 551,208. 11 Claims. (Cl. 73—30.)

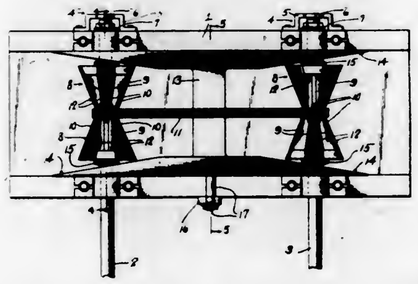
1. A meter comprising a cylinder, a floating piston in the cylinder, axially spaced inlet and exhaust ports at each end thereof, a valve at each end of the cylinder consisting of a ring fitting the cylinder bore and movable to control both ports, and means for shifting said valves



controlled by the piston, each valve being of a width to keep one of its cooperating ports completely closed until it has completely closed the other port, in shifting.

1,421,906. COMFORTER OR WADDED QUILT. HEMAN A. CALEF, Portland, Oreg. Filed Dec. 3, 1920. Serial No. 427,975. 1 Claim. (Cl. 5—3.)

As an article of manufacture, a quilt comprising a casing of flexible material composed of an upper piece, a lower piece, and an intermediate piece, the intermediate piece being secured at successive substantially equally spaced points to the upper and lower pieces alternately, to provide independent, relatively off-set pockets of substantially equal capacity the length of the upper, lower and intermediate pieces being substantially equal one to another between the extreme points of the attachment, and filling for the respective pockets, said filling serving to give a corresponding fullness to all of said pockets, whereby under stretching of the quilt the upper, lower and intermediate casing-pieces yield to an equal extent, thereby correspondingly and similarly rendering and maintaining the thickness of all pockets substantially uniform throughout the quilt, without regard to its degree of stretch.



1,421,907. AMUSEMENT DEVICE. JULIAN C. CALLAIS, St. Louis, Mo. Filed June 10, 1920. Serial No. 387,924. 2 Claims. (Cl. 46—27.)

1. In an amusement device, a circular rack, having a horizontal flange; a bearing having a vertical pintle and concentrically mounted within said rack; a spider having sockets and revolvably mounted on said pintle; seat-

carrying beams detachably mounted in said spider; a reciprocating arm having a handle-bar and a foot-bar and mounted at the outer terminal of each beam; a shaft mounted beneath each of said beams, having pinions at its ends, the outer pinion geared to said reciprocating arm, and the inner pinion engaging said rack.

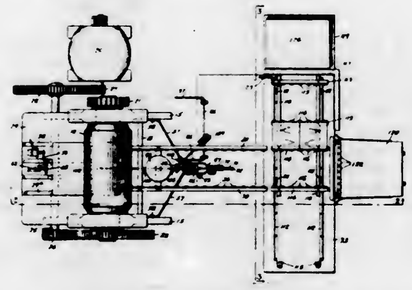
1,421,908. GEARLESS TRANSMISSION MECHANISM. LOUIS C. CATTOI, Hurley, Wis. Filed Feb. 24, 1921. Serial No. 447,453. 2 Claims. (Cl. 64—8.)

1. A device of the class described comprising a casing, a drive shaft journaled therein, a driven shaft journaled therein, a pair of telescopic cones on each shaft, said cones having tapered slots therein for receiving tapered portions of the companion cone, an H-shaped member slidably mounted in the casing and having the inner faces of its parallel members beveled to engage the broad ends of the cones and a pivoted lever connected with said sliding member for moving the same.

1,421,909. MILK SKIMMER. CHARLES E. CHAMBERS, Wichita, Kans. Filed Dec. 13, 1920. Serial No. 430,362. 2 Claims. (Cl. 31—85.)

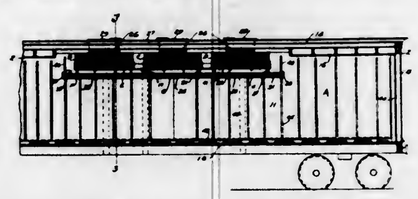
2. In a milk skimmer, a flexible disk having a pair of slots arranged adjacent to and on opposite sides of the center of said disk and in parallelism with each other: two arm members, one for each slot, each comprising a longitudinal strip with a pair of notches oppositely arranged in the side edges of each strip and near the lower end thereof, the said notches of each strip engaging, respectively, the outer portions of its slot and whereby the lower end elements of said strips extend below said disk in spaced apart planes, while the upper end portions extend above the disk as handle elements; the upper handle elements being susceptible of movement in opposite directions and in parallelism with each other, to pivot said disk into parallelism therewith and whereby the lower end elements of said arms below the disk are brought into a contiguous relationship with each other from their former spaced apart relationship.

1,421,910. EMERGENCY BRAKE, ANTISKIDDING, AND ANTITHEFT DEVICE. MAX CICHON, Chicago, Ill., assignor to Virginia Marcia Cichon, Chicago, Ill. Filed June 3, 1922. Serial No. 565,618. 8 Claims. (Cl. 188—4.)



1. An apparatus of the character described, including a vehicle having a pair of driving wheels, a shaft mounted on said vehicle and means for operating said shaft, arms rigidly attached to said shaft, brake shoes carried by said arms and adapted to be projected under the wheels, forwardly extending links attached to the brake shoes and connecting said shoes with the vehicle frame, and springs connected to said links and exerting a force tending to throw the shoes into inoperative position.

1,421,911. TOOTH-CLEANING DEVICE. ABRAHAM B. COHEN, Far Rockaway, N. Y. Filed Aug. 22, 1918, Serial No. 250,928. Renewed Apr. 21, 1922. Serial No. 555,918. 3 Claims. (Cl. 15—39.)

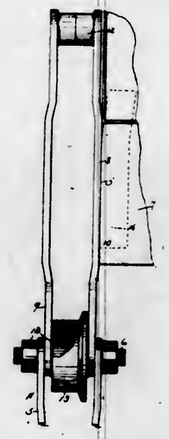


1. A tooth cleanser comprising a composite sheet composed of an interior soft absorbent cotton and a facing composed of a fabric which does not substantially swell up when moistened, the said soft absorbent cotton having pores containing particles of solid dentifrice.

1,421,912. PLATING MACHINE. STANLEY A. COHEN, deceased, late of New York, N. Y., by Alice Hood Cohen, executrix, New York, N. Y., assignor to The New York Consolidated Card Company, Long Island City, N. Y., a Corporation of New York. Filed May 17, 1920. Serial No. 382,022. 12 Claims. (Cl. 92—71.)

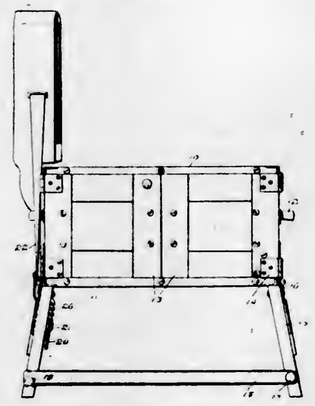
1. A plating machine comprising supporting means upon which a pile of material to be plated is adapted to travel, pressing rolls in operative co-relation to said supporting means and operatively connected with each other said pile being reciprocated between said rolls, driving means whereby said rolls are driven and devices located upon opposite sides of said rolls for controlling said driving means and arranged to be alternately actuated by said pile to reverse the driving means and rolls, whereby the direction of travel of said pile is automatically reversed.

1,421,913. REFRIGERATOR CAR. LESTER W. COLLINS, St. Paul, Minn. Filed Oct. 7, 1919. Serial No. 328,980. 5 Claims. (Cl. 62—17.)



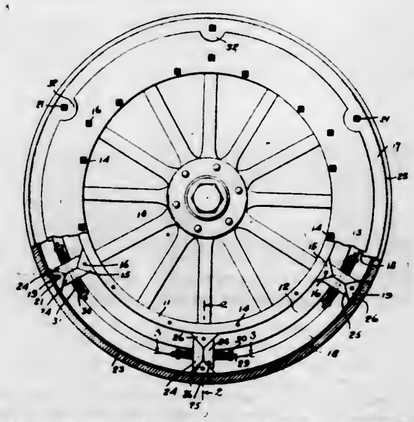
1. A body structure containing a provision chamber, a plurality of assembled ice baskets of open work structure distanced apart and situated near the top and away from ends of said structure, skeleton cradle elements secured to the side walls of said structure for supporting said baskets in position and a plurality of assembled combined drip pan and air baffle elements secured to said side walls and spaced from said ice basket elements for conducting the drip away from the ice in the basket elements and permitting air to circulate freely from the provision chamber over, through, below and around the ice in the basket elements.

1,421,914. ANTIFOULING COMPOSITION. GEORGE D. COLEMAN, deceased, late of Buffalo, N. Y., by Nellie S. Coleman, executrix, Revere, Mass. Filed Nov. 3, 1916. Serial No. 129,393. 4 Claims. (Cl. 106—24.)



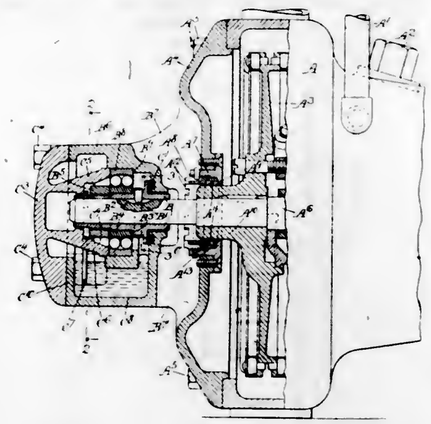
1. An anti-fouling composition comprising an intimate mixture of hydraulic cement, cupric material substantially insoluble in water, and a soluble salt of copper.

1,421,915. CHAIN. JAMES H. COOKE, Hartford, Conn. Filed Mar. 8, 1920. Serial No. 364,271. 12 Claims. (Cl. 74—32.)



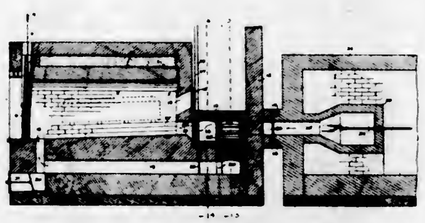
1. A chain link member having its opposite ends offset in the same direction and to the same extent and with the plane of one face of each of said offset portions located substantially in a plane passing centrally through the intermediate portion of the member and parallel with the faces thereof and with roller bearing hubs extending from the same side at opposite ends thereof whereby a chain may be formed composed of links all of duplicate construction.

1,421,916. SADDLER'S CHEST. LOUIS B. CRAIG, Davenport, Iowa. Filed Nov. 3, 1920. Serial No. 421,609. 3 Claims. (Cl. 144—286.) (Filed under the act of Mar. 3, 1883. 22 Stat. L., 625.)



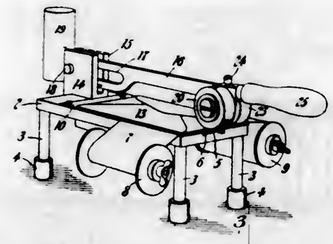
1. A chest, doors hinged at one side of the chest and opening toward respective ends thereof, legs attached to the respective ends of the chest and foldable upon the ends, braces for holding the legs in folded position and unfolded chest supporting position, a treadle pivoted to the legs at the forward end of the chest and a socket secured to the forward end of the chest for the reception of the shank of a clamp.

1,421,917. RESILIENT TIRE. ROBERT CURRY, New York, N. Y. Filed July 9, 1921. Serial No. 483,633. 7 Claims. (Cl. 152—37.)



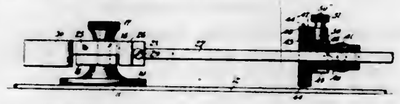
6. A resilient tire for vehicle wheels embodying spaced inner and outer rims, a series of radially disposed cams provided on said rims, a series of circumferentially movable cams respectively engaging the rim cams, and means for resiliently resisting circumferential movement of the circumferentially movable cams whereby to tension the relative movement between said rims.

1,421,918. BEARING FOR STEAM TURBINES. CHARLES W. DAKE, Chicago, Ill., assignor to The Pyle-National Company, Chicago, Ill., a Corporation of New Jersey. Filed Mar. 3, 1919. Serial No. 280,364. 20 Claims. (Cl. 64—36.)



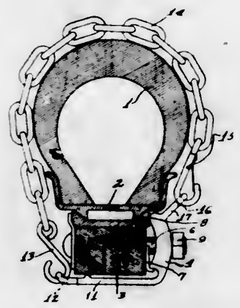
1. The combination with a bearing housing having an apertured wall of a sleeve mounted for rotation within the aperture and extending into the housing, a ball bearing surrounding the sleeve anchored in position and supporting the sleeve, a shaft passing inwardly through the aperture in the wall and removably engaging the sleeve, and means for holding the shaft and sleeve against rotation with respect one to another, and said means being adapted to permit ready withdrawal of the shaft longitudinally from the sleeve without changing the relation between sleeve and bearing, the means for holding shaft and sleeve together comprising a spring collar surrounding the sleeve, a spring key penetrating the sleeve mounted on and forced inwardly by the spring collar and a key seat on the shaft adapted to be engaged by the spring key.

1,421,919. CREMATION FURNACE. ALEXANDER H. DAVIDSON, Colma, and SEVERUS SUNDELIUS, San Francisco, Calif. Filed July 7, 1916. Serial No. 107,924. 3 Claims. (Cl. 110—3.)



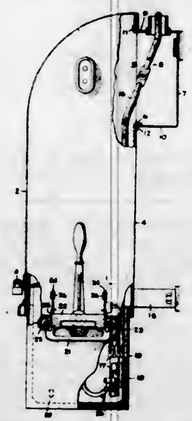
1. In a crematory, a plurality of combustion chambers, a main supply passage to convey heated gases to said combustion chambers, a furnace connected to said supply passage, said connection being provided with an open joint for preventing the transmission of vibration from the furnace to the combustion chambers and for permitting the entrainment of air into said combustion chambers and said passages being formed each with an escape port, a flue connected with each of said escape ports, and means connecting said flues, and means to convey gases from said connecting means to the atmosphere.

1,421,920. PRINTING MACHINE. FRANK DE MINICO, New York, N. Y., assignor to Pollard-Alling Manufacturing Company, New York, N. Y., a Corporation of New York. Filed June 9, 1921. Serial No. 476,120. 10 Claims. (Cl. 101—274.)



1. A printing machine including in combination means for supporting a printing plate, means for supporting an ink ribbon above the printing plate support, a lever mounted for movement in the direction of its length, an impression roll pivotally mounted on said lever, and a pivot on which said lever is mounted for oscillation normal to the direction of its length toward and away from said table.

1,421,921. ROTARY GLASS CUTTER. CARL F. DOERR, Yonkers, N. Y. Filed Apr. 22, 1921. Serial No. 463,693. 6 Claims. (Cl. 33—27.)

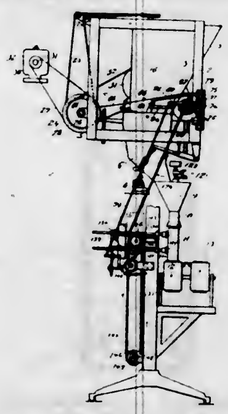


1. In a rotary glass cutter, a cutter bar, a sleeve adjustibly fastened to the said cutter bar, a cutter head provided with cutters arranged in spaced relation and projecting from the peripheral face of the cutter head, the latter being mounted to turn on and to slide on the said sleeve to allow of adjusting the cutter head on the sleeve, and means securing the adjusted cutter head n place on the sleeve.

1,421,922. ANTISKID DEVICE. JOSEPH L. DONAT, Chicago, Ill. Filed July 18, 1921. Serial No. 485,473. 2 Claims. (Cl. 152—14.)

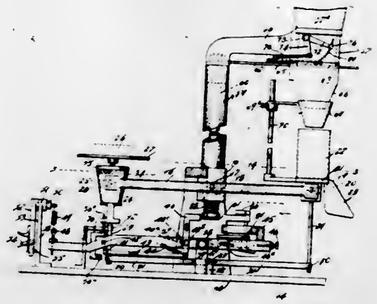
1. In a rim securing clamp, two portions at substantially right angles to each other, one adapted to extend across the inner face of the felloe and the other to extend across a lateral face thereof, the last-mentioned portion having a slot to receive the rim securing bolt, perforated lugs projecting from said portions, one of said lugs standing obliquely to its portion, whereby when the securing clamp is in place on the wheel, the perforations in said lugs will be conveniently located to receive hooks for securing antiskid chains in place.

1,421,923. STARTING COMPENSATOR. PARKER DUNNING, Bloomfield, N. J., assignor to General Electric Company, a Corporation of New York. Filed Nov. 17, 1919. Serial No. 338,571. 4 Claims. (Cl. 200—150.)



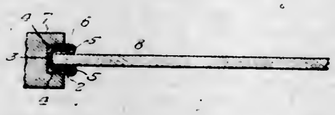
1. The combination of a casing for electrical apparatus, of a movable oil well provided with fixed handles and movable members in close proximity therewith biased to a position in which said well is supported from the casing by the said members.

1,421,924. LIGHT-DIFFUSING MEDIUM AND METHOD OF MAKING THE SAME. LEON W. EBERLIN and SAMUEL E. SHEPPARD, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Dec. 13, 1920. Serial No. 430,800. 13 Claims. (Cl. 134—45.)



1. A composition of matter consisting of a mixture of a water soluble silicate and amylaceous particles.

1,421,925. AUTOMATIC PACKAGING EQUIPMENT. EARL B. ELDER, New York, N. Y., assignor to E. D. Anderson, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 15, 1919. Serial No. 317,698. 16 Claims. (Cl. 249—59.)

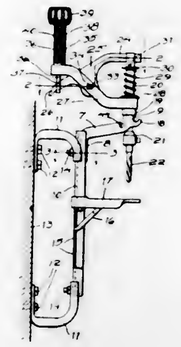


1. In an apparatus of the class described, a hopper with a bowl at its lower extremity, a vertically moving partition in said hopper and means for moving the same, a rotary agitating mechanism in said bowl and means for closing the lower end of the bowl when a predetermined amount of material has passed through the same.

1,421,926. AUTOMATIC WEIGHING MECHANISM. EARL B. ELDER, New York, N. Y., assignor to E. D. Anderson, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 16, 1920. Serial No. 431,093. 21 Claims. (Cl. 249—58.)

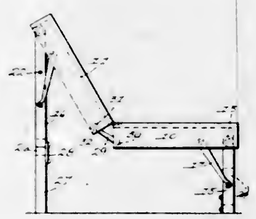
1. A weighing machine comprising balancing mechanism, a supply receptacle for material, a gate to control the flow therefrom, means tending to close the gate, means to retain the gate open, devices operative with the balancing mechanism to release the retaining means before a full charge from said supply receptacles has been deposited on the balancing mechanism, the said devices including operating means to actuate the balancing means before said full charge has been deposited thereon, and devices cooperative between the gate and said first named devices to render the latter inoperative with the balancing mechanism whereby the balancing mechanism may operate independently of said gate.

1,421,927. WINDOW-MOUNTING DEVICE. HENRY FAUROT, Jr., Chicago, Ill., assignor to Western Felt Works, Chicago, Ill., a Corporation of West Virginia. Filed Apr. 26, 1922. Serial No. 556,608. 6 Claims. (Cl. 296—44.5.)



1. A window mounting device, comprising a channeled strip of flexible material adapted to have its base inserted in a channeled frame, the junctions of the side walls and bottom wall of the strip being so reinforced as to cause the side walls to tend to approach each other, the side walls being formed by portions of the material doubled upon itself.

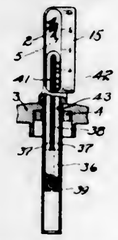
1,421,928. DRILL. JEREMIAH C. FITZGERALD, Kilbourn, Wis. Filed Sept. 9, 1920. Serial No. 409,117. 5 Claims. (Cl. 77—20.)



1. A device of the class described, consisting of a shaft adapted to carry a drill-bit at one of its ends and mounted for rotary as well as reciprocatory movement, a

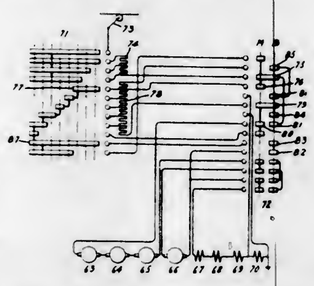
crank mounted to turn said shaft, a connection uniting said shaft and crank, and independently operable

threaded means carried by the crank and connected to said connection for controlling the reciprocatory movement of said shaft.



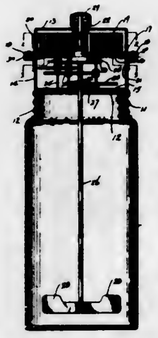
1,421,929. COMBINATION TABLE. GABRIEL FLORESKUL, Toronto, Ontario, Canada. Filed Aug. 13, 1920. Serial No. 403,371. 1 Claim. (Cl. 45—116.)

A table of the character described comprising in combination with two box-shaped elements hingedly connected at their upper edges, pairwise arranged legs pivotally secured within said elements, braces also pivotally connected to the inner side walls of said elements and adapted to engage with their outer hooked ends pins on said legs, foot parts hinged to said legs, the foot part of one pair of said legs adapted to be swung into alignment with said legs, while the foot parts of the other pair are held parallel with the legs for allowing the use of the table as a chair, and clamps holding said foot parts in alignment with said legs and a clamp rod pivotally secured to the lower edge of the side walls of one of said box-like elements and engaging with its hooked other end a pin in the inner side walls of the other elements, substantially as described.



1,421,930. APPARATUS FOR INDICATING THE AMOUNT OF WATER IN AUTOMOBILE RADIATORS. CAMPBELL FORD, San Francisco, Calif. Filed July 24, 1918. Serial No. 246,424. 2 Claims. (Cl. 73—82.)

1. In an apparatus for indicating the amount and temperature of water in a tank, a float, a scale, a rod attached to said float for indicating on said scale the level of water in said tank, and a thermometer tube secured

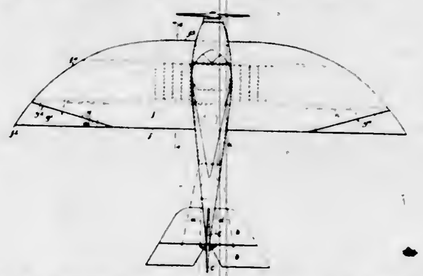


to said rod and having its bulb in said float in communication with the water in said tank.

1,421,931. ELECTRIC BRAKING. PETER W. FORSBERG, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Feb. 21, 1920. Serial No. 360,288. 26 Claims. (Cl. 172—179.)

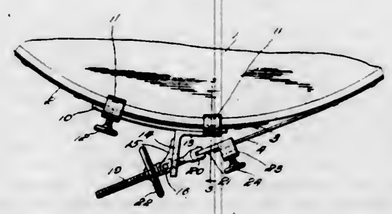
1. In a system of control for electric braking, a resistor, a plurality of dynamo-electric machines, a portion of the armatures of which is connected in series with the resistor to form a braking circuit, and another portion of the armatures of which operates as an exciter connected with the field windings of all of the machines in a shunt circuit to the resistor.

1,421,932. SPRING-OPERATED MOTOR. JOHN C. FOSTER, New York, N. Y. Filed June 9, 1920. Serial No. 387,634. 7 Claims. (Cl. 185—39.)



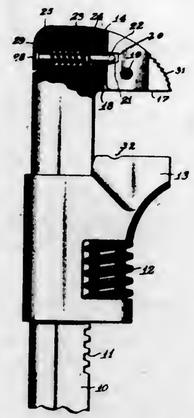
1. In a spring motor, the combination of a casing, a shaft rotatably carried by said casing, a sleeve rotatably mounted upon said shaft, a spring connecting said casing and sleeve, means operatively connecting said sleeve and shaft, and means adjustably mounted on said sleeve exteriorly of said casing, and engaging said shaft for regulating the speed ratio thereof.

1,421,933. CLIP DEVICE FOR REELS. EDWARD FULDA, New York, N. Y. Filed July 12, 1920. Serial No. 395,616. 8 Claims. (Cl. 242—74.)



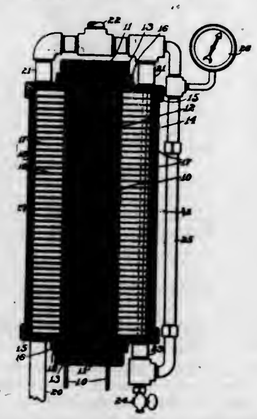
8. In a reel, the combination with a hub or drum provided with a peripheral slot or depression and shoulders at the ends of said slot, of a clip consisting of a continuous piece of spring metal engaging both of said shoulders and passing under a projection intermediate said shoulders whereby a free end of the clip will be held against the surface of the drum by spring action of the metal of the clip itself and downward pressure upon the clip at a point thereof between said shoulders will cause it to fulcrum on a shoulder and raise said free end.

1,421,934. AEROPLANE CONSTRUCTION. WILLIAM P. GARY, Totowa Borough, N. J. Filed Dec. 9, 1921. Serial No. 521,106. 4 Claims. (Cl. 244—12.)



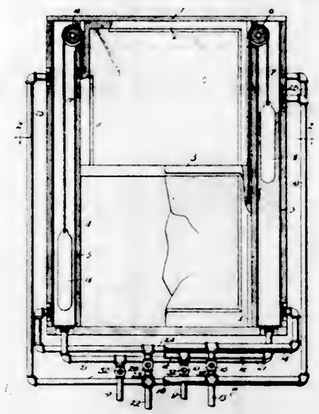
1. A cambered aerofoil having as viewed in plan its leading edge convex and its trailing edge and leading edge meeting at a point abaft the central transverse axis of the aerofoil and also having the substantially longitudinally contour-sections thereof graded down in size to substantially said point but all approximately identical in form the chords of all such contour-sections being in substantially the same plane.

1,421,935. HOOP-STRETCHING DEVICE. WALKER B. GILBERT, Lynchburg, Va. Filed Aug. 21, 1920. Serial No. 405,109. 8 Claims. (Cl. 254—67.)



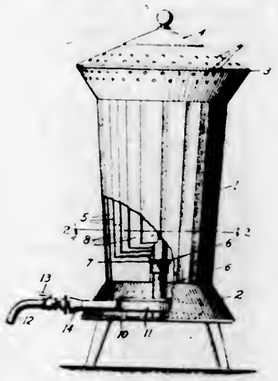
1. In a device of the class described, means conformable to the curvature of the side wall of a barrel for clamping one end of a hoop in position thereon, means for securing said first mentioned means in position, and means associated with said first-mentioned means for engaging the other end of the hoop and stretching the latter prior to the securing of the same to the wall of the barrel.

1,421,936. WRENCH. FRANK R. GILBY, Detroit, Mich. Filed Mar. 5, 1921. Serial No. 449,724. 10 Claims. (Cl. 81—780.)



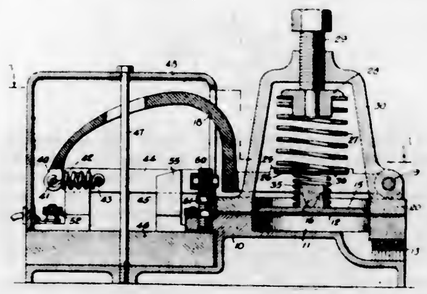
1. A wrench having a dog pivoted thereon, a shank, and a jaw, the dog having a curved serrated surface eccentric to the pivot, the radial distance of the eccentric surface from the pivot being greatest adjacent to the shank whereby movement of the dog away from the shank causes the serrated surface to approach the jaw.

1,421,937. ELECTRIC WATER HEATER. ARTHUR M. GOLDBERG, Indianapolis, Ind., assignor to Electric Controller Company, Inc., Indianapolis, Ind., a Corporation of Indiana. Filed July 28, 1921. Serial No. 488,123. 8 Claims. (Cl. 219—47.)



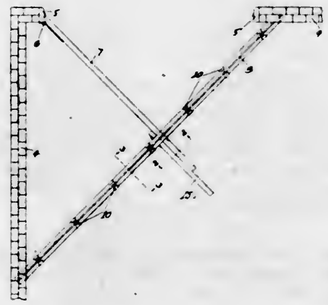
2. An alternating-current electric water-heater, comprising an outer water-containing casing having inlet and outlet openings, a primary winding and core within said outer casing, and a plurality of sheet-metal plates located within said outer casing and surrounding said primary winding and core.

1,421,938. WINDOW-OPERATING DEVICE. CHARLES I. GOLDBLATT, Brooklyn, N. Y. Filed Mar. 10, 1921. Serial No. 451,186. 6 Claims. (Cl. 268—4.)



1. The combination with a frame and a member slidable vertically in the frame, of a counterbalance normally retaining said member in elevated position, a flexible device connecting the slidable member and the counterweight, and means for partially immersing the counterbalance in a fluid, whereby the weight of the sliding member will preponderate and said member will slide by gravity in the frame.

1,421,939. AIR HEATER. MICHAEL HACHALACHTI, New York, N. Y., assignor of one-fourth to George L. Livingston and one-fourth to Abraham Okun, New York, N. Y. Filed Oct. 11, 1918. Serial No. 257,723. 1 Claim. (Cl. 126—90.)

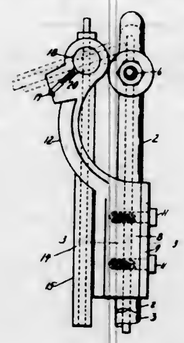


A gas heater of the class described embodying a substantially frusto conical casing inverted so that its wall diverges upwardly, a chambered base positioned subjacent the casing and forming a combustion chamber, a perforated cover for said casing and an upright post extending vertically through the heater, in combination with radially extending partitions positioned longitudinally of the interior of the casing to divide said interior into a plurality of upwardly extending circulating passages segmental in cross section and diverging in an upward direction, means carried by the post for spacing the partitions and a gas burner positioned in the combustion chamber, whereby all the air passing through the chamber is mixed with the products of combustion and circulates upwardly through the diverging passages to be dispersed through the perforations of the cover.

1,421,940. AUTOMATIC PRESSURE-OPERATED SWITCH. WILLIAM L. HAMILTON, Bangor, Mich. Filed Sept. 10, 1918. Serial No. 253,489. 3 Claims. (Cl. 200—83.)

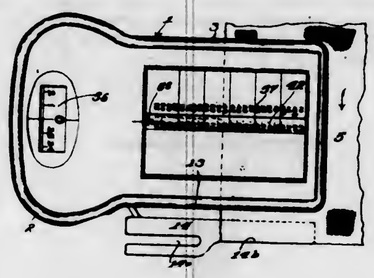
1. In a pressure regulator, a diaphragm exposed to pump pressure, a lever having depending lugs, a spring supporting plate held on the lever, a spring bearing on the said supporting plate, a pressure plate on the said diaphragm and engaged by the said lugs, the said pressure plate having a rising boss, a light spring interposed between the said pressure plate and the under side of the said supporting plate, the light spring engaging the said boss, a switch having a pivoted member, and a tension spring connecting the free end of the said lever with the said pivoted switch member.

1,421,941. DOOR HANGER. ALVA J. HAYES, Corydon, Iowa. Filed May 12, 1921. Serial No. 468,979. 3 Claims. (Cl. 20—16.)



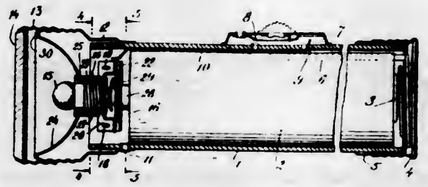
1. The combination with a door adapted to swing from one of its sides, a suitably supported straight track extending substantially across the sector described by the door, upper rollers adapted to travel on said track, lower rollers, a track on the door adapted to travel on the lower rollers, and a swivel device connecting the upper and lower rollers.

1,421,942. WINDSHIELD SUNSHADE. GEORGE A. HOLSBERG, San Francisco, Calif. Filed Nov. 18, 1919. Serial No. 338,843. 1 Claim. (Cl. 296—95.)



The combination with a windshield having upper and lower panels, of a frame for said panels, a hinged joint

connection between the upper end of the top panel and the frame to permit a swinging movement of said panel in said frame whereby it may occupy different positions of adjustment, a pair of brackets detachably connected to said frame below the hinged connections between the same and the upper panel, vertically disposed arms



extending from said brackets and positioned so as to be out of the horizontal path of movement of the swinging upper panels, bearings in said arms and disposed in substantially the same horizontal line as said hinged joints for the upper panel, and a swinging auxiliary shield overlying a portion of the upper panel supported in said bearings in said arm.

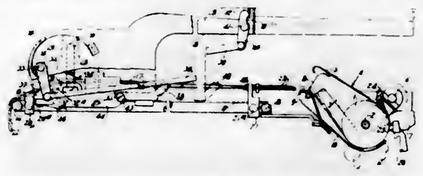
1,421,943. CLOTH-MEASURING AND COST-COMPUTING MACHINE. GREENE CARLTON HOSCH and GEORGE B. KYLE, St. Louis, Mo., assignors to The Measuregraph Company, St. Louis, Mo., a Corporation of Delaware. Filed Mar. 27, 1920. Serial No. 369,368. 20 Claims. (Cl. 33—133)

1. In a fabric measuring and cost-computing machine the combination of a casing, a measuring roller mounted therein, a presser-roller co-operating with the measuring roller to press the fabric against the same, indicating mechanism actuated by the measuring-roller, returning means for returning the indicating mechanism to zero, and a controlling member with means for effecting the raising and lowering of the presser-roller and means actuated by the controlling member for controlling the operation of the returning means.

1,421,944. SPOTLIGHT. FREDERICK L. HUMISTON, New Haven, Conn., assignor to Winchester Repeating Arms Company, a Corporation of Connecticut. Filed Oct 25, 1921. Serial No. 510,207. 10 Claims. (Cl. 240—8.5.)

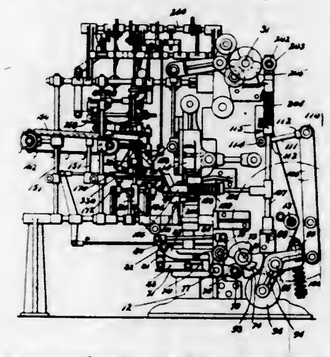
1. In a hand lamp, the combination of a casing, a battery therein, a lamp, a support for said lamp, and a reflector rotatable on said support to move axially of said casing.

1,421,945. ELEVATOR CONTROLLER. RUDOLF A. ISENBERG, San Francisco, Calif. Filed Mar. 15, 1921. Serial No. 452,587. 8 Claims. (Cl. 187—32.)



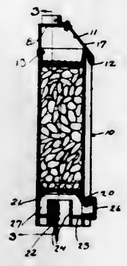
5. The combination with an elevator shaft and elevator mounted therein, of a contact arm for controlling movement of said elevator within said shaft; a controller arm operatively connected to the contact arm and projecting beyond the elevator; means for normally actuating said contact and controller arms to move said elevator in either direction within the shaft and to stop the same; and means mounted within the elevator shaft and engaging said controller arm to prevent movement of the same and the contact arm secured thereto when the actuating means therefor have been moved to a stop position between predetermined points within said shaft, and to permit movement of said controller and contact arms to a stop position to stop said elevator at predetermined points within said shaft.

1,421,946. TYPEWRITING MACHINE. ARTHUR A. JOHNSON, Washington, D. C., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed July 6, 1921. Serial No. 482,694. 20 Claims. (Cl. 197—126.)



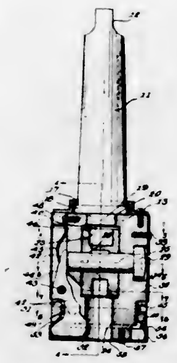
1. In a typewriting machine, in combination, a revoluble platen, a carriage therefor having a rearward extension, a carbon-carrier mounted for forward and rear-

ward movement on said extension, and means to prevent cumulative creeping of separate plies fed around said platen, comprising pins mounted on said carrier, so that they may be projected into correspondingly po-



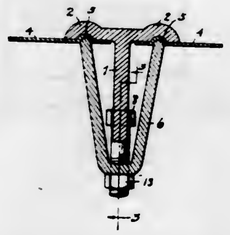
sitioned perforations in superposed forms on the separate plies, and thereby prevent relative displacement of the forms to the rear of said pins during the feeding of the forms in advance of said pins around the platen.

1,421,947. AUTOMATIC COUNTER-FORMING MACHINE. ALBERT F. JONES, Salem, Mass. Filed Sept. 2, 1920. Serial No. 407,778. 26 Claims. (Cl. 12—66.)



1. A counter-forming machine, comprising male and female shaping dies, die-operating mechanism including means for entirely withdrawing the male die from the cavity formed by the female dies, and automatic blank-supplying mechanism including means for bending a blank at a station outside the said cavity, means for confining the bent blank, and means for shifting the bent and confined blank to insert its body portion in said cavity, said confining means being adapted to engage the blank until the male mold enters the cavity and to then release the blank.

1,421,948. FILTER. DAVID A. JONES and CLARENCE R. MARTIN, Bartlesville, Okla. Filed May 28, 1921. Serial No. 473,260. 4 Claims. (Cl. 210—91.)



1. In a filter of the type described, a casing, vertically spaced trays within the casing, the uppermost of said trays being disposed in spaced relation to the top of the casing and the lowermost of said trays being arranged in spaced relation to the bottom of the casing, inlets opening through the top of the casing adjacent opposite sides thereof, and an outlet opening through the bottom of the casing and extending upwardly within the casing to a point adjacent the bottom of the lowermost tray, said outlet being provided adjacent the upper surface of the bottom of the casing with minute openings.

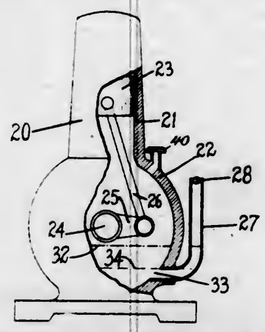
1,421,949. TAP AND REAMER CHUCK. OTTO S. KALLMAN, Minneapolis, Minn. Filed Feb. 20, 1920. Serial No. 360,240. 7 Claims. (Cl. 279—14.)

1. A chuck, comprising a body having a tool shank receiving opening formed therein, means arranged in the body having a plurality of different sized openings therein arranged to receive the inner ends of a tool shank, and means carried by said body and projecting into said tool shank receiving opening therein, for clamping a tool.

1,421,950. METAL BUILDING CONSTRUCTION. THOMAS H. KANE, Youngstown, Ohio, assignor to Truscon Steel Company, Youngstown, Ohio, a Corporation of Michigan. Filed May 15, 1920. Serial No. 381,545. 5 Claims. (Cl. 189—1.)

1. In a metal building construction, the combination of a column, a sheet metal wall panel provided with a corrugation along a vertical edge, the column being formed of a plurality of angular members, one of which has a groove to receive the corrugation on the panel, another member being positioned to hold the corrugation on the panel in the groove, and means to secure the parts of the column together.

1,421,951. ELECTROMAGNET FOR MOMENTARILY RELEASABLE LOCKING DEVICES WITH ELECTRIC LOCKING OF THE RELEASING MEANS. KARL FRIEDRICH KAPPES, Mannheim, Germany, assignor to the Firm of Luftfahrzeug-Bau Schutte-Lanz, Mannheim-Rheinau, Germany. Filed Oct. 8, 1920. Serial No. 415,645. 3 Claims. (Cl. 74—93.)



1. An electric releasing-device, comprising, in combination, an electromagnet; means for exciting it; two armatures adapted to be attracted by said electromagnet; locking-means at said armature; a loaded lever; two arms located between this lever and said armatures and being adapted to be operated by them at the same time, substantially and for the purpose as described.

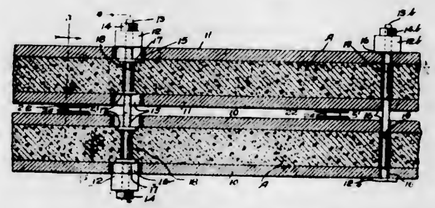
1,421,952. RESILIENT STAMP PAD. ROBERT H. KEE and WHITNEY K. MUNSON, Los Angeles, Calif., assignors to Mun-Kee Products Corporation, a Corporation of California. Filed Apr. 11, 1921. Serial No. 460,592. 4 Claims. (Cl. 91—54.5.)

1. A device of the character described comprising a base, a recess in the upper surface to receive a pad, a second recess in the base of the first recess forming a reservoir, depressions in the bottom of said base, said depressions increasing in depth as radial spacing is increased.

1,421,953. SIGNALING DEVICE. LESTER S. KEILHOLTZ, Dayton, Ohio, assignor, by mesne assignments, to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed Jan. 29, 1917. Serial No. 145,156. 6 Claims. (Cl. 116—112.)

1. In a device of the character described, the combination with an engine including a crank case having a breather and adapted to contain a supply of lubricant, said crank case being provided with an opening positioned below the normal level of the lubricant; a tube connected to said crank case and having a passage-way communicating with the opening in the crank case; and an audible signaling device secured to said tube, whereby the passage of air to the signaling device due to the operation of the engine will indicate a predetermined low level of the lubricant in the crank case.

1,421,954. MOLDING COMPOSITION. JOHN L. KELLER, Charleston, W. Va. Filed Feb. 28, 1921. Serial No. 448,643. 2 Claims. (Cl. 106—24.)

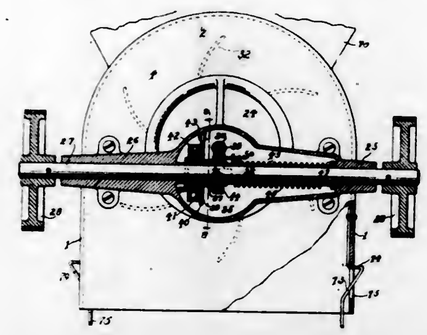


1. The herein described molding composition, consisting of water, paper, saw dust, cement, lamp black, Paris green, linseed oil, wheat flour and brick dust substantially as described and for the purposes specified.

1,421,955. GOLF-BAG BALL RECEPTACLE. CHARLES B. KEMP, New York, N. Y. Filed July 30, 1921. Serial No. 488,588. 6 Claims. (Cl. 150—1.5.)

1. A golf bag involving a golf ball receptacle having an opening for the insertion of the balls, means for preventing withdrawal of the balls through said opening, and a closure for said receptacle arranged and adapted to permit the removal of the balls from the receptacle.

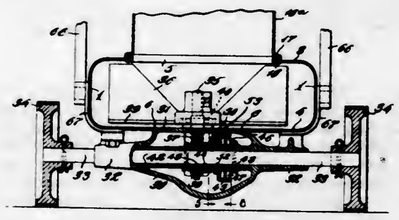
1,421,956. COLLAPSIBLE MOLD FOR CONCRETE STRUCTURES. HERMAN J. KESTLER, New York, N. Y. Filed Dec. 22, 1920. Serial No. 432,486. 20 Claims. (Cl. 25—131.)



3. As a new article of manufacture, a collapsing core unit for use between the inner and outer molding means for molding double walls to hold said means spaced, said unit comprising elongated elements, the one element having a series of openings therein and the other element having a corresponding series of bevelled lugs adapted to enter said openings when the cores collapse and adapted to engage the other element at said openings by a relative longitudinal movement of said elements for expanding the unit.

5. A mold for forming double concrete walls, including plank sides arranged in pairs constituting mold sections to form said double walls, clamping means for the several series of planks, said clamping means extending through all the planks of both pairs, said clamping means including transverse bolts, and elongated vertically disposed elements on said bolts and extending along the joints at the inner sides of the respective series of planks, together with expansible means between those planks forming the inner sides of the respective mold sections.

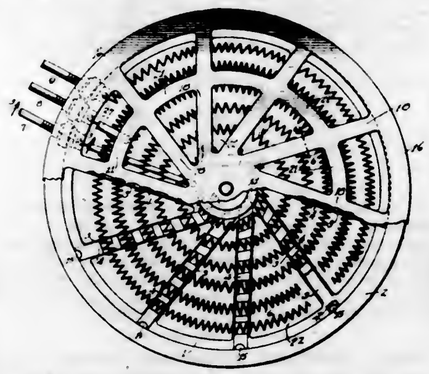
9. A mold for concrete walls comprising planks forming the inner and outer sides of the mold, and corner



elements connected with the ends of adjacent planks, said corner elements including means for sustaining said corner elements offset from the general planes of the outer adjacent sides; together with an angle piece at the said corner and spaced from the first-mentioned corner element to determine the inner surface of the molded wall at the corner.

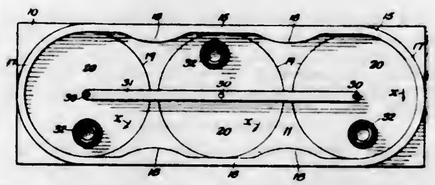
1,421,957. SUCTION SWEEPER. JAMES B. KIRBY, Cleveland, Ohio. Filed Oct. 7, 1918. Serial No. 257,108. 12 Claims. (Cl. 15—18.)

3. The combination with a dustpan and a rotatable brush located in operative relation thereto, of energy storing means of the fly-wheel type operatively connected to said brush, carrying wheels journaled to said dustpan, a driving member geared to said energy storing means, and a spring connected to said member and said wheels, said spring being adapted and arranged to be wound up with the forward movement of said dustpan and also to operate said driving member in a direction to turn said energy storing means in a direction to rotate said brush in a direction to throw litter upon said dustpan.



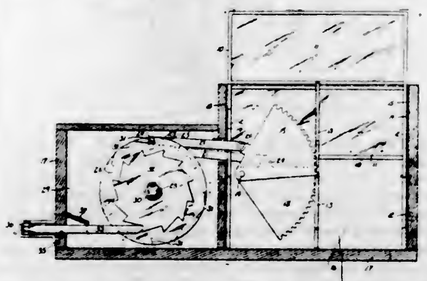
1,421,958. SUCTION SWEEPER. JAMES B. KIRBY, Cleveland, Ohio. Filed Apr. 12, 1919. Serial No. 289,617. 28 Claims. (Cl. 15—18.)

4. The combination, in a suction sweeper, of carrying wheels, a rotary fan, and a spring motor wound up by the wheels and arranged to drive the fan.



1,421,959. ELECTRICAL HEATING UNIT. ROYCE GERALD KLOEFFLER, Manhattan, Kans. Filed Nov. 26, 1920. Serial No. 426,473. 9 Claims. (Cl. 219—37.)

2. An electrical heating unit comprising a body portion having a plurality of spoke-like supporting members, an insulating strip carried by each of the said spoke-like members, resistance elements supported by said insulating strips, a cover portion having spoke-like members arranged to register with the first named spoke-like members, an insulating strip carried by each of the spoke-like



members of the cover for holding said resistance elements in position, and means for securing said cover to said body portion.

1,421,960. AMUSEMENT APPARATUS. WALTER F. KRAHE, Brooklyn, N. Y. Filed Feb. 10, 1921. Serial No. 443,798. 7 Claims. (Cl. 46—27.)

5. An apparatus of the class described comprising an elongated platform having semi-circular end portions, disks mounted in the end portions of said platform, another disk mounted in said platform intermediate of said first named disks, carriage members mounted on and movable over said platform and disks, and means for rotating all of said disks to move said members over said platform and from one disk to another.

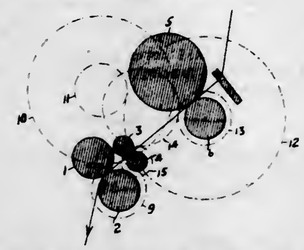
1,421,961. AUTOMATIC ADVERTISING DEVICE. WILLIAM H. KUHNE, Waterbury, Conn. Filed Aug. 24, 1921. Serial No. 494,820. 3 Claims. (Cl. 40—60.)

1. In an automatic advertising device, the combination with a gang of independent, vertically-movable advertising-frames, each having a depending rack; of a series of complementary, frame-actuating mechanisms each having a gear meshing into the depending rack of its complementary frame and located below the same, and means operated by the movement of a door for successively operating the said frame-actuating mechanisms for the successive lifting and exposure of the said frames between which the gears are positioned to rise as the frames are successively elevated.

1,421,962. RAILWAY-SWITCH FILLER. DENNIS E. LAHEY, Louisville, Ky. Filed Feb. 18, 1922. Serial No. 537,488. 6 Claims. (Cl. 238—380.)

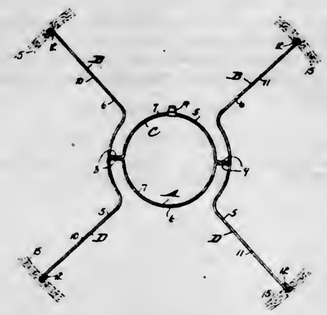
1. The combination with a stock rail and a switch point cooperating therewith, of a wedge shaped filler block arranged between said rail and switch point, said filler block being attached to and movable with the switch point.

1,421,963. RAILWAY SWITCH. DENNIS E. LAHEY, Louisville, Ky. Filed Feb. 18, 1922. Serial No. 537,489. 15 Claims. (Cl. 246—435.)



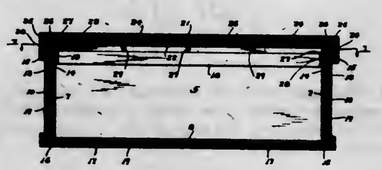
1. In a railway track, the combination with stock rails and movable switch points cooperating therewith, of guard rails arranged between the stock rails, each guard rail being bent intermediate its ends to provide a recess, and plates carried by the guard rails and arranged over the recesses for housing the switch points.

1,421,964. SHIPPING DEVICE. ROBERT H. LANGFORD, Springfield, Tenn. Filed Jan. 12, 1921. Serial No. 436,704. 2 Claims. (Cl. 220—82.)



1. A shipping device of the character described, consisting of a container, a cover for said container having a sight opening and locking means, a window protecting said sight opening, a plate on the upper part of the cover surrounding said opening and retaining the window in place, a casing secured below said window, a slide mounted in said casing and having a pocket to carry address cards, and means in the casing for securing the slide in place.

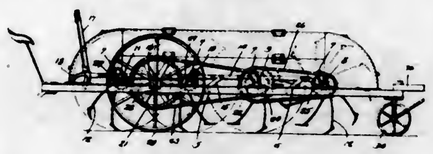
1,421,965. HIGH SLIP-DRAFT APPARATUS FOR SPINNING COTTON ROVINGS. OTTO LATSCH, Oxford, Ala., assignor of one-half to George F. Hoffman, Philadelphia, Pa. Filed Feb. 4, 1922. Serial No. 534,018. 4 Claims. (Cl. 19—130.)



1. In high slip-draft apparatus for spinning cotton rovings the combination of a smooth top middle roll of weight and setting adjusted to permit slippage, means for positively driving said top middle roll, and a positively driven smooth bottom roll.

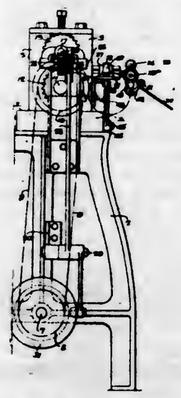
1,421,966. TIRE-CHAIN RETAINER. GEORGE J. LA VIGNE, New Haven, Conn. Filed Apr. 6, 1922. Serial No. 550,202. 3 Claims. (Cl. 152—14.)

1. A tire chain retainer, comprising two members formed from wire, and each including a semi-circular central section, bearings and radially-extending arms, the bearings of one member adapted to engage with the bearings of the other member, and the arms adapted to engage with a tire chain.



1,421,967. BURIAL BOX. FREDERICK LEES, Philadelphia, Pa. Filed Nov. 30, 1921. Serial No. 518,894. 2 Claims. (Cl. 27—7.)

1. A burial box of cementitious material having an inner wooden body, vertically spaced battens on the outer faces of the sides and end walls and longitudinal battens under said wooden body, a reinforcing strip completely surrounding the upper outer edge of the wooden body and secured to the aforesaid vertical battens, an inner facing strip secured to the inner upper edge of the wooden body and constituting one wall of a surrounding sealing

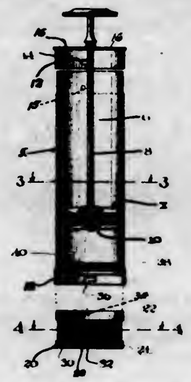


groove in the cementitious material, metallic fabric surrounding and attached to the aforesaid battens, the upper and lower edges of said metallic fabric being inturned to grip the upper and lower edges of the wooden body, and a cover for said burial box having an inner wooden face reinforced by metallic fabric and a depending angular cross section lip, said lip being adapted to seat in a groove about the said burial box, means for hermetically sealing said cover to the burial box, and means for transversely bracing the burial box against expansion or contraction.

1,421,968. FARMING MACHINE. JOHN H. LEWIS, Rhinelander, Wis. Filed Sept. 21, 1920. Serial No. 411,712. 2 Claims. (Cl. 97—25.)

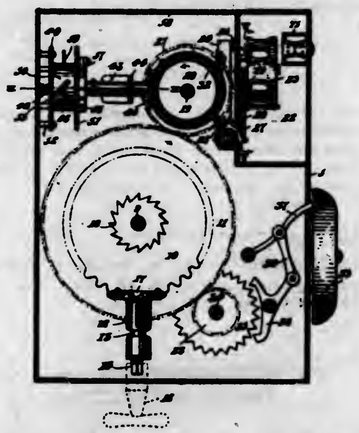
1. An agricultural machine including an outer frame and an inner frame, bull wheels for supporting the frames, a plurality of bearing members supported on the frames, each of said bearing members including an elongated curved opening, a plurality of shafts supported on the frame, and having their extremities operating in the opening, operating means having connection with the shafts for moving the shafts into and out of operation, and a plurality of earth engaging arms supported by the shafts.

1,421,969. MEANS FOR CUTTING FABRICS. RUDOLF LOEB, Jenkintown, Pa. Filed Sept. 1, 1920. Serial No. 407,453. 11 Claims. (Cl. 164—77.)



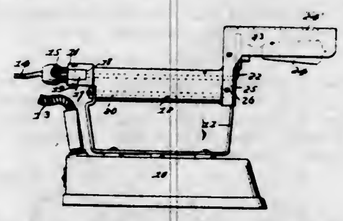
1. The combination in a machine for cutting fabrics, of means for severing the fabric at predetermined intervals; and means in advance of the severing means for guiding and placing tension on the fabric.

1,421,970. PAINT COMPOSITION. JAMES B. MCCARTNEY, Muscatine, Iowa, assignor of one-fourth to Evert F. Richman and one-fourth to Charles J. Richman, both of Muscatine, Iowa. Filed Nov. 29, 1920. Serial No. 427,180. 3 Claims. (Cl. 134—52.)



3. A coating composition consisting of eight ounces of gasoline, one ounce of carbon bi-sulphide, one ounce of paraffin oil, enough coal tar to make with the foregoing ingredients one gallon of mixture, and enough comminuted shells to give to the mixture the desired consistency.

1,421,971. HYDROCHEMICAL CLEANER. BERT MCCARTY, Tampa, Fla. Filed Nov. 1, 1920. Serial No. 421,145. 9 Claims. (Cl. 141—1.)

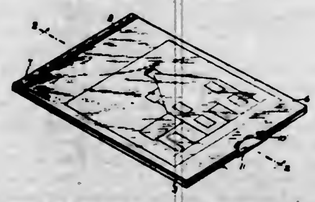


2. A portable cleaning device comprising a hand pump having a cylinder and a plunger, a cylindrical foraminous receptacle having an open end flatly abutting the forward end of said cylinder, said cylinder and said receptacle being of the same diameter, an attaching flange surrounding the adjacent portions of said receptacle and said cylinder, the forward portion of said cylinder being provided with a reticulated end wall.

1,421,972. BURGLAR ALARM. JOSEPH F. MACKOVITCH, Conway, Pa., assignor of one-third to Mandaline Mailing, Pittsburgh, Pa. Filed Dec. 17, 1921. Serial No. 523,047. 8 Claims. (Cl. 116—23.)

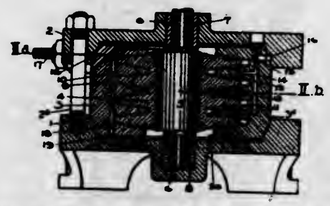
5. An alarm mechanism of the class described comprising a spring motor, a gear driven thereby, a pivot hammer having a firing pin, a spring for urging the hammer to firing position, means including cooperating pins upon the hammer and gear for intermittently swinging the hammer from firing position as the gear is rotated, a second gear rotatable with the first named gear, a stationary spindle, a hollow shaft journaled upon and slidable longitudinally on said spindle, a pinion fixed upon one end of the hollow shaft, a spring normally urging the hollow shaft in one direction to engage the pinion with said second named gear, means to cause endwise movement of the hollow shaft upon rotation of the same in one direction to disengage the pinion from the second named gear, ratchet means for preventing rotation of the hollow shaft in the opposite direction to which it is urged by said motor, means to rotate said hollow shaft including a flexible member, means for causing endwise movement of the hollow shaft including a drum to which the flexible member is attached and which is provided with an oblique elongated slot, said drum being fixed upon the hollow shaft, and a radial pin being fixed upon the spindle and projecting into said slot.

1,421,973. SADIRON LIGHT. CHARLES L. MALLOY, Cosidale, Pa. Filed June 8, 1920. Serial No. 387,311. 1 Claim. (Cl. 240—2.)



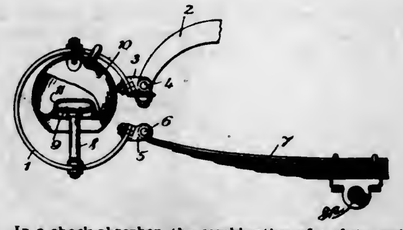
A sad iron having a grip or handle formed at its rear end with a block extension which is slotted transversely, a block fitted in said slot or recess and forming one member of a coupling, bolts passing through the block extension and through the block to secure the two together, electrical connectors carried by the block, a conductor passing longitudinally through the handle member and connected with said connectors in said block, a socket mounted on the forward end of the handle and electrically connected with said conductor, a lamp carried by the socket member, a shade or reflector mounted on the handle member and disposed to reflect the light from the lamp to the surface which the iron traverses, and a terminal block removably engageable with said connectors.

1,421,974. METHOD OF PRODUCING NONSHATTERABLE GLASS. OTTO S. MARCKWORTH, Columbus, Ohio. Filed Mar. 26, 1919. Serial No. 285,348. 22 Claims. (Cl. 49—81.)



16. A method of producing non-shatterable glass comprising immersing assembled glass and celluloid laminæ in a solution consisting of fusel oil, camphor and methyl salicylate while the solution is at a temperature between 24 degrees and 35 degrees centigrade, subsequently raising the temperature of the solution which has been applied to the laminæ, applying pressure to the laminæ, and subjecting the parts to a progressively increasing temperature during the pressure.

1,421,975. TRACING DEVICE. J NICHOLAS MEYERS, Philadelphia, Pa. Filed Jan. 25, 1921. Serial No. 439,823. 1 Claim. (Cl. 35—10.)



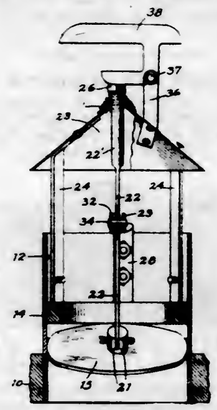
As an article of manufacture, a copying device presenting a relatively rigid base, a transparent flexible copying surface, a flexible connection for hingedly and permanently connecting said transparent copying surface to the base whereby articles of various thicknesses may first be adjusted on the base, then covered by said transparent copying surface and clamped between the two without disturbing the articles, and a clasp pivotally carried by the relatively rigid base adapted to engage the transparent copying surface to effect an optional clamping of the article to be copied and the transparent copying member to the rigid base.

1,421,976. METHOD AND APPARATUS FOR PUMPING FLUIDS. ANTHONY G. M. MICHELL, Melbourne, Victoria, Australia, assignor to Michell Bearings Limited, Westminster, England. Filed Aug. 5, 1919. Serial No. 315,476. 3 Claims. (Cl. 103—44.)

1. A method of pumping consisting in cyclically varying the thickness of a film of the fluid to be pumped between closely fitting and relatively moving surfaces, whereby pressure, dependent on the viscous resistance of the fluid, is generated in the film during the portion of the cycle in which the thickness of the film is diminished.

1,421,977. SHOCK ABSORBER. KARL MICKLEY, Zurich, Switzerland, assignor to the Firm Alfred Jost & Co., Zurich, Switzerland. Filed Apr. 19, 1921. Serial No. 462,651. 4 Claims. (Cl. 267—32.)

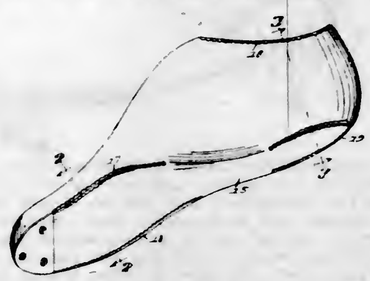
1. In a shock-absorber, the combination of a plate spring curved to a hoop shape and interposed between two members for transmitting a load from one of said members to the other, and an air-cushion device operatively connected to said plate spring in the manner of a stay, at points lying between the ends of said plate spring and the part opposite said ends and tending to counteract the compression of said plate spring caused by the load.



1,421,978. PROCESS OF MAKING ARSENIC TRICHLORIDE. LOWELL H. MILLIGAN, New Kensington, Pa., assignor to Newton D. Baker, Secretary of War. Filed June 12, 1920. Serial No. 388,663. 13 Claims. (Cl. 23—13.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

12. In a process for making arsenic trichloride, heating an arsenic compound with chlorine and a reducing agent.

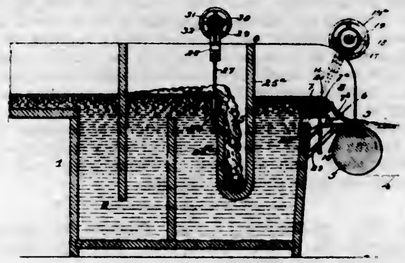
1,421,979. FIRE EXTINGUISHER. HOWARD S. MITCHELL, Homer, La. Filed June 25, 1920. Serial No. 391,592. 3 Claims. (Cl. 220—88.)



3. The combination with a storage tank having a vent opening, of an apparatus of the character described com-

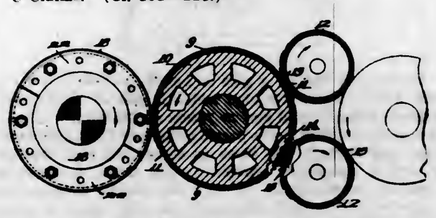
prising a casing fitted in said opening, a normally opened valve arranged within the casing and including a valve stem having an opening therein, a member secured to the casing and extended across the top thereof, said member having an opening, an explosive chamber supported by said member and adapted to receive a charge of explosive, a pivoted latch element associated with said member and

adapted to be arranged in parallelism therewith, said element having an opening adapted to register with the aforementioned opening, a fusible pin adapted to be passed through said openings for holding the valve in an open position, a plug carried by said element for closing said explosive chamber, said explosive when ignited effecting the release of said valve, and means for automatically closing the valve subsequent to its release.



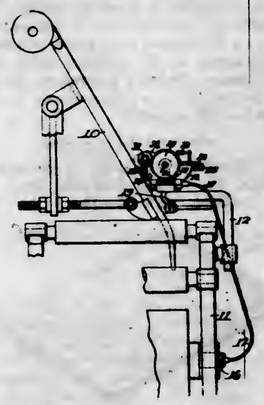
1,421,980. METHOD OF PROTECTING SHOE LASTS. FREDERICK L. MORSE, Framingham, Mass. Filed July 9, 1920. Serial No. 394,953. 1 Claim. (Cl. 12—133.)

The method of protecting a shoe last consisting in applying metallic plates to embrace the edges of the last and anchoring the said plates at their edges, and in finishing the said plates on each side of the edges of the last to which the plates are applied to the contour of the contiguous surfaces of the last.



1,421,981. METHOD OF AND APPARATUS FOR FEEDING PULP TO THE FORMING WIRES OF PAPER-MAKING MACHINES. JAMES M. MURRAY, Berlin, N. H., assignor to International Paper Company, a Corporation of New York. Filed Aug. 16, 1918. Serial No. 250,101. 21 Claims. (Cl. 92—44.)

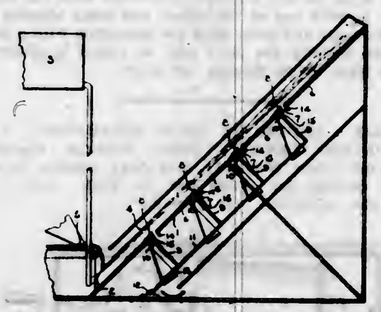
1. The method of feeding pulp to the forming wire of paper making machines, which consists in providing a pool of the pulp, delivering the pulp from the pool onto the forming wire in a downwardly flowing stream free from



disturbing influences, and permitting the pulp to advance with the wire free from obstruction above.

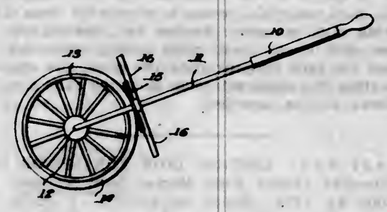
1,421,982. PRINTING COUPLE. CONRAD NORDFORS, Jersey City, N. J., assignor to Wood Newspaper Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Sept. 26, 1918. Serial No. 255,848. 8 Claims. (Cl. 101—216.)

1. The combination with a printing plate cylinder, having plates thereon and between the plates plate high margin bars, of an inking roller therefor having a surface depression registering with the margin bars to prevent inking their surfaces.



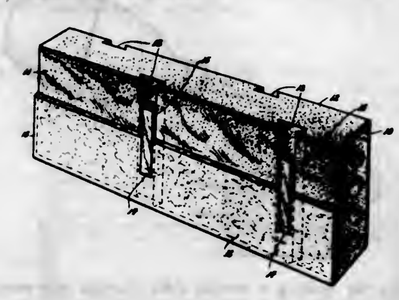
1,421,983. MACHINE FOR COUNTING OUT AND MARKING PRINTED PRODUCTS. CONRAD NORDFORS, Jersey City, N. J., assignor to Wood Newspaper Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Dec. 11, 1918. Serial No. 266,211. 3 Claims. (Cl. 270—20.)

1. The combination of the stationary former plate of a paper folder, with freely rotatable means movable to a



position to press the web against said plate and adapted to be turned by the movement of the paper for marking the last one only of each series of products of a predetermined number, while passing over said plate.

1,421,984. CONCENTRATING PULVERULENT MATERIAL. FRANK ONDRA, Johannesburg, Transvaal, South Africa, assignor to Concentrators Limited, Johannesburg, Transvaal Province, South Africa, a Company of the Transvaal Province of the Union of South Africa. Filed Jan. 28, 1920. Serial No. 354,646. 3 Claims. (Cl. 83—82.)



2. The herein-described process of concentrating pulverulent material in the art of mineral separation which consists in first causing the particles to be mixed with a fluid under pressure and to be projected by such pressure in a stream following an uninterrupted path inclined at an angle to the vertical; collecting the particles as they fall due to their weight from said stream in prearranged zones to obtain a plurality of collections of particles each containing both gangue and mineral particles of substantially the same weight but varying as to size; and then separating the patricles according to size to separate the mineral from the gangue particles.

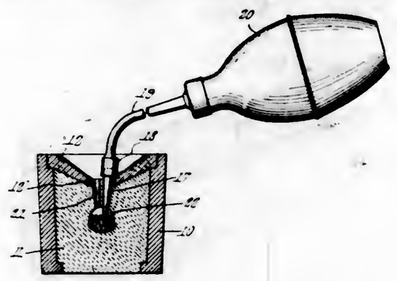
1,421,985. TOY. LORENCE ORUSSA, Roanoke, Ill. Filed Nov. 5, 1920. Serial No. 422,001. 1 Claim. (Cl. 46—38.)

A device of the character described comprising an elongated rod having one end provided with a handle and having its other end formed with a right angularly extending axle portion, a ground engaging wheel journaled upon said axle portion and provided with a rubber tire, and a spinning member rotatable upon said rod at right angles to said wheel and engaging said tire whereby to be rotated thereby when said wheel is trundled along the ground, said spinning member comprising a disk and crossed arms secured thereon, the disk being of relatively small diameter and engaging against the periphery of said tire, and the cross-arms being relatively long and extending beyond the wheel.

1,421,986. WALL CONSTRUCTION. ELMER V. PHILLIPS, Philadelphia, Pa. Filed Nov. 30, 1920, Serial No. 427,500. Renewed Dec. 8, 1921. Serial No. 520,987. 1 Claim. (Cl. 72—105.)

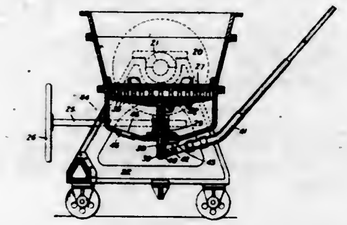
The combination with a wall structure formed of units having channels therein with undercut walls, of blocks positioned within the channels and having beveled edges cooperating with the undercut walls, the faces of the blocks projecting outwardly from the surface of the units, a body of plastic material applied to the surface of the wall, extending between the blocks and the floor, and flush with the face of the blocks, a base board overlying the blocks thus embedded and the flush body of plastic material, and devices for securing the base board to the blocks, and holding said board in intimate contact with the blocks, and in contact with the surface of the plastic material and the floor.

1,421,987. TOOL FOR RELEASING AN AIR VALVE FROM RIM OF AN AUTOMOBILE TIRE. ELMER QUINN, Philadelphia, Pa. Filed Apr. 5, 1921. Serial No. 458,664. 2 Claims. (Cl. 29—84.)



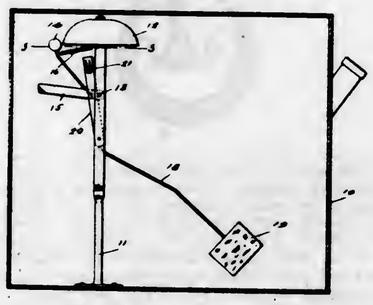
1. In a device of the character described, a tool having at its lower portion a chamber provided with an upper wall 6, a rear wall 5, and side walls 3, the latter having the terminal horizontal edges 8, and the outer depending terminal lips 7, whereby a chamber is formed between the walls 3 and 5 adapted for the reception of the upper end of the nipple, said terminal lips being adapted to overhang the upper shoulder of said nipple.

1,421,988. APPARATUS FOR CASTING FILLINGS FOR TEETH. WILLIAM H. RICHARDS, Knoxville, Tenn. Filed Dec. 16, 1921. Serial No. 522,980. 7 Claims. (Cl. 32—27.)



1. In apparatus of the character described, a mold having a cavity formed therein receiving the impression

element, a pair of tubular sprues extending through the material of the mold and leading into the cavity, and

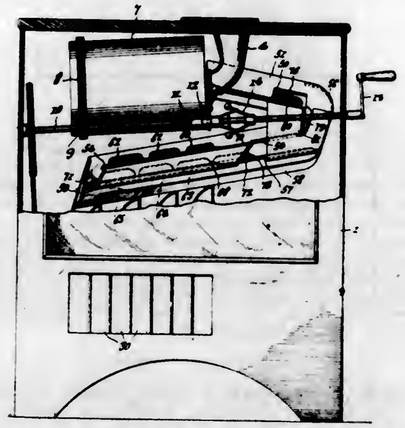


means for passing a heated fluid through one tubular sprue.

1,421,989. BLAST-ROASTING APPARATUS AND THE LIKE. GILBERT RIGG, Melbourne, Victoria, Australia, assignor to Mining and Metallurgical Process Proprietary Limited, Melbourne, Australia. Filed June 9, 1920. Serial No. 387,663. 9 Claims. (Cl. 266—21.)

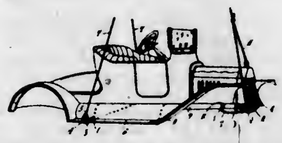
1. In blast roasting operations and the like for the treatment of ores maintaining the permeability of the charge by periodically breaking perforating or opening up the clinker formed over the grate thus permitting a uniform passage of the blast.

1,421,990. SIGNAL. VINCENT R. RINDT, Winter, Wis. Filed May 28, 1921. Serial No. 473,472. 3 Claims. (Cl. 116—110.)



1. The combination with a liquid containing receptacle, of a standard arranged within the receptacle, a bell supported by the standard, a spring pressed hammer normally contacting said bell, and float actuated means for moving the hammer away from said bell against the tension of said spring, and subsequently releasing the hammer for the purpose specified.

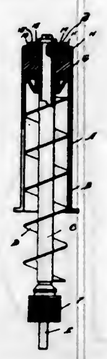
1,421,991. FISH LURE. CLAUDE M. RODGERS and ARTHUR W. WENGER, Warsaw, Ind. Filed May 31, 1921, Serial No. 473,596. Renewed May 20, 1922. Serial No. 562,528. 6 Claims. (Cl. 43—42.)



6. A fish lure comprising a plate having upstanding sides cut away at opposite points intermediate its length, a hook secured to the plate with the barbed portion upward and with the shank engaging the plate in position to clamp a flexible trailer between itself and the plate, and a spoon having a flexible connection with the plate at the forward end of the latter, and being adapted at both its upper and lower sides for connection with a fishing line, whereby the plate may be guided to different depths when drawn through the water.

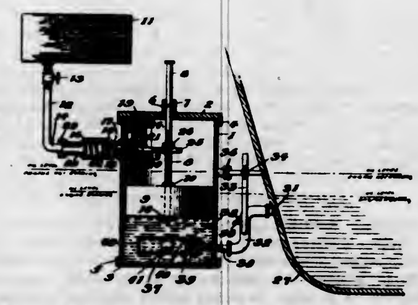
1,421,992. AUTOMATIC COIN SEPARATING AND COUNTING DEVICE. HENRY WILLIAM ROEBLING, EDWARD HUGH WILLIAMS, and JOHN GEORGE BAUER, New Orleans, La. Filed Mar. 21, 1921. Serial No. 454,014. 6 Claims. (Cl. 133—3.)

1. A device of the character described comprising a coin chute comprising means to receive the coins, a plate having rails one above another for receiving the coins from said means, said plate having graduated slots above the rails for separating the coins, and means for diverting the mutilated coins from the rails and slots, substantially as described.



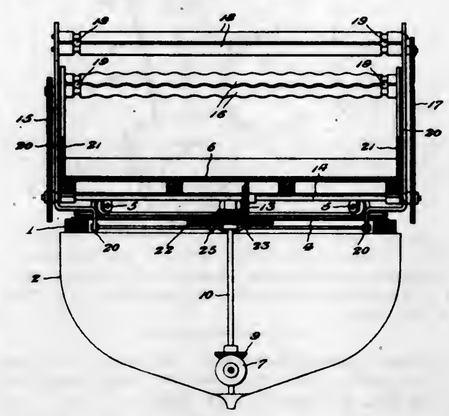
1,421,993. LIFTING IRON FOR MOTOR CARS. CHARLES ALBERT ROFE, Marton, New Zealand. Filed July 24, 1919. Serial No. 313,078. 1 Claim. (Cl. 294—82.)

A lifting iron comprising a body portion and end portions, each of the end portions being offset at an angle to the body portion, and extending on opposite sides to each other, end hooks formed on the ends of the body portion, one of said hooks extending at substantially



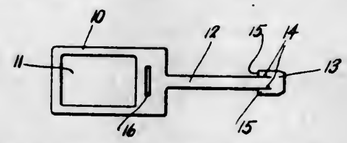
right angles to the end portions and the other within the same plane therewith, the said iron being adapted to be inserted in a substantially horizontal position beneath the running board of an automobile to engage with the bracket or chassis.

1,421,994. DRIVING MECHANISM FOR LOCOMOTIVE STOKERS. JOHN W. ROHRER, Columbus, Ohio. Filed May 22, 1920. Serial No. 383,582. 1 Claim. (Cl. 192—43.)



In a locomotive stoking device including a casing, a head formed on one face with a ratchet, a conveyor having a shaft passing through said head, and a member carried by the shaft of the conveyor adjacent said ratchet; driving mechanism comprising pairs of pawls pivoted upon said member, a disk mounted upon said shaft and disposed against the outer end of said member, said disk being provided at diametrically opposite sides with cut-out portions and being provided intermediate said cut-out portions with an arcuate slot, said member being formed at diametrically opposite sides with slots registering with the first named cut-out portions, lugs extending from said pawls and disposed through said second named slots and extending into said cut-out portions, and a guide bolt for said disk carried by said member and extending through the arcuate slot in the disk, and an extension on the disk serving as a combined handle and indicator and movable over a scale on said member.

1,421,995. LUBRICANT-CONTROLLING DEVICE FOR AUTOMATICALLY CONTROLLING THE LUBRICATING SYSTEM OF GAS ENGINES OF AUTOMOBILES AND OTHER MOTOR VEHICLES. ALFRED J. ROWAN, Sault Ste. Marie, Mich. Filed Aug. 26, 1921. Serial No. 495,638. 6 Claims. (Cl. 184—103.)

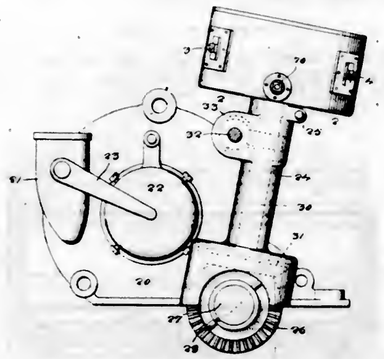


1. A lubricating controlling device of the class described including a receptacle, means for automatically maintaining the oil within the receptacle at a predetermined level, a connecting pipe for connecting the receptacle with a crank case, and gravity acting means for closing the connecting pipe when the same is tilted either longitudinally or laterally.

1,421,996. SEINE-OPERATING MECHANISM. TOM RUNNING, Juneau, Territory of Alaska. Filed Oct. 17, 1919, Serial No. 331,396. Renewed Dec. 3, 1921. Serial No. 519,802. 2 Claims. (Cl. 254—137.)

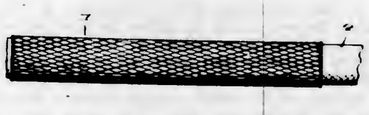
1. A seine operating device comprising a turntable, uprights thereon, a pair of rollers mounted in said uprights, a rocking frame carried by the platform, a pair of rollers carried by said frame, all of said rollers having grooves adjacent their ends for permitting the floats and sinkers on the seine to pass between the rollers, means for rotating the rollers and means for rocking the frame.

1,421,997. LINK. JOHN V. SANDQUIST, Houston, Tex. Filed July 13, 1920. Serial No. 395,919. 5 Claims. (Cl. 59—91.)



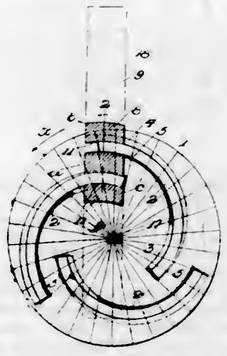
1. A link comprising a member having an opening therein, a substantially T-shaped bendable member adapted to be bent upon itself to provide a loop and having the head thereof associated with the link and bendable tongues forming an integral part of the structure for locking the head in active association with the link.

1,421,998. COMMUTATOR AND BATTERY-CHARGING OUTFIT INCLUDING THE SAME. DONALD S. SCARBOROUGH, St. Louis, Mo., assignor to Peter Douros, East St. Louis, Ill. Filed Apr. 11, 1919. Serial No. 289,351. 2 Claims. (Cl. 175—364.)



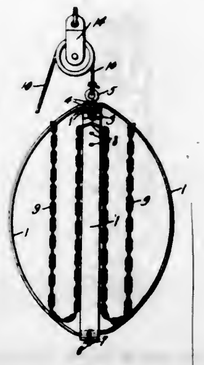
1. The combination of a cover, a housing integral with said cover and having a comparatively large lower portion and a sleeve extending upwardly from said lower portion and provided with an upper clamp portion, a shaft having a miter gear interposed in the lower portion of the housing, a shaft disposed in the sleeve portion of the housing and having a miter gear intermeshed with that of the first-named portion, a commutator rotor fixed

on the second-named shaft, above the housing, and a casing carrying brushes opposed to said rotor member and having a portion disposed in the clamp portion of



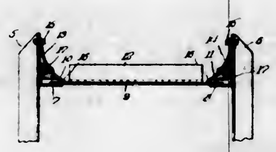
the housing, whereby the casing may be turned about the second-named shaft for the adjustment or setting of the brushes.

1,421,999. SHOE-STRING TIP. RUDOLPH F. SCHILLER, Sun Prairie, Wis. Filed Feb. 21, 1922. Serial No. 538,180. 2 Claims. (Cl. 24—143.)



1. A tip for shoe strings comprising a cylindrical member having its bore provided with impinging elements, said tip designed, when inserted over a shoe string to be pulled from the opposite ends thereof to expand the same longitudinally and to contract the same laterally and in such contraction to cause the impinging elements to enter the shoe string.

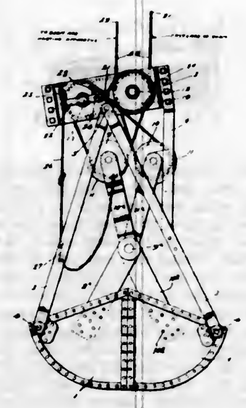
1,422,000. CAM GEARING. HENRY J. SCHMICK, Williamsport, Pa. Filed Mar. 1, 1918. Serial No. 219,809. 6 Claims. (Cl. 74—36.)



1. In gearing, the combination of a plurality of spirally disposed cams having overlapping ends, the working faces of said cams being twisted substantially as described, and a gear wheel having teeth twisted transversely and circumferentially to fit the twisted cam surfaces.

1,422,001. CHIMNEY CLEANER. ALONZO H. SHARP and WILLIAM D. COCKRELL, Aldrich, Minn. Filed Apr. 23, 1921. Serial No. 463,809. 2 Claims. (Cl. 15—163.)

1. A cleaner of the class described including bowed scraping members radially disposed about a common axis, said members having adjustably connected lapping terminals, means connected to the terminals at one end of the membera for raising and lowering the device, and looped flexible cleaning elements interposed between and connected to the upper portions of the bowed members.



1,422,002. CONVEYER. ARTHUR L. SHAW, Chicago, Ill., assignor to Chicago Automatic Conveyor Co., a Corporation of Illinois. Filed Nov. 22, 1920. Serial No. 425,619. 4 Claims. (Cl. 199—204.)

1. A conveyer having a traveling belt; continuing supports for the edge of the belt; a flexible guide having its lower edge resting on the margin of the belt and extending upwardly and outwardly therefrom, and means preventing lateral movement of the guide away from the belt.

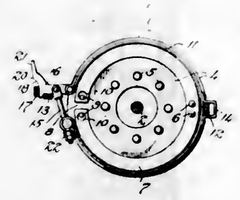
1,422,003. SINGLE-LINE GRAB-BUCKET CONSTRUCTION. ARTHUR M. SHEARER, Indiana, Pa. Filed July 23, 1920. Serial No. 398,368. 8 Claims. (Cl. 37—30.)

1. In a single-line grab bucket construction, the combination of a head, swinging bucket sections connected with and suspended therefrom, sheaves connected with the bucket sections, drums and pulleys carried by the head, brake means also carried by the head and connected with one of the bucket sections and a single looped

line or cable suspending the head and bucket sections and engaging the sheaves, drums and pulleys, said head suspended by said looped line.

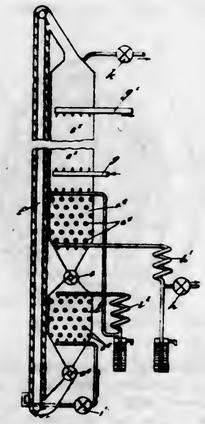
1,422,004. PROCESS OF OBTAINING ALUMINA. RALPH S. SHEAWIN, East St. Louis, Ill., assignor to Aluminum Company of America, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Jan. 16, 1914, Serial No. 812,594. Renewed Apr. 3, 1919. Serial No. 287,347. 13 Claims. (Cl. 23—13.)

10. In the leaching of sintered unfused alumina-silica-lime-soda mixtures, the step of heating to not above 200° F., such a sintered mixture and an alkaline solution of a sodium compound.



1,422,005. DIRECTION INDICATOR FOR MOTOR VEHICLES. FRANK SKARZYNSKI, Rochester, N. Y. Filed Oct. 20, 1921. Serial No. 509,007. 4 Claims. (Cl. 116—48.)

1. In a direction indicator for motor vehicles, a vertical shaft journaled for rotation and having a housing fixed upon the upper end thereof, a lamp socket mounted upon the exterior of one of the side walls of said housing and having an incandescent lamp therein, feed wires for said socket extending through the housing and shaft, means operatively connected to the lower end of the shaft for manually rotating the latter, and a hollow transparent indicator member having a flanged wrist portion secured against said side of the housing and having an open end into which the lamp and socket project.

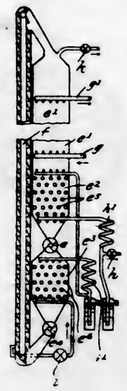


1,422,006. FRICTION BRAKE. GEORGE L. SMITH, Washington, D. C. Filed Apr. 3, 1920. Serial No. 371,017. 9 Claims. (Cl. 188—77.)

1. In a brake structure, the combination of a rotatable member, a compressible resilient and initially compressed brake element fixed to said member and tending to overcome compression thereof by the action of centrifugal

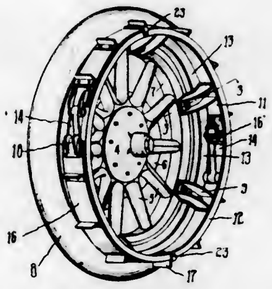
force thereon due to rotation of the member, and a second brake element engageable with the first element to further compress the latter.

1,422,007. METHOD OF STRIPPING THE ILLUMINANTS FROM AND OF PURIFYING COAL GAS BY MEANS OF CHARCOAL. FREDERICK SODDY, Aberdeen, Scotland. Filed Apr. 11, 1919. Serial No. 289,352. 11 Claims. (Cl. 48—197.)



1. A process of treating coal-gas to separate methane, carbon monoxide and hydrogen on the one hand from naphthalene, benzene, ethylene and other illuminants on the other hand which process consists in relatively moving in contact with each other coal-gas and charcoal which is not cooled substantially below the ordinary temperature.

1,422,008. APPARATUS FOR PURIFYING COAL GAS. FREDERICK SODDY, Oxford, England. Filed Aug. 6, 1920. Serial No. 401,696. 3 Claims. (Cl. 48—178.)

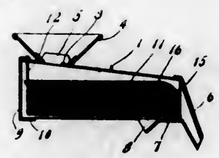


1. Apparatus for treating coal-gas to separate the non-illuminant hydrocarbon and other gases from the illuminants, comprising a container, a heated chamber, a cooled chamber and a chamber which is neither heated nor cooled in the said container, means for circulating charcoal successively through the heated chamber, the cooled chamber

and the chamber which is neither heated nor cooled, means for passing coal-gas through the last-named cham-

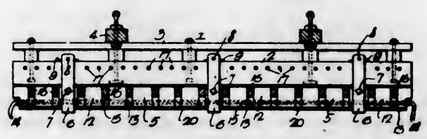
ber in counter-current to the charcoal and means for withdrawing gas from the heated chamber.

1,422,009. DRIVING CLEAT MECHANISM FOR MOTOR-VEHICLE DRIVING WHEELS. ALFRED T. STURT, New York, N. Y., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Dec. 4, 1919. Serial No. 342,387. 3 Claims. (Cl. 301—39.)



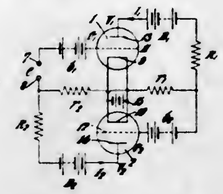
3. In a vehicle wheel, a cylindrical rim having an opening therein, an abutment secured to the inner surface of the rim adjacent said opening, a cleat supporting strip having a hook at one end adapted to engage an edge of said opening, means on the other end of the strip extending through the opening and engaging said abutment, said means comprising a bolt and nut whereby the strip may be tightened upon the rim.

1,422,010. RAILWAY-TRACK CONSTRUCTION. ANTON TAUCHAR, Dunlo, Pa. Filed Dec. 31, 1921. Serial No. 526,086. 5 Claims. (Cl. 238—135.)



1. As an article of manufacture, a rail section having a longitudinal bore opening at opposite end faces of the rail section, the bore of the rail section at the ends of the latter being enlarged and internally threaded.

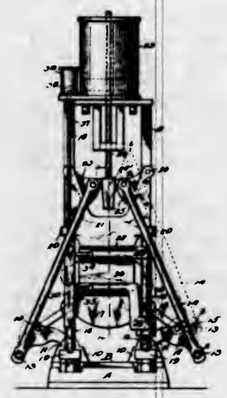
1,422,011. ASH SIFTER. RICHARD A. THIEDE, Camden, N. J. Filed Nov. 11, 1920. Serial No. 423,429. 1 Claim. (Cl. 83—60.)



An ash sifter comprising a channel-shaped casing having an upper wall and side walls, the lower portions of the side walls being bent laterally to provide supporting flanges for resting upon the open upper end of a receiving receptacle, the upper wall of said casing having an inlet opening, a plate closing the rear end of the casing and having its lower end portion extending beneath the casing for resting upon the receptacle, a downturned discharge spout closing the forward end of the casing and having an extension extending beneath the casing for resting upon the receptacle, the extension being provided with a deflected lip for extending into the receptacle, and means in the casing for receiving ashes and after sifting the ashes passing resulting cinders through the discharge spout.

1,422,012. YARN RACK. WALTER S. TRICKETT, Groveville, N. J., assignor to Hussong Dyeing Machine Company, Groveville, N. J., a Corporation of New Jersey. Filed Jan. 7, 1922. Serial No. 527,596. 5 Claims. (Cl. 8—19.)

1. The combination in a yarn rack, of a main frame; bottom members located under the sides of the main frame; means for detachably securing the bottom members to the main frame, said bottom members being made in sections, some of said sections being notched; and means for securing the sections together.



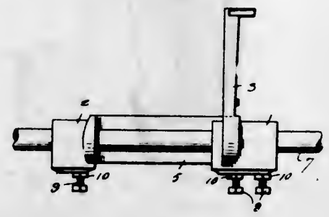
1,422,013. THERMIONIC APPARATUS APPLICABLE FOR WIRELESS TELEGRAPHY AND OTHER PURPOSES. LAURENCE BEDDOME TURNER, Cambridge, England. Filed Feb. 6, 1920. Serial No. 356,626. 6 Claims. (Cl. 250—8.)

1. In thermionic apparatus, the combination of a plurality of ionic tubes, each having a filament, a grid and an anode, connections including sources of current between the anode of one tube and the grid of a second tube in said apparatus, and between the anode of said second tube and the grid of said first mentioned tube, and a common branch connection including high ohmic resistances in the anode and grid circuits of both of said tubes,

whereby the anode of one tube and the grid of the second tube in said apparatus are connected, and the anode of said second tube and the grid of the first mentioned tube are connected to form a closed circuit cascade system.

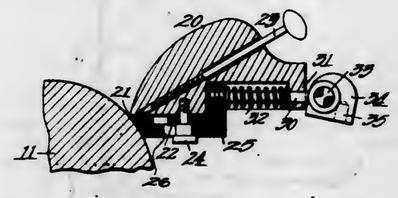
1,422,014. COTTON COMPRESS. FRANK L. WHITE. Memphis, Tenn. Filed Sept. 16, 1919, Serial No. 324,141. Renewed Apr. 25, 1922. Serial No. 556,543. 8 Claims. (Cl. 100—19.)

1. In a press having upper and lower platens and hinged gates forming two sides of a press chamber, a high-density attachment comprising a reciprocable wedge and actuating means therefor, said wedge being disposed adjacent the free ends of the gates and reciprocable parallel to the axis thereof, said gates having projections on their free ends projecting into the range of action of said wedge and engaged by the latter to impart additional closing motion thereto.



8. A cotton compress comprising a base and spaced columns rising therefrom; upper and lower platens; gates hung on said columns and coacting with the platens to form an enclosed baling chamber; curved levers pivoted on the base having hocket bearings in an intermediate portion and links mounted in said bearings and pivotally connected to the lower platen; lifting rods connected to the outer ends of the curved levers; curved cams pivotally-mounted above the baling chamber and to the upper portions of which the upper ends of the lifting rods are connected; a steam cylinder and piston rod; a rack-head on the lower end of the piston rod between the curved faces of said cams, said head having tapering sides provided with teeth and the curved faces of the cams having teeth engaged thereby; and a high-density attachment comprising a fluid-operated wedge for imparting further closing motion to a previously closed gate and thereby further compressing the material in the press-chamber.

1,422,015. CROSSCUT-SAW HANDLE. JOSEPH F. WILLIAMS, De Funiak Springs, Fla. Filed Apr. 1, 1921. Serial No. 457,726. 2 Claims. (Cl. 145—108.)

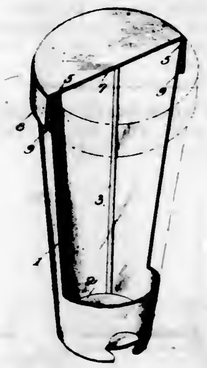


2. A saw blade handle comprising a straight shank having one end secured to the saw blade, the said straight portion of the shank extending considerably above the upper edge of the saw to provide a straight hand grip, an annular flange formed on the upper end of the straight hand grip, a curved hand grip extending from the said flange and curved toward the opposite end of the saw blade, the said curve being substantially quarter-circular, and a knob formed on the terminal of the said curved hand grip.

1,422,016. LOOM ROCK-SHAFT BEARING. JAMES A. WIX, Goldville, S. C. Filed May 25, 1921. Serial No. 472,398. 1 Claim. (Cl. 139—67.)

A loom rock shaft bearing comprising a pair of boxes having elongated and vertically disposed openings, blocks adjustable in said openings and engaging and forcing a rock shaft against the upper walls of the openings, a horizontally disposed U-shaped frame connecting the boxes, and a vertical arm formed on one of the boxes and adapted to be secured to the frame of a loom, said arm having projections and slots and the latter adapted to receive projections on the loom frame and the former to fit in depressions on said frame to prevent the arm from moving relatively to the frame.

1,422,017. PAGE CUT-OFF DEVICE FOR INK FOUNTAINS. HENRY A. WISE WOOD, New York, N. Y., assignor to Wood Newspaper Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Dec. 19, 1917, Serial No. 207,976. Renewed Dec. 16, 1921. Serial No. 522,953. 11 Claims. (Cl. 101—365.)

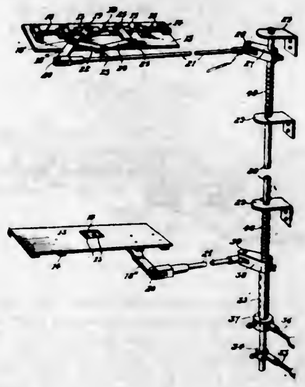


1. In an ink fountain containing a feed roll and regulating blade, a plurality of means operative between the surface of the ink and the blade for shutting off the supply of ink to different parts of the blade, said means abutting against each other at their side edges and constituting a continuous series throughout the length of said blade.

1,422,018. PAPER-MATERIAL CONTAINER AND THE LIKE. WILBUR L. WRIGHT, Fulton, N. Y., assignor to Sealright Co., Inc., Fulton, N. Y., a Corporation of New York. Filed June 19, 1918. Serial No. 240,815. 9 Claims. (Cl. 229—43.)

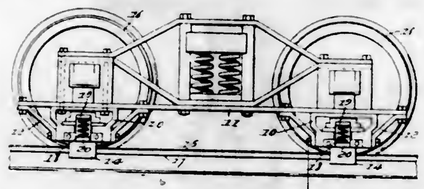
1. A paper can have a tapered body for nesting, the mouth of said can being at the tapered large open end thereof, said body being flexible and having its top edge crimped downwardly around said open end, in combina-

tion with a slip paper cover for closing said large open end of the body, said cover having a deep substantially-straight resilient flange at its free end forming a rolled



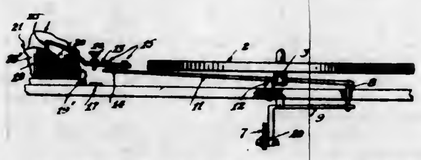
or crimped edge to cooperate with the large top edge of the body and with a portion of the body below said edge.

1,422,019. **ALLOY OF REFRACTORY METALS AND PROCESS OF FORMING SAME.** JOHN ADAM YUNCK, South Orange, N. J. Filed Jan. 17, 1913. Serial No. 742,711. Renewed July 14, 1921. Serial No. 484,617. 7 Claims. (Cl. 75—1.)



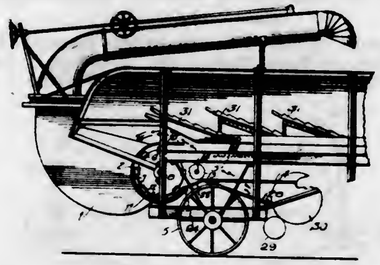
1. An alloy for use in making metal filaments and the like, composed of at least 95 per cent of metallic tungsten and the rest pure thorium.

1,422,020. **SASH-LOCKING DEVICE.** JOHN ZAK, Bergholz, Ohio. Filed July 6, 1921. Serial No. 482,674. 2 Claims. (Cl. 292—33.)



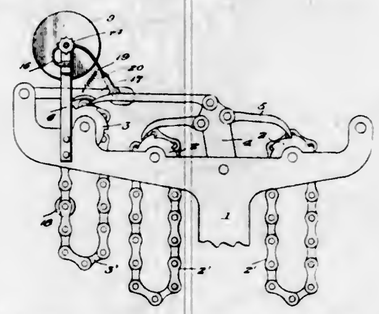
1. A sash locking device comprising a vertical rock shaft provided with means for mounting the same in a window frame and having an arm fixed upon the upper end portion thereof, a tubular rock shaft surrounding the first named rock shaft and rotatable relative thereto, an arm fixed upon the upper portion of said tubular rock shaft, locking devices provided with means for mounting the same within the upper and lower members of the window frame and normally yieldingly held in locking position, means operatively connecting each of said arms with one of said locking devices, and means to independently rock either one of said shafts relative to the other including a handle upon the lower portion of each shaft adapted to extend inwardly through the wall of the dwelling.

1,422,021. **DERAILING GUARD.** FRANK ZEIS, Trenton, N. J. Filed Apr. 23, 1921. Serial No. 463,753. 3 Claims. (Cl. 104—246.)



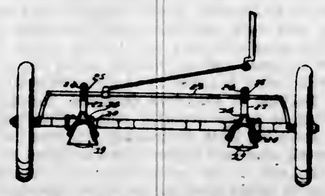
2. A derailing guard having a hanger for attachment to the bottom of a truck frame and a spring supported follower mounted for vertical movement in the hanger and provided with a depending inwardly directed foot for terminal arrangement beneath the outer side of a rail head, the shank portion of said foot being fitted with vertical anti-friction rollers for contact with the edge of the rail head.

1,422,022. **SOUND RECORDING AND REPRODUCING MACHINE.** WILLIAM E. BIRKET, Peoria, Ill. Filed Mar. 25, 1921. Serial No. 455,529. 12 Claims. (Cl. 274—1.)



1. In combination with the tone-arm and governing means of a sound recording and reproducing machine, mechanism interposed between the said tone-arm and governing means directly engaging both adapted in the movement of the tone-arm to control the action of said governing means.

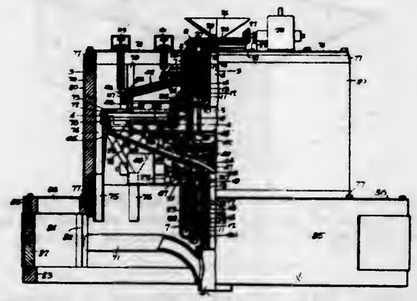
1,422,023. **THRASHING MACHINE.** EDD BOE, Clearbrook, Minn., assignor of one-fourth to Irvin Dewitt Kretser, Clearbrook, Minn., one-fourth to Dustin Wallace McNabb, Winnipeg, Canada, and one-fourth to Edwin Archer Halseth, Clearbrook, Minn. Filed Aug. 20, 1920. Serial No. 404,887. 5 Claims. (Cl. 130—27.)



1. In a thrashing machine, means for thrashing grain, including a chaffer, a sieve parallel to and spaced from said chaffer, an auxiliary thrashing means disposed between said chaffer and said sieve, said auxiliary thrashing means comprising a thrashing cylinder having a plurality of teeth mounted thereon, a concave having a plurality of teeth disposed between the teeth of said thrashing cylinder, whereby grain is drawn through the teeth of said concave by the teeth of said thrashing cylinder, thus thrashing the grain, and means for returning the grain threshed by said auxiliary means to said chaffer and means being adapted to feed the grain to said first named means.

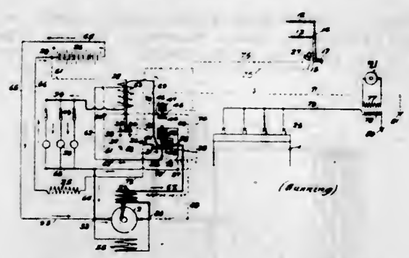
1,422,024. **REGISTER.** JAMES SAMUEL BOYD, Spray, N. C. Filed Sept. 28, 1920. Serial No. 413,386. 3 Claims. (Cl. 235—91.)

1. In combination with the control cylinder of a loom, a register and means for operating the same by a part on the chain of said cylinder.



1,422,025. **DIRIGIBLE HEADLIGHT.** ALVEY L. BROGDEN, Abbeville, S. C. Filed Oct. 26, 1921. Serial No. 510,426. 2 Claims. (Cl. 240—62.)

1. A dirigible headlight attachment for automobiles having standards and means for attaching the same at their lower ends to the front axle of the vehicle and provided at their upper ends with bearing sleeves, bearings for registration with said bearing sleeves having means for attachment to the front axle, lamp carrying posts mounted revolubly in said bearing sleeves and bearings, and means for communicating motion from the steering bar of the vehicle to said posts and consisting of operating arms carried by the posts and terminally actuable by said steering bar, the bearings for the lower end of each post consisting of a bearing sleeve and a step bearing, and said operating arm being extended from the post between the same.

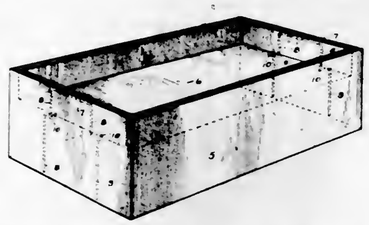


1,422,026. **PROCESS AND APPARATUS FOR ELECTROSTATIC SEPARATION OF FINELY-DIVIDED DISCRETE MATERIAL.** GEORGE RUDSTON BROWN, Bondi, near Sydney, New South Wales, Australia, assignor to Electrostatic Separation Company, Limited, Sydney, New South Wales, Australia, a Company registered according to the laws of the State of New South Wales, in the Commonwealth of Australia. Filed Jan. 7, 1920. Serial No. 349,975. 28 Claims. (Cl. 83—49.)

1. Process for electrostatic separation of finely divided discrete material wherein the material dried and hot is centrifugally cast against an electrode whereby its particles of comparative electrical conductivity become electrically charged and are thrust through one zone of an electrostatic field of force between said electrode and another electrode and to a second zone of said field of

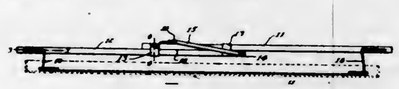
force where they are momentarily sustained more or less free of the force of gravity as they centrifugally travel through said second zone to a point of discharge, while particles of insufficient electrical conductivity by arrest of centrifugal travel and by the force of gravity find another point of discharge, substantially as described.

1,422,027. **AUTOMATIC ELECTRIC GENERATING UNIT.** WILLIAM W. BUCHER, Chicago, Ill., assignor, by mesne assignments, to Kohler Company, Kohler, Wis., a Corporation of Wisconsin. Filed Mar. 20, 1919. Serial No. 283,910. 9 Claims. (Cl. 290—30.)



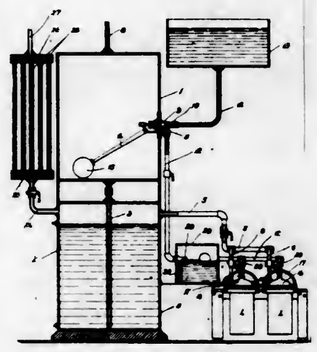
1. In combination with a gas engine operated generator, a storage battery and service mains, a control switch having a fine winding in circuit with the battery and the mains in order to be energized by a service demand, an engine ignition means in a circuit controlled by the control switch, a starting switch having a winding in a circuit also controlled by the control switch, a governor operated switch included in the last mentioned circuit, a motor circuit including the battery and the generator as a motor and controlled by the motor starting switch, a main switch having a winding connected in circuit with the generator and energized when the generator is driven by the engine, said control switch having a coarse wire winding in circuit with the mains and the generator and controlled by the main switch, said main switch having an interlock included in the starting switch winding circuit, and a charging resistance in circuit with the battery and the generator and controlled by the main switch.

1,422,028. **BOX TRAY SUPPORT.** WILLIAM L. BUEDINGEN, Milwaukee, Wis. Filed May 22, 1920. Serial No. 383,606. 3 Claims. (Cl. 248—20.)



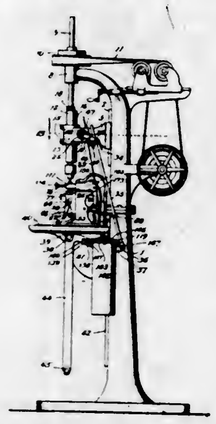
2. In a device of the class described, the combination with a box and a tray adapted to be supported therein and spaced from the bottom thereof, of means substan-

tially independent of the box and tray for readily removably supporting the tray within the box and including



supporting legs resting upon the box bottom, an upper portion confined between the adjacent walls of the box and tray, and shelf means upon which the tray rests.

1,422,029. FILM HOLDER. WILLIAM S. BRACKNEY, Elizabethton, Tenn. Filed Sept. 18, 1920. Serial No. 411,078. 4 Claims. (Cl. 95—100.)



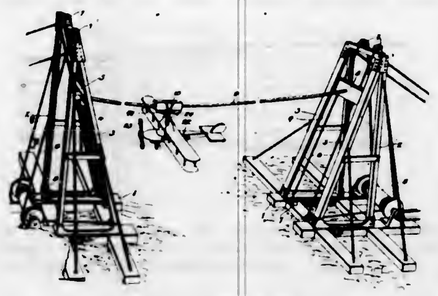
1. A film holder comprising an elongated body portion and pivotally mounted spaced film engaging members extending laterally from said body portion for detachable engagement with a film.

1,422,030. ACETYLENE-GAS-LIGHTING PLANT. DUNCAN CARMICHAEL, Ancoats, Manchester, England. Filed Dec. 26, 1919. Serial No. 347,392. 2 Claims. (Cl. 48—31.)

1. An acetylene gas plant, comprising a generator, a tank adapted to contain water, means for delivering gas from the generator to said tank above the water contained therein, a second tank connected to the lower portion of said first tank to receive water expelled from the first tank by gas pressure from the generator, a water supply pipe, a valve in said pipe, a sealed tank to receive water from said water supply pipe, a connection between said sealed tank and said generator and through which water passes to said generator, float-controlled means in said second tank for closing the valve in said water supply pipe when the water delivered to said second tank by the pressure of gas in the first tank reaches a predetermined level, and float-operated means in said sealed tank to govern the supply of water to said sealed tank and from said sealed tank to the generator and operative to prevent the flow of water through the generator to said first-named tank and prevent back pressure of gas from the generator to the water supply means.

1,422,031. DRILLING MACHINE. THEODORE P. CAULKINS, Chicago, Ill., assignor to Edward T. Wray, Chicago, Ill. Filed Dec. 20, 1915, Serial No. 67,804. Renewed Nov. 24, 1917. Serial No. 203,866. 29 Claims. (Cl. 77—5.)

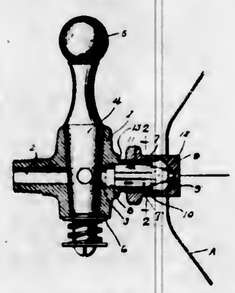
1. A machine of the character described, comprising, in combination, a primary source of power, a tool adapted to be actuated thereby, means for normally holding said tool in an inoperative position, a work support, work clamping means for clamping work thereon, tool feeding means, an actuator held normally in an inoperative position to be controlled by an operator, means for connecting said actuator with said work clamping means and means for connecting the same with said tool feeding means to bring said work clamping and tool feeding means into operation when said actuator is moved to an operative position.



10. A machine of the class described, comprising, in combination, a power actuated tool, a work-support, a primary actuating lever, lever-actuated means for clamping the work upon said support, lever-actuated means for feeding the tool to the work, means for releasing the lever-actuated means when the operation is completed but before the end of the primary lever stroke, means for restoring the tool and the work clamping means to their respective normal positions, a sliding air actuated piston having a gage-stop thereon for discharging the work, and means, brought into action upon the latter part of the primary lever stroke upon the release of said first named lever-actuated means, for forcing air against said piston to discharge the work.

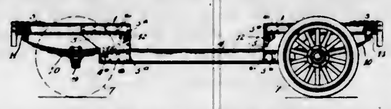
14. A machine of the class described, comprising, in combination, a work-support, work-clamping means for clamping work thereon, an actuator in operative connection with said clamping means to cause the clamping and releasing of the work, a gage for gaging the position of the work, a cylinder and piston, the latter of which is in operative connection with said gage, a source of compressed air, and means controlled by said actuator for admitting air under pressure to said cylinder for moving said gage to discharge the work.

1,422,032. AMUSEMENT DEVICE. FRANK CHAPMAN, Brooklyn, N. Y. Filed Mar. 27, 1922. Serial No. 547,300. 4 Claims. (Cl. 104—23.)



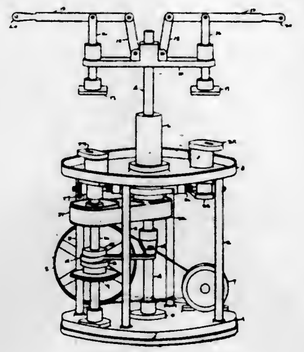
1. An aerial amusement apparatus, comprising in combination spaced derricks, carrier blocks adapted for vertical adjustment on the derricks, a supporting cable terminally

connected to the carrier blocks, a traveler adapted for traveling cooperation with the cable, a rod depending from



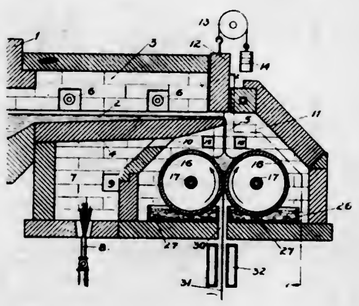
the traveler, an aeroplane car mounted for free rotary movement on the rod, and means for locking said car with respect to the rod.

1,422,033. GAS COCK AND JET PLUG THEREFOR. EMIL L. CLAUS, Milwaukee, Wis. Filed Oct. 16, 1920. Serial No. 417,361. 2 Claims. (Cl. 67—121.)



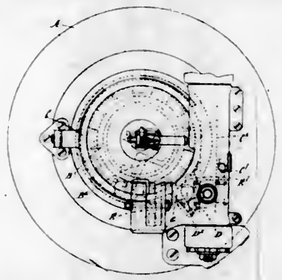
2. A gas cock, comprising a casing provided with an inlet and an outlet, valve means intermediate the inlet and outlet, a discharge nozzle surrounding the outlet and having a jet plug receiving bore, the outer end of said bore being slightly larger than the inner end portion and tapered theretoward, and a jet plug disposed in said bore, said jet plug including a relatively thin hollow shell, the main portion having longitudinal ribs forming channels whereby fluid may pass around the plug and the outermost diameter of said plug as defined by said ribs giving to have snug frictional engagement with the walls of said bore.

1,422,034. VEHICLE. JOSEPH W. COLLIER, Newark, N. Y., assignor to Arcadia Trailer Corporation, Newark, N. Y., a Corporation of New York. Filed May 14, 1921. Serial No. 469,729. 10 Claims. (Cl. 280—2.)



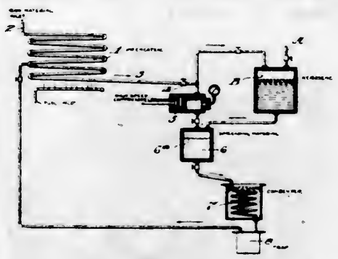
1. A vehicle frame having a side formed by two end bars and a center bar arranged below the end bars, the end bars and the center bar each having at least one horizontally presented flange, and plates secured to opposite ends of the center bar and to the end bars, said plates being shaped to engage the flange of the center bar and the flanges of the end bars.

1,422,035. GRINDER. CHARLES LEE COOK, Louisville, Ky. Filed Apr. 17, 1919. Serial No. 290,724. 11 Claims. (Cl. 51—26.)



1. A plane surface grinder comprising a holder, means for giving said holder an oscillating movement in a plane parallel to the plane of the surface ground, and adjustable double eccentric means for setting the extent of either movement at any distance from zero to the sum of the throw of said eccentrics.

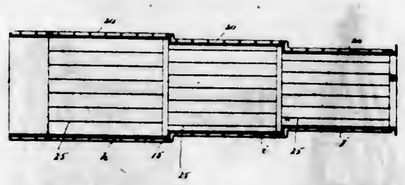
1,422,036. METHOD AND APPARATUS FOR PRODUCING SHEET GLASS. JOSEPH P. CROWLEY and CLIFFORD A. ROWLEY, Toledo, Ohio, assignors to The Libbey-Owens Sheet Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Jan. 17, 1921. Serial No. 437,660. 25 Claims. (Cl. 49—17.)



25. In an apparatus for continuously producing sheet glass, a source of molten glass, a pair of horizontal cylindrical metallic rollers having their cylindrical surfaces tinned, means for adjusting the rollers vertically and toward and from each other, means for internally cooling the rollers, means for rotating the rollers in opposite directions, a receptacle containing molten tin in which the lower portion of each roller revolves, means for flowing molten glass from the source into the trough between the rollers, the glass flowing through the slot formed by the contiguous surfaces of the rollers and emerging in the form of a downwardly moving sheet of glass, a heated chamber in which the rollers are located, having a slot in its lower side, and means for cooling the sheet as it emerges from the chamber.

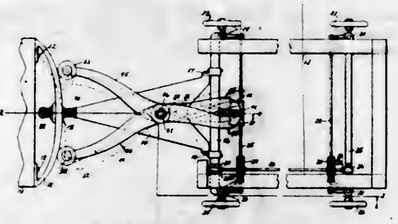
1,422,037. ORDNANCE BREECH MECHANISM. ARTHUR TREVOR DAWSON and GEORGE THOMAS BUCKHAM, Westminster, London, England, assignors to Vickers Limited, Westminster, London, England. Filed Oct. 26, 1921. Serial No. 510,656. 9 Claims. (Cl. 89—29.)

1. In ordnance breech mechanism, the combination with the breech screw, the swinging carrier in which said breech screw is mounted, and the axis pin of said carrier, of a breech screw withdrawing crank arranged to engage with the breech screw at a point substantially beneath the center line of the breech screw, a breech screw unlocking crank arranged with its axis in substantially the same horizontal plane as the axis of the withdrawing crank and means for operating said cranks from the carrier axis pin.



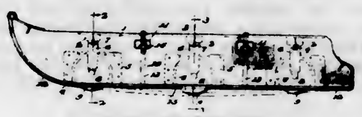
1,422,038. TREATMENT OF HYDROCARBON OILS. DAVID T. DAY, Washington, D. C. Filed June 17, 1919. Serial No. 304,749. 24 Claims. (Cl. 196—25.)

1. The process of producing hydrocarbon oils having low boiling points from hydrocarbon oils having high boiling points, which consists in vaporizing at least a part of the oil to be treated and immediately compressing the material so treated in a cylinder by the action of a sliding piston which moves substantially instantaneously to generate pressure and heat sufficient to heat and compress the vaporized material to the temperature and pressure of conversion.



1,422,039. DRUM FOR DRYING PULP AND THE LIKE. CHARLES L. DEAN, Denver, Colo., assignor to Stearns-Roger Manufacturing Company, Denver, Colo., a Corporation of Colorado. Filed Mar. 24, 1920. Serial No. 368,325. 9 Claims. (Cl. 34—6.)

8. A sectional drying drum embracing longitudinal tubular sections fastened end to end each section comprising a demountable shell consisting of peripheral sectors detachably secured together and a series of partition plates secured inside the sectors, means for supporting said partition plates in properly spaced relationship, the plate nearest the diametric plane of the section being



extended to project between the longitudinal edges of two adjacent sectors to be held between them for support when the drum is assembled, substantially as described.

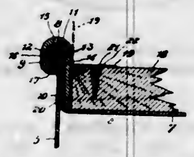
1,422,040. TRAILER-STEERING DEVICE. REUBEN H. DE LAUNTY, Chicago, Ill. Filed Feb. 24, 1920. Serial No. 360,725. 10 Claims. (Cl. 280—33.5.)

1. In a trailer steering device, in combination, a truck having an arcuate extension at its rear end, a trailer having steerable wheels, and means slidably engaging said arcuate extension operative upon lateral change of angular relation between the truck and trailer for steering said wheels.

1,422,041. VEHICLE SLED. THOMAS W. DINNING and EARL H. CLYMER, Renton, Wash. Filed Feb. 23, 1921. Serial No. 447,344. 5 Claims. (Cl. 280—9.)

4. A wheel vehicle and sled comprising a body having side members, wheels mounted in the side members and extending below the lower edge of the side members, runners having their ends secured to the edge of the said side members, standards secured to the runners and extending through the bores formed in the side members, and means engaging the standards to project the runners below the plane of the lower peripheries of the wheels.

1,422,042. GAME BOARD. JOHN R. DONNELLY, Fairfield, Me. Filed Apr. 30, 1921. Serial No. 465,785. 1 Claim. (Cl. 46—41.)



A ouija board comprising a board proper having a circular groove, a rotary finger engaging member arranged centrally of said board and having an annular groove on the under side thereof, ball bearings arranged in said grooves, letters of the alphabet arranged upon

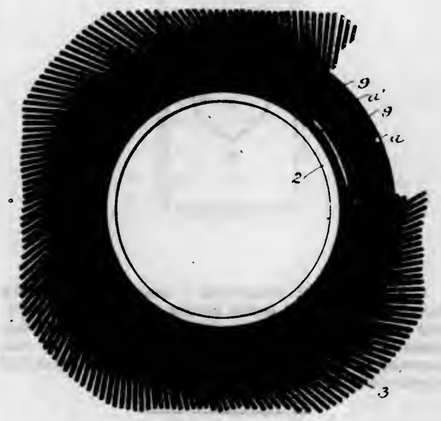
the board proper and in concentric relation to said rotary member, numerals arranged adjacent said letters in a similar relation, other indicia arranged upon said board,

and a pointer projecting from the periphery of the rotary member and cooperating with all the indicia upon said board for the purpose specified.

1,422,043. REMOVABLE FALSE HEAD FOR METALLIC CONTAINERS. CHARLES T. DRAPER, Cleveland, Ohio, assignor to The Draper Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 15, 1920. Serial No. 365,722. 8 Claims. (Cl. 220—67.)

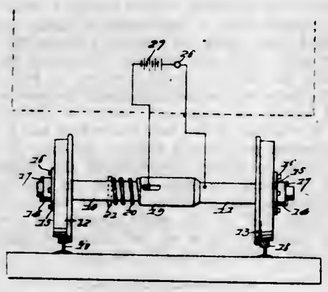
1. A sheet metal container having a recessed metallic head, a reinforcing hoop or ring entering said recessed head, a wooden false head removably positioned within the recessed head, and means connected with said hoop for removably retaining the false head in position.

1,422,044. MOUNT FOR ARTIFICIAL TEETH. HERBERT A. EDWARDS, London, England. Filed June 23, 1921. Serial No. 479,894. 2 Claims. (Cl. 211—34.)



1. A mount for artificial teeth comprising a support, a series of sectional mount strips carried on said support having recesses therein longitudinally of each strip, said recesses being filled with a plastic material to receive the artificial teeth and said strips being partially severed by a weakening therebetween to allow of each of the latter being removed from the series of strips as required.

1,422,045. LOCK-SEALED ENVELOPE. MICHAEL H. FLAHERTY, Philadelphia, Pa. Filed May 26, 1920. Serial No. 384,389. 2 Claims. (Cl. 229—82.)



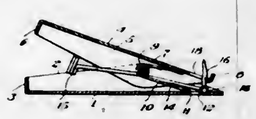
1. An envelope having a slot through a wall thereof, a sealing member for a closure flap of the envelope insertable through said slot and containing an application of adhesive for disposition within the envelope, said sealing member having a slot therethrough to remain exposed and unobstructed exteriorly of the envelope when the latter is closed to facilitate application of a moistening means therethrough to said adhesive.

1,422,046. METHOD OF FORMING TIRES. WILLIAM G. FORDING, Cleveland, Ohio, assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed June 30, 1916. Serial No. 106,759. 36 Claims. (Cl. 154—14.)

1. The method of making a tire carcass which comprises passing a circumferential series of separately supplied strands back and forth from one side of a tire-forming support to the other so as to form a plurality of successive layers.

1,422,047. RAILWAY-TRACK INDICATOR. FRANK GARAGNANI, Herrin, Ill. Filed July 14, 1921. Serial No. 484,661. 3 Claims. (Cl. 246—121.)

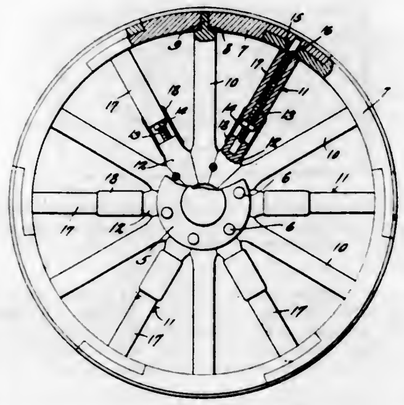
1. An apparatus for the purpose described having relatively movable axle members carrying rail traversing wheels and a signalling device having inside and outside contacts of which the elements are movable respectively by said axle members and are included in circuit with a



signalling unit and a source of electrical energy, said contacts being housed in a sleeve arranged in telescoping relation with the axle members.

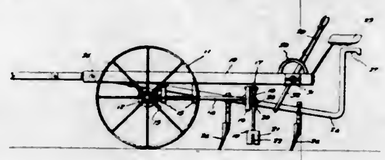
1,422,048. HINGE JOINT. GILBERT W. GOODRIDGE, Bridgeport, Conn., assignor to The Bryant Electric Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Dec. 6, 1921. Serial No. 520,242. 4 Claims. (Cl. 16—128.)

1. A hinge joint comprising a plate, a door struck therefrom, and hinge means uniting said door and plate, said hinge means comprising integral lugs on one of said members and cooperating recesses in the other of said members in which said lugs are received and journalled substantially in the plane of the plate.



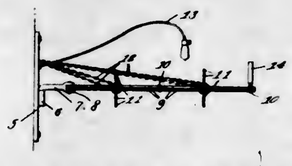
1,422,049. TRAP. GEORGE M. GOULD, Madison, S. Dak. Filed Nov. 26, 1921. Serial No. 517,991. 1 Claim. (Cl. 43—82.)

A mouse trap including a base having a flanged outer end and flanged sides, a jaw having a flanged outer end and flanged sides which are received between the sides of the base and which are pivoted thereto, spring means influencing the jaw to closed position, a wire member having its outer end coiled upon itself to provide a bait box and having an angle end which is journaled in a bearing at the rear of the base and which has a notched angle extension providing a trigger, the body of the jaw having a slot to receive therethrough the trigger when the jaw is swung to open position on the base and when turned to one position, incident to the weighted bait holding end of the wire member to swing the latter to cause the notch of the trigger to engage with the said wall of the opening in the jaw.



1,422,050. AUTOMOBILE WHEEL. DAVID S. GREENBERG, Warren Point, N. J. Filed Jan. 16, 1922. Serial No. 529,654. 3 Claims. (Cl. 301—67.)

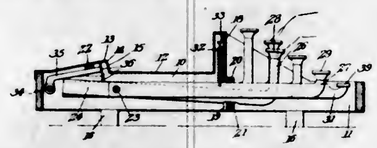
1. In a wheel, a sectional felloe, the adjacent sections of the felloe overlapping, a hub including plates, spoke members having connection with the sections at points intermediate their ends, and adjustable spokes disposed between the first mentioned spoke members and having connection with the sections of the felloe for securing



the sections together, and the inner ends of said spoke members being positioned between the plates of the hub.

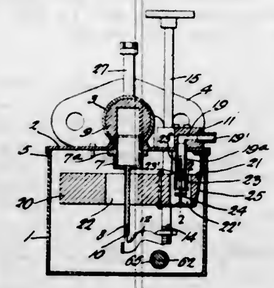
1,422,051. COTTON CHOPPER. FURNEY C. HALL, Hartsfield, Ga. Filed June 21, 1921. Serial No. 479,270. 4 Claims. (Cl. 97—45.)

1. A machine of the character described comprising a frame, ground wheels journaled on said frame, a hoe mounted for oscillatory movement, means actuated by one of the ground wheels for controlling the movements of said hoe, cultivator beams pivoted at the forward end of the machine and arranged in spaced parallel relation, the opposite ends of the beams being extended to provide handles whereby the beams can be conveniently raised or lowered, and means including a lever whereby the said beams can be adjusted simultaneously and held in any given position for the purpose specified.



1,422,052. WALL ATTACHMENT. HARRY C. HANSON, Minneapolis, Minn. Filed Jan. 7, 1921. Serial No. 435,678. 1 Claim. (Cl. 45—13.)

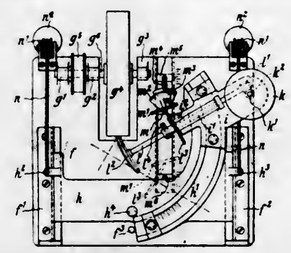
In a device of the character described, a base having a tubular portion formed integral therewith, a supporting arm, having a right-angled extremity, adjustably supported within the tubular portion, a body portion including bars pivotally connected at their ends, hooks



secured to the bars, suporting chains having connection with the bars, and said supporting chains having their inner ends connected to the base to secure the body portion in a horizontal position.

1,422,053. TYPEWRITING-INSTRUCTION MACHINE. OSCAR J. HANSON, Fargo, N. Dak. Filed Nov. 22, 1920. Serial No. 425,780. 1 Claim. (Cl. 35—16.)

A device of the character described comprising a casing having an upwardly extending channel shaped forward portion and an upwardly offset rear portion having an inclined front wall formed with a longitudinal slot, a frame below the casing, a plurality of type bars pivoted at their rear ends within the frame, a plurality of levers pivoted within the frame and having their rear ends engaging said type bars and their forward ends provided with keys, and springs connected with said levers and disposed within the channel shaped front portion of the casing, depression of a lever resulting in upward movement of the type bar associated therewith whereby the type will be visible through said slot.

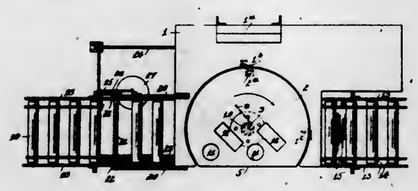


1,422,054. CARBURETOR. WILLIAM A. HEIDE, Detroit, Mich. Filed June 26, 1917. Serial No. 177,087. 2 Claims. (Cl. 137—104.)

2. In a carburetor a fuel reservoir, a float mounted therein, a fuel conduit extending within the reservoir and disposed above the float, a pin extending upwardly from the float, a valve loosely mounted upon the pin and adapted to seat in the fuel conduit to close the same, and a U-shaped member mounted upon the pin and provided with inturned ends adapted to engage the valve to disengage the same from the fuel pipe upon the descent of the float.

1,422,055. MACHINE FOR GRINDING BEVELED RIM SURFACES ON SPECTACLE GLASSES. OTTO HENKER, Jena, Germany, assignor to the Firm of Carl Zeiss, Jena, Germany. Filed Aug. 8, 1918. Serial No. 249,032. 5 Claims. (Cl. 51—101.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In a machine for grinding beveled rim surfaces on spectacle-glasses a grindstone, a shaft rotatably disposed in a body and adapted to hold a spectacle-glass, guiding means allowing to displace during the grinding operation the grindstone and the shaft relatively to one another, these guiding means forming with the said shaft an angle which differs from 90°, and a cam coacting with a stop



for limiting the relative displacement of the grindstone and the shaft, the angle contained by said stop and said guiding means being variable.

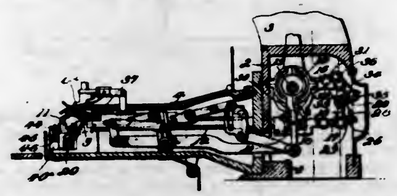
1,422,056. WINDOW-SHADE FIXTURE. GEORGE B. HOLLAND, Naugatuck, Conn. Filed July 25, 1921. Serial No. 487,493. 5 Claims. (Cl. 156—24.)

5. In a sheet metal bracket for window fixtures, an arm for supporting a tubular overdrapery-rod, said arm having an opening for receiving the end of a curtain rod and an integral tapered portion beyond said opening adapted to fit into said tubular overdrapery-rod.

1,422,057. APPARATUS FOR CASING CANS. CHARLES L. HOOPER, Rochester, N. Y., assignor to Vacuum Oil Company, New York, N. Y., a Corporation of New York. Filed Apr. 19, 1920. Serial No. 374,925. 8 Claims. (Cl. 198—19.)

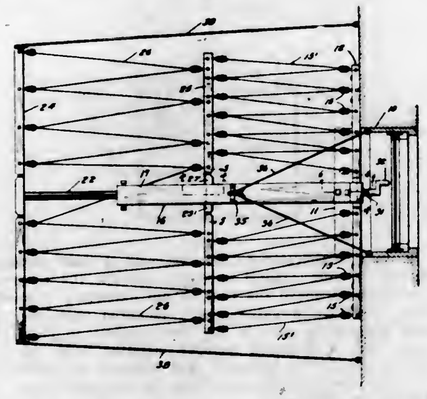
1. An apparatus used in casing cans comprising a table adapted to swing back and forth, a conveyor leading to the table, a fulcrum piece arranged adjacent to the delivery end of the table for facilitating the inversion of the cans on the table from their positions on the conveyor, means on the table cooperating with the tops of the cans for positioning a plurality of cans in abutment with each other, a conveyor leading from the table in line with the conveyor leading to the table, means for limiting the swinging movement of the table in both directions, means at the end of the receiving conveyor on which the encased cans are tilted from the table said means being movable for shifting the encased cans to an inverted position from that which they occupied on the table, and controlling means for the shifting means operable by an operative situated in front of the table.

1,422,058. TOOL HOLDER. VALENT HOVANEC, Ambridge, Pa. Filed Nov. 5, 1921. Serial No. 513,155. 2 Claims. (Cl. 279—77.)



1. A plurality of socketed tool holders of different sizes nested together, and means operable to lock a tool within the smaller tool holder and engageable by the next larger tool holder for preventing separation of the tool and the first named holder until said holders are separated, means carried by the larger tool holder to engage the smaller tool holder for retaining said tool holders nested and adapted to engage and retain a larger tool, said larger tool holder having a shank on one end thereof, and a further intermediate sized socketed tool holder adapted for snug reception of said shank, said last named tool holder being provided with means engageable with said snank to retain the latter within the socket thereof and to engage an intermediate sized tool for retaining the latter in said socket thereof.

1,422,059. LAMP EXTINGUISHER. TRAVIS H. B. HOWARD, Como, Miss. Filed Apr. 27, 1920. Serial No. 376,934. 1 Claim. (Cl. 67—73.)

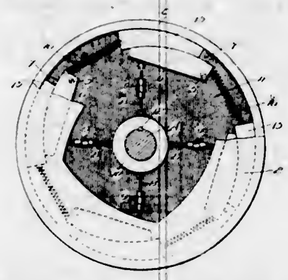


An extinguisher for a lamp of the wick type, in combination with the wick tube having an outwardly offset portion providing a recess in communication with the wick space of the tube, said portion having side walls, a squeese plate completely disposed in said recess, rod portions extending from said plate above its horizontal center and journalled in said side walls so that the plate will of itself normally hang vertically and will seek the vertical after operation whereby movement of the wick in either direction is unaffected by its presence, and one of said rod portions extending beyond the adjacent side wall for finger manipulation to move the plate into squeezing relation with the wick.

1,422,060. LOOPER MECHANISM FOR SEWING MACHINES. ROBERT R. HUGHES, Jr., Utica, N. Y., assignor to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Original application filed Oct. 17, 1919, Serial No. 331,312. Divided and this application filed June 16, 1920. Serial No. 389,328. 11 Claims. (Cl. 112—200.)

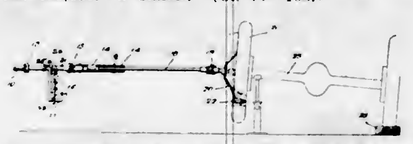
1. In a sewing machine, a looper, means for supporting said looper whereby the same moves in a line substantially parallel with the line of feed and in a direction opposed to the feed as it enters the needle thread loop, means for moving the looper laterally, and means for oscillating said looper including an eccentric, a lever mounted on a swinging fulcrum and connected to said eccentric, and devices operated by said lever and connected to said looper for giving said looper an extended dwell at each end of its stroke and during the lateral movement thereof.

1,422,061. CLOTHES DRIER. WILLIAM C. HUGHES, New Haven, Conn. Filed Dec. 18, 1920. Serial No. 431,650. 7 Claims. (Cl. 68—34.)



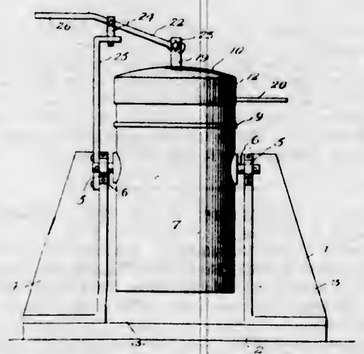
7. A clothes drier comprising a supporting bar adapted to be secured to a stationary support, a supporting frame mounted on said supporting bar, an adjustable drying frame mounted on said supporting frame, connections between said drying frame and said supporting bar, and means to adjust said drying frame on said supporting frame.

1,422,062. SELF-ADJUSTING CLUTCH. ARTHUR H. HUNT, Virgil, Kans. Filed Dec. 15, 1919. Serial No. 345,101. 8 Claims. (Cl. 192—37.)



1. In a friction clutch, the combination with a drive element and a driven element having a plate thereon, of

a sleeve slidably mounted for rotation with the drive element, wedge shaped shoes movably mounted between the drive element and driven element, pivoted wedges connected with the sleeve for engaging the shoes to transmit power from the drive to the driven element, the engaging faces of said shoes and wedges being tapered in

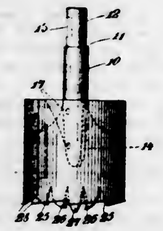


opposite directions, a screw adjusting rod between the sleeve and each wedge and pivoted at opposite ends to said sleeve and wedge respectively to form a thrust rod connection for adjusting the degree of contact between the wedges and shoes, and said plate on the driven element adapted to retain the shoes in position and prevent accumulation of dust thereon.

1,422,063. MOTOR-STARTING DEVICE. JOHN OTTO Q. JOHNSON, Modesto, Calif. Filed July 9, 1921. Serial No. 483,487. 2 Claims. (Cl. 74—106.)

1. A device for imparting movement from a rotary element to a crank, comprising a plurality of relatively adjustable elements for connection with the crank, one of said elements last named including a fork and a curved member passing around the bend of the crank, and having formed therein an angular opening for receiving the end of said rotary element.

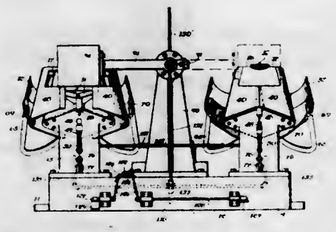
1,422,064. SANITARY GARBAGE CAN. PATRICK KANE, Chicago, Ill. Filed May 2, 1921. Serial No. 466,179. 2 Claims. (Cl. 220—36.)



2. In a device as set forth, a rockably mounted receptacle, a removable cover thereon, said cover comprising a shell, a stationary perforated disc carried by said shell and forming a bottom therefor, a rod connected to said stationary disc, a removable perforated disc rotatable on said rod to dispense a disinfectant into said receptacle, and a hand lever pivotally connected to said rod and mounted for pivotal movement by horizontal and vertical axes.

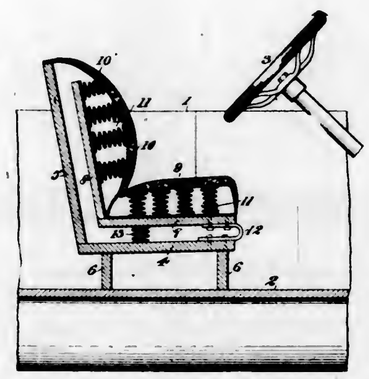
1,422,065. VULCANIZING APPARATUS. WILLIAM R. URQUHART, Los Angeles, Calif., and CLIFFORD W. POST, Akron, DWIGHT E. HUMPHREY, Cuyahoga Falls, and CLARENCE C. VAN ARSDALE, Akron, Ohio, assignors to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Oct. 18, 1920. Serial No. 417,755. 35 Claims. (Cl. 18—4.)

1. An apparatus for treating rubber articles comprising, an oven, means for successively and continuously moving tire casings through the oven, and means for repeatedly circulating the same air through the oven.



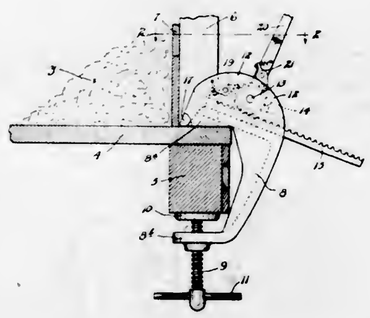
1,422,066. FRUIT CUTTING AND CORING DEVICE. GEORGE VAFIADES and JOHN KOUKOS, New York, N. Y. Filed June 27, 1921. Serial No. 480,637. 8 Claims. (Cl. 146—6.)

1. A fruit corer, comprising outer and inner toothed coring members having cutting edges deflected beyond the contours of said members.



REISSUES.

15,395. SHIRT BOSOM AND BODY MACHINE. CECIL H. BOYCLS, Louisville, Ky. Filed Nov. 19, 1921. Serial No. 516,486. Original No. 1,357,218, dated Nov. 2, 1920, Serial No. 380,488, filed May 11, 1920. 18 Claims. (Cl. 68—9.)

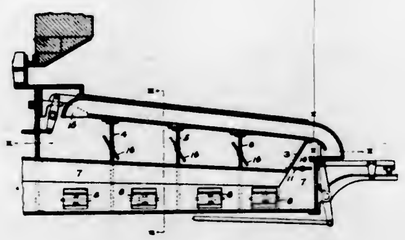


12. In a garment former device, a heat storing body and a stretcher member heated by and movable to and from the body.

15,396. AUTOMOBILE SEAT. JAMES H. MCCOLLOUGH, Jr., San Jose, Calif. Filed Sept. 27, 1921. Serial No. 503,616. Original No. 1,379,270, dated May 24, 1921, Serial No. 362,508, filed Mar. 1, 1920. 6 Claims. (Cl. 155—55.)

4. An automobile seat comprising a fixed bottom and back; a rigid L-shaped seat frame nested in and spaced from the fixed bottom and back; a connection between the bottom of the seat frame and the fixed bottom adapting the seat frame for oscillation about a horizontal axis; means for limiting the extent of said oscillation; a seat cushion carried by the bottom of the seat-frame, and a back cushion having its covering extending from the lower part of the back to the seat-frame over the top thereof and secured to the fixed back.

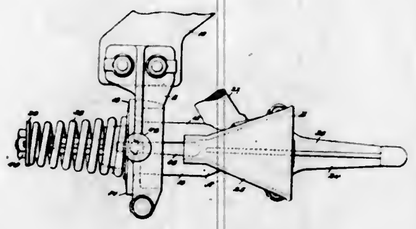
15,397. GRAIN-DOOR-FORCING DEVICE. WILLIAM H. MCGANS, Minneapolis, Minn. Filed June 1, 1922. Serial No. 565,565. Original No. 1,400,447, dated Dec. 13, 1921, Serial No. 407,052, filed Aug. 30, 1920. Reissue No. 15,306, dated Mar. 14, 1922, Serial No. 535,229, filed Feb. 6, 1922. 7 Claims. (Cl. 254—84.)



1. A grain door forcing device comprising a clamp having means for rigidly securing the same to a side sill and floor structure of a box car with its upper portion exposed in the door opening, a thrust plunger mounted on the upper portion of said clamp for movement therethrough against a grain door applied in the door opening, and a manually operated power multiplying device applied to said clamp and operative on said plunger to force the same against a grain door.

15,398. CLOCK. WILLIAM O'LEARY, Belvedere College, Dublin, Ireland. Filed Apr. 15, 1922. Serial No. 553,220. Original No. 1,365,537, dated Jan. 11, 1921, Serial No. 276,149, filed Feb. 10, 1919. 18 Claims. (Cl. 58—124.)

13. An automatic regulating mechanism for clocks, comprising in combination with an oscillating member of a time piece, a device for imparting periodic impulses to said oscillating member, an independent time mechanism, and devices for releasing and resetting the said impulse device at predetermined periods by the said independent clock mechanism.

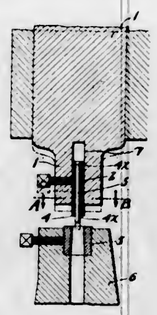


15,399. FURNACE. THOMAS A. PEEBLES, Pittsburgh, Pa. Filed Dec. 14, 1921. Serial No. 522,403. Original No. 1,338,694, dated May 4, 1920, Serial No. 218,246, filed Feb. 20, 1918. 17 Claims. (Cl. 110—74.)

1. In a furnace the combination of spaced fuel supporting members, a plurality of chambers arranged transverse of and below the fuel supports and adapted to supply air to different portions of the bed of fuel on said supporting members, means for feeding heated air to the chamber underlying the portions of the fuel supporting members on which initial combustion occurs and means for supplying air to the other chambers.

15,400. AUTOMATIC TRAIN-PIPE CONNECTOR. JOSEPH V. ROBINSON, Morristown, N. J. Filed Mar. 5, 1921. Serial No. 450,063. Original No. 1,245,784, dated Nov. 6, 1917, Serial No. 781,194, filed July 25, 1913. Reissue No. 14,873, dated June 1, 1920, Serial No. 334,880, filed Oct. 31, 1919. 46 Claims. (Cl. 285—58.)

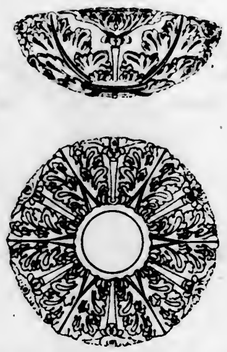
1. In an automatic train pipe coupling, the combination of a coupling head having an opening therethrough, a base, a member pivotally mounted on the base and carrying at one end a laterally extending tubular conduit which extends through the opening in said head and terminates approximately in the plane of the coupling face of the latter, said conduit being mounted directly upon said member, means for securing the conduit to the



member, a projection near the other end of said member, and means for normally maintaining said projection in engagement with said base to yieldingly support said coupling head.

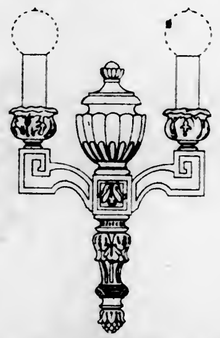
15,401. METHOD OF MAKING ROADS. LEONARD SCHADE VAN WESTRUM, Zurich, Switzerland. Filed May 20, 1921. Serial No. 471,260. Original No. 956,009, dated Apr. 26, 1910, Serial No. 489,662, filed Apr. 13, 1909. 4 Claims. (Cl. 94—23.)

1. The method of building roads which consists in mixing with the materials constituting the mineral aggregate in their natural condition an asphaltic cement whose base is hard bitumen in excess over fluxes and chemicals, and emulsified with an agent whose basis is water, and in spreading and compacting the mixture on a suitable foundation.



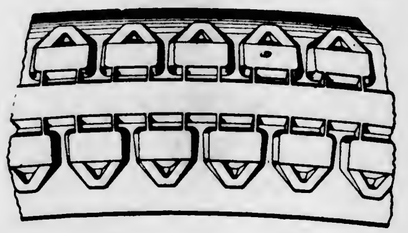
15,402. STAMPING MACHINE FOR CUTTING OUT ARTICLES FROM SHEET METAL. THOMAS HENRY WILSON, Bramley, Leeds, England. Filed June 4, 1921. Serial No. 475,174. Original No. 1,320,189, dated Oct. 28, 1919, Serial No. 300,381, filed May 28, 1919. 11 Claims. (Cl. 164—86.)

1. In a stamping machine for cutting out articles in the flat from sheet metal plates, the combination with a vertically reciprocating slide and a circular die, of a tubular punch or cutting tool carried by said vertically reciprocating slide, and a central pin depending below the base of the said tubular punch or cutting tool and being adapted to work in conjunction with the said circular die of the machine.



DESIGNS.

61,146. PRINCIPAL CENTRAL BODY OF A LIGHTING FIXTURE. HARRY C. ADAM, St. Louis, Mo. Filed Sept. 3, 1921. Serial No. 498,548. Term of patent 14 years.



The ornamental design for the principal central body of a lighting fixture, as shown.

61,147. LIGHTING FIXTURE. HARRY C. ADAM, St. Louis, Mo. Filed Sept. 3, 1921. Serial No. 498,557. Term of patent 14 years.

The ornamental design for a lighting fixture, as shown.

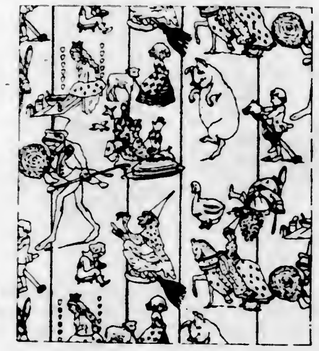
61,148. PNEUMATIC-TIRE TREAD. HARRY S. BERLIN, Springfield, Ohio, assignor to The Victor Rubber Company, Springfield, Ohio, a Corporation of Ohio. Filed Oct. 8, 1921. Serial No. 506,526. Term of patent 14 years.

The ornamental design for a pneumatic tire tread, as shown.

61,149. TOY SHACKLE. JOSEPH EDMUND BLAKE, Gardner, Mass. Filed Jan. 9, 1922. Serial No. 123. Term of patent 3½ years.

The ornamental design for a toy shackle as shown.

61,150. SOLID-RUBBER TIRE FOR VEHICLES. HENRY H. BOUCHER, Los Angeles, Calif. Filed May 2, 1921. Serial No. 466,207. Term of patent 14 years.



The ornamental design for a solid rubber tire for vehicles, as shown.

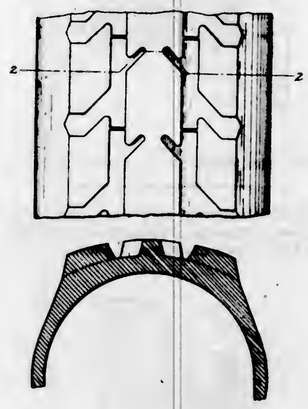
61,151. EMBLEM, BADGE, OR BUTTON. ARTHUR E. CHASE, Toledo, Ohio, assignor to Grand Council of The Ladies' Oriental Shrine of North America, Wheeling, W. Va., an Association. Filed Mar. 4, 1922. Serial No. 1,046. Term of patent 14 years.

The ornamental design for an emblem, badge, or button, as shown.

61,152. TEXTILE FABRIC. WILLIAM DOWLING, New York, N. Y., assignor to Golding Bros. Company, New York, N. Y., a Corporation of New York. Filed Jan. 10, 1922. Serial No. 158. Term of patent 7 years.

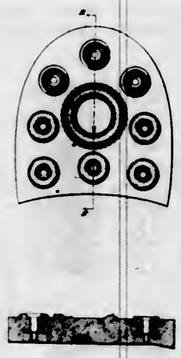
The ornamental design for a textile fabric, as shown.

61,153. DOLL PINCUSHION. MINNIE M. FARRELL, Kansas City, Mo. Filed Jan. 11, 1922. Serial No. 161. Term of patent 7 years.



The ornamental design for a doll pincushion, as shown.

61,154. WHIRLIGIG TOY. HELEN M. FLETCHER, San Francisco, Calif. Filed Dec. 21, 1921. Serial No. 524,023. Term of patent 3½ years.



The ornamental design for a whirligig toy, as shown.

61,155. TIRE. ARTHUR A. FRANK, Milwaukee, Wis., assignor, by mesne assignments, to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed July 6, 1921. Serial No. 482,849. Term of patent 14 years.

The ornamental design for a tire substantially as shown.

61,156. SHOE HEEL. DUDLEY FREEMAN, Roxbury, Mass., assignor to Panther Rubber Manufacturing Company, Stoughton, Mass., a Corporation of Massachusetts. Filed Mar. 11, 1922. Serial No. 1,130. Term of patent 14 years.

The ornamental design for a shoe heel as shown.

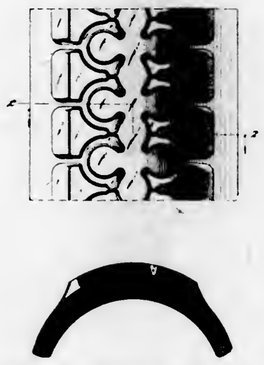
61,157. SOLE OR TAP. DUDLEY FREEMAN, Roxbury, Mass., assignor to Panther Rubber Manufacturing Company, Stoughton, Mass., a Corporation of Massachusetts. Filed Mar. 11, 1922. Serial No. 1,131. Term of patent 14 years.

The ornamental design for a sole or tap as shown.

61,158. DOLL. AGNES P. HANDLEY, Oakland, Calif. Filed Feb. 15, 1922. Serial No. 707. Term of patent 14 years.

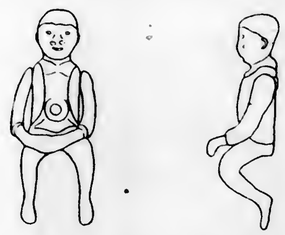
The ornamental design for a doll, as shown.

61,159. DOLL. JAMES A. HAYES, New York, N. Y. Filed Mar. 21, 1922. Serial No. 1,318. Term of patent 7 years.



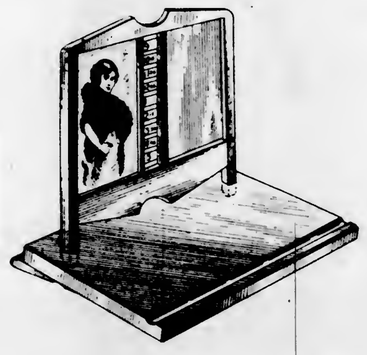
The ornamental design for a doll substantially as shown.

61,160. DOLL. JAMES A. HAYES, New York, N. Y. Filed Apr. 1, 1922. Serial No. 1,490. Term of patent 3½ years.



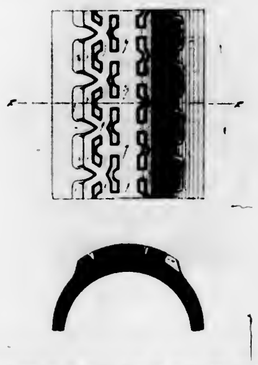
The ornamental design for a doll as shown.

61,161. TIRE. WILLIAM F. HOELZER, New Brunswick, and JOHN T. JOHNSON, Plainfield, N. J. Filed Oct. 19, 1921. Serial No. 508,879. Term of patent 14 years.



The ornamental design for a tire, as shown.

61,162. BROOMHOLDER. FRANCIS G. HOWE, Melrose, Mass. Filed July 1, 1921. Serial No. 481,953. Term of patent 14 years.



The ornamental design for a broom holder, as shown.

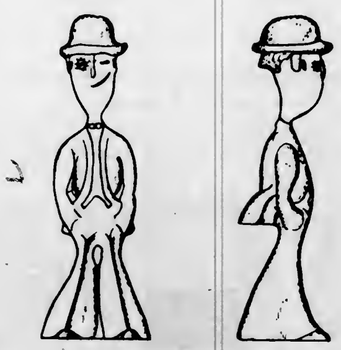
61,163. MEMORANDUM STAND. SIMON JAFFE, Montreal, Quebec, Canada. Filed Nov. 28, 1921. Serial No. 518,455. Term of patent 7 years.

The ornamental design for a memorandum stand, as shown.

61,164. TIRE. JOHN T. JOHNSON, Plainfield, N. J., assignor to Otto J. Kuhlke, Akron, Ohio. Filed Oct. 19, 1921. Serial No. 508,880. Term of patent 14 years.

The ornamental design for a tire, as shown.

61,165. SAFETY PAPER. CHARLES KRES, Cleveland, Ohio, assignor to The Forman Bassett Company, a Corporation of Ohio. Filed Feb. 11, 1921. Serial No. 444,300. Term of patent 14 years.



The ornamental design for safety paper surface, as shown.

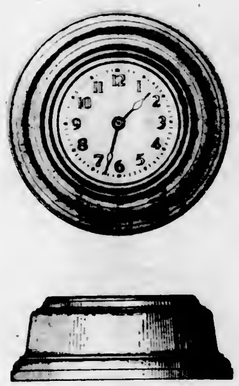
61,166. SAFETY PAPER. CHARLES KRES, Cleveland, Ohio, assignor to The Forman Bassett Company, a Corporation of Ohio. Filed Feb. 23, 1921. Serial No. 447,334. Term of patent 3½ years.

The ornamental design for safety paper surface, as shown.

61,167. DOLL OR STATUETTE. ALEXANDER W. KURFISS, Kansas City, Mo., assignor to John W. Mashburn, Kansas City, Mo. Filed Mar. 27, 1922. Serial No. 1,399. Term of patent 3½ years.

The ornamental design for a doll or statuette, as shown.

61,168. SWIVEL CONFECTION RACK. JOSEPH LAZERUS, Philadelphia, Pa. Filed July 2, 1921. Serial No. 482,221. Term of patent 7 years.



The ornamental design for a swivel confection rack, as shown.

61,169. VASE. ALLEN A. LYON, Belvidere, Ill. Filed July 9, 1921. Serial No. 483,572. Term of patent 7 years.

The ornamental design for a vase, as shown.

61,170. CLOCK CASE. LEWIS E. MACOMBER, New York, N. Y., assignor to Seth Thomas Clock Co., Thomaston, Conn., a Corporation. Filed Feb. 13, 1922. Serial No. 672. Term of patent 7 years.

The ornamental design for a clock case as shown.

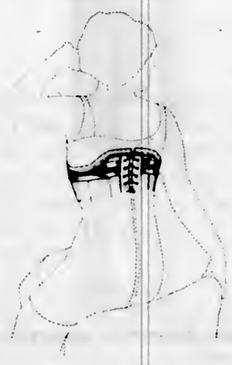
61,171. RING OR SIMILAR ARTICLE. JOSHUA W. MAYER, New York, N. Y. Filed Mar. 2, 1922. Serial No. 974. Term of patent 7 years.

The ornamental design for a ring or similar article, as shown.

61,172. RING OR SIMILAR ARTICLE. JOSHUA W. MAYER, New York, N. Y. Filed Mar. 2, 1922. Serial No. 976. Term of patent 7 years.

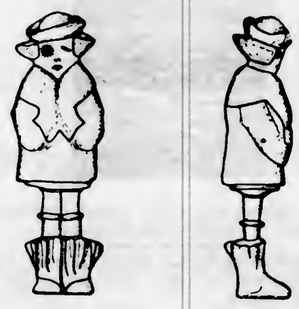
The ornamental design for a ring or similar article, as shown.

61,173. SAFETY PAPER. FRANK MEYER, Lakewood, Ohio, assignor to The Forman Bassett Company, a Corporation of Ohio. Filed Feb. 23, 1921. Serial No. 447,318. Term of patent 3½ years.



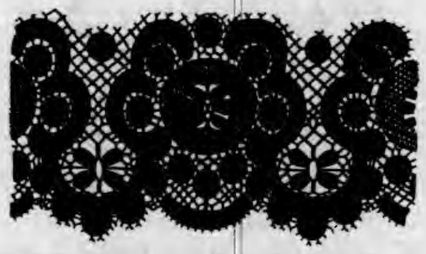
The ornamental design for safety paper, as shown.

61,174. SAFETY PAPER. FRANK MEYER, Lakewood, Ohio, assignor to The Forman Bassett Company, a Corporation of Ohio. Filed Feb. 23, 1921. Serial No. 447,319. Term of patent 3½ years.



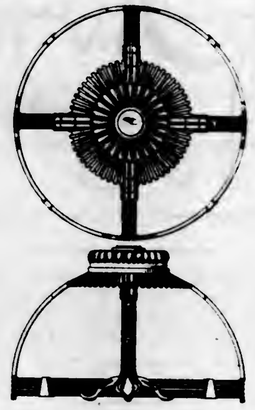
The ornamental design for safety paper, as shown.

61,175. CORSET. GERTRUDE L. NICKERSON, Bridgeport, Conn., assignor to The Warner Brothers Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Apr. 5, 1922. Serial No. 1,557. Term of patent 14 years.



The ornamental design for a corset, as shown and described.

61,176. DOLL OR STATUETTE. GEORGE W. SISK, Kansas City, Mo., assignor to John W. Mashburn, Kansas City, Mo. Filed Mar. 27, 1922. Serial No. 1,411. Term of patent 3½ years.

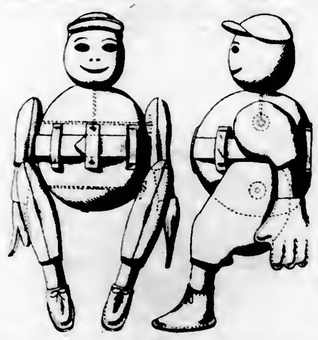


The ornamental design for a doll or statuette, as shown.

61,177. LACE. THOMAS H. SMEDLEY, Long Eaton, England, assignor to Richmond Lace Works, Alton, R. I., a Corporation of Maine. Filed Nov. 18, 1921. Serial No. 516,221. Term of patent 3½ years.

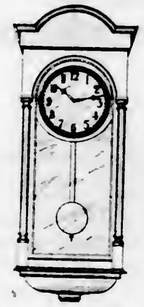
The ornamental design for lace, as shown.

61,178. ART METAL SHADE FRAME. ADOLF STEFFEN, Pittsburgh, Pa., assignor to Pittsburgh Lamp, Brass & Glass Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed May 18, 1921. Serial No. 470,614. Term of patent 7 years.



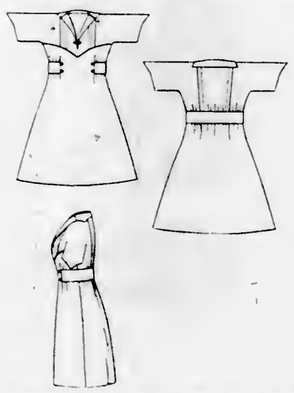
The ornamental design for an art metal shade frame, as shown.

61,179. DOLL. WILLIAM B. VAN VALIN, Los Angeles, Calif. Filed Feb. 10, 1922. Serial No. 635. Term of patent 14 years.



The ornamental design for a doll, as shown.

61,180. BASEBALL-PLAYER DOLL. WILLIAM B. VAN VALIN, Los Angeles, Calif. Filed Mar. 27, 1922. Serial No. 1,412. Term of patent 14 years.



The ornamental design for a baseball player doll, as shown.

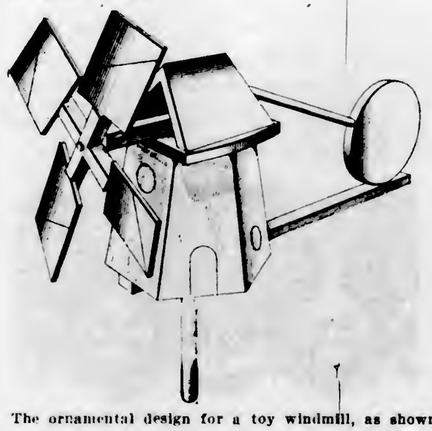
61,181. CLOCK CASE. FREDERICK A. WEIDMAN, Thomaston, Conn., assignor to Seth Thomas Clock Co., Thomaston, Conn., a Corporation. Filed Feb. 13, 1922. Serial No. 682. Term of patent 7 years.

The ornamental design for a clock case as shown.

61,182. DRESS APRON. MAY WHITE, Newport Beach, Calif. Filed Apr. 11, 1922. Serial No. 1,689. Term of patent 7 years.

The ornamental design for a dress apron as shown.

61,183. PHONOGRAPH CABINET. JOSEPH WOLFF, Brooklyn, N. Y., assignor to Sonora, Inc., a Corporation of New York. Filed Nov. 5, 1920. Serial No. 422,052. Term of patent 7 years.



The ornamental design for a phonograph cabinet, substantially as shown.

61,184. LEATHER, WALL PAPER, OR SIMILAR ARTICLE OF MANUFACTURE. HENRY G. WURM, Yonkers, N. Y. Filed Jan. 6, 1922. Serial No. 66. Term of patent 7 years.

The ornamental design for leather, wall paper, or similar article of manufacture, as shown.

61,185. TOY WINDMILL. STELLA A. GILL, Chatham, Mass. Filed Nov. 30, 1921. Serial No. 519,005. Term of patent 7 years.

The ornamental design for a toy windmill, as shown.

TRADE-MARKS

OFFICIAL GAZETTE, JULY 4, 1922.

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 106,453. (CLASS 34. HEATING, LIGHTING, AND VENTILATING APPARATUS, NOT INCLUDING ELECTRICAL APPARATUS.) THE MINNESOTA STOVE COMPANY, Minneapolis, Minn. Filed Sept. 26, 1917.

SANICO

Particular description of goods.—Wood, Coal, Gas, Oil, and Vapor Stoves, Ranges, and Furnaces.

Claims use since on or about May 1, 1917.

Ser. No. 111,634. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) WESTERN ELECTRIC COMPANY, INCORPORATED, New York, N. Y. Filed June 17, 1918.

Western Electric

Particular description of goods.—Electric Apparatus and Material—Namely, Electric Signal or Alarm Boxes, Electric Door Openers, Electric Sewing Machines, Switchboards, Distributing Rings and Frames, Apparatus Blanks for Switchboards, Designation Strips for Switchboards, Apparatus Spaces for Switchboards, Trouble Caps for Switchboards, Plug Cut-Outs, Electric Pumps, Wall Plates for Switches and Electrical Appliances, Battery Lamps and Lanterns, Insulating Fabric for Wire and Cables, Burglar Alarms, Insulating Compounds for Wires and Cables, Panel Boards, Conduits and Fittings, Electrical Cords, Cord Tips, Attachment Plugs, Telephone Plugs and Plug Sets, Sockets, Electrical Receptacles to Receive Attachment Plugs, Fuse Blocks and Posts, Gongs and Gong Mountings, Electric Battery Connectors and Cabinets for Electric Batteries, Telephone and Telegraph Apparatus, Insulators, Fanning Strips, Ground Strips, Telephone Hand Sets and Hand-Set Hangers, Hand Wheels, Mounting Plates for Electric Apparatus, Binding Posts, Connection Blocks, Cable Terminals, Cable Boxes, Terminal-Punchings and Strips, Metal Trolley Poles, Charging Machines, Ringing Machines, Hickeys, Duct Rods, Electric Power Switches, Splicing Compound, Bell-Ringing Transformers, Electric Hammers, Insulating Compound, Electric Power and Light Outfits, Electric Vacuum Tubes, Wireless Systems, Electric Utility Motors, Telephone Sets for Automobiles, Telephone Sets for Churches, Circuit Breakers, Insulating Joints, Outlet Boxes, Christmas-Tree Lighting Outfits, Electric Smoothing Irons, Holders for Shades for Electric Lamps, Electric Drops, Electric Ranges, Electric Dishwashers, Printing-Telegraph Apparatus, Electric Train-Dispatching Systems, Condensers, Desk-Set Boxes, Flashing Recall Outfits, Desk Stands, Desk Sets, Subscribers' Sets, Backboards for Subscriber Sets, Telephone Coin Collectors, Heat Coils, Howlers, Induction Coils, Repeating Coils, Retardation Coils, Resistances, Interrupters, Jacks, Jack Boxes, Jack Fasteners, Jack Markers, Switchboard Keys, Key Caps, Key Indicators, Key Levers, Key Units, Lightning Arresters, Protectors, Listening Sticks, Protector Blocks, Protector Micas, Line Connectors, Line Poles, Telephone Receivers, Telephone Transmitters, Telephone Transmitter Arms and Brackets, Telephone Transmitter Attachments, Relays, Telephone and Telegraph Relays, Telephone-Relay Covers, Resonators for Telegraph Sounders, Ringers, Signals, Telegraph Sounders, Switch Tools for Telephone Subscriber Sets, Tape for Breast Transmitters, Telegraph Keys, Telegraph Sets, Autotransformers, Artificial Lines, Attenuation Equalizers, Audions, Binaural Sets, Fuse Boards, Power Boards, Alarm Cabinets, Supervisors' Cabinets, Number-Plate Cabinets, Carrier Telephone Apparatus and Systems, Carrier Telegraph Apparatus and Systems, Carrier Current Repeaters, Carrier Panels, Loading Coils, Loading Cases and Pots, Pot-Head Compound, Deaf Sets, Electron-Discharge Devices, Electron-Discharge-Device Sockets, Electric Wave Filters, Mechanical Repeaters, Mechanical-Repeater Sockets, Milking Machines, Cream Separators, Electrical Networks, Rectifiers, Telephone Repeaters, Telegraph Repeaters, Train-Dispatching Selectors, Impulse Senders, Signaling Sets, Submarine Signaling Systems, Submarine Signaling Detectors, Submarine Signaling Compensators, Manual Telephone Systems, Automatic Telephone Systems, Semiautomatic Telephone Systems, Automatic Telephone Apparatus, Semiautomatic Telephone Apparatus, Loud-Speaking Telephone Systems and Apparatus, Thermocouples, Vacuum-Tube Input and Output Transformers, Vacuum-Tube Oscillation Generators, Vacuum-Tube Oscillators, Vacuum Pumps, Electrical Water Systems, Insulating Paints and Varnishes, Automobile Heaters, Automobile Timers, Curling-Iron Heaters.

Claims use since January, 1910.

Ser. No. 111,635. (CLASS 18. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) WESTERN ELECTRIC COMPANY, INCORPORATED, New York, N. Y. Filed June 17, 1918.

Western Electric

Particular description of goods.—Cord Fasteners, Cord Hooks, Cord Pulleys, Cord Weights for Switchboards, Key Shelf Braces, Window Springs, Number Plates,

Expansion Shields and Toggle Bolts; Anchoring Appliances for Telephone and Telegraph Lines—Namely, Screw Anchors, Guy Anchors, Insulated Staples and Nails, and Milonite Nails.

Claims use since January, 1910.

Ser. No. 123,631. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) DODGE SALES & ENGINEERING CO., Mishawaka, Ind. Filed Oct. 10, 1919.

KEYSTONE

Trade-mark consists of the word "Keystone" in letters whose tops are inclined slightly to right, initial letter "K" being larger and the upper diagonal stroke extending in a curve which connects with a horizontal line placed above letters "stone."

Particular description of goods.—Stamped Steel Pulleys of Various Diameters and Widths for Power-Transmission Purposes as Complete Units, in the Construction of Machines, on Line and Other Shafting, Etc.

Claims use since 1906.

Ser. No. 129,819. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) WILSON & CO. INC., New York, N. Y., and Chicago, Ill. Filed Mar. 16, 1920.

WILSCO

Trade-mark "Wilsco."

Particular description of goods.—Tomato Catchup, Fruit in Sugar, Cherries, Oysters, Salmon, Tomatoes, Succotash, Sauerkraut, Peas, Okra and Tomatoes, Cut Okra, Corn, Beets, Wax Beans, Strawberries, Raspberries, Blackberries, Pineapple, Plums, Pears, Peaches, Grapes, Royal Anne Cherries, Apricots, Hominy, Pumpkin, Sweet Potatoes, Spinach, Rhubarb, Apples, Asparagus.

Claims use since July 26, 1916.

Ser. No. 131,719. (CLASS 38. PRINTS AND PUBLICATIONS.) THE GEORGE MATTHEW ADAMS SERVICE, New York, N. Y. Filed Apr. 26, 1920.

Minute Movies

Particular description of goods.—Series of Cartoons.

Claims use since Dec. 1, 1919.

Ser. No. 138,800. (CLASS 8. RECEPTACLES.) ALUMINIUM WALZWERKE A.-G., Schaffhausen, Switzerland. Filed Oct. 26, 1920.

Particular description of goods.—Boxes and Vases Made of Aluminium.

Claims use since Dec. 1, 1912.

Ser. No. 139,790. (CLASS 8. SMOKERS' ARTICLES, NOT INCLUDING TOBACCO PRODUCTS.) EVANS CONCINNUM & METAL WORKS, LTD., London, England. Filed Nov. 18, 1920.

CONCINNUM

Particular description of goods.—Pocket Cigarette-Rolling Machines.

Claims use since 1885.

Ser. No. 140,311. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) MARSHALL FIELD & COMPANY, Chicago, Ill. Filed Nov. 27, 1920.

RAINBOW

Particular description of goods.—Muslin, Cambric, Nainsook, and Long Cloth, All in the Piece.

Claims use since 1906.

Ser. No. 143,103. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE PORTER CHEMICAL COMPANY, Hagerstown, Md. Filed Feb. 2, 1921.

CHEMCRAFT

Particular description of goods.—Chemicals as Listed in Accompanying Catalogue.

Claims use since on or about Nov. 1, 1915.

Ser. No. 143,544. (CLASS 37. PAPER AND STATIONERY.) THE C. L. LABOITEAUX COMPANY, Cincinnati, Ohio. Filed Feb. 14, 1921.

PARAGON

Particular description of goods.—Strawboard, Box Board, Binders' Board, Fiber Board, Backing Board, Plain Chip Board, Pasted Container Board, Pasted Strawboard, and Particularly Pasted Chip Board.

Claims use since first part of November, 1906.

Ser. No. 143,743. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) CAMDEN ANCHOR-ROCKLAND MACHINE CO., Camden, Me. Filed Feb. 18, 1921.

KNOX

Particular description of goods.—Marine and Stationary Internal-Combustion Motors and Carburetors.

Claims use since 1901.

Ser. No. 144,358. (CLASS 17. TOBACCO PRODUCTS.) THE TUCKETT TOBACCO COMPANY, LIMITED, Hamilton and London, Ontario, and Montreal, Quebec, Canada. Filed Mar. 9, 1921.

T&B

Particular description of goods.—Cut and Plug Tobacco.

Claims use since Apr. 8, 1872.

Ser. No. 144,546. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) SKELTON TOOL CO., Syracuse, N. Y. Filed Mar. 9, 1921.

STC

Trade-mark "STCO."

Particular description of goods.—Tools Consisting of Reamers, Boring Bars, Special Metal Working Tools, and Machine Guards.

Claims use since on or about Feb. 1, 1919.

Ser. No. 144,884. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) SANDER, WIELER & CO., Hamburg, Germany. Filed Mar. 17, 1921.

The Chinese characters appearing upon label of applicant mean: Foreign Firm Lee Kong. No claim is made to said Chinese characters apart from the mark.

Particular description of goods.—Carbon Blacks and Paint Pigments.

Claims use since 1860.

Ser. No. 145,119. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) T. NOONAN & SONS COMPANY, Boston, Mass. Filed Mar. 23, 1921. Under ten-year proviso.

NOONAN'S

Particular description of goods.—Toilet Preparations—Namely, Complexion Cream, Skin Lotions, and Preparations for the Hair and Scalp.

Claims use since on or about Jan. 1, 1880.

Ser. No. 145,601. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) ACKSWELL MFG. & SALES CO. INC., Northport, N. Y. Filed Apr. 2, 1921.

ACKSWELL

Particular description of goods.—Oil Valves.

Claims use since Sept. 29, 1920.

Ser. No. 145,708. (CLASS 39. CLOTHING.) THE PITTSBURGH DRY GOODS COMPANY, Pittsburgh, Pa. Filed Apr. 4, 1921.

JIM DANDY

Particular description of goods.—Hosiery.

Claims use since 1907.

Ser. No. 145,861. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) SULLIVAN MACHINERY COMPANY, Boston, Mass., and Chicago, Ill. Filed Apr. 7, 1921.

CYCLONE

Particular description of goods.—Air Lifts and Liquid Separators.
Claims use since May 7, 1920.

Ser. No. 146,321. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) ALLAN ANGUS MAGEE, Montreal, Quebec, Canada. Filed Apr. 18, 1921.

HORSE-BIKE

Particular description of goods.—Horses on Two, Three, or Four Wheels for Children.
Claims use since Jan. 15, 1921.

Ser. No. 146,549. (CLASS 7. CORDAGE.) THE HOOVEN & ALLISON COMPANY, Xenia, Ohio. Filed Apr. 22, 1921.

H&A

Particular description of goods.—Ropes and Cordage—Namely, Sisal and Manila Ropes.
Claims use since Aug. 15, 1920.

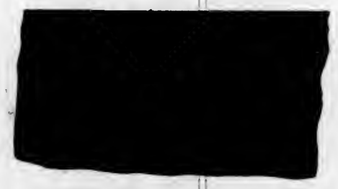
Ser. No. 146,655. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE PURITAN DRUG MFG. CO., Columbus, Ohio. Filed Apr. 23, 1921.

Aster

Particular description of goods.—Ammonia, Castor Oil, Hive-Sirup Expectorant, Sirup of Figs and Senna, Tablets for the Relief of Aches and Pains, Cough Balsam, Sulphate Quinine Capsules, Worm Powders, Salts, Candy Worm Lozenges, Compound for Preserving Foods, Worm Sirup, Carbolic Salve, Cocoanut-Oil Shampoo, Rouge, Red Oil Liniment, Witch-Hazel Cream, Seidlitz Powders, Cream Tartar, Facial Cream, Saltpeter, Copperas, Haarlem-Oil Capsules, Nail Polish, Toilet Waters, Facial Powders, Violet Toilet Water, Cucumber and Witch-Hazel Cream, Camphorated Paraffine Oil, Paregoric, Tincture Arnica, Spirits Niter, Assafetida, Earache Drops, Witch Hazel, Liquid Bluing, Glycerine, Corn Plasters, Eyewater, Calomel, Sirup of Ipecac, Hoffman's Drops, Sirup of Pepsin, Egg Preserver, Candy Laxative, Powders for the Relief of Pain, Charcoal and Pepsin Lozenges, Sulphur and Cream of Tartar Lozenges, Bronchial Lozenges, Blue Vitriol, Colic and Diarrhea Mixture, Almond Cream Lotion, Cold Cream, Salicylic Acid, Mutton Tallow and Glycerine Cream, Moth Balls, Dental Cream, Peroxide Cream, Hand Lotions, Cucumber Cream, Witch Hazel Cream, Senna Leaves, Lip-Stick Rouge, Kidney Pills, Carbolic Acid, Lilac Toilet Water, Hair Tonic, White Liniment, Petroleum Jelly, Aspirin Tablets, Glycerine Rose-Water and Bay-Rum Preparation, Tincture Iron, Toothache Gum, Toothache Drops, Bay Rum, Epsom Salts, Alum, Spirits of Camphor, Glauber Salts.
Claims use since December, 1913.

Ser. No. 147,192. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) GILLETTE SAFETY RAZOR COMPANY, Boston, Mass. Filed May 4, 1921.

TUCKAWAY



Particular description of goods.—Safety Razors.
Claims use since Apr. 26, 1921.

Ser. No. 147,229. (CLASS 12. CONSTRUCTION MATERIALS.) ROBERT BURHANS, Jr., Los Angeles, Calif. Filed May 5, 1921.

FEATHERSTONE

Particular description of goods.—An Insulating Powder Used in Building Construction and as an Ingredient in Making Mortar and Also for Making Into Building Bricks.
Claims use since August, 1920.

Ser. No. 147,266. (CLASS 39. CLOTHING.) THE VAN RAALTE COMPANY, New York, N. Y. Filed May 5, 1921.

No claim is made to the exclusive use of the representation of the goods apart from the mark as shown and described.
Particular description of goods.—Stockings.
Claims use since September, 1920.

Ser. No. 147,380. (CLASS 48. MALT BEVERAGES, EXTRACTS, AND LIQUORS.) UNITED STATES BREWING COMPANY, Newark, N. J. Filed May 7, 1921.

TREFZ
"TASTE TELLS"
SPECIAL

The word "Special" being disclaimed apart from the mark as shown.
Particular description of goods.—Beer and Near Beer.
Claims use since 1909.

Ser. No. 147,727. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE LINDSBORG MILLING & ELEVATOR CO., Lindsborg, Kans. Filed May 14, 1921.

GOLDEN EAGLE

Particular description of goods.—Wheat Flour.
Claims use since Apr. 12, 1905.

Ser. No. 148,041. (CLASS 5. ADHESIVES.) UNITED SHOE MACHINERY CORPORATION, Paterson, N. J., and Boston, Mass. Filed May 21, 1921.

UNION

Trade mark consists of word "Union."
Particular description of goods.—Cement Such as is Used in the Manufacture and Repairing of Boots and Shoes.
Claims use since 1915.

Ser. No. 148,623. (CLASS 40. FANCY GOODS, FURNISHINGS, AND NOTIONS.) A. STEIN & COMPANY, Chicago, Ill. Filed June 3, 1921.

HICKORY

Particular description of goods.—Elastic Webbing and Shirred Elastic Ribbon.

Ser. No. 149,093. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) NATIONAL HOME APPLIANCE CORPORATION, Detroit, Mich. Filed June 13, 1921.

Water Baby

Particular description of goods.—Household Appliances Consisting of Hydraulic Motors and Hydraulically-Actuated Cleaners, Grinders, Beaters, Buffers, and Parts Thereof.
Claims use since Jan. 31, 1921.

Ser. No. 149,102. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) HIRAM B. RHYMER, Elmira, N. Y. Filed June 13, 1921.

RHY-OX-IDE

Particular description of goods.—Washing Powder.
Claims use since May 1, 1914.

Ser. No. 149,168. (CLASS 32. FURNITURE AND UPHOLSTERY.) MELVILLE C. BACHELLER, Grand Forks, N. Dak. Filed June 15, 1921.

Kiddie
Kricket

No claim made to word "Kricket" apart from mark shown.
Particular description of goods.—Benches Other Than Workbenches.
Claims use since May 10, 1921.

Ser. No. 149,408. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) ALBERT E. LEON, Belmont, Mass. Filed June 20, 1921.

CELLUGRAPH

Particular description of goods.—Antifriction Bearings, Shafts, Arbors, and Bearing Parts.
Claims use since January, 1919.

Ser. No. 149,598. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) PACKAGE CONFECTIONERY COMPANY, Boston, Mass. Filed June 24, 1921.

CAPTAIN KIDD'S TREASURE CHEST

Particular description of goods.—Candy.
Claims use since Jan. 21, 1916.

Ser. No. 150,957. (CLASS 39. CLOTHING.) BONAR-PHELPS COMPANY, New York, N. Y. Filed July 26, 1921.

FUSIYAMA

Particular description of goods.—Hats for Men.
Claims use since about December, 1919.

Ser. No. 152,217. (CLASS 15. OILS AND GREASES.) THE STAR OIL COMPANY, Chicago, Ill. Filed Aug. 26, 1921.

JUPITER

Particular description of goods.—Lubricating Oils.
Claims use since 1897.

Ser. No. 152,459. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) BOSTON & LOCKPORT BLOCK COMPANY, Boston, Mass. Filed Sept. 1, 1921.

No claim is made to the representation of the pulley or block. Trade-mark consists of a band or stripe colored yellow applied or produced in center of the periphery or score of sheave of a pulley or block covering approximately one-half of the width of such periphery or score and going all way round the same.
Particular description of goods.—Pulleys or Blocks.
Claims use since Jan. 1, 1901.

Ser. No. 152,460. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) BOSTON & LOCKPORT BLOCK COMPANY, Boston, Mass. Filed Sept. 1, 1921.

No claim to representation of pulley or block. Trade-mark consists of a band or stripe colored red applied or produced in the center of the periphery or score of sheave of a pulley or block covering approximately one-half of the width of such periphery or score and going all way round the same.
Particular description of goods.—Pulleys or Blocks.
Claims use since Jan. 1, 1901.

Ser. No. 152,727. (CLASS 40. FANCY GOODS, FURNISHINGS, AND NOTIONS.) HARRY SILBERT, doing business as Hudson Bay Fur Company, New York, N. Y. Filed Sept. 8, 1921.

Particular description of goods.—Prepared Furs in the Piece or by the Yard.
Claims use since Aug. 17, 1921.

Ser. No. 152,849. (CLASS 38. PRINTS AND PUBLICATIONS.) ALBERT E. JACOBSON, New York, N. Y. Filed Sept. 12, 1921.

ARTATONE

Particular description of goods.—Photographic Prints.
Claims use since March, 1912.

Ser. No. 152,897. (CLASS 39. CLOTHING.) MARYLAND SHOE CORPORATION, Baltimore, Md. Filed Sept. 13, 1921.

BILTOFIT

Particular description of goods.—Leather and Canvas Shoes.
Claims use since Sept. 5, 1921.

Ser. No. 152,898. (CLASS 39. CLOTHING.) MARYLAND SHOE CORPORATION, Baltimore, Md. Filed Sept. 13, 1921.

TENDERTOUCH

Particular description of goods.—Leather and Canvas Shoes.
Claims use since Sept. 5, 1921.

Ser. No. 153,243. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) GADOMSKI BROS., Jersey City, N. J. Filed Sept. 23, 1921.

No claim is made to the representation of the container or to the words "Healing Powder" apart from mark shown on drawing.
Particular description of goods.—Healing Compound Adapted for Healing Sores and Wounds.
Claims use since May, 1920.

Ser. No. 153,356. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) KNICKERBOCKER CASE COMPANY, Chicago, Ill. Filed Sept. 26, 1921.

No claim is made to the word "Chicago" apart from mark shown on drawing.
Particular description of goods.—Cases and Bags Made of Leather, Fiber, or Other Suitable Materials, and Which Are to be Used for Holding Fishing Material.
Claims use since Mar. 16, 1921.

Ser. No. 153,420. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) FRANK VALCOUR, Cutbank and Forsyth, Mont. Filed Sept. 27, 1921.

ANNIHILATOR

Particular description of goods.—Liquid Cleaning Compound.
Claims use since Sept. 1, 1921.

Ser. No. 153,594. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) ROBERT FABIG, Gesellschaft mit beschränkter Haftung, Maschinen u. Apparate-Fabrik, Neuruppin, Germany. Filed Oct. 1, 1921.

„Rofa"

Particular description of goods.—Typewriting Machines and Parts Thereof.
Claims use since Aug. 5, 1919.

Ser. No. 153,649. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) Detroit Brass & Malleable Works, Detroit, Mich. Filed Oct. 3, 1921.

Particular description of goods.—Brass Valves and Cocks, Gas Appliances—Namely, Brackets, Bracket Cocks, Chandelier Cocks, Fixture Fittings, Hose Cocks, Hose Nipples, Gas-Log Mixers, Gas Mixer Pins, Service Cocks, and Extension Sockets, and Malleable-Iron Pipe Fittings.
Claims use since 1904.

Ser. No. 153,733. (CLASS 8. SMOKERS' ARTICLES, NOT INCLUDING TOBACCO PRODUCTS.) MANHATTAN BRIAR PIPE COMPANY, New York and Brooklyn, N. Y. Filed Oct. 4, 1921.

No claim is made to pictorial representation of pipe apart from mark on drawing. The mark consists of two relatively small adjacent dots of gold color applied or affixed to stem of pipe.
Particular description of goods.—Pipes for Smoking.
Claims use since Sept. 20, 1921.

Ser. No. 153,743. (CLASS 8. SMOKERS' ARTICLES, NOT INCLUDING TOBACCO PRODUCTS.) MANHATTAN BRIAR PIPE COMPANY, New York and Brooklyn, N. Y. Filed Oct. 4, 1921.

No claim is made to the pictorial representation of the pipe apart from mark shown. The mark consists of a relatively short and narrow stripe of silver color applied or affixed to the stem of the pipe.
Particular description of goods.—Pipes for Smoking.
Claims use since Sept. 20, 1921.

6,207.—*Title:* "PIANO SALE." (For Advertising Purposes for Pianos.) UNION PIANO CO., Chicago, Ill. Filed May 6, 1922.

6,208.—*Title:* "PIANO SALE." (For Advertising Purposes for Pianos.) UNION PIANO CO., Chicago, Ill. Filed May 6, 1922.

DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF

UNITED STATES COURTS IN PATENT CASES.

DECISIONS OF THE U. S. COURTS.

Court of Appeals of the District of Columbia.

EX PARTE DUNBAR.

No. 1399. Decided February 6, 1922.

PATENTS—ASSIGNEE OF TWO APPLICATIONS IS BOUND BY ELECTION.

Where two applicants each assigned their copending applications to the same assignee by an assignment which left no interest in the applicant, the election of the assignee to take the patent on one application, which contained narrow claims reading on the disclosure in the other application, is binding on him and precludes his right to issuance of a patent on the other application, containing broader claims covering the same features.

Mr. Curtis B. Camp and *Mr. C. C. Bradbury* for Dunbar.

Mr. T. A. Hostetler for the Commissioner of Patents.

VAN ORSDEL, *J.*:

Appellant Dunbar filed the present application for patent October 9, 1905. One Dyson filed a copending application March 19, 1906, on which a patent was issued December 12, 1916. Both applicants assigned to Kellogg Switchboard and Supply Company, and both applications have been prosecuted through the Patent Office by the same attorneys.

It is unnecessary to consider the mechanism or the line of division between the Dunbar and Dyson claims, or the right of the common assignee to disclaim the invention of the claims in the Dyson patent, since this appeal turns upon a question of law. The Dyson application, which went to patent, contained certain narrow claims which would read upon the earlier application of Dunbar. Dunbar has broad claims covering the same features of the invention, and he is here insisting upon the allowance of his claims.

The tribunals below recognize the dilemma in which Dunbar finds himself, and the Commissioner in his opinion states the grounds upon which relief was refused, as follows:

> By taking out the Dyson patent, an election was made on the question of priority between Dyson and Dunbar, and the common assignee is just as much bound by that election as if an interference had been declared and priority decided in favor of Dyson. The reason for the rule holding that interferences will not be declared between co-assignors is that the presentation of the testimony on behalf of each assignor is in control of the common assignee, and that there are, therefore, no parties having adverse interests. If an assignee is to be allowed, after having made such election and taken out the patent, to repudiate the election and present the claims in another application, monopoly would obviously be extended.

The record is silent as to the nature of the assignment from Dunbar to the Kellogg Company. In this situation we must assume that the assignment was absolute and conveyed all the right, title, interest, and claim in the patent to the assignee. Dunbar has, therefore, no interest left in the invention which he can now assert. The case resolves itself into the right of the assignee to a patent upon the present Dunbar claims. To grant these claims to the assignee, after the assignee, by its own election, had accepted the Dyson patent, would be, as held by the Commissioner, a clear extension of the monopoly. If the assignment from Dunbar to the Kellogg Company was a conditional one whereby Dunbar would be prejudiced by the election of the assignee to accept the Dyson patent, a different question might be presented, but in the state of the record Dunbar has no interest left upon which he can personally claim protection.

The decision of the Commissioner of Patents is affirmed.

In the absence of Mr. Justice Robb, Mr. Justice Hitz of the Supreme Court of the District of Columbia participated in the hearing and disposition of this case.

Court of Appeals of the District of Columbia.

ELDRED *v.* FINK AND YUNCK. YUNCK *v.* ELDRED AND FINK.

Nos. 1474 and 1475. Decided March 6, 1922.

1. PATENTS—SPECIFICATION IN PRIOR PATENT HELD CONSTRUCTIVE REDUCTION TO PRACTICE OF COUNTS IN INTERFERENCE.

Where a specification in a prior patent issued to one of the parties in interference proceedings, describing a composite wire for incandescent electric lamps composed of a core of nickel steel and a copper sheath covered with a platinum coating, and where there was evidence that the wire had been successfully used without the platinum coating in 60 per cent of the lamps so made, and expressly reserved the right to file an application covering such wire, *Held* that this was a sufficient reduction to practice of the counts in an interference covering a similar wire without the platinum coating.

2. SAME—NECESSITY OF FURTHER EXPERIMENTS WHICH CAN BE PERFORMED BY THOSE SKILLED IN THE ART DOES NOT INVALIDATE REDUCTION TO PRACTICE.

A specification in an application for patent, which describes the counts in issue in subsequent interference

proceedings, is not invalidated as a reduction to practice by the fact that further experiments were necessary to make the invention successful, where such experiments could have been conducted by those skilled in the art from the description in the specification.

Mr. A. Parker Smith for Yunck.

Mr. C. J. Sawyer for Eldred.

Mr. Hubert Howson and *Mr. A. G. Davis* for Fink.

ROBB, *J.*:

These are appeals from a Patent Office decision in interference proceedings involving a composite leading-in wire for incandescent electric lamps. The claims are ten in number, but the first and tenth, here reproduced, will be sufficiently illustrative:

1. A composite low expansion wire comprising a core of nickel steel and an external copper sheath welded thereto, said wire as a whole having less expansion than platinum.

10. The combination, with a gas-tight receptacle having a wall of vitreous material, of a composite leading-in wire sealed therein, said wire consisting of reinforced copper wire, said reinforcement consisting of a layer of low expansion nickel-iron alloy.

The Examiner of Interferences, after a painstaking review of the evidence, awarded priority of invention to Eldred. The Examiners-in-Chief and the Commissioner overruled this decision and awarded priority to Fink.

Eldred contends, and this contention was sustained by the Examiner of Interferences, that application No. 656,987, filed October 26, 1911, upon which patent was issued December 30, 1913, constituted a constructive reduction to practice. If this contention is sound, Eldred is entitled to an award of priority. In that application Eldred was particularly concerned with a composite wire consisting of a nickel-steel core, a layer of copper and an outer covering of platinum, but in his specificatiou he said:

Nickel-steel containing about 38% of nickel answers the purpose very well.

The size of the core is specified and also its coefficient of expansion, as well as the thickness of the copper layer and the platinum covering. In addition to this description of the above composite wire, the specification makes reference to the use of wire without the platinum covering, in these words:

As additional evidence of the importance of having a coefficient of expansion lower than that of glass the fact may be mentioned that the composite copper-nickel-steel core of the present wire has, without any coating platinum, been drawn into lamp wire and has afforded seals. With such a copper-clad ferrous alloy wire, the sealing-in operation is best carried on under non-oxidising conditions, as for example in an atmosphere of nitrogen or other inert gas. Three lamps out of five have given perfect seals. Here the character of the seal depends, not upon any adhesion of the glass for the copper, as the surface of the latter metal oxidises considerably in the process of sealing-in but solely upon the strong contraction of the glass upon the wire. A glass lamp having sealed into it a leading-in wire comprising an alloy core of low but non-uniform expansion and an expansion-correcting sheathing of welded-on copper, the wire as a whole having a lower expansion than the glass, is in itself novel, and the right to make such novel article the subject of separate application is expressly reserved. For the present purposes however, a welded-on outer sheathing of platinum is desirable and preferable.

There was evidence that in October of 1910 a few experimental lamps were made according to the disclosure in this specification, and that 60% of them were good lamps. At the time the testimony was taken, wire made according to the specification of this patent was used in making a considerable number of lamps, almost all of which were perfect. We agree with the Examiner of Interferences that this application describes fully the structure of the wire, the principle involved, and gives the proportions and dimensions for at least one embodiment. As the Commissioner correctly says:

That a certain amount of experimenting may be necessary in a certain class of inventions and that the necessity for such experimentation is no ground for holding a patent invalid is well settled.

This specification was addressed to those skilled in the art, to whom was left the mere mechanical experimentation incident to the commercial exploitation of the invention. In other words, any one skilled in the art, given this specification, would have had no difficulty in producing lamps.

For the reasons given more in detail by the Examiner of Interferences, we reverse the decision and award priority to Eldred.

Reversed, as to No. 1474.

Affirmed, as to No. 1475.

In this case Mr. Justice HOEHLING of the Supreme Court of the District of Columbia sat in the place of Mr. Chief Justice SMYTH.

PATENT SUITS.

[Notices under section 4921, Revised Statutes, as amended February 18, 1922.]

845,747, 908,731, W. R. Bonham, Calculating machines, suit filed March 8, 1922, U. S. D. C., W. D. Mich., Doc. 1959, *F. C. Pangborn* v. *R. W. Hook and The Calculator Corporation.* Decree by stipulation of parties dismissing cause, entered June 13, 1922.

897,757, I. W. Marshall, Sheet-combining machine; 897,758, same, Process for manufacturing indurated fiber, suit filed June 3, 1922, U. S. D. C., Del., Doc. 481, *T. E. Marshall, J. W. Marshall, T. C. Marshall, and National Fibre & Insulation Company* v. *Diamond State Fibre Company.*

Adverse Decisions in Interference.

PATENT NO. 1,348,085.

On May 19, 1922, a decision was rendered that Ezra Lyman Cathcart was not the first inventor of the subject matter covered by claim 2 of his Patent No. 1,348,085, subject, "Posting tray for machine bookkeeping," and no appeal having been taken within the time allowed such decision has become final.

PATENT NO. 1,374,217.

On June 3, 1922, a decision was rendered that Herman C. Muhlbach was not the first inventor of the subject matter covered by the sole claim of his Patent No. 1,374,217, subject, "Wheel," and no appeal having been taken within the time allowed such decision has become final.

PATENT NO. 1,376,371.

On June 2, 1922, a decision was rendered that George H. Yanochowski was not the first inventor of the subject matter covered by claims 4, 5, 6, 12, 13, 18, 19, 20, 22, 24, 26, 27, 28, 29, 32, 33, 34, 38, 39, and 40 of his Patent No. 1,376,371, subject, "Automatic telephone system," and no appeal having been taken within the time allowed such decision has become final.

Changes in Classification.

(ORDER NO. 2,760.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., June 16, 1922.

The following changes in the classification of inventions are hereby directed, to take effect immediately:

In class 97, Plows (Division I), abolish subclass—

4. Clevises.

The patents formerly contained in this subclass have been placed for the most part in class 278, Land Vehicles, Animal Draft Appliances, subclasses 96.1, Whiffletrees, Connections, Link or clevis, Resilient, and 96.2, Whiffletrees, Connections, Link or clevis, Adjustable draft line, and the subclass indented thereunder, hereinafter established.

In class 213, Railway Draft Appliances (Division XLIV), abolish subclass—

67. Miscellaneous.

The patents formerly contained in this subclass have been placed for the most part in class 280, Land Vehicles, in the subclasses indented under subclass 33.2, Wheeled, Articulated, Vehicle train, hereinafter established.

In class 278, Land Vehicles, Animal Draft Appliances (Division X), change the title of subclass 96, Whiffletrees, Connections, Link, to read—

Whiffletrees—
Connections—
96. Link or clevis.

abolish the existing definition, and establish in lieu thereof the following definition:

96. WHIFFLETREES, CONNECTIONS, LINK OR CLEVIS. The connecting means is in the form of a link or clevis.

In same class, establish the following subclasses and definitions:

Whiffletrees—
Connections—
Link or clevis—
96. 1. Resilient,
96. 2. Adjustable draft line—
96. 3. Horizontally.

96.1. WHIFFLETREES, CONNECTIONS, LINK OR CLEVIS, RESILIENT. Where the link or clevis is supported resiliently or consists of resiliently-connected parts.

96.2. WHIFFLETREES, CONNECTIONS, LINK OR CLEVIS, ADJUSTABLE DRAFT LINE. Where the link or clevis is so mounted or constructed as to permit change in the line of draft relative to the drawn vehicle.

96.3. WHIFFLETREES, CONNECTIONS, LINK OR CLEVIS, ADJUSTABLE DRAFT LINE, HORIZONTALLY. Where the adjustment is permitted in a horizontal plane.

The patents contained in these subclasses have been taken for the most part from class 97, Plows, subclass 4, Clevises, hereinbefore abolished.

In class 280, Land Vehicles (Division X), abolish the following subclasses with their definitions:

Wheeled—
Articulated—
Vehicle train—
33. 7. Offset couplings—
33. 8. Adjustable-tongue connectors.

The patents formerly contained in these subclasses have been placed for the most part in class 280, Land Vehicles, subclasses 33.44, 33.55, and 33.9 to 33.16, indented under subclass 33.2, Wheeled, Articulated, Vehicle train, hereinafter established.

In same class, change the titles of subclasses 33.5, Wheeled, Articulated, Vehicle train, Trailer-steering connectors, and 33.6, Wheeled, Articulated, Vehicle train, Trailer-steering connectors, Adjustable tongue, to read:

Wheeled—
Articulated—
Vehicle train—
Draft devices—
33. 5. Trailer steering—
33. 6. Adjustable tongue,

change the definition of subclass 33.5 by canceling the first word, "Coupling" and substituting therefor the word *Draft*, and change the definition of subclass 33.6 by canceling the note at the end thereof and substituting *Search this class, subclass 33.11.*

In same class, establish the following subclasses and definitions:

Wheeled—
Articulated—
Vehicle train—
33.44. Draft devices—
Trailer steering—
33.55. Stub-axle type,
33.9. Resilient,
33.10. Shiftable—
33.11. Pivoted—
33.12. To tractor,
33.13. Pusher type,
33.14. Tow poles and ropes,
33.15. Coupling—
33.16. Overload release.

33.44. WHEELED, ARTICULATED, VEHICLE TRAIN, DRAFT DEVICES. Patents relating to the means for transferring movement from a drawing to a drawn vehicle either by push or pull through such draft devices.

33.55. WHEELED, ARTICULATED, VEHICLE TRAIN, DRAFT DEVICES, TRAILER-STEERING, STUB-AXLE TYPE. Where the drawn vehicle is provided with the stub-axle type of guiding wheel.

33.9. WHEELED, ARTICULATED, VEHICLE TRAIN, DRAFT DEVICES, RESILIENT. Where the draft device is resiliently mounted on the vehicle to cushion shocks incident to its use.

33.10. WHEELED, ARTICULATED, VEHICLE TRAIN, DRAFT DEVICES, SHIFTABLE. Where the draft device may be shifted laterally and held in such shifted position to permit changes in the relative line of draft of the drawing and drawn vehicle.

Search this class, subclass 33.6.

33.11. WHEELED, ARTICULATED, VEHICLE TRAIN, DRAFT DEVICES, SHIFTABLE, PIVOTED. Where the draft device may be shifted laterally about a pivot on the frame of the vehicle.

33.12. WHEELED, ARTICULATED, VEHICLE TRAIN, DRAFT DEVICES, SHIFTABLE, PIVOTED, TO TRACTOR. Where the pivot is on a tractor (drawing vehicle.)

33.13. WHEELED, ARTICULATED, VEHICLE TRAIN, DRAFT DEVICES, PUSHER TYPE. Draft devices specially adapted to push a vehicle or vehicles in train formation.

33.14. WHEELED, ARTICULATED, VEHICLE TRAIN, DRAFT DEVICES, TOW POLES AND ROPES. Means of the character indicated adapted to connect conventional parts of vehicles, usually used to tow a disabled motor vehicle.

Note.—Where a steering function is also included, search this class, subclass 33.5, and the subclasses indented thereunder.

33.15. WHEELED, ARTICULATED, VEHICLE TRAIN, DRAFT DEVICES, COUPLING. The coupling elements of draft devices.

33.16. WHEELED, ARTICULATED, VEHICLE TRAIN, DRAFT DEVICES, COUPLING, OVERLOAD RELEASE. Where such coupling operates under overload to automatically release the coupling connection.

Search Class—
278—LAND VEHICLES, ANIMAL DRAFT APPLIANCES, subclass 22, Horse-detachers, Automatic.

The patents contained in these subclasses have been taken for the most part from class 213, Railway Draft Appliances, subclass 67, Miscellaneous, hereinbefore abolished, and class 280, Land Vehicles, subclass 33.7, Wheeled, Articulated, Vehicle train, Offset couplings, and the subclass indented thereunder, hereinbefore abolished.

In same class (280), in subclass 33, Wheeled, Articulated, cancel the existing definition and substitute therefor the following:

33. WHEELED, ARTICULATED. Jointed vehicles or trains of vehicles connected together to permit a single source of draft to move such train as a unit.

Note.—Patents showing the drawn vehicle as an agricultural or earth-working implement, when there is involved no functional manipulation of the implement and no specific structure thereof other than that which directly cooperates to effect a joining of the implement to the drawing vehicle, will be found in this class; otherwise in the art in which the particular implement is classified.

Note.—Compare this class, subclass 98, and the subclasses indented thereunder.

Search Class—
180—MOTOR VEHICLES, subclass 14, Vehicle trains.

In same class (280), in subclass 33.2, Wheeled, Articulated, Vehicle train, cancel the existing definition and substitute therefor the following:

33.2. WHEELED, ARTICULATED, VEHICLE TRAIN. Trains of two or more vehicles adapted to travel other than on tracks and provided with draft connections.

WM. A. KINNAN,
Acting Commissioner.

Changes in Classification.

(ORDER NO. 2,761.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., June 17, 1922.

The following changes in the classification of inventions are hereby directed, to take effect immediately:

In class 118, Textiles, Spinning (Division XXI), establish the following subclass and definition:

Doffing or donning—
Mechanical—
18.5. Traveling carriage.

18.5. DOFFING OR DONNING, MECHANICAL, TRAVELING CARRIAGE. The doffing or donning mechanism is adapted to travel along the frame and manipulate the bobbins in succession.

The patents contained in this subclass have been taken from class 214, Material or Article Handling, subclass 4, Bobbin doffing or donning, hereinafter abolished.

In the same class (118), subclass 16, Doffing or donning, abolish the note following the definition.

In class 214, Material or Article Handling (Division IV), abolish the following subclass with its definition:

4. Bobbin doffing or donning.

The patents formerly contained in this subclass have been placed in class 118, Textiles, Spinning, subclass 18.5, Doffing or donning, Mechanical, Traveling carriage, hereinbefore established.

WM. A. KINNAN,
Acting Commissioner.

THE
OFFICIAL GAZETTE
OF THE
United States Patent Office.

Vol. 300—No. 2. TUESDAY, JULY 11, 1922. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.
Printed copies of patents are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

Instructions Respecting the Certification of Authority of Executors and Administrators, and the Execution of Applications for United States Patents by Foreign Residents.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., June 30, 1922.

The following instructions to the diplomatic and consular officers of the United States respecting the certification of the authority of executors and administrators, and the execution of applications for United States patents by foreign residents have been issued by the Department of State.

WM. A. KINNAN,
Acting Commissioner.

DEPARTMENT OF STATE,
Washington, June 24, 1922.

CERTIFICATE REQUIRED OF EXECUTOR OR ADMINISTRATOR IN CONNECTION WITH THE GRANTING OF PATENT FOR INVENTION OF DECEDENT.

To the American Diplomatic and Consular Officers.

GENTLEMEN: In a letter to the Department dated May 24, 1922, the Assistant Secretary of the Interior invites attention to section 4896 of the Revised Statutes, as amended by the act of March 3, 1903 (Chap. 1019, 23 Stats. L., 1226), which provides that, when any person making application for a patent dies before it has been granted, the executor or administrator may carry on the proceedings, and that "the authority of such foreign executor or administrator shall be proved by a certificate of a diplomatic or consular officer of the United States." It is essential that this certificate be recorded in the United States Patent Office and its form, the Commissioner of Patents suggests, should be substantially as follows, it being contemplated that the papers which satisfy the diplomatic or consular officer of the appointment of the administrator shall not be attached to his certificate and need not be transmitted to the Patent Office:

I, ——————, Consul of the United States of America at ——————, duly commissioned and qualified, do hereby certify that there have been exhibited to me papers issued by ——————, the authorized authorities in this jurisdiction which show that ——————— is the person authorized to act as executor or administrator of the estate of ——————, deceased, late of ——————.

In testimony whereof, I hereunto set my hand and seal this —— day of ——————, 19—.

[SEAL.] ——————,
U. S. Consul.

The parties interested should make application for this certificate directly to the diplomatic or consular officers, who are authorized to perform the service, consular officers charging the usual fee of $2.00 as prescribed by item No. 38 of the Tariff of United States Consular Fees.

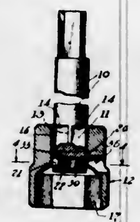
In the above connection your attention is again invited to the requirement (see circular instructions May 11, 1897; and April 11 and August 11, 1899; and General Instruction No. 730) that when an oath accompanying an application for United States Letters Patent is executed before you "all the application papers must be attached together and a ribbon passed one or more times through all the sheets of the application, and the ends of such ribbon brought together under the seal before the latter is affixed and impressed or each sheet must be impressed with the official seal." Because of the failure properly to ribbon papers presented through consular officers the Patent Office frequently finds it necessary to refuse to accept applications for patent offered for filing.

I am, gentlemen, your obedient servant,
For the Secretary of State:
ALVEY A. ADEE.

The Official Gazette.

THE OFFICIAL GAZETTE is published every Tuesday simultaneously with the weekly issue of patents. From January 1, 1872, (the commencement of its publication,) to June 30, 1883, it was published and bound in semi-annual volumes; from July 1, 1883, to December 31, 1902, in quarterly volumes; from January 1, 1903, to December 31, 1908, in bimonthly volumes; since January 1, 1909, in monthly volumes. Terms: Annual subscriptions, $5; monthly, 50 cents. For postage upon foreign subscriptions, except those from Canada and Mexico, $5 or more, as required. Moneys received from foreign subscribers in excess of the subscription price of $5 will be deposited to the credit of the subscriber and applied to postage upon the subscription as incurred. Single copies, 10 cents; if mailed to foreign countries, excepting Canada and Mexico, 10 cents additional for postage. *Payment in advance required. No club rates. No discount to newsdealers. No sample copies.* All subscriptions must commence with the beginning of a volume. None taken for less than an entire volume. All orders should be addressed to "The Superintendent of Documents, Government Printing Office, Washington, D. C."

Condition of Applications Under Examination at Close of Business July 1, 1922.



(Total number of applications waiting action, excluding Trade-Mark division, 67,367; Trade-Mark division, 8,549. Oldest new case, Mar. 31; oldest amended, Apr. 8, 1921. The dates given are 1921 except where * indicates 1922.)

Room No.	Divisions, Examiners, and subjects of inventions.	Oldest new application and oldest action by applicant awaiting office action. New.	Amended.	No. of applications awaiting action.
314	1. LOEFFLER, F. A., Closure Operators; Fences; Gates; Harrows and Diggers; Plows; Planting; Scattering Unloaders.	Nov. 30	Dec. 14	913
128	2. BALDWIN, M., Bee Culture; Dairy; Medicines; Pneumatics; Preserving; Presses; Tents, Canopies, Umbrellas, and Canes; Tobacco; Trees, Plants, and Flowers.	July 12	July 5	1,960
175	3. RICH, WM. J., Electric Heating and Rheostats; Electrochemistry; Heating; Metal Founding; Metallurgical Apparatus; Metallurgy; Metal Treatment; Plastic Metal Working.	Sept. 17	Aug. 19	919
234	4. MERRITT, A. D., Conveyers; Conveyers, Fluid Current; Conveyers, Power Driven; Excavating; Handling—Hand and Hoist-Line Implements; Hoisting; Material or Article Handling; Pushing and Pulling Implements; Railway Mail Delivery; Traversing Hoists.	Aug. 22	*Apr. 6	1,469
167	5. MACNAB, J. F., Bookmaking; Books, Strips, and Leaves; Harvesters; Jewelry; Manifolding; Music; Printed Matter; Tying Cords or Strands.	Sept. 26	Sept. 30	1,115
318	6. LEWERS, A. M., Bleaching and Dyeing; Chemicals; Explosive, Pyrotechnic, and Match Compositions; Fertilizers; Liquid Coating Compositions; Plastic Compositions; Substance Preparation.	Sept. 26	*Feb. 11	1,262
312	7. JARBOE, C. G., Games and Toys; Optics; Photography; Velocipedes	Sept. 21	Nov. 7	2,370
133	8. CLIFT, J. W., Beds; Chairs and Seats; Flexible-Sheet-Securing Devices; Furniture: Kitchen and Table Articles; Store Furniture; Supports.	*Mar. 17	*May 3	872
221	9. TRYON, F. M., Air and Gas Pumps; Hydraulic Motors; Injectors and Ejectors; Motors, Fluid; Motors, Fluid Current; Pumps.	June 2	*Apr. 19	1,117
235	10. MITCHELL, T. H., Land Vehicles; Land Vehicles, Animal Draft Appliances; Land Vehicles—Bodies and Tops; Land Vehicles—Dumping; Land Vehicles, Wheel Substitutes; Motor Vehicles.	Dec. 23	*Mar. 22	1,137
154	11. ARMSTRONG, H. C., Boot and Shoe Making; Boots, Shoes, and Leggings; Button, Eyelet, and Rivet Setting; Harness; Leather Manufactures; Nailing and Stapling; Whips and Whip Apparatus.	*Feb. 6	*Feb. 23	663
322	12. PIERCE, P. P., Machine Elements	Dec. 1	*Feb. 17	1,295
329	13. NIXON, G. A., Bolt, Nail, Nut, Rivet, and Screw Making; Chain, Staple, and Horseshoe Making; Driven, Headed, and Screw-Threaded Fastenings; Gear Cutting, Milling, and Planing; Metal Drawing; Metal Forging and Welding; Metal Rolling; Metal Tools and Implements, Making; Metal Working; Needle and Pin Making; Turning.	June 20	*Feb. 25	1,694
323	14. BRUMBAUGH, N. J., Compound Tools; Cutting and Punching Sheets and Bars; Farriery; Metal Bending; Sheet-Metal Ware, Making; Tools; Wire Fabrics and Structure; Wire Working.	Aug. 9	*Mar. 16	1,150
308	15. REDROW, W. L., Bread, Pastry, and Confection Making; Glass; Laminated Fabrics and Analogous Manufactures; Paper Making and Fiber Liberation; Plastic Block and Earthenware Apparatus; Plastics.	July 18	Aug. 24	2,021
112	16. BACKUS, C. D., Radiant Energy; Telegraphy; Telephony	July 6	July 14	2,337
307	17. RAFTER, G. S., Coating, Label Pasting, and Paper Hanging; Nut and Bolt Locks; Ornamentation; Paper Manufactures; Printing; Type Casting; Sheet-Material Associating or Folding; Sheet Feeding or Delivering; Type Setting.	Aug. 20	*Jan. 3	1,351
229	18. PORTER, M. E., Liquid Heaters and Vaporizers; Motors, Expansible-Chamber Type; Power Plants; Speed-Responsive Devices; Steam and Vacuum Pumps.	June 1	May 20	2,428
236	19. GLASCOCK, E. S., Automatic Temperature and Humidity Regulation; Furnaces; Heating Systems; Stoves and Furnaces; Domestic Cooking Vessels; Thermostats and Humidostats.	June 2	Oct. 17	1,316
179	20. WRIGHT, H., Artificial Body Members; Miscellaneous Hardware; Closure Fasteners; Cutlery; Dentistry; Locks and Latches; Safes; Undertaking.	*Jan. 23	*Jan. 9	1,573
212	21. THURBER, W. L., Continuous-Strip Feeding; Textiles; Textiles, Braiding, Netting, or Lace Making; Textiles, Cloth Finishing; Textiles, Fiber Preparation; Textiles, Knitting; Textiles, Spinning; Textiles, Twisting or Twining; Textiles, Weaving; Winding and Reeling.	Aug. 30	Dec. 28	909
249	22. COLWELL, J. H., Aeronautics; Firearms; Ordnance; Ammunition and Explosive Devices; Ammunition and Explosive-Charge Making.	Oct. 21	*Mar. 9	466
217	23. GROESBECK, W. D., Acoustics; Coin Handling; Horology; Recorders; Registers; Sound Recording and Reproducing; Time-Controlling Mechanism.	May 13	Nov. 3	815
144	24. DURAS, C. O., Apparel; Apparel Apparatus; Garment Supporters; Sewing Machines	Sept. 9	*Feb. 7	1,210
315	25. LIGHTFOOT, J. H., Agitating; Butchering; Centrifugal-Bowl Separators; Mills; Threshing; Vegetable Cutters and Crushers; Gas Separation.	*Apr. 5	*Apr. 5	432
105	26. HODGES, J. S., Electricity, Generation; Motive Power; Prime-Mover Dynamo Plants	Sept. 12	Dec. 31	1,046
214	27. ANDERSON, L. S., Abrading; Brush, Broom, and Mop Making; Brushing, Scrubbing, and General Cleaning; Laundry; Washing Apparatus.	Sept. 10	Sept. 12	1,994
225	28. BENSON, A. R., Internal-Combustion Engines	Oct. 7	Sept. 1	1,684
147	29. MORRIS, B. N., Boring and Drilling; Button Making; Chucks or Sockets; Coopering; Tool-Handle Fastenings; Wheelwright Machines; Wood Sawing; Wood Turning; Woodworking; Woodworking Tools.	Oct. 5	*Apr. 28	538
152	30. SULLIVAN, M. R., Illuminating Burners; Illumination; Liquid and Gaseous Fuel Burners; Typewriting Machines.	*Jan. 3	*Apr. 1	1,457
172	31. HOLMES, W. N., Alcohol; Ammonia, Water, and Wood Distillation; Charcoal and Coke; Fuel and Igniting Devices; Gas, Heating and Illuminating; Hides, Skins, and Leather; Hydraulic Cement and Lime; Mineral Oils; Oils, Fats, and Glue; Sugar and Salt.	June 21	Sept. 6	2,142
278	32. BANCROFT, J. F., Gas and Liquid Contact Apparatus; Heat Exchange	Sept. 1	*Mar. 9	989
70	33. COWLES, W. A., Bridges; Hydraulic and Earth Engineering; Masonry and Concrete Structures; Metallic Building Structures; Roads and Pavements; Roofs.	Nov. 14	*Jan. 21	914

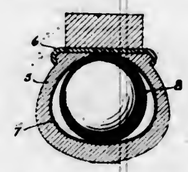
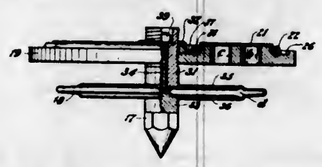
PATENTS



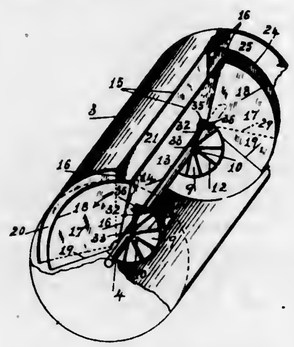
GRANTED JULY 11, 1922.

1,422,067. SOCKET WRENCH. WALTER A. ABEGG, Los Angeles, Calif. Filed Dec. 15, 1920. Serial No. 430,877. 7 Claims. (Cl. 81—121.)



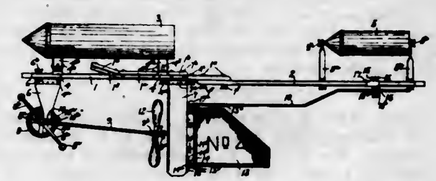
1. In combination, a socket having a recess, a shank adapted to extend into the recess, and means adapted to be set to adjustably yieldingly hold the shank in the recess or to positively hold the shank in the recess, said means comprising a pressure member, a spring adapted to press the pressure member when the shank is yieldingly held in the recess, a screw adapted to adjust the pressure of the spring, and a part arranged to positively connect the pressure member and screw when the shank is positively held in the recess.

1,422,068. PRESSURE-SIGNALING DEVICE FOR TIRES. WILLIAM F. ARNDT, Watertown, Wis. Filed June 17, 1921. Serial No. 478,437. 2 Claims. (Cl. 116—34.)



2. The combination with the inner tube of a pneumatic tire, of an elongated solid ball enclosed thereby, the elongated elements of the surface of the ball having a greater radius of curvature than the inner circumference of the tube, and the shortest diameter of the ball being approximately three-fourths of the normal diameter of the tube.

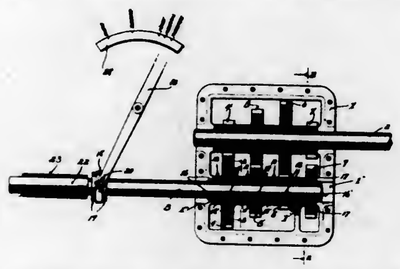
1,422,069. STEAM TRAP. CHARLES H. ATKINS, Palmer, Mass. Filed May 13, 1920. Serial No. 381,106. 5 Claims. (Cl. 236—58.)



5. In a steam trap, the combination, of an enclosing casing, a rigid member secured to the casing, the casing having inlet and outlet ports arranged in alignment with each other, a diaphragm having a volatile liquid therein and secured to the rigid member, a valve secured to the diaphragm, the rigid member being located under the inlet port and having openings to permit the incoming steam to directly surround the diaphragm to cause the expansion of the liquid in the diaphragm to close the valve, the construction being such that the diaphragm will be cooled simultaneously with the interior of the casing to open the valve and will immediately expand to close the valve by the incoming steam, passing through the openings in the rigid member and directly into contact with the diaphragm.

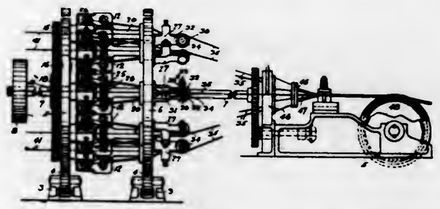
1,422,070. AIR COMPRESSOR. HANS C. AARUP, Springfield, Ill. Filed Sept. 25, 1919. Serial No. 326,240. 1 Claim. (Cl. 230—22.)

In an air compressor, the combination of a rotative shaft; spiders having radial slits and perforated ears; pins extending through the perforations in the ears of the spiders and through the shaft and connecting the spiders with the shaft in such relation thereto that the radial slits of the respective spiders will be uniformly out of line; blades supported in the radial slits of the spiders and separated by narrow spaces between the inner longitudinal edges of the blades; wings united to the respective blades; and a cylindrical shell united to the blades and the wings.



1,422,071. SWIMMING DEVICE. GEORGE GAIL ALLENBAUGH, Mansfield, Ohio. Filed Aug. 31, 1921. Serial No. 497,096. 9 Claims. (Cl. 9—18.)

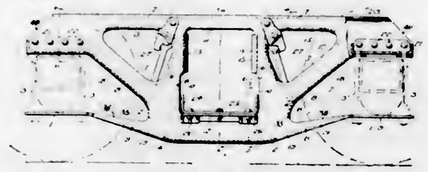
2. In a swimming device, a buoyant collapsible frame provided with subjacent propeller and rudder mechanism



beneath its median portion, and hand operated gearing at the front portion of said frame for operating said propeller and a foot operated lever for controlling said rudder mechanism.

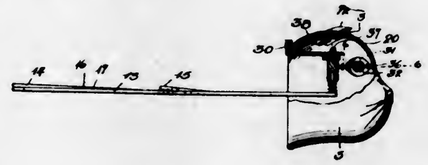
1,422,072. VARIABLE-SPEED GEAR. PETER ALVIN AMUNDSON, Oconomowoc, Wis., assignor of one-half to Thomas Andrew Amundson, Oconomowoc, Wis. Filed Feb. 1, 1921. Serial No. 441,566. 1 Claim. (Cl. 74—59.)

A variable speed gear comprising a driven shaft, said driven shaft having a transverse recess and a central, longitudinal recess, a plurality of gears on the drive shaft, a longitudinal, continuous key for said gears rigid with said shaft, a plurality of gears on the driven shaft provided with circular recesses and longitudinal slots, a key on said driven shaft reciprocable in said transverse recess, a plunger rigid with said key mounted in said longitudinal recess, and a spring urging said key rearwardly in said transverse recess, said key extending from said driven shaft so as to engage with the longitudinal slot of each gear selectively, a reverse gear on said driven shaft provided with a slot, a key on said driven shaft for engaging in said slot, a stud, a gear wheel on said stud meshing with said reverse gear and one of said gears on said driven shaft.



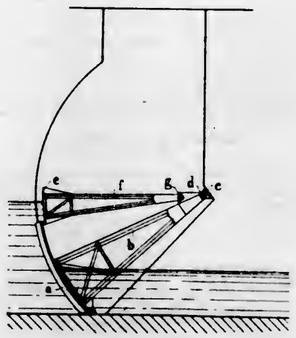
1,422,073. WIRE-ROPE MACHINE. ALBIN E. ANDERSON, Oakmont, Pa., assignor of two-thirds to Eyvind M. Verner and James W. Macfarlane, both of Pittsburgh, Pa. Filed Dec. 2, 1920. Serial No. 427,855. 4 Claims. (Cl. 28—21.)

1. In a machine for making wire cable, the combination of a rotatable flier frame and a plurality of individually rotatable bobbin frames carried by the said flier frame, each of the said bobbin frames comprising means for carrying a plurality of rotatable bobbins in two parallel sets the axis of the bobbins in each set being arranged on the sides of a polygon around the axis of rotation of the bobbin frame, the bobbins in one set being staggered with respect to the bobbins in the other set.



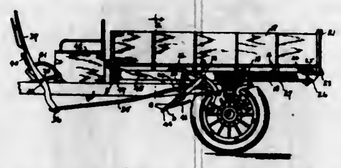
1,422,074. TRUCK SIDE FRAME. GUSTAF ARVID ANDERSON, Baltimore, Md., assignor to The T. H. Symington Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 8, 1921. Serial No. 520,849. 64 Claims. (Cl. 105—205.)

1. A car truck side frame involving a sheet metal outer wall and a sheet metal inner wall integrally connected thereto in spaced relation therewith, each of said walls having a plurality of truck column portions, a plurality of top arch bar portions, a plurality of bottom arch bar portions and a plurality of pedestal tie bar portions.



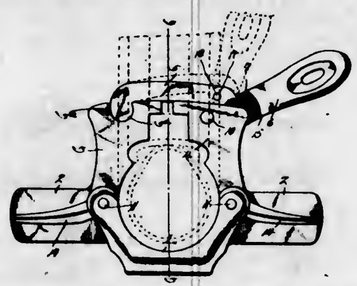
29. A blank for a side frame member of a car truck, said blank being of sheet metal and having an axis of symmetry dividing said blank into two portions each of which has a bolster opening, top arch bar portions, pedestal tie bar portions and bottom arch bar portions.

1,422,075. SPARKING TOY. LOUIS V. AROSSON, Newark, N. J. Filed May 27, 1921. Serial No. 473,135. 3 Claims. (Cl. 46—40.)



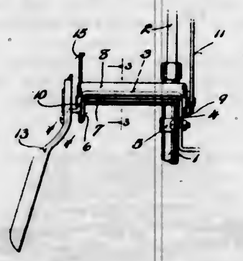
1. A toy comprising the semblance of a portion of a living being having elements thereof simulating eyes adapted to permit light to pass therethrough, a pyrophoric element mounted within said portion, means to cause friction of said pyrophoric element to produce sparks whereby the light passing elements shall be illuminated.

1,422,076. SEGMENT GATE. THEODOR BECHER, Gustavsburg, Germany, assignor to Maschinenfabrik Augsburg-Nuernberg, A. G., Nuernberg, Bavaria, Germany, a Corporation of Germany. Filed Apr. 11, 1922. Serial No. 551,740. 1 Claim. (Cl. 61—25.)



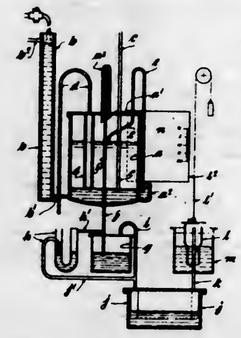
A segment gate consisting of two parts being arranged one above the other in such a manner that the upper segment leaf is journalled to swing on a special pivot arranged on the supporting arm of the lower segment leaf.

1,422,077. DUMPING MECHANISM FOR TRUCKS. JOHN A. BEEBE, Omaha, Nebr., assignor of one-fourth to Percy A. Greaves, Omaha, Nebr. Filed Jan. 24, 1921, Serial No. 439,458. Renewed Dec. 12, 1921. Serial No. 521,925. 6 Claims. (Cl. 298—19.)



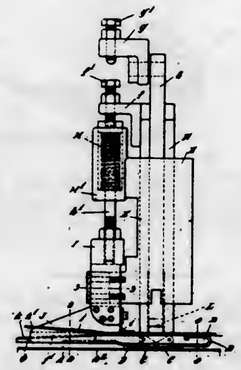
1. In dumping mechanism, the combination with the frame of a vehicle having a box pivotally mounted thereon, of a rock-lever pivotally connected with the frame, a hoisting-bar pivotally mounted between its ends upon the rock-lever and having its upper end pivotally connected with the box, and a longitudinally movable pull-and-push bar pivotally connected with the lower end of the hoisting-bar.

1,422,078. AUTOMOBILE SAND AND MUD DOG FOR ATTACHING TO VEHICLE WHEELS. DEMARKUS S. BLACKWELL, Sand Springs, Okla. Filed June 24, 1921. Serial No. 480,252. 3 Claims. (Cl. 152—14.)



1. A device for attaching over a wheel comprising a base piece for gripping purposes carrying pivotally attached thereto, two side pieces forming jaws, all of a shape to fit snugly over a tire, rim, and felly of said wheel, a handle pivotally attached to one side piece, a clamping member carried by said handle, capable of being locked to the opposite side piece, and means for connecting said pieces, as and for the purpose described.

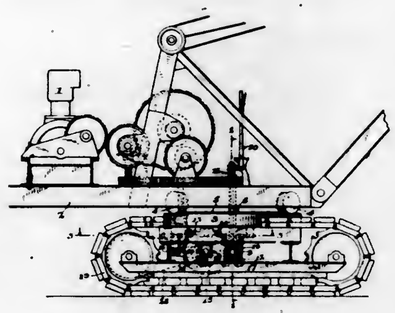
1,422,079. BURNER-LIFTING MEANS. JOHN S. BRENNAN, Milwaukee, Wis. Filed Aug. 30, 1920. Serial No. 407,032. 2 Claims. (Cl. 158—42.)



1. In a burner structure, a supply pipe, means for moving a burner head including a bracket arm extended from and secured to the supply pipe, the opposite end portions of the arm being laterally turned, a brace rod connecting the laterally turned portions, an operating strip having its opposite ends bent laterally and pivoted on the end portions of said brace rod, one end of the strip forming a crank for a burner head connecting member, the other end providing a handle attaching portion, and a handle fixed to said attaching portion, the opposite edges of said strip being adapted to engage the arm to limit rotation of said handle.

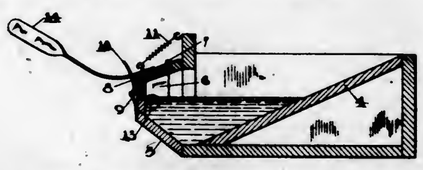
1,422,080. APPARATUS FOR AUTOMATIC AND CONTINUOUS ANALYSIS AND RECORDING OF GASES. WALTER DOUGLAS RUSSELL BROWN and WILLIAM THOMAS PICKSTON, Bolton, England. Filed Dec. 15, 1919. Serial No. 344,989. 3 Claims. (Cl. 23—3.)

3. Apparatus for the continuous and automatic analysis of flue and other gases by the absorption process and the continuous and automatic recording of such analysis, comprising, in combination, an initial gas measuring chamber, a residual gas measuring chamber and means whereby the withdrawal of the sealing liquid from the initial gas measuring chamber by a vacuum serves to unseal the exit of the residual gas measuring chamber, as set forth.



1,422,081. WIRE-STITCHING MACHINE. GEORGE THOMAS BUCKHAM and JOHN IRVING NASMITH, Westminster, London, England, assignors to Vickers Limited, Westminster, London, England. Filed Nov. 3, 1921. Serial No. 512,629. 6 Claims. (Cl. 1—11.)

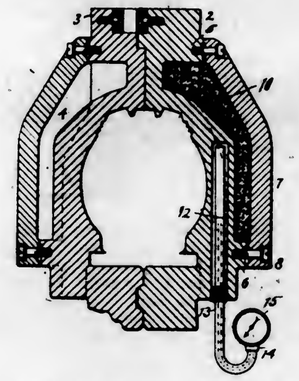
4. A wire stitching mechanism for folding boxes comprising a work support, a movable anvil located above said



work support and within which clinching dogs are pivotally mounted, the upper face of said anvil being adapted to receive the overlapping edges of the boxes which are to be stitched together, the lower surface of the box being positioned beneath said anvil and resting upon said work support, a blade spring being provided beneath the clinching dogs so as to protect the lower surface of the box during the clinching operation.

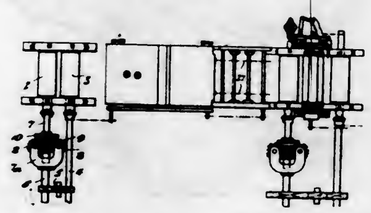
1,422,082. CONTROL MEANS FOR LOCOMOTIVE CRANES. PAUL BURKE, Green Bay, Wis., assignor, by mesne assignments, to Northwest Engineering Company, a Corporation of Wisconsin. Filed Oct. 2, 1920. Serial No.414,217. 8 Claims. (Cl. 180—9.2.)

1. The combination, with traction elements and a base wholly supported thereby, of a rotating base mounted on said base, a prime mover on said rotating base, a power transmission shaft located in the axis of rotation of said rotating base and driven by said prime mover, transmission mechanism between said shaft and traction elements to positively drive said elements at the same or differential speeds whereby said machine may be positively driven and turned entirely under its own force, and control means for said driving means coaxial with the axis of rotation of said rotating base and operable therefrom irrespective of its position or movement.



1,422,083. APPARATUS FOR SOLUTIONING TIRE BEADS. THOMAS A. BURNS, Toronto, Ontario, Canada, assignor to Dunlop Tire and Rubber Goods Company, Limited, Toronto, Ontario, Canada. Filed Nov. 29, 1920. Serial No. 426,997. 3 Claims. (Cl. 91—32.)

1. Apparatus for solutioning tire beads comprising a solution tank having part of a side wall movable to and from its normal position; and a divided apertured die plate partly carried by the side wall and partly by the movable part.



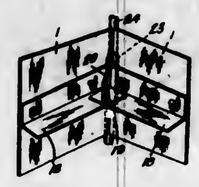
1,422,084. MOLD ADAPTED FOR USE IN VULCANIZING RUBBER ARTICLES. WARREN F. CLARK, Cleveland, Ohio, assignor, by mesne assignments, to Automatic Electric Heater Company, Warren, Pa., a Corporation of Delaware. Filed Jan. 17, 1920. Serial No. 352,012. 13 Claims. (Cl. 18—31.)

1. The combination with a mold for use in vulcanizing rubber articles, said mold having a wall of approximately uniform thickness, one surface of which is adapted to cooperate with the article to be molded, an electric heating

coil cooperating with the other surface of the wall and substantially coextensive with the first mentioned surface of the wall.

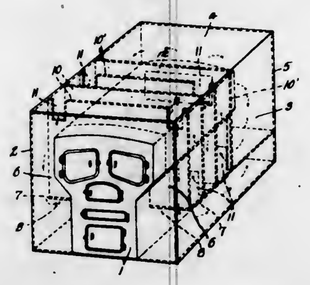
1,422,085. APPARATUS USED IN THE MANUFACTURE OF SHEET-METAL PLATES. DAVID DAVIES, Llanelly, and DAVID JONES, Tircoed, Wales. Filed Apr. 18, 1918. Serial No. 229,392. 2 Claims. (Cl. 29—17.)

2. In metal stretching apparatus of the character described, a pair of primary rollers, a pair of secondary rollers, means to positively drive one roller of each pair, the said positively driven primary roller at a lower rate of speed than the said positively driven secondary roller, such driving means comprising a shaft directly connected to the said positively driven secondary roller, a second shaft geared to said first named shaft for rotation therewith in the same direction, a bracket carried by said second named shaft, worm wheels arranged for revolution and mounted in said bracket, a third shaft in line with and independent of said second shaft, and directly connected to the said positively driven primary roller, a worm on said third named shaft and engaged by the worm wheel, and a clutch element also on said third named shaft and arranged to cooperate with said worm.



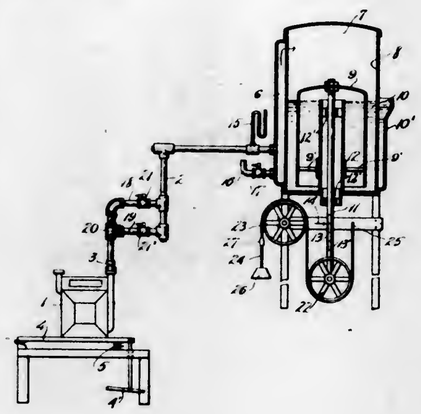
1,422,086. MEANS FOR CONNECTING AUTOMOBILE BODIES TO THE CHASSIS. ARTHUR C. DESLER, Radford, Va. Filed Apr. 12, 1921. Serial No. 460,647. 7 Claims. (Cl. 267—46.)

7. Means of the character described comprising two spring plate members with the outer end of each member



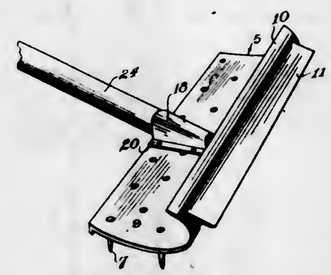
secured to the lower face of the body, two springs secured to the axle, each of said springs having a top plate terminating near the center of the body, means for connecting the inner end of each top plate and inner end of each spring plate together, and a plurality of radius rods, each being secured at one end to a clip fixedly secured to the axle with its other end secured to the body by a ball and socket joint.

1,422,087. HEATING APPARATUS. ARISTIDE HARRY DES PAROIS, Mon real, Quebec, Canada. Filed Apr. 1, 1921. Serial No. 457,622. 3 Claims. (Cl. 126—58.)



1. The combination with a heating furnace having a smoke outlet at its upper end, of an exterior casing enclosing said furnace and suitably spaced from the walls thereof; vertical partitions within the casing defining a space or chamber in front of the doors of the furnace to provide access to said doors; a plurality of spaced, horizontal partitions secured in said casing in the space between the walls thereof and the furnace, and dividing said space into a series of superposed sections, each section having a hole in zig-zag relation to the hole in the adjacent partition; and a pipe leading to the chimney communicating with the bottom section, substantially as described.

1,422,088. HEATING APPARATUS. ARISTIDE HARRY DES PAROIS, Montreal, Quebec, Canada. Filed Apr. 21, 1921. Serial No. 463,240. 4 Claims. (Cl. 126—60.)

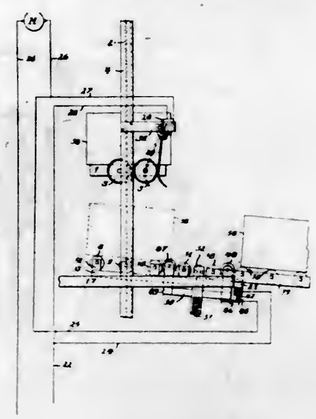


1. The combination with a heating furnace having a smoke outlet at one end, of an external casing enclosing the furnace and spaced therefrom; a horizontal partition disposed intermediate the top and bottom of the space formed between the walls of the casing and furnace and dividing said space into upper and lower sections, said partition terminating short of the front wall of the casing to provide an opening, and the lower section having a smoke outlet communicating with it; and a plurality of spaced, parallel partitions in the upper section connected at opposite ends with the top wall of the casing and the horizontal partition, each of the parallel partitions having an opening.

1,422,089. MEANS FOR AND METHOD OF PROVING GAS METERS. RICHARD L. DEZENDORF, Richmond Hill, N. Y. Filed Mar. 22, 1919. Serial No. 284,455. 7 Claims. (Cl. 73—1.)

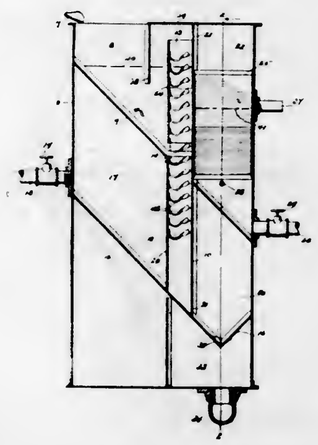
1. In a meter tester, the combination of a connection adapted to be applied to the outlet of a meter to be tested, means for producing and automatically maintaining a partial vacuum for drawing air through said connection, and means for determining the amount of air drawn through such connection during a given operation of said meter.

1,422,090. GARDEN TOOL. DAVID S. DICKIE, Winifred, Mont. Filed Aug. 19, 1920. Serial No. 404,551. 4 Claims. (Cl. 55—39.)



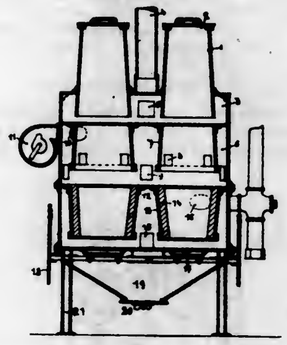
1. A garden tool comprising a transversely curved elongated plate having one longitudinal edge portion extended rearwardly in the direction of the major portion of the plate thereby forming an overhanging blade, a second blade projecting forwardly from the overhanging blade, and a handle connected to said plate at the other longitudinal edge of the same.

1,422,091. DETECTOR FOR ELEVATORS AND CONVEYERS. WILLIAM T. DONALDSON, St. Paul, Minn., assignor to Standard Conveyor Company, a Corporation of Minnesota. Filed Feb. 7, 1921. Serial No. 442,917. 6 Claims. (Cl. 198—232.)



1. The combination with an electrical elevator having a series of trays and a conveyor arranged to receive packages therefrom, of switches connected in the power line

of the moter of said elevator, a detector mounted near the junction of said elevator and conveyer and arranged



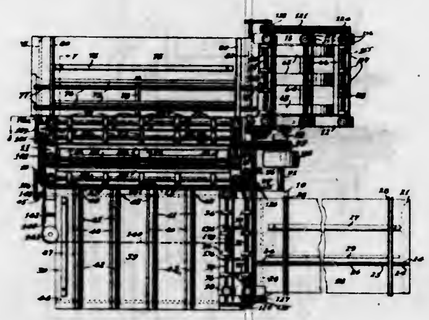
to actuate one of said switches and actuating means projecting into the path of said trays for operating another of said switches.

1,422,092. SEPARATING AND CLASSIFYING APPARATUS. LEWIS H. FALLEY, Kansas City, Mo. Filed Nov. 1, 1919. Serial No. 335,197. 5 Claims. (Cl. 83—82.)

1. An apparatus of the character described, comprising a settling tank, a partition dividing the tank into a settling compartment, and a receiving compartment communicating with said settling compartment intermediate the ends of the latter; fluid supply means communicating with said settling compartment and maintaining an upward flow therein, and a plurality of deflecting elements located in vertically spaced relation in said settling compartment, said elements extending in a downwardly curved direction, transversely across said settling compartment, and adapted to produce cross-currents therein, while also tending to centralize the downward movement of the material settling within said settling compartment.

1,422,093. GAS PRODUCER. LOUIS FORNAS, Paris, France. Filed Feb. 1, 1919. Serial No. 274,465. 2 Claims. (Cl. 48—73.)

2. In a gas producer, the combination of a horizontal air chamber having a drier therein, means for supplying fuel to the drier to pass therethrough, means for supplying air to said chamber at a point above the zone of combustion, suitable for carrying off moisture from the combustible and for supporting combustion, a horizontal gas chamber beneath the air chamber and provided with a discharge opening through which the gases produced are exhausted, and a furnace in the gas chamber communicating at its top with the air chamber at a point immediately below the drier, said furnace being supplied with air from said chamber and fuel from said drier.

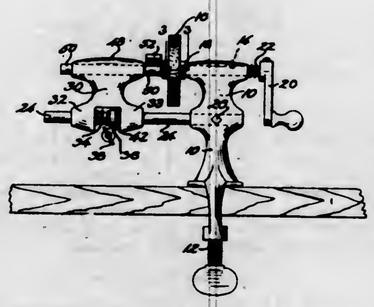


1,422,094. SPARE-TIRE CARRIER. GEORGE H. FORSYTH, Chicago, Ill. Filed July 12, 1920. Serial No. 395,466. 12 Claims. (Cl. 224—29.)

1. A carrier for spare tires comprising a dummy wheel body, simulating in appearance a service wheel of the car on which used but of non-service construction, a member adapted to receive and support a spare tire, and a releasable tire-retaining member, the dummy wheel body permanently assembled with a suitable support.

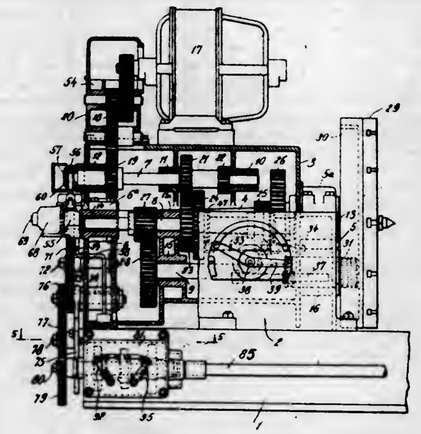
1,422,095. SCORING AND TRIMMING MACHINE. CHARLES C. GAMM, St. Paul, Minn., assignor to Waldorf Paper Products Company, a Corporation of Minnesota. Filed Oct. 15, 1920. Serial No. 417,119. 6 Claims. (Cl. 93—58.)

1. In a scoring and trimming machine, a frame, a feed table mounted at one end of said frame, a series of parallel shafts journalled in said frame, gripping rolls, trimming knives and rotary scoring bars mounted on said shafts, a second series of parallel shaf s journalled in said frame at right angles to said first series, rotary scoring bars and gripping rolls mounted on said second series of



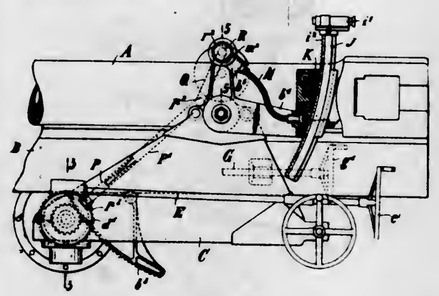
shafts, a second table interposed between said first and second series of shafts for receiving the material to be operated upon endless chains arranged to carry the material to be operated upon to said scoring bars and gripping rolls.

1,422,096. ALLOY CONTAINING IRON, NICKEL, CHROMIUM. PIERRE GIRIN, Paris, France, assignor to Societe Anonyme de Commentry, Fourchambault, & Decazeville, Paris, France. Filed Dec. 9, 1918. Serial No. 265,984. 1 Claim. (Cl. 75—1.)



An alloy of iron, nickel, chromium and manganese, containing nickel, 20 to 25 per cent, chromium, 10 to 15 per cent, manganese, 1 to 2 per cent, carbon, 0.2 to 0.5 per cent, such alloy having, together with the mechanical qualities of the best steels, a high resistance to attack by strong acids, organic acids and alkalis, in solution or in fusion.

1,422,097. IGNITION-POINT GRINDER. DAVID H. GREENFIELD, Denver, Colo. Filed Apr. 5, 1920. Serial No. 371,353. 4 Claims. (Cl. 51—166.)



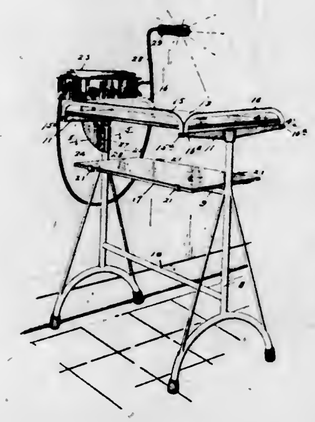
1. An ignition point grinder comprising a standard, a grinding wheel rotatably mounted thereon, a rod secured to said standard and extending therefrom in a direction parallel to the axis of rotation of said wheel, a holder support slidably and rotatably secured to said rod, a holder on said support adapted to clamp an ignition point, and means to adjust the holder to and from the surface of the grinding wheel.

1,422,098. LATHE HEADSTOCK. GEORGE E. GREENLEAF and CLIFFORD F. RANDOLPH, Plainfield, N. J., assignors to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 9, 1918. Serial No. 261,780. 25 Claims. (Cl. 74—58.)

19. In a lathe headstock, an improved tool feeding mechanism comprising the combination of a spindle, drive mechanism therefor, a combined frame and casing serving to support the said spindle and drive mechanism and serving to enclose the major portions thereof to retain oil and to exclude dirt, a bed supporting the frame, feed gearing mounted at the outer end of the said frame and casing entirely outside thereof, the initial element of said gearing being mounted on said casing, a feed shaft extending longitudinally of the bed at the front thereof, and a sliding gear change speed mechanism comprising a pair of parallel shafts having a plurality of gears thereon connecting the feed gearing with the feed shaft, one of said shafts being directly connected to and in alignment with said feed shaft.

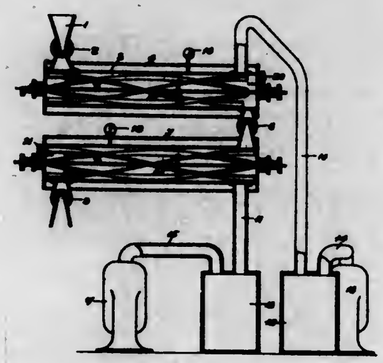
1,422,099. GUN WITH INDEPENDENT SIGHTING LINE. WALTER HEILEMANN, Essen-on-the-Ruhr, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed May 26, 1915. Serial No. 30,639. 4 Claims. (Cl. 89—41.)

1. In a gun having a carriage and a gun barrel adapted to be elevated relatively to the carriage, a sighting device comprising a base member adapted to be elevated in unison with the gun barrel, a sighting means carrier adjustable relatively to said base member for range and a gearing for adjusting the sighting means carrier relatively to said base member, a planetary gearing mounted on the carriage



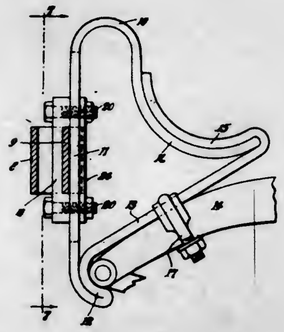
and comprising two coaxial central wheels rotatable independently of each other, a bridge member rotatable about the same axis as said central wheels and planetary wheels rotatably mounted on the bridge member in a distance away from said axis and engaging said central wheels, means for elevating the gun barrel positively connected to said bridge member, two driving members rotatably mounted on the gun carriage on opposite sides of the gun barrel each being positively connected to one of said central wheels and means positively connecting one of said driving members to said sighting means adjusting gearing for rotating the sighting means carrier relatively to the gun barrel about the same angle but in opposite direction as the gun barrel is rotated when said last-named driving member is actuated and the other driving member is held stationary, the sighting means carrier and the driving member positively connected thereto being arranged on opposite sides of the gun barrel.

1,422,100. BEATER FOR SUCTION CLEANERS. EARL B. HOFF, East Cleveland, Ohio, assignor, by mesne assignments, to Electric Vacuum Cleaner Company, Inc., East Cleveland, Ohio, a Corporation of New York. Filed Mar. 5, 1919. Serial No. 280,813. 5 Claims. (Cl. 15—188.)



3. As an article of manufacture a hollow prismatic rubber sleeve having flexible lashes projecting outwardly from its edges, the ends of said sleeve being open.

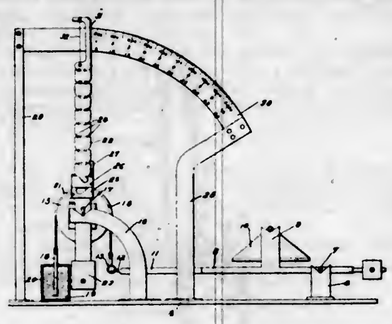
1,422,101. KNOCKDOWN DENTAL AND SURGICAL TABLE. WALTER G. HOLMES, Minneapolis, Minn. Filed Nov. 29, 1920. Serial No. 426,946. 4 Claims. (Cl. 45—31.)



1. A dental or surgical table including a frame having supporting end members, a cross bar connecting said end members, cross arms on the end members and cross bar, and a table top and a shelf supported on the cross arms.

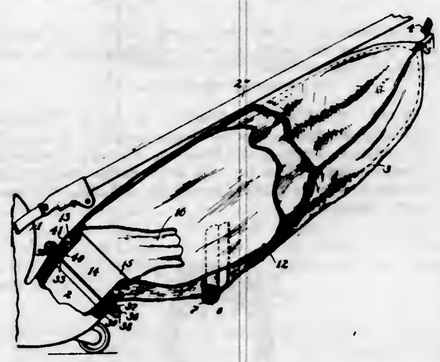
1,422,102. PROCESS FOR AGING WHEATEN FLOUR TO IMPROVE ITS BAKING QUALITIES. ROBERT HUTCHINSON, Nottingham, England. Filed Mar. 19, 1921. Serial No. 453,687. 5 Claims. (Cl. 83—42.)

1. A proces for improving the "strength" or baking qualities of wheaten flour in which a wheaten material is subjected to a heat treatment to effect a partial heat-coagulation of the gluten proteins, and such treatment is controlled by varying the fluid pressure exerted on the materials.



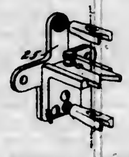
1,422,103. AUTOMOBILE BUMPER. NEIL MACINNES, Chicago, Ill. Filed Nov. 30, 1921. Serial No. 518,750. 14 Claims. (Cl. 293—55.)

4. A bumper comprising a bar having two portions struck from the ends thereof and extended rearwardly and shaped into arches to form securing and stiffening members for said bar, substantially as described.



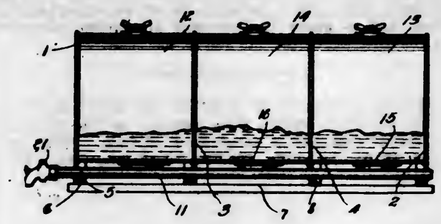
1,422,104. SCALE. HENRY F. KINSER, Chattanooga, Tenn. Filed Jan. 18, 1921. Serial No. 438,158. 3 Claims. (Cl. 265—36.)

1. In a scale, a base, a beam frame supported above the base and carrying a scale pan, bracket members supported by the base, a drum supported by the bracket members, a ribbon having connection with the beam frame and passing over the drum, an indicating beam having notches formed therein and having numerals disposed thereon opposite the notches, a pair of weights adjustable on the indicating beam and adapted to be positioned opposite the notches, to shift the center of gravity of the indicating



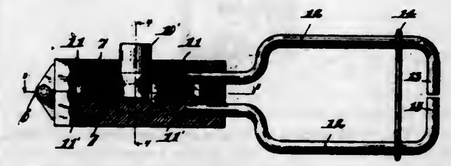
beam, a dial cooperating with the indicating beam, said dial having a line of numbers cooperating with the respective adjustable weights.

1,422,105. SUCTION CLEANER. JAMES B. KIRBY, Cleveland, Ohio, assignor to Electric Vacuum Cleaner Company, Inc., a Corporation of New York. Filed Jan. 20, 1915. Serial No. 3,191. 22 Claims. (Cl. 183—44.)



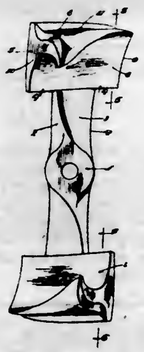
20. In a dust-bag for vacuum cleaners, the combination with the bag proper, of a rigid sleeve forming an inlet to the bag at its lower end, said bag having an outlet in said end adjacent said inlet, and a closure for said outlet.

1,422,106. THREAD-CLEANER. WALTER J. KLOTS, Scranton, Pa., assignor to W. J. Klots Raw Silk Cleaner Co., Inc., a Corporation of Delaware. Filed May 13, 1922. Serial No. 560,797. 5 Claims. (Cl. 28—70.)



1. A thread cleaner comprising an integral flat plate of treatment hardened steel substantially ¼ of an inch in thickness having an open ended narrow slot therein the walls of which meet the face of the plate toward which the thread is moved at sharp right angles.

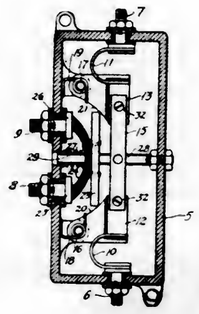
1,422,107. TANK CONSTRUCTION. ANDREW A. KRAMER, Kansas City, Mo. Filed Oct. 15, 1920. Serial No. 417,097. 5 Claims. (Cl. 280—5.)



1. A wagon tank having end sheets and partition sheets provided with integral bolsters, dispensing pipes extending the length of the tank and connecting the bolsters, and means for effecting communication between the pipes and the tank.

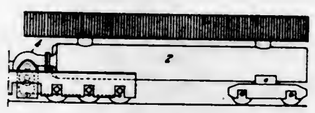
1,422,108. MOLD. EDWARD J. KUKAC, Chicago, Ill. Filed Aug. 2, 1919. Serial No. 314,814. 3 Claims. (Cl. 22—153.)

1. A mold adapted for casting storage battery terminals comprising a pair of hingedly connected co-operating blocks; a matrix in the co-operating faces of said blocks; a removable core positioned through one block substantially at the central portion thereof and extending into said matrix; a second removable core in said matrix, said second core being tapered and located longitudinally in the meeting faces and within the end walls of said blocks; and an exterior opening communicating with said matrix.



1,422,109. PROPELLER. FRANK WILSON LAMBERT, Hancock, Iowa. Filed Oct. 21, 1921. Serial No. 509,356. 2 Claims. (Cl. 170—170.)

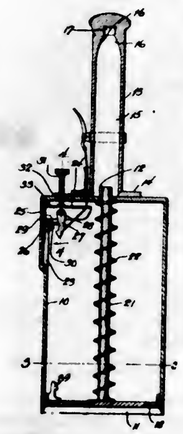
1. A propeller comprising a hub, a blade radial thereto and having a surface contour adapting it to exert a pro-



pelling force in action, and a circumferential fluid compression blade carried at the outer end of the radial blade and disposed diagonally to the axis of the hub, the working surface of the last mentioned blade being relatively gradually transversely curved at the advancing end of the blade and of gradually increasing transverse curvature in the direction of the hub and of the blade.

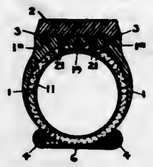
1,422,110. INTERLOCK CIRCUIT PROTECTOR. JUSTIN LEBOVICI, Oakley, Ohio, assignor to The Triumph Electric Company, a Corporation of Ohio. Filed Apr. 26, 1919. Serial No. 292,976. 9 Claims. (Cl. 175—294.)

7. The combination with a polyphase circuit of a fuse in the circuit of each of said phases respectively, a circuit breaking element in the circuit of each of said phases respectively and openable independently of each other, said circuit breaking elements being biased to move to open position, and means whereby the fuse of each circuit respectively holds in closed position one of said circuit breaking elements connected in the phase of another circuit.



1,422,111. TURBINE-DRIVEN LOCOMOTIVE. FREDRIK LJUNGSTROM, Brevik, Lidingon, Sweden, assignor to Aktiebolaget Ljungstroms Angturbin, Stockholm, Sweden, a Corporation. Filed Oct. 19, 1921. Serial No. 508,896. 6 Claims. (Cl. 105—38.)

1. In locomotives in which the driving wheels are actuated by turbines with the assistance of toothed gearings, and provided with a boiler carriage and a condenser placed on a separate carriage, the arrangement that one or more high pressure turbine systems with driving devices are disposed on the boiler carriage and one or more low pressure turbine systems with driving devices are disposed on the condenser carriage.



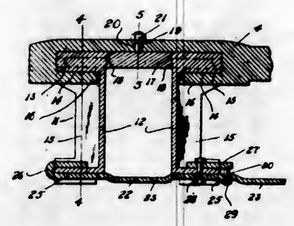
1,422,112. MEASURING DEVICE. EMORY HAMMETT LORD, Washington, D. C. Filed Mar. 4, 1920. Serial No. 363,352. 5 Claims. (Cl. 73—165.)

1. In a measuring device, a container portion open at one end, a handle, a plunger movably mounted in said container portion, means to yieldingly retain said plunger normally in its forwardmost position, means carried by said container portion to limit the rearward movement

of said plunger, and said last-named means being adjustable to vary the limit of backward movement of said plunger.

1,422,113. PNEUMATIC TIRE. WILLIAM MCEWEN, Waiuku, Auckland, New Zealand, assignor of one-half to William Cory Scott Hosking, Waiuku, Auckland, New Zealand. Filed Dec. 13, 1918, Serial No. 266,533. Renewed Apr. 18, 1922. Serial No. 555,235. 1 Claim. (Cl. 152—19.)

In combination, a pneumatic tire having the inner edges of its walls connected and the outer edges of its walls disconnected and thickened to form a relatively broad external peripheral face and having annular grooves in said peripheral face of the tire; a detachable tread having a broad internal peripheral face to substantially match the external peripheral face of the tire, said internal peripheral face of the tread having annular ribs adapted to fit into and match the annular grooves in the external face of the tire whereby when said tread is attached to said tire the former is held to the latter against movement laterally thereof, said tread being split transversely to permit its being wrapped around the tire in being mounted thereon, the walls of said annular grooves in the tire being parallel with each other and substantially perpendicular to the axis of rotation of the tire and the walls of said ribs being likewise formed so that the tread can be mounted on the tire by merely wrapping the same around the tire, the ribs seating themselves in said grooves; and means for securing the ends of said tread together to hold the same firmly to the tire.



1,422,114. AIR-TIGHTLY SEALING COMPOSITION FOR METAL CONTAINERS, SPECIALLY THOSE FOR FOOD. JAMES HENRY MACKENZIE, Sydney, New South Wales, Australia. Filed Aug. 19, 1920. Serial No. 404,655. 4 Claims. (Cl. 106—8.)

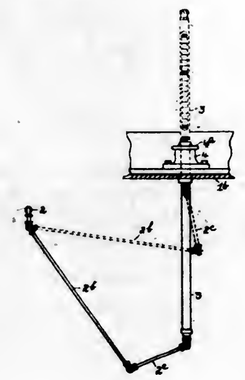
1. A glutinous composition for sealing tins consisting of a pasty mass of flour, gums, and water, sufficient glycerine to emulsify the mass, sufficient rosin to render said mass tenacious and sufficient methylated spirit to dissolve said rosin.

1,422,115. COMPOSITION FOR TREATING MANUFACTURED RUBBER. RHETHERFORD B. MARTIN, New York, N. Y. Filed May 20, 1919. Serial No. 298,421. 7 Claims. (Cl. 134—1.)

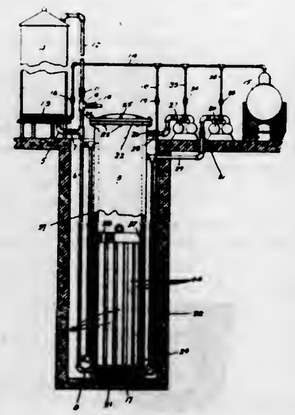
5. A composition for treating manufactured rubber containing a larger portion of phenylamine and a smaller portion of cotton seed oil.

1,422,116. RAILWAY TRUCK. SAMUEL A. MATHERS, Chillicothe, Ohio. Filed Jan. 12, 1921. Serial No. 436,656. 3 Claims. (Cl. 105—206.)

1. In a truck, a frame, said frame having the ends thereof formed to include longitudinal sockets, spaced pedestals arranged to be received within said sockets by longitudinally separating the pedestals, a spacing block positioned between the upper ends of said pedestals and operating to maintain the latter positively in spaced relationship, and braces secured to the lower end of said pedestals and serving to connect the latter positively with said frame.



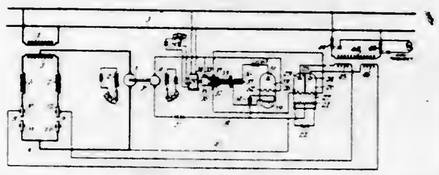
1,422,117. GUARD CHAIN FOR PNEUMATIC TIRES. FRANCIS L. MEAKLE, Portland, Me. Filed May 31, 1921. Serial No. 473,890. 2 Claims. (Cl. 152—16.)



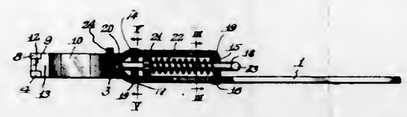
1. An armor for pneumatic tires consisting of a series of hollow sections in contact, each extending across the tread and up on the sides of the tire to be held in position by lateral friction, each end of each section having a radially projecting flange, a U-shaped connecting coupling fitting over adjacent flanges, said couplings and said flanges having corresponding bolt holes with connecting bolts for securing said sections together.

1,422,118. LEVEL-REGISTERING MEANS. FRANK W. MERRITT and ALFRED E. WATTS, Duluth, Minn. Filed Apr. 4, 1921. Serial No. 456,393. 1 Claim. (Cl. 33—209.)

The combination with a vessel including a hull and a deck, a fluid reservoir having flexible terminals at its opposite ends, a vertically disposed fluid operated level gauge mounted upon each of said terminals and adapted to communicate therewith, said gauges being adapted to stand so that the zero or central horizontal gauge lines on both of them will be in the same horizontal plane when said vessel is level, housings mounted on said deck in registration with said gauges, said gauges being adapted to normally extend into said housings and in operation to extend upward through said housings, and means for supporting said gauges in raised position.



1,422,119. METHOD OF AND APPARATUS FOR TREATING TIMBER AND THE LIKE. AUGUST MEYER, Minneapolis, Minn., and PHILIP R. WALSH, St. Louis, Mo., assignors, by mesne assignments, to Duplex Holding Company, St. Louis, Mo., a Corporation of Missouri. Filed Aug. 3, 1921. Serial No. 489,471. 4 Claims. (Cl. 99—12.)

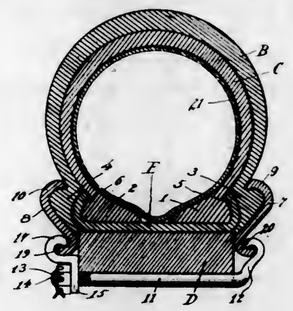


1. The herein described process of treating a predetermined portion of a piece of timber with a preservative liquid by immersing a terminal portion thereof to the desired extent in the treating liquid, and producing a pressure above the liquid and about the free extending portion of the piece of timber to cause a penetration of the liquid.

1,422,120. REGULATING AND CONTROL APPARATUS AND SYSTEM. FRIEDRICH WILHELM MEYER, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Mar. 24, 1920. Serial No. 368,330. 7 Claims. (Cl. 171—119.)

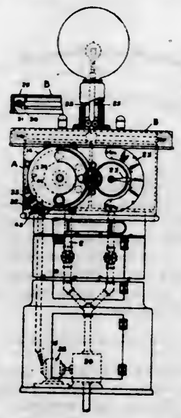
1. A regulator for regulating a machine subject to variations in load and power conditions, having in combination an open air arc discharge rectifier for regulating the machine, and electrolonic means subject to the varying conditions for controlling the arcs of said rectifier.

1,422,121. RATCHET WRENCH. RUDOLPH A. MILLER, Detroit, Mich. Filed Nov. 10, 1919. Serial No. 336,798. 1 Claim. (Cl. 81—60.)



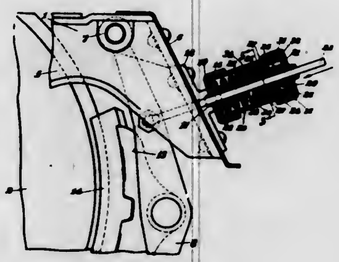
A ratchet wrench comprising a flat bar having a head at its outer end provided with a slot, a flat plate disposed in parallelism with the outer end of said bar and having a head with a slot therein, said plate having its inner end bent and anchored in said bar to form an end wall, a transverse partition between said bar and plate adjacent the heads thereof, tongues on said partitions extending into said bar and plate and anchored therein, a ratchet nut engaging collar journaled in said bar and plate heads with the ratchet portion of said collar extending between said heads, said collar having a slot adapted to register with the slots of said bar and plate heads, a pawl slidable and rotatable in said partition and the end wall of said plate and having its outer end normally engaging said ratchet nut engaging collar, an abutment on said pawl adjacent said partition, a spring encircling said pawl between said abutment and the end wall of said plate and holding said pawl in engagement with said ratchet nut engaging collar, and a crank on the inner end of said pawl for turning said pawl so that the action thereof relative to ratchet nut engaging collar may be reversed.

1,422,122. FUSE. JOHN ALLAN NELSON, Charleston, S. C. Filed Jan. 12, 1920. Serial No. 350,862. 1 Claim. (Cl. 200—130.)



A screw plug fuse of the class described, comprising a cup-shaped body portion made of insulating material and having the usual metallic screw sleeve about a portion of its exterior side surface, a transparent closure for the top of the body portion, a metallic button seated in the exterior bottom surface of the body portion, centrally thereof, a rod having its one end secured to the metallic button and extending upwardly through the bottom of the body portion, and its upper end terminating at a point in close proximity to the transparent closure, projections extending from said rod and engaging the bottom surface of the body portion of the plug and adapted to cooperate with the metallic button for holding said rod against longitudinal movement, and a coiled fuse element having its inner end connected to the upper end of the rod and its other end extended through the side wall of the body portion of the plug and connected with the threaded metallic sleeve.

1,422,123. TWO-IN-ONE RUBBER TIRE. WILLIAM O'CONNELL, Cincinnati, Ohio. Filed Dec. 31, 1919. Serial No. 348,628. 2 Claims. (Cl. 152—17.)



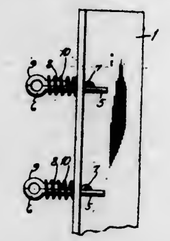
1. A wheel for vehicles provided with a rim and pneumatic tire thereon, and an auxiliary beaded casing embracing the main casing, of a pair of annular bands of an ogee curve in cross section forming oppositely disposed hooks, the hooked portion on the edge of the bands engaging the beads of the auxiliary casing, and the bodies of the bands lying against the outside inwardly sloping surfaces of the beads, and fastening devices secured underneath the wheel felloe and engaging the hooked portions of the other edge of the bands, with means for drawing the fastening devices toward each other to draw and lock the auxiliary casing in place.

1,422,124. DISPENSING TANK. WILLIAM HERMAN OPITZ, Fort Wayne, Ind. Filed Aug. 16, 1919. Serial No. 317,920. 2 Claims. (Cl. 221—100.)

1. A dispensing tank having in combination therewith means for charging liquid into the tank, an overflow pipe, a plurality of openings arranged in the arc of a circle and vertically spaced at distances from the inlet to the overflow pipe proportional to the quantities of liquid to be withdrawn from the tank, a rotatably mounted gate or valve provided with a port and means for rotating the gate or valve to bring said port into alinement with any of the spaced openings.

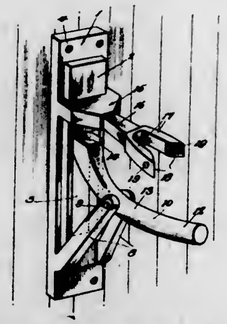
1,422,125. RELEASE AND TAKE-UP DEVICE FOR BRAKES. ALFRED K. PEHRSON, Pittsburgh, Pa., assignor to Pressed Steel Car Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Nov. 17, 1919. Serial No. 338,497. 15 Claims. (Cl. 188—199.)

5. In a brake mechanism, the combination with a car truck frame, of a car wheel, a brake shoe movable into and out of engagement with said wheel, and a friction device mounted on said frame and connected with said mechanism for maintaining the face of the shoe a predetermined distance from said wheel when the brake is released, said means being adapted to compensate, when the brake shoe is applied to the wheel, for any wear of the face of the shoe or tread of the wheels.



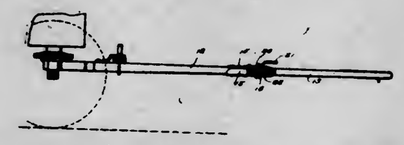
1,422,126. METHOD AND APPARATUS FOR HANDLING COMESTIBLES. PAUL W. PETERSEN, Chicago, Ill. Filed Oct. 12, 1921. Serial No. 507,170. 6 Claims. (Cl. 99—14.)

1. The method of handling comestibles, such as fish and the like, for refrigerating them substantially en masse which consists in arranging the comestibles in regular formation to fill an open scoop-shaped container, then placing said scoop-shaped container in the open end of a second upright thin-walled and water-tight container wherein said first container is fitted to slidingly engage therewith, and then immersing said second container in a refrigerant to a level not permitting the entry of the refrigerant into the second container but substantially on a par with or above the level of the comestibles contained therein.



2. An apparatus for handling comestibles comprising an open pan, a telescopic lid therefor, and a second water-tight can having an open end wherein said pan and lid may be inserted, said can having a tapering form longitudinally of its length and width and slidingly engaging with said pan and lid.

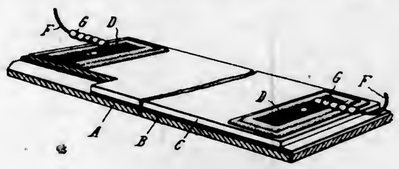
1,422,127. WIRE-FENCE FASTENER. VALDEMAR PETERSEN, St. Ansgar, Iowa. Filed Sept. 28, 1921. Serial No. 503,832. 2 Claims. (Cl. 256—48.)



1. In a wire fence fastener, a clip bar terminating at on end in a head, a finger bar pivotally secured to said clip bar and formed with a head adapted to cooperate with the clip bar head, a straight finger pivotally secured to said clip bar, and a spring adapted to encircle said clip bar and one finger.

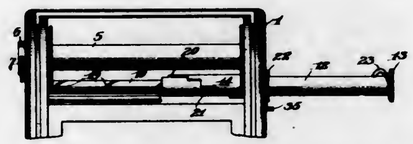
1,422,128. HARNESS HOOK. HARVEY W. RAGER, Ponca, Nebr. Filed Apr. 19, 1921. Serial No. 462,617. 2 Claims. (Cl. 248—24.)

1. In a device of the class described, an attaching plate provided with a perpendicular slot terminating with flat top and bottom end walls, arms extending forwardly from the plate, a hook pivotally supported between the ends of said arms, an inwardly extending shank on said hook engaging in said slot and adapted to abut with said top and bottom end walls respectively in open and closed positions of said hook, and a bifurcated keeper integral with said plate adapted to receive the free end of said hook when in closed position.



1,422,129. TRACTION COUPLING. JOSEPH C. REUSS, Libertyville, Ill. Filed Mar. 16, 1921. Serial No. 452,664. 1 Claim. (Cl. 280—33.2.)

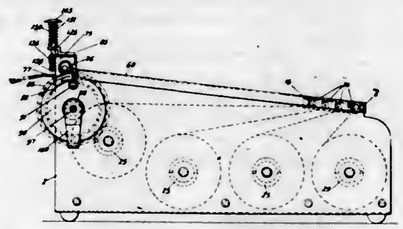
In combination, a vehicle having a forwardly extending pole comprising front and rear sections of approximately equal length, a hinge secured to the top of said pole for connecting adjacent ends of said sections, a channel mem-



ber secured to the under side of said rear section adjacent the front end thereof and projecting beyond said section for receiving the rear end of said front section and for holding said sections in alignment with one another, a pin having a threaded end arranged to pass through the projecting portion of said channel member and the rear portion of said front section, a nut arranged to be threaded on to said pin for holding said channel member and front section in rigid relation to one another, said channel member having an opening therein for receiving a coupling device when said front section is folded, a double-tree for said vehicle, a pin for securing said double-tree to said pole adjacent the rear end of said rear section, and a ring carried by the upper end of said pin and arranged to receive the free end of said front section when said front section is folded backwardly along the upper face of said rear section.

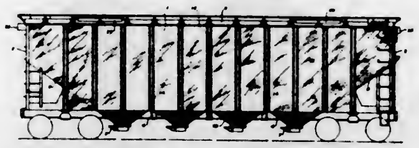
1,422,130. ELECTRICAL HEATER RESISTANCE ELEMENT. ROBERT WOOLRIDGE REYNOLDS, Darlinghurst, near Sydney, New South Wales, Australia. Filed Feb. 18, 1921. Serial No. 446,079. 4 Claims. (Cl. 219—76.)

1. An electrical heater resistance element consisting of an electrically insulating support, terminal wiring attachments mounted on said support, a painted on and dried out film surface containing a water-washed chemically precipitated silicic vehicle, and powdered graphite incorporated in said silicic vehicle.



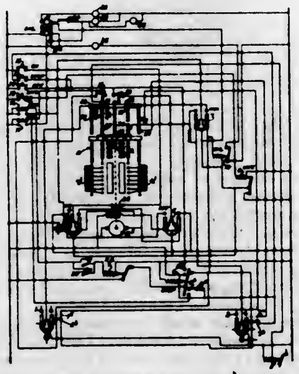
1,422,131. FILM-WINDING MECHANISM FOR CAMERAS. WILLIAM A. RIDDELL, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Mar. 16, 1918. Serial No. 222,799. 11 Claims. (Cl. 242—71.)

7. In a film camera, the combination with a film winding roll and driving means therefor embodying a push rod and mechanism for converting the reciprocatory motion thereof into rotary motion, of means for progressively limiting the actuating movement of the push rod comprising a rotary sleeve surrounding the latter and provided with a plurality of stepped stops and with a ratchet, an abutment on the push rod adapted to cooperate, singly, with said stops when the push rod is moved in one direction and a spring finger on the latter adapted to engage the ratchet and rotate the sleeve when the push rod is moved in the opposite direction.



1,422,132. AUTOGRAPHIC REGISTER. HERBERT L. ROBERTS, Toronto, Ontario, Canada, assignor to Business Systems, Limited, Toronto, Ontario, Canada, a Corporation of Canada. Filed Sept. 24, 1918. Serial No. 255,481. 8 Claims. (Cl. 282—21.)

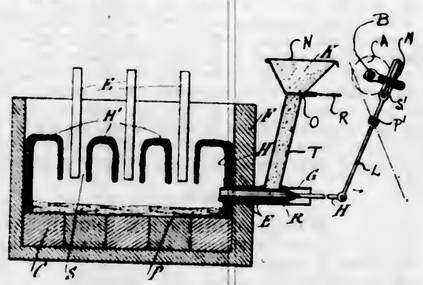
1. In a machine of the character described, the combination of a feed roll mounted in fixed bearings, a spring pressed frame pivotally mounted adjacent to said fixed feed roll, a second feed roll journaled in said frame, suitable registering means adapted to relatively shift super-



posed webs into registered position, and means for rocking said frame for simultaneously separating said feed rolls and actuating said registering means.

1,422,133. GRAIN CAR. WILLIAM J. ROBIDER, Westmount, Quebec, Canada. Filed Dec. 9, 1920. Serial No. 429,408. 9 Claims. (Cl. 105—248.)

1. In a railway car having metal sides and ends, a metal center sill, a plurality of metal hoppers correspondingly arranged on each side having longitudinal walls inclined downwardly from the car sides and center sill, and transverse walls inclined downwardly at a lesser angle with the adjacent meeting edges forming equal angles and having discharge openings and closures at the bottom, a metal partition extending from side to side and from between the adjacent walls of the middle hoppers to near the top of the sides and a removably mounted metal roof.



1,422,134. MOTOR CONTROLLER. THOMAS H. RODMAN, New York, N. Y., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Aug. 27, 1920. Serial No. 406,505. 14 Claims. (Cl. 172—179.)

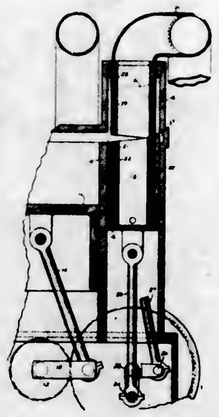
3. In a motor controller in combination power operated starting and stopping means, a control station there-

for including starting, stopping and resetting elements and connections requiring operation of said resetting element as a prerequisite to use of said starting element for restarting after operation of said stopping element.

1,422,135. METHOD OF MANUFACTURING CALCIUM CARBIDE. WILLIAM B. ROGATZ, Plattsburg, N. Y., assignor to Farmers Standard Carbide Co., Plattsburg, N. Y., a Corporation of New York. Filed May 5, 1921. Serial No. 467,176. 6 Claims. (Cl. 204—62.)

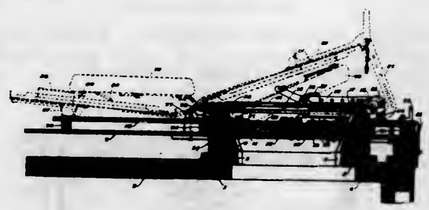
1. In the art of making calcium carbide in an electric furnace, that step in the art which consists in feeding the material through the wall and side crust of the furnace and above the molten material in the furnace and below the top crust of the furnace.

1,422,136. MATRIX MANUFACTURE. JOSEPH L. ROUSSEAU, Brooklyn, N. Y., assignor to Mergenthaler Linotype Company, a Corporation of New York. Filed Aug. 1, 1921. Serial No. 488,865. 5 Claims. (Cl. 101—401.2.)



1. In the art of manufacturing matrices, providing an oversized blank, forming in the edge of said blank a notch of a depth not to extend below the final edge of the matrix, punching the character impression in the bottom wall of said notch and of a depth to extend below the final matrix edge, and thereafter dressing down the blank edge to produce the final matrix edge.

1,422,137. ART OF MANUFACTURING MATRICES. JOSEPH L. ROUSSEAU, Brooklyn, N. Y., assignor to Mergenthaler Linotype Company, a Corporation of New York. Filed Aug. 1, 1921. Serial No. 488,866. 5 Claims. (Cl. 101—401.2.)

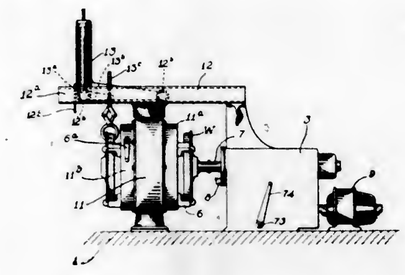


1. In the art of manufacturing plural-character matrices, providing a blank with a raised portion on its character edge occupying the zone intermediate two adjacent character zones, punching the matrix characters in their respective zones, and thereafter dressing down the raised portion to the edge of the blank.

1,422,138. VALVE MECHANISM FOR GAS ENGINES. EPPA H. RYON, Waltham, Mass. Filed Aug. 18, 1919. Serial No. 318,076. 7 Claims. (Cl. 123—188.)

1. A valve mechanism for gas engines having a cylinder and piston, comprising a cylindrical casing, a plurality of co-operating fixed and movable concentric sleeves oppositely disposed within said casing, said sleeves being reversely beveled at their adjacent ends to form a port for the passage of gases when partially separated, and means to operate said movable sleeves in timed relation to said engine piston to open and close said port.

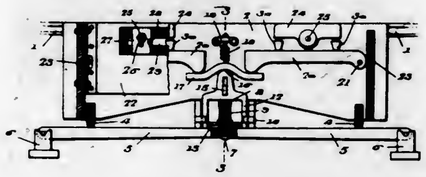
1,422,139. HATCH COVER FOR REFRIGERATOR CARS. AUGUST G. SANDMAN, Baltimore, Md. Filed Dec. 13, 1920. Serial No. 430,250. 7 Claims. (Cl. 105—377.)



1. In a refrigerator car having a hatchway in the roof thereof, hatch timbers about the hatch, a hatch plug fitting between the hatch timbers, a hinged hatch cover and means adapted for detachably engaging the plug to the cover.

1,422,140. CAR-WHEEL-BORING MACHINE. WILLARD T. SEARS, Montclair, N. J., assignor to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 6, 1920. Serial No. 401,719. 38 Claims. (Cl. 29—38.)

1. In a boring machine, the combination of a base, a substantially vertically extending work holder thereon comprising a chuck, a tool support also mounted on the base, a tool mounted in the tool support, means extend-

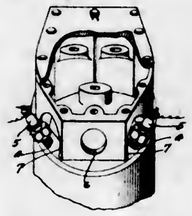


ing across the tops of the work holder and tool support and rigidly connecting such members, and means for causing relative rotating and feeding movements between the tool and chuck.

15. In a boring machine, the combination of a base, a work-holding turret comprising two chucks mounted on the base for movement about an approximately vertical axis whereby either chuck may be placed in the tooling position and the other chuck in the work-chucking position, a tool support also mounted on the base, means rigidly connecting the turret and tool support, a boring bar mounted in the tool support coaxially of the chuck in the tooling position, wedge means for securing the turret in the working position, and means for causing relative rotating and feeding movements between the bar and last mentioned chuck.

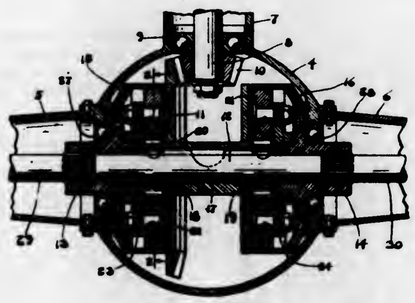
30. In a boring machine, the combination of a base, a work holder thereon, a boring bar, a fluid pressure cylinder operatively connected to the bar, a piston operative within the cylinder, a piston rod connecting the piston to the base, two fluid pressure pipes, fluid pressure conduits through the piston rod connecting the pipes to the opposite sides of the piston respectively, valves in the pipes for controlling the flow of fluid to the opposite sides of the piston, means connecting such valves and adapted in one position to leave a restricted opening through one valve whereby the flow of fluid is regulated to slowly feed the boring bar forward and in another position to leave a full opening through such valve whereby the flow of fluid in the opposite direction may be rapid to permit the rapid withdrawal of the bar, and means for rotating the bar.

1,422,141. WEIGHING MECHANISM. STEPHEN WALTER SHUFORD, Woodlawn, N. C. Filed Aug. 8, 1919. Serial No. 316,142. 5 Claims. (Cl. 265—9.)



1. A weighing apparatus embodying a yieldable platform arranged for the movement of railroad cars thereover, a recording device having a recording member operatively connected to said platform to be positioned by the depression of the platform, and means operated by the wheels of the cars and adjustable with respect to the platform longitudinally of the line of movement of the cars for bringing the recording member into operation to make a record when the car is moved on the platform to a predetermined position.

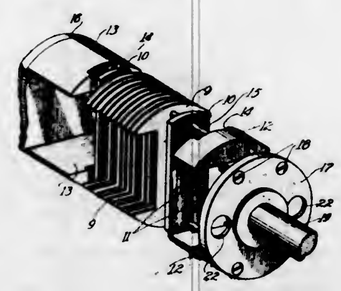
1,422,142. EXTENSION-TABLE SLIDE. HARRY N. SMITH, Watertown, Wis., assignor to Watertown Table Slide Company, Watertown, Wis., a Corporation of Wisconsin. Filed July 26, 1921. Serial No. 487,664. 3 Claims. (Cl. 45—115.)



1. The combination of slide-bars having longitudinal recesses therein, and a block having an upper surface, a second surface, spaced lower than said first mentioned upper surface, a lower surface spaced below said second upper surface, and a second lower surface spaced below said first mentioned upper surface, the distances between said upper surfaces being unequal to the distances between said lower surfaces, and said slide-bars receiving said block in said recesses and contacting with said surfaces.

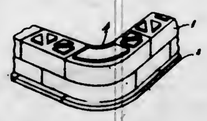
1,422,143. INTERNAL-COMBUSTION ENGINE. WILLIAM J. SNADECKI, Bridgeport, Conn., assignor to Richard Crane, Washington, D. C. Filed May 13, 1918. Serial No. 234,127. 1 Claim. (Cl. 123—55.)

In combination with the cylinder head of an internal combustion engine, two exhaust outlets at one side and a gas inlet opposite thereto, a spark plug at each side of said inlet, said spark plugs passing through said cylinder head at such an angle that when said cylinders are mounted in a V-type engine said spark plugs are substantially vertical, a clearance through said cylinder head around said spark plug, said cylinder head providing water-jacketing means around said outlets and detachably secured to said cylinder.



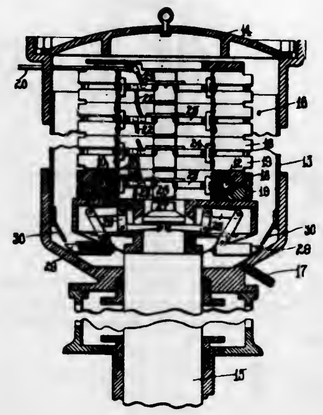
1,422,144. POSITIVE BOTH-WHEEL-DRIVE DIFFERENTIAL. ALBERT B. SOWDEN, Covington, Ky. Filed Apr. 29, 1920. Serial No. 377,637. 1 Claim. (Cl. 74—7.)

In a single differential housing supported by torque tube and axle housings, a short driven shaft within said



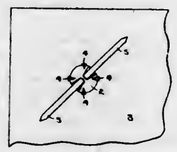
housing, an axle in each axle housing, a pair of drums having hubs rotatively mounted on said short driven shaft and having detachable driving connection with said axles respectively, a gear fixed on the driven shaft, within each drum, a rotatively mounted disk in each drum, a series of double faced cams pivotally mounted on each disk adapted to be moved into clamping engagement with said drums respectively, in either direction and having gear teeth thereon meshing with the teeth of said gears, respectively, a beveled gear keyed on said short driven shaft between said drums and having means to close said drums respectively, a beveled pinion engaging said beveled gear and a drive shaft on which said beveled pinion is keyed, substantially as set forth and for the purposes specified.

1,422,145. ARMATURE FOR MAGNETO MACHINES. JOHN ROY STARK, Racine, Wis., assignor to Webster Electric Company, Racine, Wis., a Corporation of Wisconsin. Filed Aug. 25, 1920. Serial No. 405,958. Renewed Nov. 25, 1921. Serial No. 517,837. 4 Claims. (Cl. 171—207.)



1. An armature for a magneto machine comprising a core structure consisting of a group of substantially I-shaped laminæ and a pair of bars, one disposed on each side of the laminæ and rigidly secured thereto, segmental blocks disposed at the ends of the core structure and provided with notches whereby the blocks may embrace said bars, and means extending through the blocks and through the core structure arranged to hold the blocks upon the core structure.

1,422,146. BUILDING BLOCK. WILLIAM TACKENBERG, Cincinnati, Ohio. Filed Nov. 29, 1921. Serial No. 518,662. 1 Claim. (Cl. 72—38.)

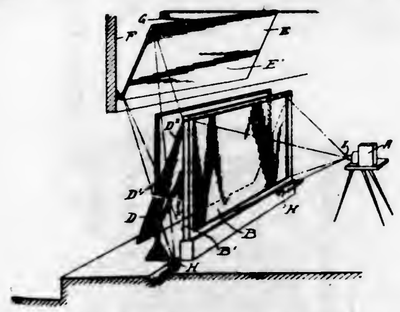


In building blocks, triangular lugs and depressions, on opposite sides thereof, said lugs and depressions being arranged to interlock between superimposed blocks to secure the same against displacement in all directions in horizontal planes, and the abutting surfaces of the lugs on one end of the block corresponding in disposition to the engaging surfaces of the depressions on the other end of the block, so as to necessitate breaking of joints between courses.

1,422,147. METHOD OF TREATING RUBBER ARTICLES. EDWARD C. TAYLOR, Springfield, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Oct. 7, 1920. Serial No. 415,366. 3 Claims. (Cl. 18—53.)

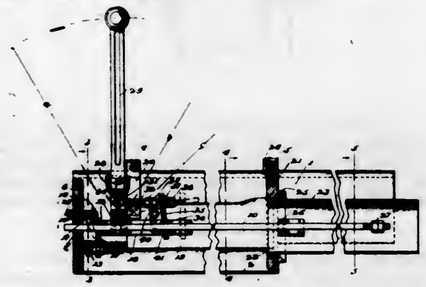
1. The method of vulcanizing an assembled tire casing comprising locating the casing on a hollow core, directing a cooling medium into the interior of the core, subjecting the exterior of the casing to heat, and subsequently applying molding pressure and vulcanizing heat to the casing.

1,422,148. PAPER FASTENER. ARTHUR STANLEY TONKIN, Lyndhurst Road, Hastings, New Zealand, assignor of one-half to Ivan Biggar Logan, Napier, New Zealand. Filed Aug. 8, 1921. Serial No. 490,614. 2 Claims. (Cl. 24—153.)



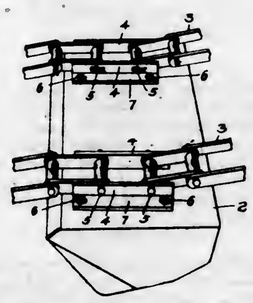
1. A paper fastener comprising, a member bevelled at its outer edge and also provided at its edge with a plurality of bendable prongs adapted to pass through a backing from the outer side, a separate member adapted to be placed between said prongs and secured on the inner side of the backing when said prongs are bent inwardly, and a pair of elongated prongs on said member upon which papers are passed.

1,422,149. SCREEN FOR MOTION PICTURES. JOHN F. R. TROEGER, New York, N. Y., assignor, by mesne assignments, to American Lux Products Corporation, New York, N. Y., a Corporation of Delaware. Filed Nov. 3, 1919. Serial No. 335,233. 3 Claims. (Cl. 88—24.)



1. The combination of two screens the surfaces of which

are arranged at an angle to each other for the purpose specified and a reflector for reflecting light to the surface



of one of said screens, said reflector having its reflecting surface made of fibrous material.

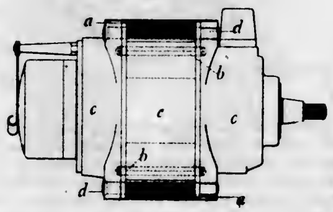
1,422,150. APPARATUS FOR FORMING CONCRETE PIPES. DANIEL N. TRULLINGER and LEO A. GRANGER, Fresno, Calif. Filed Aug. 19, 1920. Serial No. 404,544. 9 Claims. (Cl. 25—32.)

1. An apparatus for the purpose set forth comprising a shell, a core disposed longitudinally within the shell, a head supported upon the shell and adapted to travel longitudinally thereof and normally fitting around the front end of the core, and means whereby the shell, the head and the core may each be shifted longitudinally relative to the others.

1,422,151. CHAIN ATTACHMENT FOR ELEVATOR BUCKETS. HENRY B. WALKER, Lancaster, Ohio. Filed Apr. 12, 1920. Serial No. 373,325. 1 Claim. (Cl. 198—151.)

A chain connection for elevator buckets comprising angle-links extending beyond the link-pins, and fastening devices located beyond the link-pins for securing the said angle-links to said buckets.

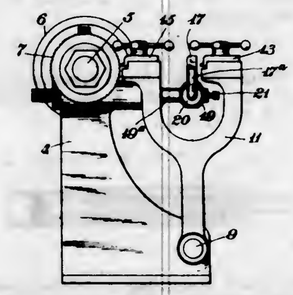
1,422,152. STAMP RECEIVER. EDWARD MASON WALSH, Monroe, Wash. Filed Jan. 6, 1921. Serial No. 435,498. 3 Claims. (Cl. 216—21.)



1. In a device of the class described, a stamp guide; a tank extended longitudinally of the guide and provided with a swab located adjacent to one end of the guide; a head including arms between which the other end of the guide and the corresponding end of the tank are received; a yoke receiving the arms; a clamping element in the yoke and coacting with one arm to bind the tank and the guide between the arms; and means carried by the head for supporting a roll of stamps for feeding through the guide and upon the path traversed by the swab.

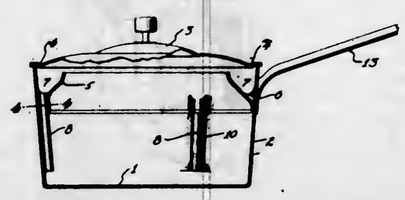
1,422,153. TRUSS PAD. HERBERT A. WARREN, Woburn, Mass. Filed Aug. 17, 1921. Serial No. 492,899. 3 Claims. (Cl. 128—119.)

1. A truss pad comprising an annular body having a base portion, formed to bear on a supporting member, a socket extending inwardly from the outer side of the body, and of greater diameter at its outer than at its inner end, the latter being open; a pressure applicator including a shank extending entirely through the socket, and having an enlargement at its inner end, and an enlarged head of greater diameter than the socket; and a spring which normally holds the shank enlargement against the inner end of the socket, and the head offset from the outer side of the body, the shank and socket being formed to permit a universal tipping movement of the applicator relatively to the body, on a fulcrum formed by the inner end of the socket, said movement being limited by the bearing of a portion of the enlarged head against the outer side of the body.



1,422,154. DYNAMO-ELECTRIC MACHINE. EARNEST ANSLEY WATSON, Coventry, England, assignor to The M-L Magneto Syndicate Limited, Coventry, England. Filed Oct. 24, 1921. Serial No. 510,098. 2 Claims. (Cl. 171—209.)

1. In a dynamo electric machine the combination of separate opposed end members having recesses in the



inner faces thereof, permanent magnets confined between said end members, laminated pole pieces located between the end members having openings extending from end to end thereof alining with said recesses, removable pins located in said openings and being of greater length than said pole pieces and projecting beyond the ends of each of the latter, each pin having its opposite ends removably seated in two alined recesses in the opposed end members, and fastening means removed from the pole pieces and passing through the end members for securing the whole together.

1,422,155. KEY-DUPLICATING MACHINE. WILLIAM C. WETHERHOLT, Columbus, Ohio. Filed June 2, 1919. Serial No. 301,348. 1 Claim. (Cl. 90—13.2.)

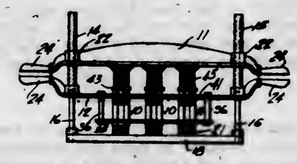
A key-cutting machine including, in combination, a frame, a rotary cutter carried by the frame, a vertically disposed swinging fork arm having the terminals of its branches lying in substantially the same horizontal plane and in the plane of the axis of the cutter, means for securing a key to be duplicated in one terminal of the fork arm, means for securing a key blank in the other terminal of the fork arm, a pilot supporting means comprising a stem secured in the frame and adjustable transversely the cutter axis, and a pilot secured in said stem and adjustable transversely thereof.

1,422,156. COOKING UTENSIL. BEULAH L. WEVER, Savannah, Ga. Filed Dec. 13, 1921. Serial No. 522,115. 4 Claims. (Cl. 53—1.)

1. A cooking utensil comprising a bottom and side portion arranged to form a vessel, an inwardly-flaring flange disposed on the upper, inner portion of the side to constitute a gutter around the upper inner edge of the vessel and leave a clear interior cooking space for articles to be cooked within the vessel, and a duct leading from the interior of the gutter to the lower portion of the interior cooking space within the vessel.

1,422,157. BAR-SPACING DEVICE. WILLIAM E. WHITE, Chicago, Ill. Filed Apr. 12, 1920. Serial No. 373,339. 5 Claims. (Cl. 72—122.)

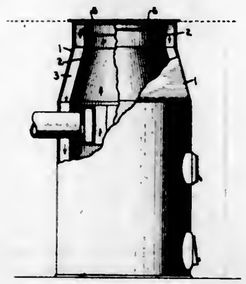
2. In a bar spacer, the combination of a single continuous length of wire, and wire chairs welded thereto at intervals, said chairs being composed of a portion lying alongside of said length of wire and beneath the same,



and two legs joined to said portion and one thereof bent over the wire, substantially as described.

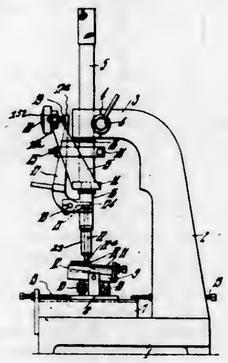
1,422,158. MEANS FOR CONNECTING TWO ELEMENTS. JOHN H. WILLIAMS, East Cleveland, Ohio, assignor to The Outlook Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 19, 1920. Serial No. 404,567. 4 Claims. (Cl. 287—53.)

1. In combination, a shaft having a flattened portion, a crank having an aperture for the reception of the shaft, means encircling the crank and adjustable longitudinally of the same for engagement with the flattened portion of the shaft for retaining the crank against angular movement with respect to the shaft.



1,422,159. WASHER-PLACING APPARATUS. ERASTUS E. WINKLEY, Lynn, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Dec. 16, 1916, Serial No. 137,368. Renewed Dec. 17, 1920. Serial No. 431,500. 25 Claims. (Cl. 18—1.)

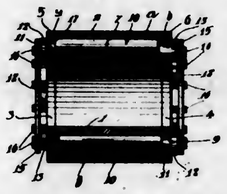
1. A washer-placing apparatus, having in combination, heel molds and washer-supporting pins fixed therein, guide posts in fixed relation with said pins, pins for holding stacks of reserve washers arranged correspondingly to



the arrangement of the washer-supporting pins, guide posts fixed in the same relation with the reserve stack pins as the formed guide posts bear to the washer-supporting pins, and a member guided in its operation by the guide posts for transferring the washers from the reserve stacks to the washer-supporting pins.

1,422,160. FURNACE CONSTRUCTION. WILBERT G. WISE, Akron, Ohio. Filed Dec. 5, 1921. Serial No. 519,807. 8 Claims. (Cl. 126—99.)

1. In a furnace construction having an inner and an outer casing, a stiffening member at the upper end of the inner casing, a register over the casings and formations on the register adapted to engage the member to hold the inner casing.

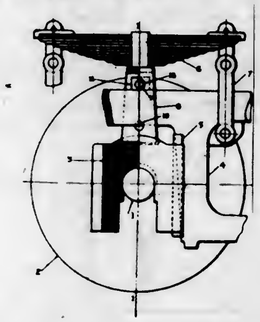


1,422,161. GAUGE. IRVIN FLINN WOODROW, Philadelphia, Pa., assignor, by mesne assignments, to Standard Steel and Bearings Incorporated, Wilmington, Del., a Corporation of Delaware. Filed Sept. 30, 1918. Serial No. 256,315. 20 Claims. (Cl. 33—147.)

1. In a device of the character described, a base, a plate reciprocatively mounted thereon, a holder pivotally mounted on said plate, and a contact element supported in position to engage an article carried by said holder.

1,422,162. ROLLER BEARING. OSWALD F. ZAHN, Los Angeles, Calif., assignor to Zahn Self Righting Roller Bearing Company, Los Angeles, Calif., a Corporation of California. Filed July 15, 1920. Serial No. 396,432. 3 Claims. (Cl. 64—62.)

1. A roller bearing comprising spaced inner and outer bearing members, inner and outer thrust rings at the ends of the bearing members respectively, two sets of rollers between the bearing members having annular grooves, the rings at one end engaging the grooves of only one set of rollers and the rings at the opposite end

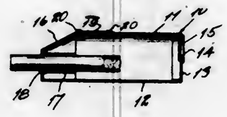


engaging the grooves of only the second set of rollers, and the rollers of one set being interposed between the rollers of the other set.

1,422,163. DOOR CHECK. PETER ZIMBELMANN, Aurora, Ill. Filed July 19, 1920. Serial No. 397,523. 4 Claims. (Cl. 16—84.)

1. A door check comprising a tubular housing; a threaded stem fitting into said housing; a piston adjustably threaded on said stem and operating in said housing; and a second housing mounted for movement with said stem and slidably fitting over said first mentioned housing, substantially as described.

1,422,164. FRAME SUPPORT. FRANK M. A'HEARN, Greenville, Pa. Filed Feb. 21, 1922. Serial No. 538,215. 6 Claims. (Cl. 105—82.)



1. In a frame support, the combination of a frame; a saddle straddling the frame; a bearing box supporting the saddle, said saddle having perforated sides; a supporting block arranged between the legs of the saddle and operating against the frame and forming a support, said block having a perforation therethrough; and a pin extending through the perforations in the saddle and the block.

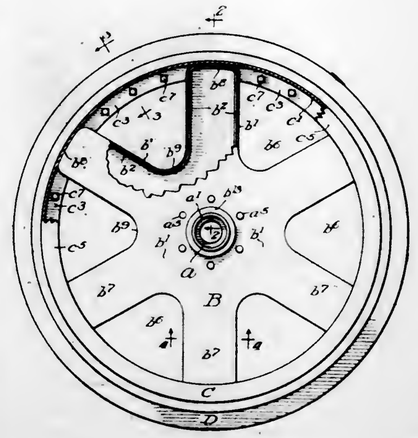
1,422,165. ASH RECEPTACLE. LEON AITOWICZ, Yonkers, N. Y. Filed July 20, 1921. Serial No. 486,220. 2 Claims. (Cl. 131—51.)

2. A device of the class described comprising, a hollow body, a flattened bottom wall for said body, a perforated end closure for the outer end of the body, a frusto-conical

member at the opposite end of the body, said frusto-conical member having an axial opening therein, a collar extending inwardly from the end wall of the frusto-conical member, and terminating in a plane with the inner end of the hollow body, said collar being in axial

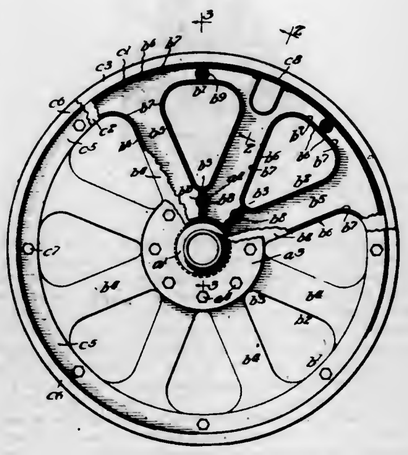
alinement with the opening and being slightly enlarged near its outer end, the body having a window adjacent the frusto-conical member, guide at opposite ends of the window and a closure slidably mounted in the guides for closing the window.

1,422,166. PHONOGRAPH-RECORD BRUSH. EDWARD J. BAKULA, St. Louis, Mo. Filed Apr. 15, 1921. Serial No. 461,527. 1 Claim. (Cl. 15—210.)



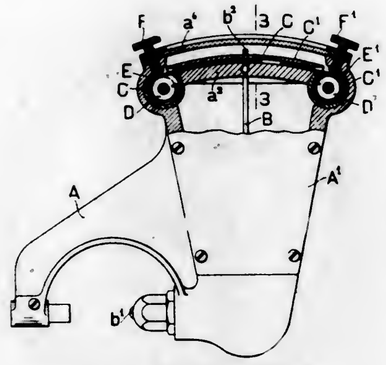
A phonograph record brush comprising a relatively thin disk of suitable diameter, a covering of fibrous material attached to the lower surface of the said disk and having its marginal edges secured to the peripheral edge of the said disk, the said material being stretched taut across the surface of the disk, a knob, a pivot pin carried by the disk and rigidly thereto, the said pivot pin being extended through a central opening in the said knob whereby the said disk may freely revolve with the said pivot pin while the knob is held stationary

---



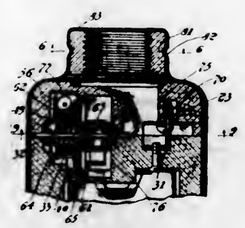
1,422,167. WHEEL. GERALD G. BARRY, Chicago, Ill. Filed Dec. 9, 1918. Serial No. 265,934. 12 Claims. (Cl. 301—64.)

1. In a vehicle wheel, the combination of a suitable hub, a supporting spoke body between the hub and rim, said supporting body comprising a pair of sheet metal flanged body plate members as herein described telescoped together, each of said sheet metal body members being formed from a blank provided with a central opening adapted to receive a hub, the main body of each said member being provided with a flange around the outer edge thereof, in forming which outer flange each of said metal blanks having a corresponding circumferential series of portions removed therefrom, leaving a series of projecting spoke bars, and the outer flange being formed as an integral continuous one from and following around the main body of each said member as thus formed (including the ends and sides of the projecting spoke bars and connecting portions of the plate body between the spokes), the said outer flange on one of said members being formed so that the body size is such that the corresponding flange on the opposite member may be forced thereover and the said two members telescoped together, the said outer flanges of the two members when telescoped being directed toward each other and being of a width substantially corresponding to the space between the two main body plates, thus providing a double thickness of the metal around the outer telescoped edges of the assembled body, means for securing the telescoped main body plates from disengagement at the central opening, means for securing the said telescoped body to the hub,



an annular rim mounted on the spoke ends, and means for securing the said rim member to the spoke ends, substantially as set forth.

1,422,168. METAL WHEEL. GERALD G. BARRY, Chicago, Ill. Filed Oct. 14, 1920. Serial No. 416,887. 5 Claims. (Cl. 301—66.)



1. In a wheel, a nave, spoke and felly structure comprising a series of independent metal box units, each said unit consisting of a complemental pair of boxes having the outline and flanged substantially as shown, formed, telescoped and assembled substantially as set forth.

1,422,169. INDICATING-LEVER-LIMIT GAUGE. MAX BARTHOLDY, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed May 20, 1921. Serial No. 471,182. 3 Claims. (Cl. 33—147.)

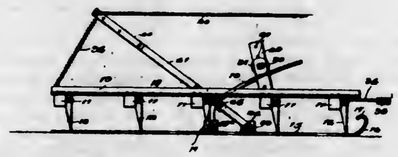
1. In a gauge of the class described provided with a scale and a pointer cooperating therewith, a pair of steel strips adjustable relative to the scale, the ends of said strips defining a tolerance field and means for adjusting said strips and means for securing them in their adjusted position.

1,422,170. ELECTRICAL CONNECTOR DEVICE. REUBEN B. BENJAMIN, Chicago, Ill., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 19, 1917. Serial No. 207,841. 6 Claims. (Cl. 173—354.)

1. A switch mechanism comprising a rotatable insulating member, a switch contact supported thereby, a lever and pawl for actuating said rotatable member, and a ball-chain connected with said lever, said lever comprising a sheet-metal member having a portion lying in a plane substantially perpendicular to the axis of said rotatable member, and a portion lying in a plane substantially radially with respect to the axis of said rotatable member, said first portion having an opening therein large enough to permit the passage of one of the balls of the ball-chain, there being a slot leading from said opening to said second portion, not large enough to permit the passage of one of the balls but large enough to permit passage of the connection between the balls.

1,422,171. VELOCIPEDE. CLARENCE W. BENNETT, New York, N. Y. Filed Jan. 22, 1920. Serial No. 353,262. 6 Claims. (Cl. 208—113.)

1. In a velocipede, a frame having side members, a seat post bracket having parts held between said side members and a part projecting beyond said side members, said bracket at the point where it projects from the side mem-



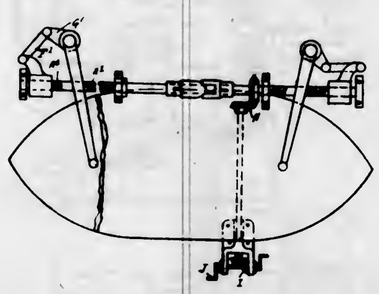
bers having its lower edges bearing directly on the upper edges of such side members, and a seat post adjustably held in the projecting portion of the bracket.

1,422,172. VELOCIPEDE. CLARENCE W. BENNETT, New York, N. Y. Filed Jan. 30, 1920. Serial No. 355,082. 2 Claims. (Cl. 208—102.)

1. In a velocipede, a frame and a tubular steering head carried thereby, a steering post journaled in said head, head plates secured in spaced relation on said post at a point below the steering head, a fork having side members extending up through said head plates, and a substantially U-shaped bracket inverted within said fork and having a base portion secured in engagement with the lower head plate and downwardly extending side arms secured to the side members of the fork.

1,422,173. HARROW. FRANK GRANVILLE BIGGERSTAFF, Kansas City, Mo. Filed Nov. 27, 1920. Serial No. 426,787. 7 Claims. (Cl. 55—34.)

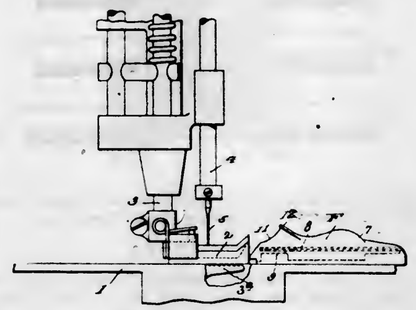
7. In a device of the character described for use with harrows, a runner, cooperable levers pivoted to said runner, and an abutment arranged upon the harrow and engaged with one of said levers.



1,422,174. HOISTING TACKLE. OTTO JOHN BOETTCHER, Chilton, Wis., assignor of two-fifths to Fred W. Maas and one-fifth to Geo. C. Hume, both of Chilton, Wis. Filed Dec. 9, 1921. Serial No. 521,180. 1 Claim. (Cl. 254—188.)

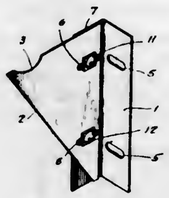
A tackle, comprising a block having a flat-faced roller journaled in it, a second block having two flat-faced rollers arranged tandem and journaled in it, a cam-shaped sustaining catch provided with a double-eye which is pivoted in the second block in line with its two rollers, a lifting member pivoted between the two eyes of the said double-eye, said catch and lifting member being mounted

on the same pivot and being independently movable, and a flat operating strap which engages with said catch and passes over the said rollers and is secured at one end to the first said block, said catch operating to clamp the strap against one of the rollers of the said second block.



1,422,175. SHIP'S DAVIT. THOMAS JOHN CARR, Newcastle-upon-Tyne, England. Filed May 5, 1921. Serial No. 466,990. 1 Claim. (Cl. 9—22.)

In mutually operated ships' davits, a screw-threaded shaft, screw-threaded sliding members carried thereon, a link joined to each of said members, and a crank pin-jointed to the corresponding link and fast on each davit at a different angle so that the linear motion of said sliding members produces differential rotary movement of the davits, and operating gear for said screw-threaded shaft.

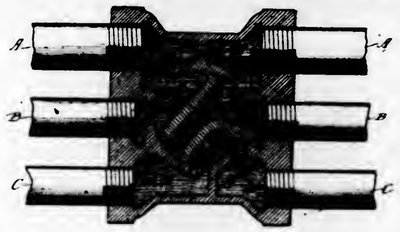


1,422,176. FOLDER FOR SEWING MACHINES. JOHN E. CHALMAN, Chicago, Ill., assignor to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 18, 1918. Serial No. 254,608. 8 Claims. (Cl. 112—147.)

1. A folder for folding the edges of a strip underneath the body portion of the strip so that said edges will substantially meet centrally of the folded strip, said folder comprising a base, a tongue around which the strip is folded carried by said base and spaced therefrom, side walls projecting upwardly from said base, said side walls being extended over the tongue and spaced from each other for a portion of the length of the tongue to permit the operator's finger to slide along the tongue for inserting the strip in the folder, said side walls being joined for a por-

tion of the length of the tongue and adjacent the delivery end of the folder, said joined side walls adjacent the spaced edges of the side walls being arched or raised to form a clearance space for the central portion of the strip as it is inserted into the folder.

1,422,177. WALL-RADIATOR BRACKET. GROVER C. CLANTON, Bayonne, N. J. Filed Aug. 3, 1921. Serial No. 489,449. 2 Claims. (Cl. 248—30.)

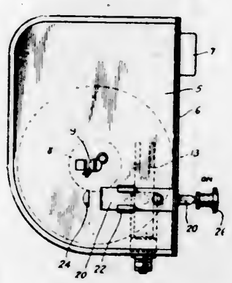


1. A radiator support, comprising a wall member formed of a pair of sheet metal flanges disposed at right-angles to each other and provided with a plurality of elongated slots, and a sheet metal member removably secured to one of said flanges and adapted to support a radiator, said last member being provided with elongated slots disposed at right-angles to and intersecting the slots of the flange to which it is secured, thereby to permit adjustment of the radiator in two directions, the slots of the remaining flange of the wall member being disposed so as to permit adjustment of the radiator in a third direction.

1,422,178. VALVE. ROSWELL P. COOLEY, Chicago, Ill., assignor to Vapor Car Heating Company, Inc., Chicago, Ill., a Corporation of New York. Original application filed May 11, 1918, Serial No. 233,905. Divided and this application filed Feb. 24, 1919. Serial No. 278,882. 12 Claims. (Cl. 251—105.)

1. In a valve, the combination of a casing having a plurality of chambers, and a rotary valve member in said casing provided with a plurality of ports and adapted to be set to three different positions in which said ports put said chambers into communication with each other

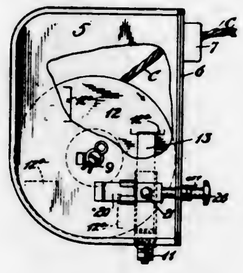
in pairs, differently combined for each position of the valve member, said casing and valve member being pro-



vided with drainage ports which come into register when said valve member is in certain of said positions.

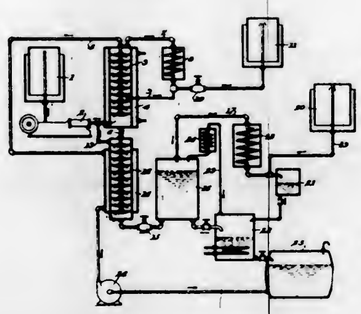
1,422,179. TRAFFIC SIGNAL. JOHN D. COWARD, Newton Upper Falls, Mass. Filed Jan. 19, 1920. Serial No. 352,272. 8 Claims. (Cl. 116—35.)

1. A traffic signal for automobiles having, in combination, a transparent windshield, an indicator support positioned upon the rear of said windshield and a direction indicator of a length greater than its width rotatably mounted upon said support and projecting laterally of said support a substantial distance therebeyond, whereby said indicator may be visible through said windshield and visible and manually operable from the rear of said windshield.



1,422,180. ELECTRIC SWITCH FOR WINDING DRUMS. CHARLES H. CUNO, Meriden, Conn., assignor to The Cuno Engineering Corporation, Meriden, Conn., a Corporation of Connecticut. Filed Feb. 3, 1922. Serial No. 533,828. 7 Claims. (Cl. 200—153.)

1. The combination of a casing, a winding drum therein having a conducting flange, a spring arm contact normally out of engagement therewith, and a manually operable slide adapted to force said spring arm contact into engagement with said flange.

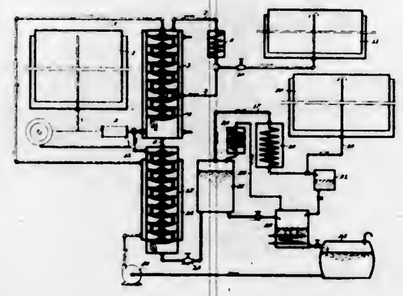


1,422,181. ELECTRIC SWITCH AND STOP FOR WINDING DRUMS. CHARLES H. CUNO, Meriden, Conn., assignor to The Cuno Engineering Corporation, Meriden, Conn., a Corporation of Connecticut. Filed Mar. 21, 1922. Serial No. 545,445. 3 Claims. (Cl. 200—153.)

1. In a device of the character described, a self-rewinding drum, a cable carried thereby and in circuit therewith, a circuit closer, means for manually operating the same and means cooperating with said circuit closer to lock

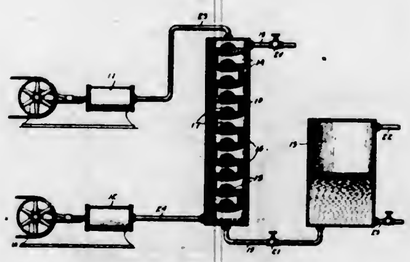
the drum against rewinding when the circuit closer is in the closed circuit position and leaving said drum free to rewind when the same is in the open circuit position.

1,422,182. TREATING GASEOUS HYDROCARBON MIXTURES. GEORGE O. CURME, Jr., Pittsburgh, Pa., assignor to Union Carbide Company, New York, N. Y., a Corporation of Virginia. Filed June 5, 1919. Serial No. 302,040. 2 Claims. (Cl. 260—170.)



1. Process of separating and recovering a relatively soluble component from a gaseous hydrocarbon mixture, comprising compressing the mixture, passing the compressed mixture in contact with a suitable solvent maintained at a temperature below atmospheric, drawing off the gases from which the soluble component has been removed, progressively reducing the solvent power of the liquid to separate therefrom the less soluble gases, returning the gases thereby evolved into contact with portions of liquid having progressively increasing solvent power, and finally to the absorption system, releasing the pressure from the liquid containing the relatively soluble component, and separately recovering said component.

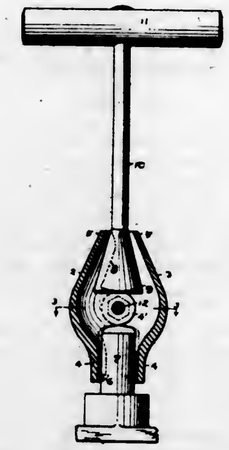
1,422,183. PROCESS OF TREATING GASEOUS MIXTURES. GEORGE O. CURME, Jr., Pittsburgh, Pa., assignor to Union Carbide Company, New York, N. Y., a Corporation of Virginia. Filed May 4, 1920. Serial No. 378,782. 5 Claims. (Cl. 266—172.)



1. Process of separating and recovering a relatively soluble component from a gaseous mixture, comprising compressing the mixture; passing the compressed mixture

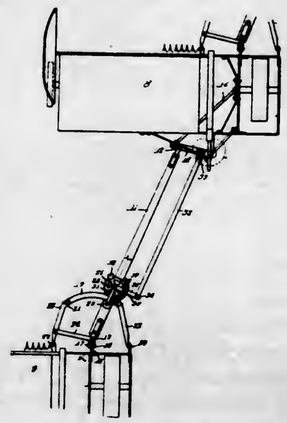
in contact with a suitable solvent; withdrawing the gases from which the soluble component has been removed; withdrawing the solvent from the absorption system; pro-

gressively separating from the solvent by a rectifying action the less soluble gases; returning the gases thereby evolved to the absorption system; and separately recovering the soluble component from the solvent.



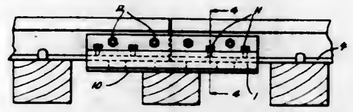
1,422,184. PROCESS OF SEPARATING ETHYLENE AND OTHER COMPONENTS FROM GASEOUS MIXTURES CONTAINING THE SAME. GEORGE OLIVER CURME, Jr., Pittsburgh, Pa., assignor, by mesne assignments, to Union Carbide Company, New York, N. Y., a Corporation of Virginia. Filed Apr. 20, 1917, Serial No. 163,523. Renewed Dec. 1, 1920. Serial No. 427,659. 6 Claims. (Cl. 260—170.)

1. The process of separating ethylene from gaseous mixtures containing the same which consists in compressing the mixture, passing the gases thus compressed through a suitable solvent flowing counter to the gas stream, drawing off the gases free from the ethylene, then removing the pressure from the solvent containing the ethylene, and leading off the purified ethylene.



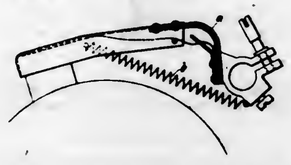
1,422,185. GRIPPING AND PULLING TOOL. HARRY DALITZ, Cleveland, Ohio, assignor to J. C. Hipp, Cleveland, Ohio. Filed May 16, 1921. Serial No. 470,052. 3 Claims. (Cl. 29—84.)

1. A gripping and pulling tool, comprising a pair of pivoted clamping members having gripping jaws and opposed spreading portions of semi-circular cross section,



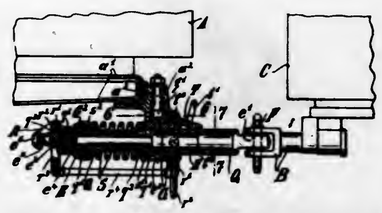
and a handle having a conical spreading member interposed and confined between said opposed portions.

1,422,186. COUPLING FOR TRAINS OF BINDERS, MOWERS, AND OTHER VEHICLES. CALVIN R. DAVIS, Rockford, Ill., assignor to Emerson-Brantingham Company, Rockford, Ill., a Corporation of Illinois. Filed July 18, 1919. Serial No. 311,828. 5 Claims. (Cl. 280—33.8.)



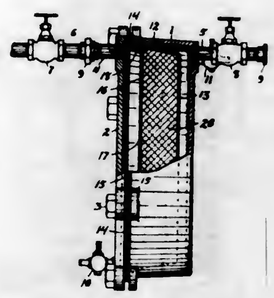
2. The combination with a front and rear vehicle, of a draft coupling therebetween comprising a segmental rack attached to the rear vehicle, a tongue pivotally connected at its front and rear ends with the front and rear vehicles respectively, a gear in mesh with the rack, means operative between the front vehicle and said gear for oscillating the latter when the front vehicle is turned, a roller engaging the back of the rack, and means connecting the roller and gear, holding them in associated relation with the tongue and preventing relative movement of said gear and rack lengthwise of the tongue.

1,422,187. FISHPLATE FOR RAILWAY RAILS. REIMER N. DITHMER, Chicago, Ill. Filed Aug. 29, 1921. Serial No. 496,455. 1 Claim. (Cl. 238—193.)



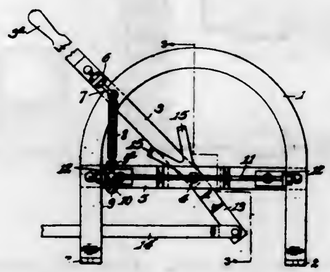
In a joint for rails comprising sections having slidably detachable interlocking bottoms and extending over and forming slots for flanges of said rails, said interlocking bottoms being thickened and together forming a rib adapted to prevent lateral movement of said joint; and means extending into said slots for adjustably engaging said flanges to prevent accidental detachment of said interlocking bottoms and to compensate for play in said slots.

1,422,188. BRUSH HOLDER FOR ELECTRIC MACHINES. ERNST DÖRFTEL, Bernburg, Germany. Filed Mar. 10, 1921. Serial No. 451,361. 3 Claims. (Cl. 171—324.)



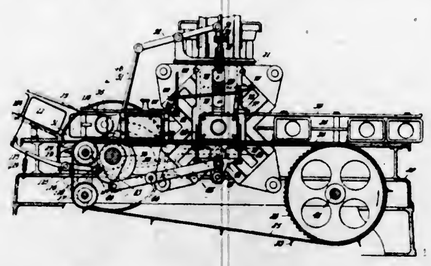
1. In an electric machine, a brush-holder, a supporting member, a yieldable blade-spring connecting the brush-holder to the supporting member and being approximately neutral in tendency with respect to the commutator so as to exert no appreciable pressure on the commutator and at the same time serve as a frictionless pivot, and a second spring for pressing the brush upon the commutator arranged in such manner that the torsional moment exerted by said second spring remains approximately constant in the entire range of wear of the brush, for the purposes set forth.

1,422,189. COUPLING MEMBER FOR VEHICLES. HEINRICH ECKERTZ, Essen-Rellinghausen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Sept. 7, 1920. Serial No. 408,747. 12 Claims. (Cl. 213—67.)



1. A coupling for vehicles comprising in combination a guide pivotally mounted on a vertical axis, a coupling rod longitudinally movable in the guide, means for locking the rod against longitudinal movement and the rod and guide against angular movement, means for releasing the locking means to permit longitudinal movement of the rod and angular movement of the rod and guide, the locking means becoming operative automatically upon a predetermined movement of the rod relative to said guide.

1,422,190. FILTER. MILTON ELROD, Indianapolis, Ind., assignor to Warriner Manufacturing Company, a Corporation of Indiana. Filed Feb. 23, 1921. Serial No. 447,059. 4 Claims. (Cl. 210—131.)

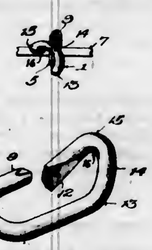


1. In a filter for a water distributing system, a case comprising a shell and head for closing same, having a drain cock communicating with its interior at the bottom thereof through the head, and a test cock having communication with its interior at the top thereof through the shell, and having an inlet pipe communicating with the interior of the case at the top thereof through the head and an outlet pipe communicating with its interior at the top thereof through the shell, said pipes being adapted to be connected in line with the supply pipe of the water distributing system; a cartridge having a radial flange at one end adapted to be clamped between the head and shell, and having a series of perforations in its opposite end and a removable perforated lid situated in its front end; and a filtering medium held compactly within the cartridge and covering all the perforations in the pan and lid.

1,422,191. RAILWAY-SWITCH STAND. LUIGI FACCIUTO, Sr., Flushing, Ohio, assignor of one-third to Louis Facciuto, Jr., Lansing, Ohio, and one-third to Frank C. Leon, Flushing, Ohio. Filed Apr. 4, 1922. Serial No. 549,490. 5 Claims. (Cl. 246—410.)

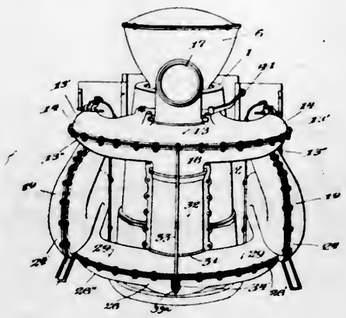
1. A switch stand comprising a pair of parallel frame members of arch form relatively positioned to form an intermediate passageway, bars disposed horizontally between the upright portions of said members, an operating lever pivotally mounted on said bars and having connection with the switch shifting bridle, said lever being movable along said passageway, retractile coil springs attached to and depending from said lever, pulleys suspended by said springs, and horizontal trackways beneath which said pulleys travel in shifting movement of said lever.

1,422,192. CAN-BODY-ENDING MACHINE. THEODORE F. FITZSIMONS, Stanmore, near Sydney, New South Wales, Australia. Filed July 2, 1919. Serial No. 308,189. 9 Claims. (Cl. 113—18.)



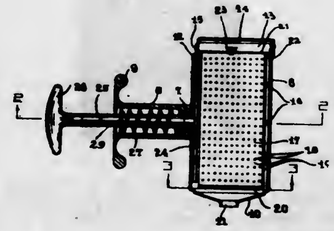
1. In a can ending machine of the type herein described, provided with a race-way, the combination with an anvil, a laterally movable header body supporting said anvil, of a normally retired stripper plunger, a trip pawl arranged to hold the stripper outward until the retiring movement of the header body is nearing completion and thereupon to release the stripper and so leave the completed can centered in the race-way.

1,422,193. PAVING BLOCK. CHARLES L. SULLIVAN, Chicago, Ill., and JOHN D. FLETCHER, Evansville, Ind. Filed May 8, 1920. Serial No. 379,816. 4 Claims. (Cl. 94—11.)



1. A paving block comprising a base and a tread portion, the said tread portion being narrower than the said base portion, and provided with an intervening longitudinally disposed furrow and with central extensions from opposite ends of the block.

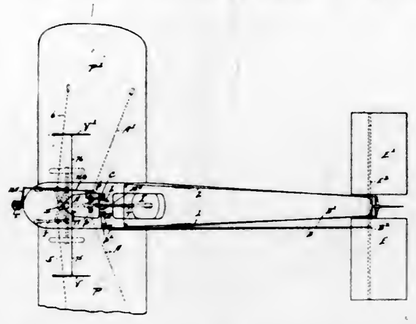
1,422,194. DRAFT COUPLING. EDWARD FOWLER and JOHN V. LEWIS, St. Elmo, Tenn. Filed Feb. 21, 1919. Serial No. 278,554. 5 Claims. Cl. 97—4.)



1. A draft element having at one end an elongated bearing section lying perpendicular to the axis of draft and bent to form a plurality of seating sections arranged at angles to each other and lying in the same plane.

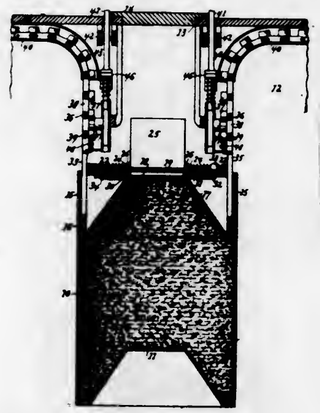
1,422,195. STOVE AND FURNACE. JOHN B. GOHMANN, Lincoln, Nebr. Filed Apr. 20, 1921. Serial No. 462,953. 2 Claims. (Cl. 126—107.)

1. In a stove or furnace, in combination with a combustion chamber having a rear smoke outlet at the top, a smoke receiving and distributing head having an inlet connection intermediate its ends with said outlet, and provided with end branches extending forwardly along opposite sides of the combustion chamber, said head also having a smoke outlet, a smoke collecting head behind the combustion chamber and having end branches extending forwardly along opposite sides of the combustion chamber, said collecting head and its branches being located below the first-mentioned head and its branches, a pipe extending vertically between said heads and establishing a connection therebetween intermediate their ends, a series of connected flues located adjacent to each side of the combustion chamber, the series of flues on one side being connected to and establishing communication between one of the forward ends of the branches of the aforesaid heads, and the series of flues on the other side being connected to and establishing communication between the forward ends of the other branches of the heads, and means for establishing a direct connection between the smoke outlet of the combustion chamber and the smoke outlet of the first-mentioned head, said means being adjustable to break said direct connection.



1,422,196. LEMON SQUEEZER. WILLIAM E. GRAY, Chicago, Ill. Filed Nov. 13, 1920. Serial No. 423,769. 7 Claims. (Cl. 100—41.)

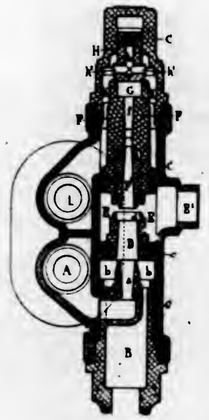
1. In a device of the class described, a casing containing a perforated container having an open side, a pressure plate in said casing adapted to enter said open side, and thumb means to operate said pressure plate.



3. In a device of the class described, a casing containing a perforated container having an open side, pressure means in said casing adapted to enter said open side, means protruding from said casing to operate said pressure means, and a spring to retract said pressure means from said container.

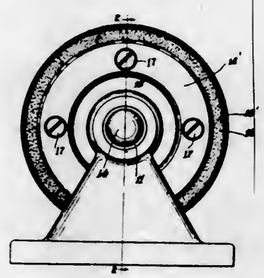
1,422,197. AEROPLANE. OTTO W. GREENE, Elyria, Ohio, assignor to The Greene Aeronautical Company, Elyria, Ohio, a Corporation of Ohio. Filed Mar. 27, 1914. Serial No. 827,532. 30 Claims. (Cl. 244—29.)

16. In a flying machine, the combination of a vertical rudder, mechanism for automatically maintaining the machine in balance, including a directional air-actuated vane independent of the rudder for automatically causing said mechanism to initiate the banking operation to balance the machine to the disturbance of balance caused by the deflection of the rudder.



1,422,198. ICE-CREAM-DISPENSING MACHINE. WILLIAM J. GUERIN, Brooklyn, N. Y. Filed Dec. 6, 1921. Serial No. 520,219. 9 Claims. (Cl. 226—128.)

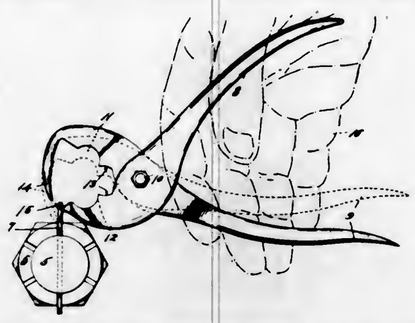
1. In a dispensing machine the combination with a plunger having an opening, of slides arranged to normally close the opening, and means controlled by a container for actuating the slides.



1,422,199. SELF-STARTING INJECTOR FOR STEAM BOILERS. JOSEPH HALL, Stockport, England. Filed Nov. 13, 1919. Serial No. 337,757. 1 Claim. (Cl. 162—1.)

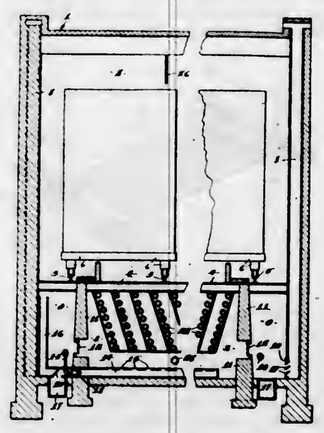
In a self-starting injector for steam boilers, the combination with a steam nozzle and lifting cone for raising water into the injector for starting and restarting automatically of a sliding cone placed above the lifting cone to create a partial vacuum in the overflow chamber, a delivery cone, a liquid pressure chamber at the delivery

orifice of the delivery cone to facilitate starting and restarting of the injector, and a valve controlled by the pressure of the boiler closing said pressure chamber.



1,422,200. GRINDING WHEEL. HARRY E. HARRIS, Bridgeport, Conn. Filed Apr. 14, 1919. Serial No. 289,963. 3 Claims. (Cl. 51—206.)

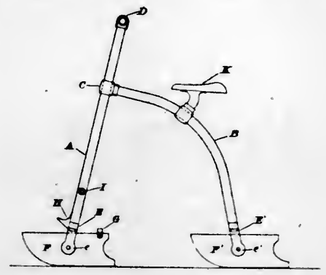
1. A grinding device comprising a gyro wheel having a wide, substantially flat, heavy periphery composed of two sections substantially equal in mass, one of said sections having a peripheral recess, a ring of abrasive material mounted in said recess, and means to clamp the other of said sections against said ring and ring holding section.



1,422,201. COTTER-PIN PULLER. MARION H. HARTER, Minneapolis, Minn. Filed Dec. 6, 1920. Serial No. 428,462. 3 Claims. (Cl. 29—86.2.)

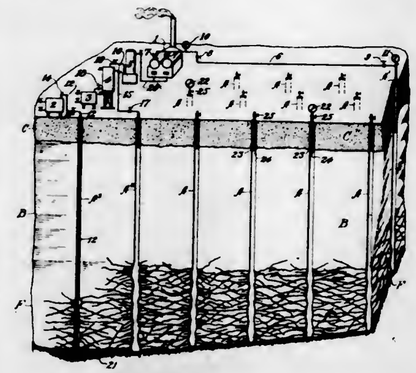
1. A cotter pin puller comprising a pair of jaw-equipped pivotally connected handles, one of the jaws having a supporting finger offset toward the other jaw, said other jaw having a tooth adapted to enter the eye of a cotter

pin and to move close to the inner face of the supporting finger and in the plane thereof.



1,422,202. DRY KILN. NELSON H. HENDERSON and HIRAM L. HENDERSON, Syracuse, N. Y. Filed May 14, 1921. Serial No. 469,601. 30 Claims. (Cl. 34—46.)

19. A dry kiln having a drying room in the upper portion thereof, and a heating chamber below the central part of the drying room and circulating chambers at opposite sides of the former chamber, such chambers opening into the bottom of the drying room, automatic pressure operated dampers in the partitions between the circulating chambers and the heating chamber, chimneys communicating with the circulating chambers, air ducts communicating respectively with the circulating chambers and with the outside air and having outlets into the heating chamber, and a steam injector in the ducts between the inlets and outlets thereof, and means for controlling the flow through the inlets of the ducts, and means for controlling the flow through the chimneys, substantially as and for the purpose described.

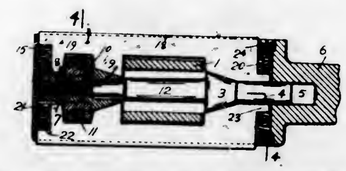


1,422,203. GLIDING COASTER. ARTHUR H. HEATZMAN, Baltimore, Md., assignor to The A. H. Heatzman Company, a Corporation of Oklahoma. Filed June 2, 1920. Serial No. 385,893. 4 Claims. (Cl. 188—8.)

1. A device for coasting constituting a frame having front and rear surface bearings, a foot rest G attached to and cooperating with the front surface bearing for creating increased friction between the said bearing and

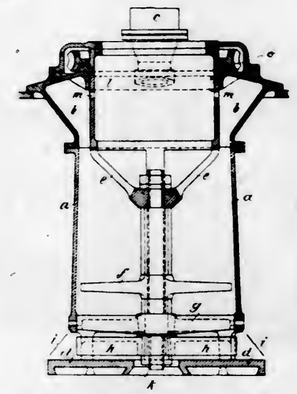
the surface incline for the purpose of diminishing the speed of the device.

1,422,204. METHOD FOR WORKING OIL SHALES. WILSON W. HOOVER and THOMAS E. BROWN, New York, N. Y. Filed Dec. 19, 1919. Serial No. 346,069. 1 Claim. (Cl. 262—3.)



The hereinbefore described method of working oil shales which consists in gaining access to a determinate zone of any desired area, in a sub-surface deposit of oil shale, by drilling a group of contiguous wells, suitable in number, proximity and depth for the purposes hereinafter set forth, in the introduction, through the wells, into such zone, of charges of explosives, in exploding the same, in thereby so fracturing the formation in such zone as to produce a series of intercommunicating fractures throughout the zone which shall render the same permeable to a heating medium, in introducing a heating medium into the zone of fracture through a member of the group of wells, all wells not required for the treatment of material and recovery of products being first securely sealed, in circulating the heating medium through said zone, in treating the bituminous material therewith, in thereby converting such material into oil and in recovering the products through other members of the group.

1,422,205. EXPANDING REAMER. JOHN JULIUS JASPERSON, Randwick, near Sydney, New South Wales, Australia. Filed July 19, 1920. Serial No. 397,223. 5 Claims. (Cl. 77—76.)

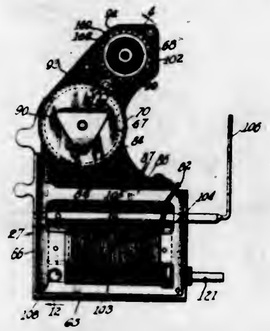


1. An expanding reamer comprising a shank with a body, a rotatable spindle arranged in the body and hav-

ing a conical shoulder at one end and screw-threaded at the other end, a rotatable screw-threaded sleeve supporting the threaded end of said spindle and having a conical shoulder, a tapped collar detachably secured on the interior of said body within which said sleeve is mounted, a plurality of cutter blades adapted to be mounted within

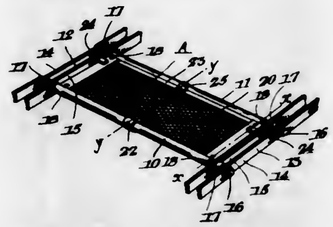
recesses in said body and to be expanded radially outward from the circumference thereof by rotating said spindle and sleeve, springs mounted within said body and engaging the front and rear ends of said cutter blades to position them within said body, an end cover plate for said body, and backing plates for said blades detachably affixed to said body.

1,422,206. COKING CHAMBER FOR GENERATORS. PAUL JAWORSKI, Bismarckhutte, Upper Silesia. Filed Aug. 26, 1921. Serial No. 495,563. 5 Claims. (Cl. 48—73.)



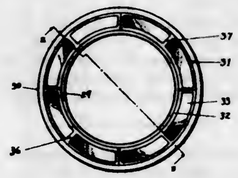
1. A coking chamber for generators comprising a casing, a feed hopper for the casing and a plate spaced from and below the lower end of said casing for supporting the contents thereof, the annular space thereby formed serving as an unrestricted inlet for the generator gases and as a discharge orifice for the coked material.

1,422,207. INDICATING AND RECORDING APPARATUS. AUSTIN C. JOHNSON, Chicago, Ill., assignor to Production Meter Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 6, 1918. Serial No. 265,544. 41 Claims. (Cl. 234—1.5.)



1. In apparatus of the character described, the combination with indicating mechanism comprising a revoluble element, of driving mechanism therefor comprising a continuously driven member adapted to be operatively connected with said revoluble element and normally engaging said member to minimize lost motion in said connection with a sliding contact, and means adapted to be controlled by the machine the performance of which said apparatus indicates, for effecting said operative connection between said revoluble element and said continuously driven member.

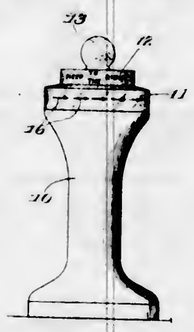
33. In apparatus of the character described, the combination with time operated indicating mechanism for indicating the total active time period of a machine performing a series of active operations, and means controlled by the operation of the machine, the performance



of which is being indicated, for giving a visual indication of the total active operations of said machine during the total time period indicated by said time operated indicating mechanism.

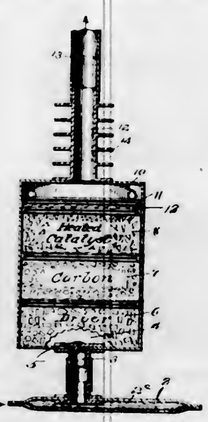
1,422,208. CONVEYER BELT. JAMES NIXON KENNY, Ottawa, Ontario, Canada. Filed Jan. 13, 1921. Serial No. 436,932. 5 Claims. (Cl. 198—194.)

1. A conveyer section comprising tubular side members, end members connected to the side members, means for pivotally connecting adjacent sections, one of the side members having a longitudinal slot therein and a supporting member located in the centre of the section extending into the slot in the side member, and a clip on the said supporting member extending over the opposite side member to that having a slot therein.



1,422,209. APPARATUS FOR VULCANIZING ARTICLES OF RUBBER OR RUBBERIZED FABRIC. PETER J. KNAUS, Milwaukee, Wis., assignor, by mesne assignments, to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Jan. 15, 1919. Serial No. 271,214. 16 Claims. (Cl. 18—17.)

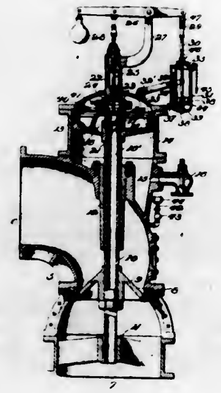
1. In an apparatus of the class described, a vulcanizing chamber, a plurality of units, the parts of adjacent units being provided with inclined mating surfaces



and forming molds for the reception of tire treads, means for simultaneously exerting pressure upon the units whereby radial pressure is communicated to the several treads during the process of vulcanization.

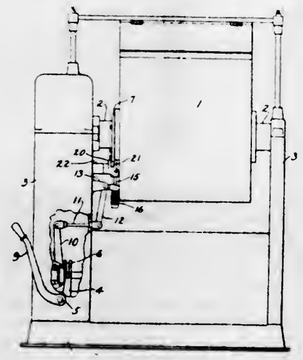
1,422,210. TRAFFIC SIGNAL. WELLINGTON A. KOCH, Plainfield, N. J. Filed Oct. 10, 1921. Serial No. 508,664. 4 Claims. (Cl. 116—63.)

2. A traffic signal including a post, a stationary illuminated direction legend on the post, and a constantly moving signal associated with the legend in its direction designation.



1,422,211. METHOD AND APPARATUS FOR TREATING GASES AND GASEOUS SUBSTANCES. ARTHUR B. LAMB, Washington, D. C. Filed May 31, 1919. Serial No. 301,017. 43 Claims. (Cl. 183—48.)

33. In a process of treating gases, passing said gases through drying material, then through a sorbent, then through a sorbent material containing sorbent, oxidizing catalyst.

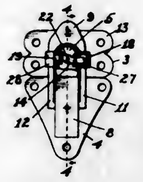


1,422,212. GOVERNOR-OPERATED PRESSURE REGULATOR. CHESTER W. LARNER, Cleveland, Ohio. Filed July 24, 1917. Serial No. 182,402. 8 Claims. (Cl. 137—53.)

8. A pressure regulating system of the type recited, comprising the combination of a penstock, a single acting piston and its operating cylinder, a valved connection for supplying penstock pressure to the space below the piston, a main valve carried by the piston rod and arranged to be seated in response to penstock pressure on the piston, and a governor-operated differential waste

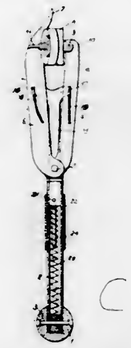
valve in the piston head for relieving the pressure in the cylinder and opening the main valve.

1,422,213. SAFETY CLUTCH DEVICE FOR MIXERS. FRANK X. LAUTERBUR, Sidney, Ohio. Filed May 1, 1922. Serial No. 557,628. 6 Claims. (Cl. 259—1.)



1. In combination, in machines of the character described, a bowl adapted to tip to dump the contents, a clutch for coupling power to mixing means within the bowl, and resilient means under the control of the bowl to throw out the clutch upon a tipping movement of said bowl, and means independent of the bowl for operating the clutch.

1,422,214. COMBINATION CLASP AND LOCK. MORITZ LEIBOVITZ, Lorain, Ohio. Filed Apr. 16, 1921. Serial No. 461,747. 5 Claims. (Cl. 70—115.)

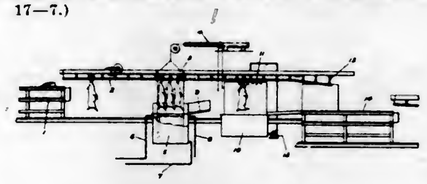


5. A combination clasp and lock, comprising a fixed member, a pivotally supported hasp, the fixed member having a raised hollow portion, the hasp being adapted to swing over the raised hollow portion of the fixed member, a rotatably mounted block arranged within the hollow portion of the fixed member, arms pivoted to the

block, the walls of the hollow portion of the fixed member being provided with slots for said arms to permit them to slide over said hasp, a post extending from the block,

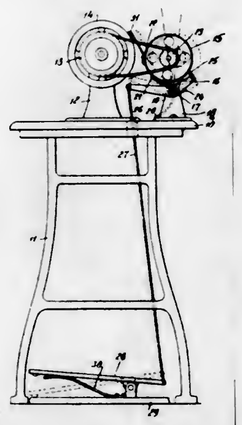
a key for fitting the post, and the wall of the hollow portion of the fixed member being provided with a hole for admitting the key, substantially as described.

1,422,215. AUTOMATICALLY CLAMPING TONGS FOR GRASPING PLATES AND DISHES. RENÉ ALFRED JEAMMET-LEYRIT, Billancourt, near Paris, France. Filed Oct. 22, 1920. Serial No. 418,808. 1 Claim. (Cl. 294—115.)



Automatically clamping tongs for grasping plates and dishes, characterized by a handle provided with a tube supporting a fixed arm, to the end of which is hinged a buffer coated with plastic material, upon which fixed arm is pivoted a movable arm provided with two buffers and with a fore-nose for initially lifting up the plates and dishes, on one side, said movable arm being acted upon by a slide by means of lugs working into slots, which slide is constantly pushed backwards by a spring and may be actuated through the medium of a handle, said buffers being pivoted upon the arms, so as to be able to assume any suitable position.

1,422,216. SYNTHETIC JEWEL BEARING. TAINE G. MCDOUGAL and SAMUEL J. MCDOWELL, Flint, Mich., assignors to Champion Ignition Company, Flint, Mich., a Corporation of Michigan. Filed Jan. 14, 1920. Serial No. 351,438. 9 Claims. (Cl. 49—77.)

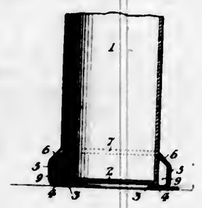


6. The process of manufacturing a synthetic jewel bearing or the like, which consists in forming a plurality of batches of ingredients which, when fused, form glass of high viscosity, one of said batches having a higher fusing point than the other, compressing from material of the batch of relatively high fusion point a body for the bearing, compressing additional material from the other batch with said body to form a facing, fusing said bearing while supported on powdered material to which it will not adhere when fused, and annealing said fused bearing.

1,422,217. METHOD OF SINGEING HOGS. ROBERT DAWSON MACLAURIN, Toronto, Ontario, Canada. Filed Oct. 1, 1921. Serial No. 504,688. 7 Claims. (Cl. 17—7.)

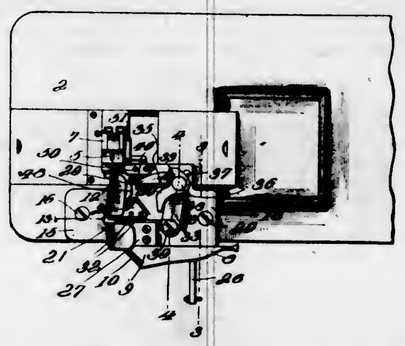
1. A method of singeing hogs which consists in dipping the hog into heated liquid capable of causing the gelatinous proteins to condense and polymerize with the consequent dimunition of the water in the skin.

1,422,218. MOTOR DRIVE FOR SEWING MACHINES. HYMAN MAIMIN, New York, N. Y. Filed Apr. 30, 1920. Serial No. 377,799. 14 Claims. (Cl. 192—11.)



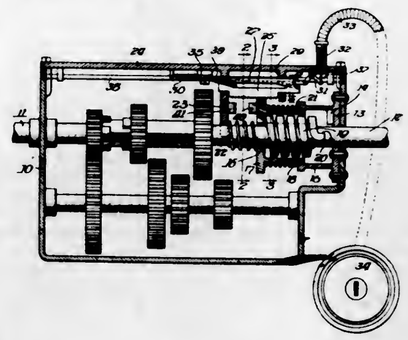
2. In a sewing machine provided with a driving wheel, the combination of a motor mounted to swing about an axis adjacent to the wheel, a spring for holding the motor in operative relation to the wheel of the machine, and means for taking the motor out of operative relation to the wheel of the machine and having a lost motion connection with the motor to permit the latter to assume its operative relation to the wheel of the machine unaffected by said means.

6. In a sewing machine provided with a driving wheel, the combination of a supporting member positioned adjacent to the driving wheel, a motor pivotally mounted on the supporting member, a spring for holding the motor in operative relation to the wheel of the machine, a swinging member, a lost motion connection between the motor and the swinging member, means for actuating the swinging member to overcome the effect of the spring and move the motor out of operative relation to the driving wheel of the machine, said means being adapted to be overcome by the operator to release the connection sufficiently to permit the motor to be held in operative relation to the driving wheel of the machine by the spring independently of the effect of the actuating means.



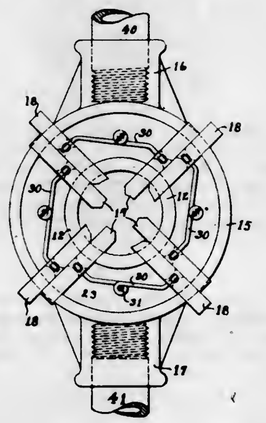
9. The combination as claimed in claim 2, in combination with braking means attached to the motor for acting on the driving wheel of the machine for stopping said driving wheel when the motor is out of operative relation with the driving wheel.

1,422,219. MUNITION CASING. VICTOR MAUCK, Norristown, Pa. Filed May 16, 1918. Serial No. 234,952. 5 Claims. (Cl. 220—66.)



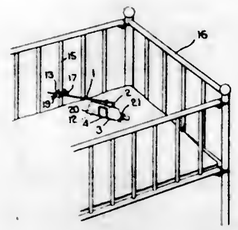
1. In a munition casing, the combination with a cylindrical, tubular shell; of a base member for said casing, formed of a single piece of pressed sheet metal, forming a closure for said shell, including an annular shoulder fitted to the interior of said shell and formed by an inwardly recessed portion of said base member coextensive with the cross sectional area of said shell; said base member being thus recessed to substantially the thickness of the metal thereof; said base member presenting an annular plane pedestal support, extending at right angles to the axis of said casing, exterior to said shell and larger than the latter, and having a peripheral cylindrical flange extending in spaced relation with the outer circumference of said shell and presenting a precisely dimensioned "stowage diameter"; the upper edge of said base member forming a truncated cone, inwardly converged into contact with said shell; and means uniting said base member to said shell, solely at the upper edge of the former, and remote from the recessed portion of said base member, including an autogeneously welded solderless seam; said shell and said base member forming between them a hermetically sealed air chamber, of substantial size, exterior to said shell.

1,422,220. SEWING MACHINE FOR APPLYING BUTTON STAY STRIPS. JAMES R. MOFFATT, Chicago, Ill., assignor to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 3, 1920. Serial No. 356,101. 15 Claims. (Cl. 112—2.)



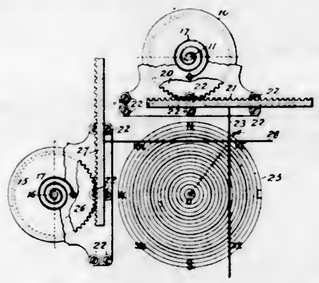
14. The combination with means for directing a strip, a folding finger adapted to swing over said strip and over which the end of the strip may be folded, a turning finger holding the end of the strip over the folding finger, an arm carrying said folding finger, means for oscillating the arm, said turning finger being mounted on said arm, and spaced stops adapted to engage the turning finger at the extremes of movement of the arm for swinging the same relative to the folding finger to fold the end of the strip and for bringing said turning finger back to inoperative position, a vertical shaft carrying said arm, a spring for swinging said shaft for holding the folding finger in inoperative position, and manually controlled means for oscillating the shaft to move said folding finger and turning finger into operative position for folding the end of the strip.

1,422,221. AUTOMOBILE LOCK. CHARLES F. MURRAY, Evanston, Ill. Filed May 22, 1917, Serial No. 170,124. Renewed Oct. 2, 1920. Serial No. 414,338. 11 Claims. (Cl. 188—31.)



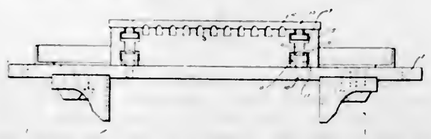
1. In a vehicle lock, the combination of a casing, a shaft, a clutch member in the form of a spring mounted in the casing and adapted to arrest the rotation of said shaft without material shock, said spring being normally in inoperative position and means for moving said spring into clutching position in consonance with the rotation of the shaft and after a predetermined number of rotations of the shaft, substantially as described.

1,422,222. DIESTOCK. IRA W. NONNEMAN, Warren, Ohio, assignor to The Borden Company, Warren, Ohio, a Corporation of Ohio. Filed June 25, 1920. Serial No. 391,716. 19 Claims. (Cl. 10—122.)



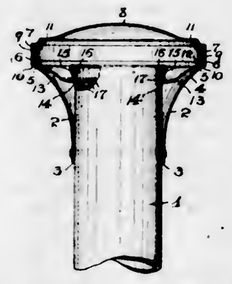
10. In a die stock, the combination with a frame, of a cam plate mounted thereon and having grooves therein, chasers mounted in said frame, projecting members on said chasers for engaging the grooves in said cam plate, said grooves comprising a set of active grooves and a set of rest grooves, one of said sets surrounding the other, and the two sets being connected at spaced points by transfer grooves.

1,422,223. NURSING-BOTTLE HOLDER. JOAN C. PHILLIPS, Wellesley Hills, Mass. Filed June 6, 1921. Serial No. 475,561. 1 Claim. (Cl. 248—65.)



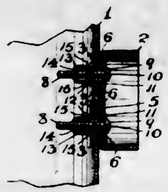
A nursing bottle holder made from a length of wire, one portion of which constitutes a stem, said wire being bent to form a U-shaped bottle-holding portion having one arm integrally connected with the stem, a bridge portion extending rearwardly from the other arm of said bottle-holding portion substantially parallel to the stem, and a second U-shaped bottle-holding portion at the end of the bridge portion, the two bottle-holding portions being in parallel relation, the free end of said last mentioned U-shaped portion having a hook or stop formed thereon adapted to contact with the stem.

1,422,224. SPEED INDICATOR FOR AEROPLANES. ARTHUR F. POOLE, Kenilworth, Ill. Filed May 31, 1918. Serial No. 237,585. 2 Claims. (Cl. 175—183.)



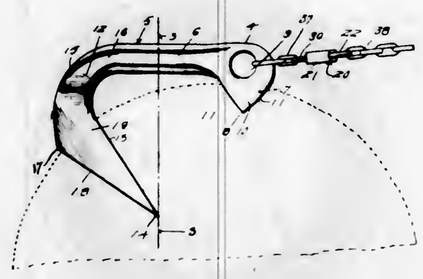
1. The method of determining the speed of travel of navigable vehicles through a non-conducting medium, said method consisting in associating with said vehicle a part capable of being influenced by the earth's magnetic field and moving said part through said magnetic field, whereby the part will be variably shifted by the influence exerted thereon by the magnetic field to give indications.

1,422,225. OIL PRESS. GEORGE A. SAUER, Dayton, Ohio, assignor to Buckeye Iron & Brass Works, Dayton, Ohio, a Corporation of Ohio. Filed Jan. 10, 1921. Serial No. 436,152. 3 Claims. (Cl. 100—54.)



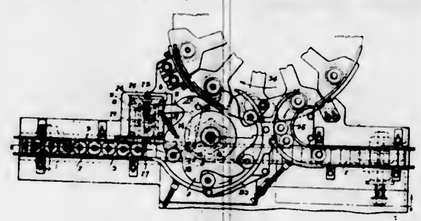
3. In a press, a plate, a pair of members disposed respectively on either side of said plate at one end thereof with an overhanging shoulder on one end thereof spaced from the face of the plate, a rack, a T-shaped aperture on either side of the end of said rack adapted to slidably engage with said members mounted on the plate respectively, second T-shaped apertures in said end of said rack recessed in said rack, a mat, depending T-shaped lugs detachably secured on either side of the bottom of said mat adapted to slide in said second T-shaped apertures in the rack, a pair of bolts at the other end of said plate threaded therein and carrying between the head of each bolt and the plate, an L-shaped member having a projecting finger thereon, a detachably depending eye on either side of the bottom of the mat adapted to engage with said fingers, whereby the plate, rack and mat may be assembled as a unit.

1,422,226. MOUNTING NAPS OR CAPS FOR POSTS, POLES, OR RODS. ABRAHAM J. SCHULTZ, Newark, N. J., assignor to Colonial Stamping Company, Inc., a Corporation of New Jersey. Filed Aug. 13, 1920. Serial No. 403,434. 6 Claims. (Cl. 5—4.)



1. In combination with an element, as a metal bed-post, rod or pole, an ornamental nap, and an interiorly disposed seating element provided with a central open portion, said seating element having a stop-member surrounding said opening and provided with a chambered portion for the reception of the end-portion of said post, rod or pole, said chambered portion comprising an annular wall, and a multiplicity of biting serrations connected with and extending from said wall, said serrations being adapted to be forced into holding engagement with said post, rod or pole, when the end-portion of the same is inserted in the chambered portion of said stop-member.

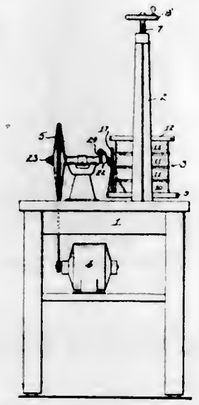
1,422,227. EXPANSIBLE ATTACHING MEANS FOR CONNECTING TUBULAR ELEMENTS. ABRAHAM J. SCHULTZ, Newark, N. J. Filed Aug. 13, 1921. Serial No. 492,074. 5 Claims. (Cl. 5—4.)



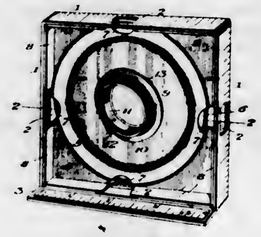
1. In an attachment of the character set forth, in combination with a main tubular element provided with a perforation, a receiving-cap or ferrule adapted to be attached to said tubular element, said cap or ferrule being also provided with a perforation, a tightening bolt extending through said perforations, and an expansion-element mounted upon said bolt and adapted to be tightened against the inner surface of said main tubular element when the said bolt is actuated.

1,422,228. LOGGING HOOK. PATRICK H. SHAFFER, Richwood, W. Va., assignor of one-half to Wellington L. Thomas, Richwood, W. Va. Filed Apr. 14, 1920. Serial No. 373,872. 1 Claim. (Cl. 294—82.)

A logging hook consisting of a many-sided shank, one end of said shank being enlarged and formed into a spur, said spur having an opening, the opposite end portion of the shank being curved back toward the first mentioned end portion to provide a substantially V-shaped hook, the last mentioned end portion adjacent the curved portion of the shank forming the bill of the hook, the back of said bill tapering laterally and longitudinally from the extremity of said bill and the junction of the bill with the shank to a portion centrally of the bill, the sides of said bill being canted inwardly toward said central portion and coacting with the tapering back portions to provide a spur, said spur being spaced from the bight portion of the V-shaped hook, the extremity of the bill being disposed substantially opposite and in alignment with the extremity of the first mentioned spur.



1,422,229. FEEDING MECHANISM. JOHN SHARP, Oakmont, Pa., assignor to Aluminum Seal Company, New Kensington, Pa., a Corporation of Pennsylvania. Filed Apr. 8, 1921. Serial No. 459,665. 4 Claims. (Cl. 198—34.)

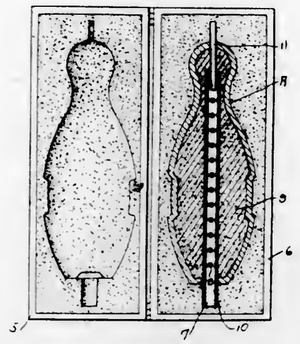


2. In a feeding device, the combination with conveying mechanism, of a spring actuated trip-arm in the path of the article, a spring-actuated slide on which said tripper is mounted, a slide member in which said slide is mounted, means on said trip-arm adapted to engage said slide member, a star-wheel, a cam on said star-wheel, and connections between said slide member and said cam for reciprocating said slide member.

1,422,230. SIEVE SHAKER. BOZO STANKOVICH, San Francisco, Calif. Filed Dec. 3, 1921. Serial No. 519,604. 4 Claims. (Cl. 83—56.)

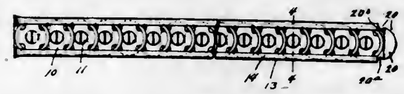
1. A sieve-shaker comprising a sieve-column mounted for oscillation about its vertical axis; an arm associated with and adapted to oscillate said column, said arm having spaced abutments; a driving shaft; and a link connected at one end with said crank and having in its other end an enlarged hole freely fitting over said arm for longitudinal play, said link having also lateral play between and against the abutments of the arm.

1,422,231. COMBINED LEVEL, PLUMB, SQUARE, AND MEASURE. JAMES STANLEY, New York, N. Y. Filed Mar. 4, 1920. Serial No. 363,220. 5 Claims. (Cl. 33—212.)



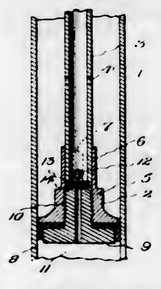
1. A combined level, plumb, square and measure, comprising a frame formed with four equal sides, a metallic housing fitted within said frame formed of two members, each of said members having extensions adapted to contact with the inner face of said frame, a circular opening formed by said housing, a circular spirit tube seated in the circular opening, and means for locking the housing around said tube.

1,422,232. MEANS FOR MAKING CAST BOWLING PINS. RICHARD E. STANLEY, Sr., Pittsburgh, Pa. Filed May 4, 1921. Serial No. 466,642. 4 Claims. (Cl. 22—184.)



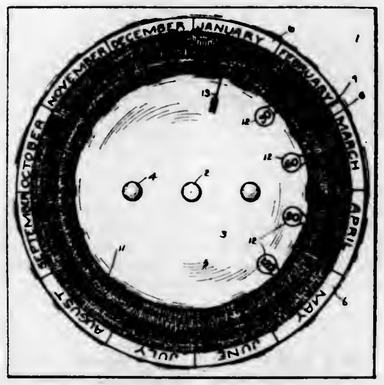
1. Means for making hollow cast bowling pins including a hollow stem, a core formed on the stem, one end por-

tion of said stem projecting beyond the end of the core, the opposite end portion terminating adjacent the oppo-



site end of the core, and a pin disposed in the last mentioned end of the core and projecting beyond the core.

1,422,233. PACKAGE FOR SNAP FASTENERS. LOUIS J. STERN, Boston, Mass. Filed Apr. 17, 1919. Serial No. 290,850. 2 Claims. (Cl. 206—46.)



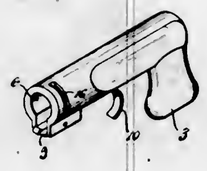
1. A package for snap fasteners and the like formed of a strip of flexible material of substantial length and having a body-portion and side-portions inwardly reflexed to provide a fastener-receiving channel permanently closed at one end, said body-portion extended beyond the other end of the channel and reflexed to provide a handle-portion and an abutment adapted to be flexed into and away from the channel-closing position.

1,422,234. COMBINED VALVE AND PISTON. FREDERICK STICKEL, Chicago, Ill. Filed Mar. 18, 1921. Serial No. 453,428. 4 Claims. (Cl. 103—225.)

1. In a pump, a hollow piston rod, a nut slidable on the lower end of the rod, a slot and pin connection between said nut and rod, a piston plug carried by said nut and provided with an air port extending therethrough, and a valve disc controlling passage of air through said port.

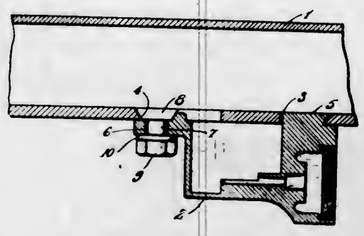
1,422,235. MATURITY CALENDAR. JAMES M [illegible], Seattle, Wash. Filed Sept. 22, 1921. Serial No. [illegible],398. 2 Claims. (Cl. 40—113.)

1. A maturity calendar of the class described embodying a disc, spaces around the outside of the disc in which the names of the months of the year appear, other spaces on the disc in which the days of the months appear, a smaller disc mounted upon the larger one, spaces around the circumference of the smaller disc, numerals in rotation in the spaces, some of these numerals repeated in larger type towards the center of the disc and opposite their respective spaces, an arrow at the numeral 365, knobs mounted on the smaller disc for rotating the disc, a pivot in the center of both discs holding them together, upon which the smaller disc is freely mounted as it rotates on it, holes opposite the days of the month in the large disc and pins which may be inserted in these holes, opposite the Saturdays, Sundays and holidays during the year, and which may be changed from year to year to designate these days so that they may readily be detected.



1,422,236. UNDERREAMER. JOHN SWAN, Jr., Marietta, Ohio. Filed June 2, 1920. Serial No. 385,876. 6 Claims. (Cl. 255—75.)

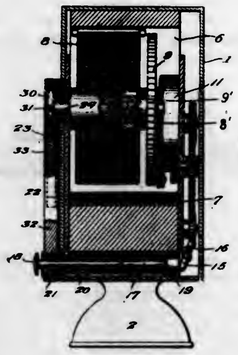
1. In an underreamer, the combination of a body, a wedge member consisting of a wedge portion having a shoulder abutting against the bottom of the body and a hollow extension located within and removably secured



to the body, cutters movably engaging the wedge portion and arranged to abut against the bottom of the body, a rod for moving said cutters and trip mechanism for controlling the movement of said rod.

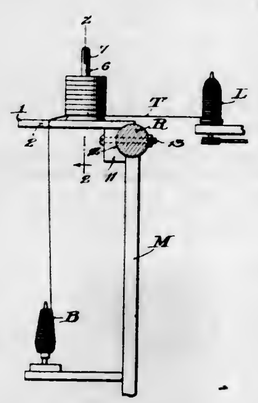
1,422,237. FIREARM. CARL G. SWEBILIUS, New Haven, Conn., assignor, by mesne assignments, to The Marlin Firearms Corporation, New Haven, Conn., a Corporation of Delaware. Filed Sept. 24, 1919. Serial No. 325,835. 9 Claims. (Cl. 49—75.)

6. In a gun, a member having a socket, a second member engaging said socket, the first member having slots in the socket portion directed transversely to the socket and extending through the socket wall, the second member having grooves to register with said slots, pivoted plates on said first member movable in said slots into engagement with said grooves to lock said members together, and means carried by one plate adapted to engage the second plate to hold said plates in locking position.



1,422,238. FIREARM. CARL G. SWEBILIUS, New Haven, Conn., assignor, by mesne assignments, to The Marlin Firearms Corporation, New Haven, Conn., a Corporation of Delaware. Filed Sept. 24, 1919. Serial No. 325,836. 4 Claims. (Cl. 89—27.)

1. A means of attaching one member to another, comprising two slots in one of the members, one end of each slot being undercut, a lug carried by the second member and adapted to coact with the under cut of one slot and a draw bolt carried by said second member, said bolt having a head adapted to coact with the undercut end of said second slot.

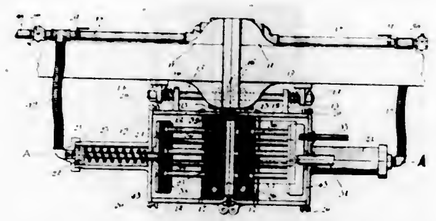


1,422,239. FLASH LIGHT. CHARLES W. SWINGLE, Chicago, Ill. Filed May 7, 1920. Serial No. 379,627. 5 Claims. (Cl. 240—8.5.)

1. A flash light comprising a casing, an electric bulb therein, a current generator within the casing and in circuit with the bulb, gears for driving said generator, operating means for said gears, a catch for preventing rotation of said gears, and manually operated means when in

one position for releasing said catch and capable when in another position for operating said operating means.

1,422,240. TENSION DEVICE FOR SPOOLING MACHINES. SAMUEL TAYLOR and FREDERICK JARRY, New Bedford, Mass. Filed Apr. 19, 1922. Serial No. 555,567. 4 Claims. (Cl. 242—150.)

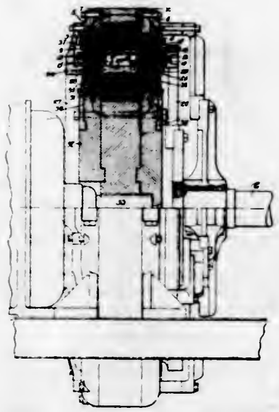


2. In a tension device for spooling machines, in combination with the rising and falling rod thereof, a plate-like member having a thread eye, a vertical stem extending upwardly from the member and having a split spring upper end, means to attach the member to the said rod of the machine, and a series of rotatable weights having openings to receive the stem, the lowermost weight having a beveled periphery over which the yarn passes.

1,422,241. ELECTRIC MULTIPLE-CONNECTION PLUG. CHARLES H. TOMLINSON, Mansfield, Ohio, assignor, by mesne assignments, to The Tomlinson Coupler Company, Mansfield, Ohio, a Corporation of Ohio. Filed Apr. 17, 1912. Serial No. 691,511. 71 Claims. (Cl. 173—332.)

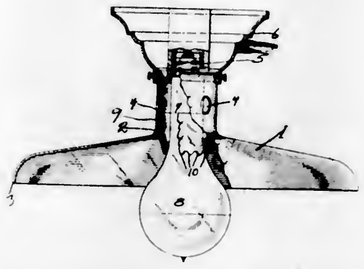
45. In a car coupling, the combination with a casing containing a plurality of fixed contacts connected to train line circuits, and a movable carrier having corresponding contact bars, of fluid pressure means for projecting said

carrier to electrically connect the corresponding contacts of counterpart couplers, and a valve device for controlling the return movement of said carrier.



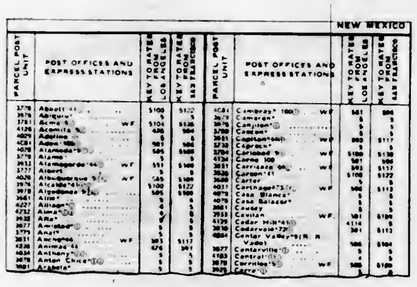
49. An electric train line coupling comprising a pair of cooperating counterpart coupler heads each having a plurality of contact terminals in the form of open-ended bushings connected to the respective car line circuits and each having a carrier provided with a plunger contact extending through the inner end of one of said bushings, and means for projecting said plunger contacts through said bushings and into a corresponding bushing of the cooperating counterpart coupler.

1,422,242. METHOD TO RENDER KAPOK AND OTHER FIBERS INCOMBUSTIBLE. RICARDO CARRERAS VALLS, Barcelona, Spain. Filed June 1, 1920. Serial No. 385,874. 2 Claims. (Cl. 23—5.)



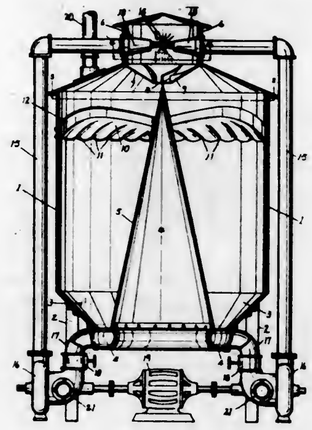
2. A process to render incombustible, kapok and other fibers having an impermeable outer cuticle or envelope, consisting essentially in treating the fiber with a volatile solvent of low boiling point such as alcohol and of rendering it permeable, and in also treating the fiber with ammonium phosphate which is capable of rendering the mass of the fibers incombustible by its penetration inwardly while the outer cuticle or envelope is in a softened and permeable state.

1,422,243. ELECTROMAGNETIC POWER-TRANSMISSION APPARATUS. RUDOLPH W. VAN NORDEN, San Francisco, Calif. Filed Oct. 30, 1918. Serial No. 260,223. 15 Claims. (Cl. 172—239.)



9. An electromagnetic power transmission apparatus, comprising an outer stator having two axially spaced laminated toothed cores, an inner stator having two axially spaced laminated toothed cores, an inductor arranged within the inner stator having two sets of axially spaced laminated pole pieces, and means for producing a magnetic flux passing axially through said outer stator and inductor and radially through said cores.

1,422,244. LIGHTING UNIT. ROBERT D. WARDELL, Detroit, Mich. Filed May 3, 1920. Serial No. 378,425. 4 Claims. (Cl. 240—92.)



1. The combination of an electric lamp bulb having its lower end translucent forming a shield which will redirect some of the light rays upwardly, with a reflector surrounding said lamp bulb and having an elongated neck, there being a plurality of openings in said neck, a socket for said lamp, means to support said reflector, an annular cylindrical member mounted intermediate the skirt of the lamp and the neck of the reflector, a plurality of teeth on tbe lower edge of said annular member, the points of which engage the lamp bulb.

1,422,245. PARCEL-POST AND EXPRESS CHART. TIMOTHY E. WEST, Oakland, Calif. Filed Sept. 19, 1918. Serial No. 254,815. 8 Claims. (Cl. 283—23.)

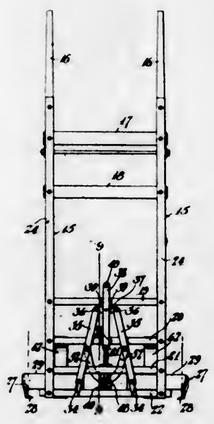
verted conical bottom, a cone disposed centrally within said tank, a plurality of transversely inclined deflector plates disposed radially at the upper end of said cone, a chamber having an inverted conical bottom with a central discharge opening, the top of the cone being close to and centrally of said discharge opening, plates arranged on said nozzle chamber bottom to impart a rotary motion to the material discharged therethrough, and a pump discharging into said chamber and having its intake connected to the bottom of said tank.

17. The method of distintegrating paper consisting of discharging under pressure the paper to be disintegrated with a suspending or carrying liquid through nozzles disposed so that the material and liquid of one stream impinge with the material and liquid of another stream, the nozzles being spaced so that there is a substantial spreading of the streams at the point of their impingement.

1,422,252. LOADING AND TRANSPORTING APPARATUS. LADISLAS B. BOREIKO, Honolulu, Territory of Hawaii. Filed May 4, 1921. Serial No. 466,847. 8 Claims. (Cl. 198—122.)

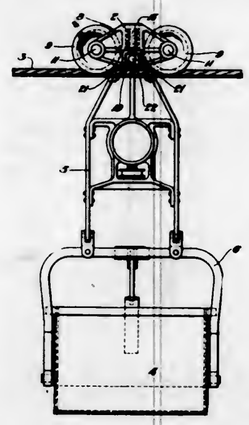
1. A field conveying and loading apparatus including a runway consisting of a plurality of open topped troughs arranged in end to end relation and interconnected at their adjacent ends, an anchor associated with one end of said runway permitting the opposite end to swing in an arc about said anchor, a self propelled power unit over which the discharge end of said runway extends for elevating the discharge end in a plane above the remainder, an endless conveyer opearting within said runway, conveyer members carried thereby, sheaves around which said conveyer operates, and a power connection between said self propelled power unit and said conveyer.



1,422,253. POWDER DISTRIBUTOR. COLIN BROWN, Rochester, N. Y. Filed Aug. 22, 1919. Serial No. 319,281. 4 Claims. (Cl. 43—147.)

4. In a powder distributor, the combination with a casing enclosing a powder chamber and an air chamber, of a discharge nozzle on the powder chamber, a piston in the air chamber, a conduit joining the powder chamber with the air chamber, a Y shaped nozzle within the powder chamber connected to the conduit and adapted to discharge jets of air against the lower portions of the opposite end walls, a valve on each side of the piston closing

the ports between the air chamber and conduit, each of said valves being adapted to prevent back flow from the conduit into the air chamber, valve control intake ports for the air chamber also on each side of said piston, and a handle on the casing adjacent an end thereof and having a bracket portion acting as a guard for one of the intake ports.

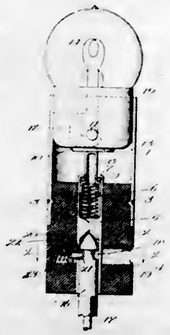


1,422,254. HAND TRUCK. CARL O. CARLSON, Riverside, Calif. Filed June 2, 1920. Serial No. 386,053. 9 Claims. (Cl. 214—65.5.)

1. A hand truck comprising a frame, supporting wheels for the frame, locking means in the frame, and a pair of movable jaws mounted in the frame arranged to be moved by the weight of the load into engagement with said locking means.

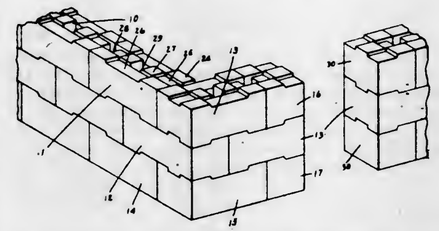
1,422,255. AERIAL TRAMWAY. FREDERICK C. CARSTARPHEN, Trenton, N. J., assignor to The American Steel and Wire Company of New Jersey, a Corporation of New Jersey. Filed Jan. 27, 1922. Serial No. 532,139. 4 Claims. (Cl. 105—750.)

2. An aerial tramway carriage comprising a body portion, wheels journaled at each end of said body portion, a piston member mounted in a suitable cylinder recess formed intermediate the ends of said carriage, said piston being provided with a head portion and a shank portion and adapted to suspendingly support a load carrying member, a spring member for normally yieldably holding said piston in its uppermost position, and said piston head portion being adapted to form an air cushion above said head on the up stroke when said piston is reciprocated vertically.



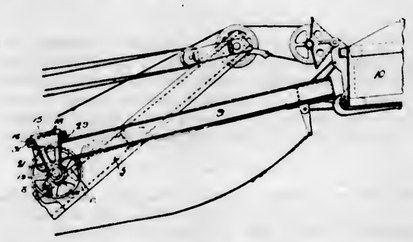
1,422,256. CAP GAUGE FOR PNEUMATIC TIRES. FREDERICK A. CONRAD and JAMES L. CONRAD, Los Angeles, Calif. Filed Sept. 27, 1919. Serial No. 326,964. 7 Claims. (Cl. 73—110.)

1. A cap gauge for pneumatic tires comprising a cylindrical cap, a hollow stem on the lower end of the cap having an interiorly threaded portion arranged to engage the end of the valve stem of the tire, a hollow plunger extending through said cap arranged to engage the valve member in said valve stem, an elastic bag in said cap surrounding said hollow plunger in open communication with the interior of the hollow plunger, means for yieldingly holding said bag in collapsed position and an indicator operated by said bag.



1,422,257. CIRCUIT CONNECTOR. HARRY A. DOUGLAS, Bronson, Mich. Filed Aug. 15, 1918. Serial No. 250,022. 1 Claim. (Cl. 173—328.)

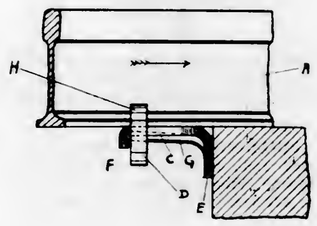
A circuit connector including a contact carrier having a recess therein, a longitudinally recessed conductor extending through the carrier and intersecting the recess of the carrier at right angles thereto, said conductor having a passage therein of less diameter than the recess of the carrier and connecting the conductor recess with the carrier recess, a latch slidable in the carrier recess and having a reduced forward end operating in the passage of the conductor and forming a shoulder engageable with the conductor to limit locking movement of the latch, and a spring between the latch and the base of the carrier



recess operating to project the latch against a circuit extending plug inserted in the recess of the conductor to force said plug into firm contact with the conductor.

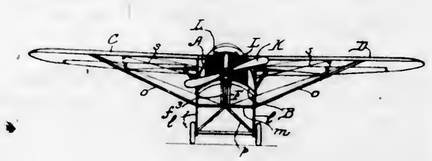
1,422,258. BUILDING BLOCK. HARVEY L. EMERY, Worthington, Ind., assignor to Self Lay Block & Machine Company, Vincennes, Ind. Filed Jan. 10, 1921. Serial No. 436,244. 6 Claims. (Cl. 72—38.)

2. A building block having an interlocking surface, said surface including a projection at each corner thereof separated by spaces and a central projection of equal height with the other projections and positioned between said corner projection and at the intersection of the diagonals therebetween, said central projection being receivable by two adjacent end spaces of two adjacent blocks of an adjacent tier when in wall formation.



1,422,259. SADDLE-BLOCK STRUCTURE FOR EXCAVATORS. CLARENCE E. GAGE, Evansville, Ind., assignor to Bucyrus Company, South Milwaukee, Wis., a Corporation of Wisconsin. Filed Feb. 17, 1921. Serial No. 445,729. 3 Claims. (Cl. 214—135.)

1. A structure of the class described comprising a shaft, a holding member in juxtaposition to the shaft and



selectively movable with respect thereto, a shiftable member movable between the shaft and said holding member, and a slide plate carried by the holding member and disposed between the holding member and shiftable member for sliding engagement with the latter, said plate retaining the holding member against movement whereby to hold the shiftable member in definite relation to the shaft and against removal from its normal position, said slide plate being readily removable from the holding member to permit movement of the latter with respect to the shaft and the shiftable member for the disassembling of the latter.

1,422,260. ANTICREEPER. HORATIO G. GILLMOR, Washington, D. C. Filed Jan. 22, 1919. Serial No. 272,569. 10 Claims. (Cl. 238—324.)

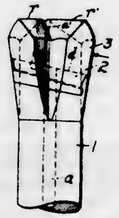
2. A rail anchor, comprising a rigid rail base engaging member formed with a movement limiting shoulder and with a tie engaging flange and a resilient yoke which extends around the rail base engaging member and the rail base, said member and said yoke interlocking and being adjustable to the operative position upon the rail by movement of both transversely upon the rail and so constructed that movement of said yoke in relation to said tie abutting member in one direction will effect a positive wedging action.

1,422,261. AIRCRAFT. FREDERICK W. GORE, Huntington, N. Y. Filed Dec. 9, 1919, Serial No. 343,667. Renewed Jan. 3, 1922. Serial No. 526,808. 26 Claims. (Cl. 244—12.)

1. An aircraft embodying a combined fuselage and main longitudinal plane comprising a plurality of cross sectional curved members positioned one below the other, the under surface of the lower member being free and unobstructed for the flow of air within a tunnel-like space extending lengthwise of the fuselage at the bottom thereof.

1,422,262. HAMMER. CHRIST HANSEN, Mink Creek, Idaho. Filed May 27, 1921. Serial No. 473,076. 1 Claim. (Cl. 254—26.)

A hammer comprising a head having claws of unequal length, the longer one being inclined toward the central line of the head and terminating in a point lying upon said central line, whereby an accurate blow may be struck with said point to force the same into a staple

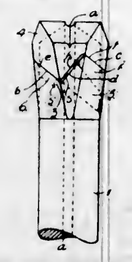


to be pulled, the space between said claws providing a nail-pulling slot, whereby said point may be used for pulling staples or the like.

1,422,263. TWO-PIECE-PULLEY CONSTRUCTION. FRED HASKEL, Detroit, Mich. Filed June 18, 1921. Serial No. 478,621. 6 Claims. (Cl. 254—192.)

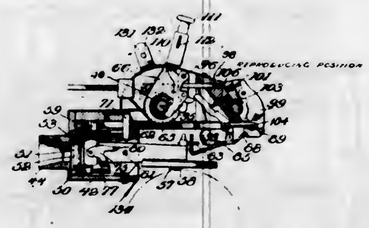
1. In a pulley, the combination with a bendable U-shaped frame provided with a transverse pivot portion extending inwardly from one of its sides, said pivot portion having a length on the side farthest from the base of the U greater than that on the side nearest to the base, of a pulley wheel insertable between the sides of the frame and engageable over the pivot portion when the sides are separated.

1,422,264. DRILL. ARTHUR L. HAWKESWORTH, Butte, Mont. Filed Sept. 19, 1921. Serial No. 501,585. 9 Claims. (Cl. 255—64.)



1. In combination with a drill-bar or shank terminating at one end in a tongue, the side walls of which are provided with grooves having one wall inclined to the shank offset at the base of the tongue, a bit movable across the axis of the shank and provided with an open-ended groove to receive the tongue, and tongues projecting from the walls of said groove for cooperating with the grooves in the side-walls of the shank tongue.

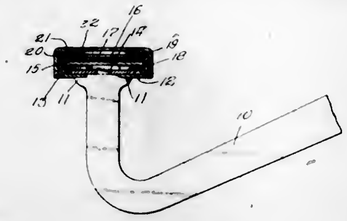
2. In combination with a drill-bar or shank, a bit detachably mounted thereon and movable across the axis of the shank in a direction so as to tighten on the shank during the drilling operation, said shank being provided with a port throughout its length, said bit also being provided with a port offset from the port in the shank and communicating therewith.



3. In combination with a drill-bar or shank, a detachable bit cooperating therewith, said bit being provided with a series of cutting edges converging to a point eccentric with the center of rotation of the shank, said shank and bit being traversed by a water-hole having an outlet at the convergence of the cutting edges.

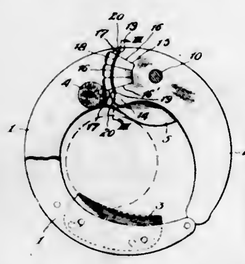
1,422,265. DRILL. ARTHUR L. HAWKESWORTH, Butte, Mont. Filed Nov. 21, 1921. Serial No. 516,784. 4 Claims. (Cl. 287—103.)

1. In combination with a shank, a cutting tool adapted to be detachably secured thereto, said shank being provided on the cutting end thereof with a zigzag formation including an abutment wall provided with a tapered hole, said cutting tool being provided with complementary formations for cooperating with those on the shank, and having a tapered tongue adapted to be wedged in the aforesaid hole when tool and shank are assembled.



1,422,266. TALKING MACHINE. FRANK C. HINCKLEY, Bridgeport, Conn., assignor, by mesne assignments, to Columbia Graphophone Manufacturing Company, Bridgeport, Conn., a Corporation of Delaware. Filed Mar. 20, 1917. Serial No. 156,044. 42 Claims. (Cl. 274—21.)

1. The combination in a talking machine of a record support, a sound-box, feed devices for advancing and returning said sound-box across said support, cooperative mechanism between them adapted to be operated to render one or the other operative, and means mounted upon the machine and movable into and out of functional position, and adapted in said functional position to be operated to actuate said cooperative mechanism.



1,422,267. COVER FOR TYPEWRITER KEYS. OTTO A. HOKANSON, Woodstock, Ill., assignor to Woodstock Typewriter Company, Woodstock, Ill., a Corporation of Illinois. Filed Dec. 19, 1919. Serial No. 345,948. 3 Claims. (Cl. 197—102.)

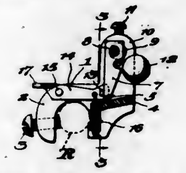
1. In combination, a typewriter key having a metallic outer surface member surrounding the lateral face thereof and having the upper face thereof arranged to carry a designation character and a cover ring of relatively hard non-metallic material of a size to fit snugly over said key without material stretching of said ring, said ring having the upper edge thereof turned inwardly to provide an inwardly projecting flange with a central opening

to permit the designation character upon the upper face of said key to be seen by the operator.

1,422,268. TYPE-HOLDING MEANS FOR MARKING DEVICES. ADOLPH G. HUPPEL, Reno, Nev., assignor to Hup Mfg. Co. Inc., New York, N. Y., a Corporation of New York. Original application filed Feb. 7, 1921, Serial No. 443,120. Divided and this application filed June 28, 1921. Serial No. 480,990. 4 Claims. (Cl. 101—377.)

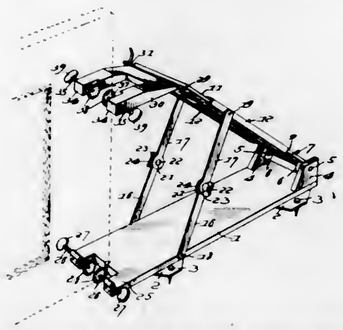
2. In a marking device, the combination of a marking member provided with a type receiving recess intersecting one end and both sides of said member; types in said recess provided with lateral end registering grooves; and means secured to said marking member engaging said grooves to hold said types in said recess.

1,422,269. COKING OF COAL. STEWART ROY ILLINGWORTH, Treforest, Wales. Filed Mar. 1, 1921. Serial No. 448,871. 5 Claims. (Cl. 202—8.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



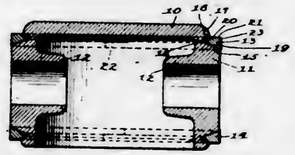
1. In the art of coking coal the improvement which comprises submitting the coal out of contact with air to a temperature and for a time sufficient to destroy a portion of the non-coke producing substances in the coal, but to leave 5% by weight of the resinic substances in the product.

1,422,270. RECIPROCATING PAN CONVEYER. GEORGE C. ILLINGWORTH, Anniston, Ala. Filed July 25, 1921. Serial No. 487,312. 10 Claims. (Cl. 198—220.)



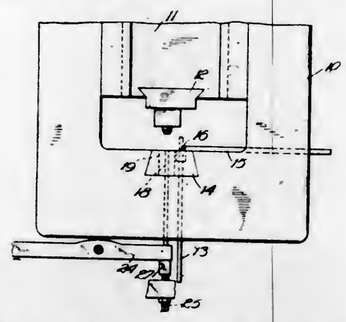
1. A conveyer composed of a series of detachable pans, connecting straps attached to adjacent ends of the pans, bolts connecting the straps and forming a flexible joint between the pans and means to reciprocate the pans.

1,422,271. SLUB CATCHER. FREDERICK JARRY, New Bedford, Mass., assignor of one-half to Samuel Taylor, New Bedford, Mass. Filed Dec. 1, 1921. Serial No. 519,268. 6 Claims. (Cl. 28—64.)



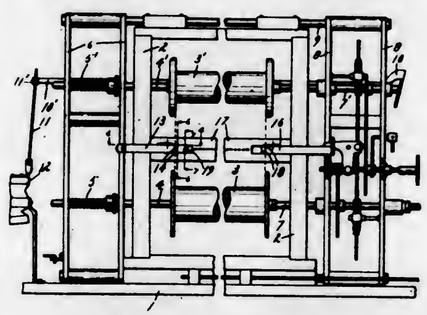
2. In a slub catcher, a frame having a face inclined to the horizontal, a swinging frame cooperating with said face to define a thread passage therebetween, and engageable with the high side of the inclined face to limit swinging of the frame in one direction, means to adjust the frame relative to the table, and a pivoted tensioned lever engaging the swinging frame to limit swinging in the opposite direction and being movable to allow the frame to be swung to release a caught slub.

1,422,272. BENCH OR FLOOR DOG. FRANK JASKOWIAK, St. Cloud, Minn. Filed Dec. 14, 1921. Serial No. 522,330. 5 Claims. (Cl. 144—296.)



1. In a floor or bench dog, a base member adapted to be secured to a stationary support, the opposite end of the base member having upstanding supports, a supporting member pivotally mounted upon said supports, said pivotally mounted member having a yieldably mounted extension, means for holding the pivotally mounted member in different positions pivotally relatively to the base member, the corresponding ends of the base member and the extension having axially aligned clamps, between which the door, window sash or the like may engage, whereby it may be planed.

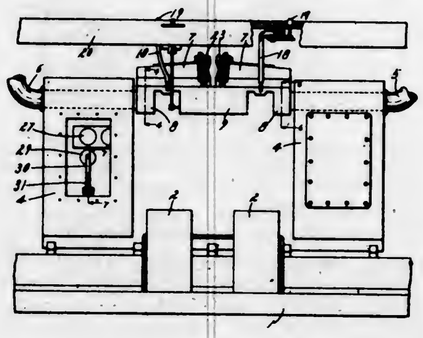
1,422,273. PISTON AND PISTON RING. HARRY B. JOHNSTON, Seattle, Wash. Filed Jan. 17, 1921, Serial No. 437,816. Renewed May 18, 1922. Serial No. 562,036. 5 Claims. (Cl. 74—109.)



1. In combination, a piston having a groove adjacent its end, and a ring in the groove, the groove having a narrow inclined conical wall inclining outwardly and toward the surface of the piston adjacent its head which is exposed to the pressure at the end thereof, a conical wall inclined oppositely to the narrow inclined conical wall of the groove, the ring having two conical surfaces for contact and cooperation with the conical walls of the groove.

1,422,274. METHOD AND APPARATUS FOR MAKING HEADED MACHINE PARTS. DAVID EMANUEL JOHNSON and THORVALD AUGUST MADSEN, Rockford, Ill., assignors to National Lock Company, Rockford, Ill., a Corporation of Illinois. Filed July 8, 1920. Serial No. 394,671. 4 Claims. (Cl. 10—11.)

1. The process of forming a headed member comprising the step of supporting a blank in a die, the step of shaping the body of the head, the step of protruding the blank from said die, and the step of shearing the fin from the protruded blank.

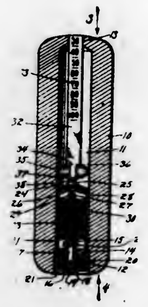


1,422,275. PNEUMATIC PIANO PLAYER. WALTER LANE, Holland, Mich. Filed May 19, 1917. Serial No. 169,669. 12 Claims. (Cl. 84—145.)

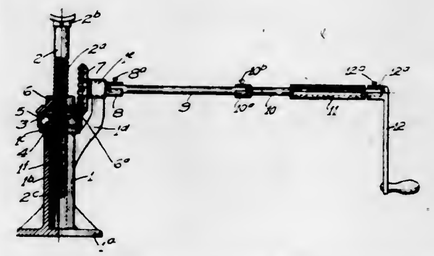
1. In a structure of the class described, the combination of a web support, tracker bar, means for controlling the movement of said web support in the direction of the length of the tracker bar comprising pneumatics, and a pair of tracker members slidably associated with said tracker bar and movable with said web support and provided with ducts connected to said pneumatics, one of said tracker members being provided with a loud pedal duct.

1,422,276. AUTOMATIC PLAYER PIANO. WALTER LANE, Holland, Mich. Filed May 19, 1917. Serial No. 169,670. 8 Claims. (Cl. 84—41.)

S. In a structure of the class described, the combination with the exhauster means of reservoirs communicating therewith, a pair of suction chests, means for regulating the suction in said suction chests comprising a suction regulating pneumatic, and manually controlled means for regulating the suction in each of said suction chests individually, and separate manually controlled means for regulating the suction in both of said suction chests, the first and last manually controlled regulating means being arranged in series whereby the latter means can control the action of the other.



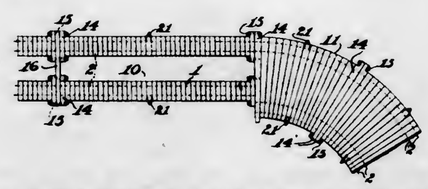
1,422,277. CHILD'S CARRIAGE. CHARLES A. LINDBERG, Sturgis, Mich., assignor to Sturgis Steel Go-Cart Company, Sturgis, Mich. Filed June 2, 1921. Serial No. 474,346. 8 Claims. (Cl. 280—47.)



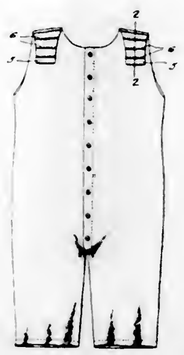
1. In a carriage, the combination of a supporting frame, comprising side members and spaced cross bars provided with opposed centrally disposed inwardly projecting offsets, an annular way mounted between said side members and cross members with the lower edges of the offsets of the cross members projecting below the lower edge of the way, a body support, comprising transverse members and connecting members therefor, said transverse members having central downward offsets therein disposed within said way, the shoulder portions of said offsets having recesses therein receiving said way, a latch pivoted on one of said transverse body support members to coact with the projecting lower edges of the offsets of said supporting frame cross members, and a spring for said latch.

1,422,278. PRESSURE GAUGE. ARTHUR B. LOW, Denver, Colo. Filed Aug. 4, 1921. Serial No. 489,818. 3 Claims. (Cl. 73—111.)

1. A pressure gauge of the character disclosed, embodying a casing that provides a longitudinal chamber opening to a top guiding aperture and having a bottom closure provided with a duct therethrough and including a valve stem contacting element and a surrounding seating face, an elongated indicator operating at its outer end through said top guiding aperture and towards its inner end provided with a combined centering, guiding and retaining element slidingly associated with the wall of said chamber in yielding frictional contact therewith, actuating means adapted only for outwardly operating said indicator with its retaining element by pressure fluid admitted through said duct, and retractile means for said actuating means.

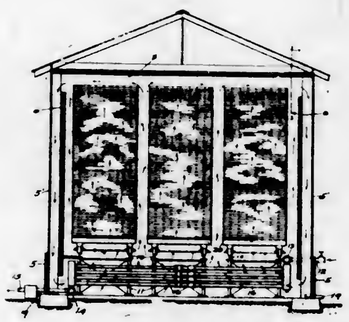


1,422,279. JACKSCREW. JOHN M. LYDICK, San Diego, Calif. Filed Apr. 27, 1920. Serial No. 376,910. 2 Claims. (Cl. 254—103.)



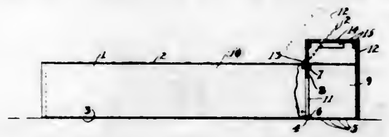
1. A jack screw, including a base member provided with an integral sideways and upwardly extended side arm journal portions extending from one side thereof, a bevel gear with its lower face downwardly, supported on said base member and threaded internally, a screw member adapted to screw into said thread in said bevel gear, a bevel gear intermeshing with said first mentioned bevel gear journaled in said side arm on said base and means for revolving said bevel gear.

1,422,280. PORTABLE ROADWAY. ARNOLD C. LUETGERT and ERNEST H. MEIKLEJOHN, Seattle, Wash., assignors of one-third to Ralph D. Brown, Seattle, Wash. Filed Mar. 31, 1921. Serial No. 457,167. 6 Claims. (Cl. 238—3.)



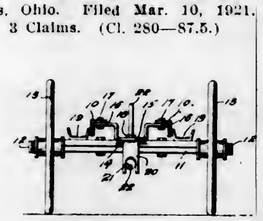
1. A portable sectional roadway, each section consisting of a series of beams placed side by side and a flexible cable passing through all said beams to hold them together.

1,422,281. UNDERGARMENT. CLARENCE R. MCFARLAND, Marion, Ill. Filed Feb. 21, 1921. Serial No. 446,692. 1 Claim. (Cl. 2—144.)



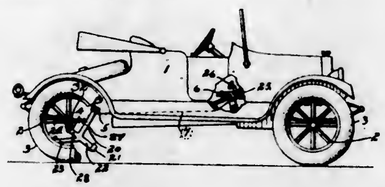
A one piece undergarment having integrally formed shoulder portions in the nature of straps which are folded upon themselves and stitched, the stitched folds on each of the straps being arranged in spaced superimposed relation to each other whereby the stitching between any of the folds may be severed without interfering with the stitching of the remaining folds.

1,422,282. HEAT-RADIATING DEVICE. EUGENE G. MCGLAUFLIN, Portland, Oreg. Filed Mar. 17, 1920. Serial No. 366,504. 1 Claim. (Cl. 257—155.)



A heat radiating device, wherein is combined, a feed pipe, a discharge pipe positioned below the plane of the feed pipe, and a series of batteries of lateral pipes, each lateral pipe being independent and extending from a connection with the feed pipe at an angle and inclination, to a connection, thence in a reverse angle and inclination to a connection with said discharge pipe, each of said lateral pipes being arranged to allow effective drainage through the same, without auxiliary means therefor, and also to allow each lateral pipe and sections thereof to be secured, adjusted, or removed between connections, independently of other pipes in said radiating device.

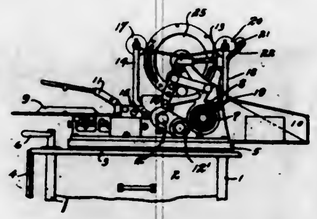
1,422,283. HUTCH. JOHN F. MCKIM, San Jose, Calif. Filed June 11, 1920. Serial No. 388,145. 2 Claims. (Cl. 119—19.)



1. In a device of the character described, a housing having an open top, a hopper hinged to the housing and adapted to form a closure for the top thereof, and a wire mesh bottom for said hopper.

1,422,284. STEERING MECHANISM. RUDOLPH A. MACK, Gallipolis, Ohio. Filed Mar. 10, 1921. Serial No. 451,384. 3 Claims. (Cl. 280—87.5.)

2. In a vehicle of the character described, the combination of a vehicle frame, a fifth wheel member carried by said frame, a bracket formed integral with said fifth wheel member and projecting downwardly therefrom, an axle pivoted to said fifth wheel member, a bracket formed integral with said axle and projecting downwardly therefrom substantially alined with the bracket of said fifth wheel member, the said fifth wheel member bracket having an opening therein, the bracket of said axle being forked, a steering post rotatably mounted in the opening in said fifth wheel bracket, and an eccentric at the free end of said steering post fitting into the forked end of the axle bracket.

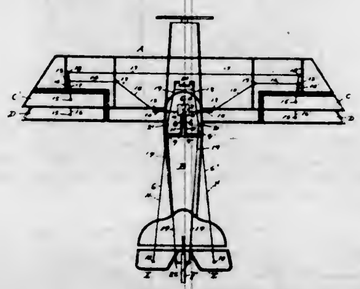


1,422,285. ANTISKID DEVICE. WALTER L. MAJORS, St. Louis, Mo. Filed Mar. 24, 1920. Serial No. 368,352. 9 Claims. (Cl. 188—2.)

4. In a device of the character described, the combination of a pair of rotary spiders, a shaft with which they move in unison, means for actuating the same, the said actuating means consisting of a tire-grip, means for forcing the same into contact with the tires, the said spiders having each thereon such tire-grip, and an arm for hoisting the car.

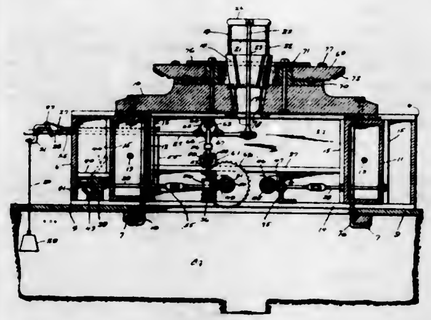
1,422,286. MIMEOGRAPH ATTACHMENT. WALTER L. MAJORS, St. Louis, Mo. Filed Mar. 31, 1920. Serial No. 370,193. 7 Claims. (Cl. 101—175.)

1. In an apparatus adapted to print in different colors, the combination of a printing member having ridges or projections, and adjoining rolls having depressions and parts projecting relative to the said depressions, the said ridges



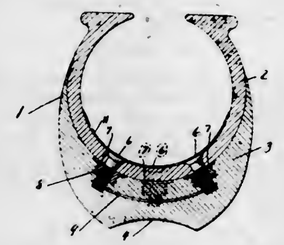
being composed of individual elements or blocks adapted to vary the same as to length, and a tongue adapted to hold the said elements.

1,422,287. FLY EXTERMINATOR. EDWARD J. MARCHAND, Duluth, Minn. Filed Aug. 27, 1921. Serial No. 495,996. 1 Claim. (Cl. 43—112.)



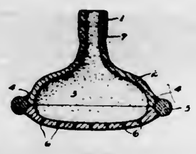
A device of the character described comprising a shallow elongated open receptacle, means for attracting flies in the bottom of the receptacle, spaced non-insulated electric wires transverse the opening, an open electric circuit associated with the wires, side walls upon the longer sides of the receptacle, one of said side walls being pivotally attached at one end whereby to conveniently remove the dead flies when collected within the receptacle.

1,422,288. CONTROLLING MECHANISM FOR FLYING MACHINES. ROBERT E. MITTON and WAYNE M. BRALEY, Salt Lake City, Utah, assignors, by direct and mesne assignments, to Mitton-Braley Aero-Plane Control Co., Salt Lake City, Utah, a Corporation of Utah. Filed Feb. 4, 1920, Serial No. 356,213. Renewed May 15, 1922. Serial No. 561,168. 4 Claims. (Cl. 244—29.)



1. A controlling mechanism for flying machines of the character described, in combination with a base or support sustaining a pivot, the pivot, a rod running through said pivot for supporting the pilot's seat, a counter balance mounted on lower end of said rod in such a way that it may revolve freely to decrease friction with the sides of the base or support, the tendency of said counter balance to hang straight downward actuating the controlling surfaces for the maintenance of stability and holds the pilot's seat level.

1,422,289. GRIPPING DEVICE. JOSEPH F. MOODY, Ranger, Tex. Filed Dec. 17, 1920. Serial No. 431,443. 13 Claims. (Cl. 255—35.)



1. In a well-drilling appliance, a work gripping means, and means controlled by speed of descent of the work for placing the gripping means in operative position.

1,422,290. TIRE CASING. DANIEL MORIARTY, Oakland, Calif. Filed Mar. 14, 1922. Serial No. 543,701. 5 Claims. (Cl. 152—17.)

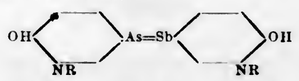
5. A tire casing comprising an inner member of fabric material, a rubber tread for the same, a plurality of screws extending through the fabric into the rubber having nuts thereon adjacent the fabric for firmly holding the screws to the latter, reinforcing wires between the screws within the rubber and a layer of asbestos inside the casing for preventing heat to spread from the screws to the inner tube.

1,422,291. BATH SPRAY. JAMES A. MULHERIN, St. Louis, Mo., assignor of one-third to Henry D. Delkeskamp, St. Louis, Mo. Filed Mar. 14, 1921. Serial No. 452,166. 2 Claims. (Cl. 299—141.)

1. A bath spray comprising a hollow head formed from soft rubber provided in its outer edge with a groove, and a ring of hard rubber detachably received in said groove and constituting a stiffening means for said head.

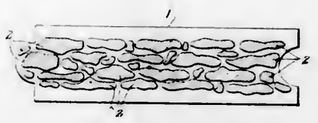
1,422,292. STAIN COMPOSITION. ALEXANDER MURRAY, Marietta, Ohio, assignor to The Marietta Paint & Color Company, Marietta, Ohio, a Corporation of Ohio. Filed July 13, 1920. Serial No. 395,924. 5 Claims. (Cl. 134—48.)

4. A stain comprising a solution of a dyestuff, a projective colloid, water, and a plurality of organic liquids, at least one of which is readily water-soluble, and at least one other of which is not, such organic liquids being incapable of destroying either the soap or the said dyestuff and incapable of readily dissolving dried glue.



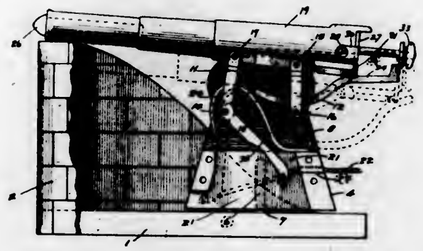
1,422,293. CAR-COUPLING RELEASE RIGGING. GEORGE E. MURRAY, Battle Creek, Mich., assignor to Walter P. Murphy, Chicago, Ill. Filed Apr. 26, 1920. Serial No. 376,752. 1 Claim. (Cl. 213—59.)

The method of transforming the usual one piece rotatably mounted lock operating rods of car couplers having a horizontally extending eye in its crank arm, which consists in twisting said eye substantially 90 degrees so that the eye extends vertically, whereby said vertically extending eye and the lock pin may be connected by means of a single closed split link.



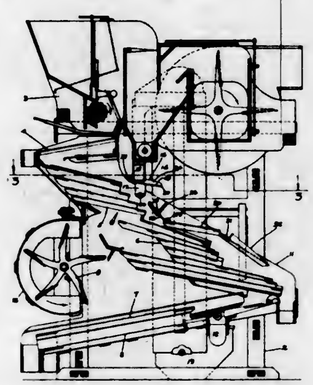
1,422,294. COMPLEX ARSENO-STIBINO COMPOUNDS AND PROCESS OF MAKING THE SAME. CHESTER NEWTON MYERS, Valley Falls, N. Y., assignor to Herman A. Metz, New York, N. Y. Filed Apr. 21, 1921. Serial No. 463,327. 12 Claims. (Cl. 260—11.)

12. Arseno-stibino compounds comprising a brownish yellow amorphous powder readily soluble in cold water and having the formula



the alkalinized solutions of said compounds being suitable for intravenous injection.

1,422,295. PLATE FOR USE IN LINING BURGLAR-PROOF VAULTS AND SIMILAR PURPOSES. FRANCIS J. NAPOLITAN, Jersey City, N. J., assignor to American Abrasive Metals Company, a Corporation of New York. Filed Aug. 13, 1921. Serial No. 492,202. 2 Claims (Cl. 109—1.)

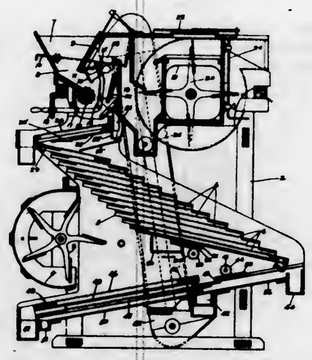


1. As a new article of manufacture a plate for use in forming bank vaults and similar purposes which plate comprises a matrix of cast iron or other metallic material in which are embedded closely packed masses each comprising fused and crystallized aluminum oxide in the form of a graded aggregate.

1,422,296. FORT DISAPPEARING GUN. CYRILL OTTOLINI, Calistoga, Calif. Filed Aug. 11, 1921. Serial No. 491,390. 5 Claims. (Cl. 124—12.)

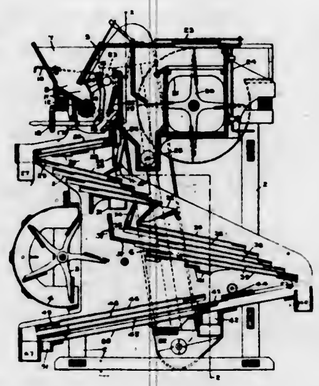
1. In a toy gun, a barrel, a carriage supporting the same comprising a plurality of pivotal supporting links having means associated therewith for thrusting the barrel upward and forward, spring means within the barrel for imparting a forward thrust to a projectile, a trigger supported on the barrel for setting the spring, and means opposing the forward thrust of the trigger for tripping the same.

1,422,297. GRAIN-FEEDING SPREADER. RICHARD L. OWENS, Minneapolis, Minn. Filed Nov. 18, 1921. Serial No. 516,136. 3 Claims. (Cl. 130—15.)



1. A spreader and feeder comprising in combination a plate having a front feeding edge, a diagonally arranged rear wall and means for supporting said plate, and permitting adjustment thereof both longitudinally and laterally, for the purpose set forth.

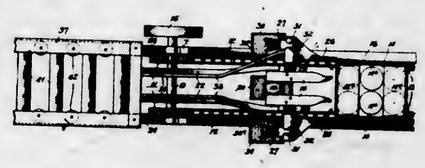
1,422,298. GRAIN SEPARATOR. RICHARD L. OWENS, Minneapolis, Minn. Original application filed Dec. 12, 1917, Serial No. 206,783. Divided and this application filed Nov. 18, 1921. Serial No. 516,137. 5 Claims. (Cl. 130—15.)



1. In a grain cleaning machine, the combination, with a grain delivering hopper, of a plurality of sieves arranged in an inclined gang, means for delivering the grain in a sheet upon the upper sieve of the gang, and passing through and over the sieves of the gang, an oppositely inclined screen arranged beneath the upper portion of the lower sieve of the gang, an inclined deck arranged beneath the lower portion of said lower sieve, a repeat elevator arranged to receive material from said

inclined deck, and an adjustable repeat board arranged to selectively divide the material passing through the

lower portion of the lower sieve of said gang between said repeat spout and the oppositely inclined screen.



1,422,299. GRAIN SEPARATOR. RICHARD L. OWENS, Minneapolis, Minn. Filed Dec. 12, 1917, Serial No. 206,783. Renewed Apr. 17, 1922. Serial No. 553,915. 23 Claims. (Cl. 130—15.)

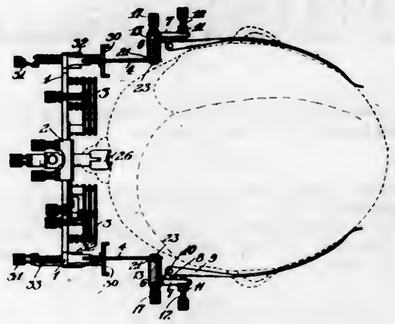
4. In a grain cleaning machine, a hopper, primary and secondary gangs of sieves whereto the material is delivered by said hopper, and a gate interposed between said gangs for selectively directing the material falling through the sieves of the upper gang upon the upper sieves of the lower gang or the lower sieves of said lower gang.

1,422,300. APPARATUS FOR SEALING BOXES. AMAND PAPE, Willow Springs, Ill. Filed Apr. 9, 1920. Serial No. 372,451. 10 Claims. (Cl. 93—7.)

1. In a box sealing machine, the combination of a conveyor adapted to receive and successively advance filled boxes and comprising members underlying the side margins of the box and formed to leave the intermediate portions of the bottom of the box exposed with the bottom flaps between them, and means for folding the bottom

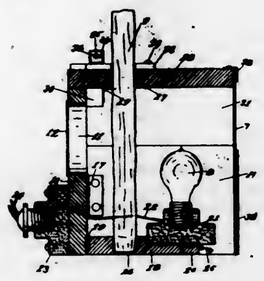
flaps upwardly and between said members and securing them to seal the bottom of the box.

1,422,301. POST FOR WIRE FENCING. CLARK PARKER, Baulkham Hills, New South Wales, Australia; Ethel Parker administratrix of said Clark Parker, deceased. Filed Apr. 30, 1919. Serial No. 293,884. 1 Claim. (Cl. 189—29.)



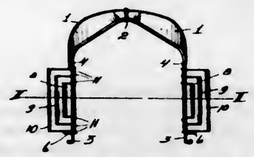
A metal fence post comprising a flat bar and a driving anchor riveted thereto, the anchor being triangular in side elevation and folded longitudinally to permit a groove to receive the post and contact therewith on both sides thereof so that the width of the anchor will extend transversely of the narrowest dimension of the post.

1,422,302. PIPE WRENCH. HOWARD PARKER, Berlin, N. H., assignor to Brown Company, Berlin, N. H., a Corporation of New Hampshire. Filed July 31, 1920. Serial No. 400,396. 5 Claims. (Cl. 81—64.)



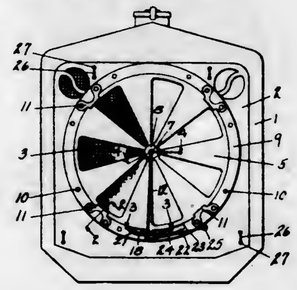
1. A pipe wrench including a handle and a flexible band secured at one end and detachably connected at its other end to said handle, said band having an effective gripping action throughout its engagement with the pipe and including extensible means permitting of extension of said band to prevent injury to the pipe when the force applied is excessive.

1,422,303. OPHTHALMIC TEST-LENS FRAME. MAX POSER, Rochester, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Original application filed Mar. 15, 1916, Serial No. 84,358. Divided and this application filed Jan. 13, 1919. Serial No. 270,792. 10 Claims. (Cl. 88—20.)



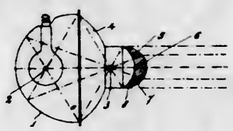
1. In an ophthalmic lens frame, the combination with a head piece, of a laterally flexible member projecting from said head piece adjacent an end portion thereof, a pivot pin carried by said member, and a temple pivotally supported by said pin for adjustment in a substantially vertical plane.

1,422,304. TREE HOLDER. GEORGE B. POWERS, Superior, Wis. Filed Mar. 8, 1921, Serial No. 450,698. Renewed Jan. 30, 1922. Serial No. 532,857. 6 Claims. (Cl. 248—38.)



2. In a device of the class described, a back having a hole therein, a base member hingedly secured to the back, a socket on said base member adapted to be folded into said hole, and means for supporting a tree on said base member.

1,422,305. AUTOMOBILE HOOD. RICHARD E. ROBINSON, Kansas City, Mo. Filed Sept. 10, 1920. Serial No. 409,426. 1 Claim. (Cl. 180—69.)



A motor car hood provided with openings at its sides, and wings extending outward at the rear margins of such openings, each succeeding wing increasing in length and width in such proportion that there will be a greater quantity of air entering each succeeding opening from the front to the rear of the hood.

1,422,306. RADIATOR COVER. WALTER S. RUNNELS, Kalamazoo, Mich. Filed Mar. 18, 1921. Serial No. 453,240. 5 Claims. (Cl. 257—132.)

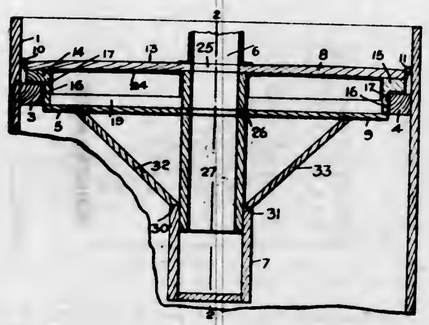
2. In a radiator cover, the combination of a cover plate having shutter openings therein, a circular shutter mounted on said cover plate by means of a tubular pivot and having openings therein adapted to be brought into register with the openings of said cover plate, a stop member on said shutter, a spring having an offset therein engaged in said shutter pivot, the inner arm of said spring being engaged with said cover plate and its outer arm being secured to said shutter whereby the shutter is held normally open, and means for closing said shutter attached to the outer arm of said spring.

1,422,307. PROJECTING DEVICE FOR BEAMS OF LIGHT. SALVATORE SALTO, Milan, Italy. Filed Jan. 19, 1920. Serial No. 352,377. 4 Claims. (Cl. 240—41.)

1. A projector for light rays comprising a curved reflecting surface, a concentrated source of light located at a focus of said surface, and a lens having its outer surface of ellipsoidal form located with a focus of the ellipsoid coincident with a focus of the reflecting surface and its inner surface of spherical form and centre also coincident with said last mentioned focus.

1,422,308. COMBINED FRICTION AND SPANNER WRENCH. JOHN A. SCHLEICHER, Saginaw, Mich., assignor to The Lufkin Rule Company, Saginaw, Mich., a Corporation of Michigan. Filed Nov. 21, 1921. Serial No. 516,572. 5 Claims. (Cl. 81—3.)

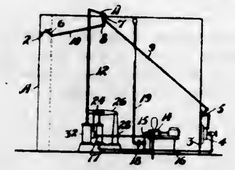
1. A combined friction and spanner wrench for a micrometer gage formed from a single piece of material



comprising a resilient embracing portion and a bifurcated portion for adjusting members of the gage without mutilation or destruction thereof.

1,422,309. APPARATUS FOR CLEANING ARTICLES. GEORGE W. SCHWEINSBERG and MASON I. DOYLE, Brooklyn, N. Y., assignors to U. S. Electrogalvanizing Company, a Corporation of West Virginia. Filed July 16, 1919. Serial No. 311,157. 9 Claims. (Cl. 266—7.)

1. In a machine for treating material by liquids in successive tanks, the combination with a unitary rotary member comprising a plurality of containers adapted to tumble and advance the material in contact with the liquids in the tanks in succession, of rotatable draining mechanism intermediate between and connecting said containers and having means for tumbling and advancing the material from one container into the next and draining the liquid back into each preceding tank from the articles.

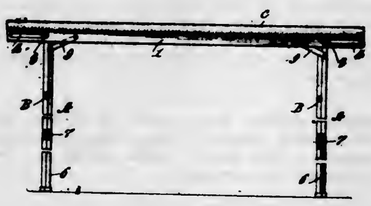


1,422,310. PHONOGRAPH. JAMES SHAW, Toronto, Ontario, Canada. Filed Sept. 2, 1921. Serial No. 497,908. 2 Claims. (Cl. 274—2.)

1. In a phonograph, a hollow bar-like member supported at its ends within a phonograph cabinet and having an orifice in its upper wall around which a tone arm base is adapted to be secured and having an orifice in its lower wall in vertical alignment with the orifice of the upper wall and around which lower orifice a horn is adapted to be secured for suspension, and a tubular connection extending between the walls and into the orifices.

1,422,311. AUTOMATIC DRAFT REGULATOR. CARLYLE J. SHERWOOD, San Francisco, Calif., assignor to Coen Co., San Francisco, Calif., a Corporation of California. Filed Sept. 24, 1919. Serial No. 326,105. 7 Claims. (Cl. 158—45.5.)

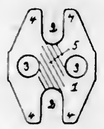
1. The combination with a boiler and furnace, an oil burner for the furnace, means for delivering oil under variable pressure to the burner, a damper adapted to regulate the air flow through the furnace, an enclosed reciprocally mounted member, means actuated by pressure variations in the oil adapted to admit oil to one side or



another of the reciprocally mounted member to impart movement thereto, and means for transmitting said movement to open and close the damper.

1,422,312. ELECTRIC CONDENSER. FRANKLIN S. SMITH, Philadelphia, Pa., assignor to The Products Protection Corporation, New York, N. Y., a Corporation of Delaware. Filed Feb. 12, 1919. Serial No. 276,559. 12 Claims. (Cl. 250—41.)

2. An electric condenser comprising an air-tight container of dielectric material, a metal lining upon the inner surface of the said container, said lining having connection at one end with a metallic part projecting through the wall of one end of said container to the exterior thereof and the other open end of said lining terminating in opposed spaced relation to the opposite closed end of said container, and a metal member secured to the said opposite closed end and projecting therethrough into the space inclosed by said metal lining.

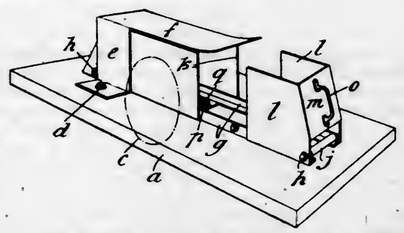


1,422,313. FOLDING TABLE. HUGH B. SMITH, University Place, Nebr. Filed Mar. 25, 1919. Serial No. 284,897. 1 Claim. (Cl. 45—11.)

A table including in combination, a pair of folding leg sections each consisting of two bars which are pivotally connected near their lower ends, two side bars having their upper ends recurved to provide an open seam tube with a slot near each end having a lateral extension, a pivot fastener fixed to each leg end arranged to work in a slot, a brace bar pivotally fixed to each end of said side bars and leg sections to hold said legs perpendicular, folding braces each consisting of two bars pivotally connected at their inner ends and having their outer ends pivotally fixed to said leg sections one of said braces having its end extending over to provide a hook for engagement with said other brace, a fabric top having side seams for engagement with said open seam tubular members, a rod held in said seams and said tubular members,

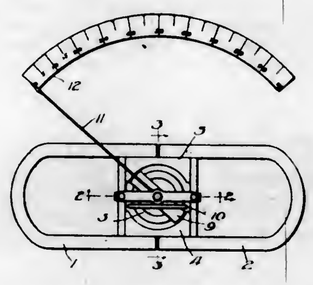
and a pivotal connecting member uniting said leg sections near the lower ends whereby increasing the leverage of said leg sections or in holding said top taut, all as and for the purpose set forth.

1,422,314. PROCESS OF MAKING WIRE-ROPE CLAMP CLIPS. GEORGE C. SOULE and JOHN B. WOODBURY, South Portland, Me. Filed Mar. 22, 1920. Serial No. 367,923. 1 Claim. (Cl. 113—116.)



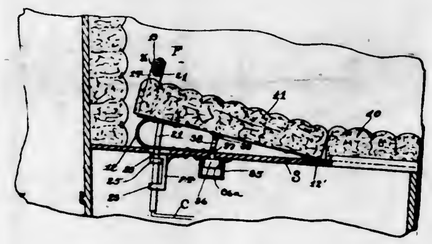
The process of making clamp members for wire rope clamps of the class described which consists of punching from a generally rectangular plate a pair of holes separated by the thickness of the rope and a pair of opposite slots extending in from the edges of said plate and at right angles to a line passing the center of said holes to form a pair of ears and finally turning said ears upwardly substantially at right angles to the body of said plate.

1,422,315. RADIATOR FOR MOTOR VEHICLES. CHARLES F. SPERY, Chicago, Ill. Filed Nov. 25, 1919. Serial No. 340,635. 8 Claims. (Cl. 257—129.)



1. A radiator core, comprising a plurality of transverse series of vertically disposed, spaced apart, water tubes arranged in alinement from front to rear, said water tubes having a tapering transverse sectional contour and having rounded edges, the narrower part of the tubes being at the front of the core, the spaces between adjacent water tubes affording air conduits of gradually decreasing width there being in the converging walls of said tubes outwardly projecting diagonal protuberances to increase the cooling area of said tubes.

1,422,316. GUARD FOR CIRCULAR SAWS. GILBERT ELPHINSTONE HARVEY SPILLER, Eaglehurst, Chagford, England. Filed Oct. 3, 1921. Serial No. 504,940. 4 Claims. (Cl. 143—159.)

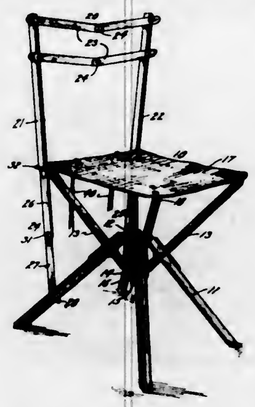


1. A guard for a circular saw working in a slot in a saw bench, consisting of a casing fixed to the bench and a drawer adapted to slide in the casing and having two plates spaced apart on each side.

1,422,317. ELECTROMAGNETIC MEASURING APPARATUS. JOSEPH C. STANGIER, Chicago, Ill.; Bertha Stangier administratrix of said Joseph C. Stangier, deceased. Filed Mar. 16, 1918. Serial No. 222,981. 8 Claims. (Cl. 171—95.)

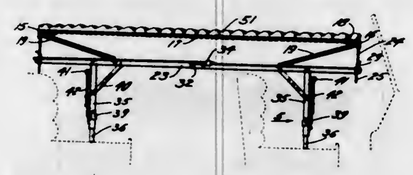
1. In a measuring instrument of the kind described, for measuring a momentary flow of electricity, a magnetic field member, an indicating member including a coil pivotally mounted in the magnetic field to oscillate freely in the field when no current is flowing therein, and means for producing a restraining force on the indicating member which ceases as the indicating member comes to rest, and whereby the indicating member remains at its extreme indicating position.

1,422,318. AUTOMATIC SWITCH FOR CIRCUITS OF INTERNAL-COMBUSTION ENGINES. SIDNEY STEVENS, Millinocket, Me. Filed Oct. 6, 1920. Serial No. 415,060. 5 Claims. (Cl. 180—82.)



1. The combination with a vehicle embodying an internal combustion engine, a circuit therefor and a driver's seat embodying a vertical shiftable section, of means operated by the elevation of said seat for breaking the circuit of the engine and by the lowering of said seat for completing the circuit of the engine and means for locking said seat in elevated position comprising, a member secured to said shiftable seat section and embodying an angular portion provided with an opening, a member secured to the frame-work of the vehicle and embodying an angular portion against which the first-named angular portion abuts whe nthe seat is in the elevated position, said second-named angular portion being provided with an opening alined with the opening of the first-named angular portion and coacting therewith to receive the hasp of a padlock.

1,422,319. FOLDING CAMP CHAIR. FRANK M. STOLL, Denver, Colo. Filed July 1, 1921. Serial No. 481,827. 3 Claims. (Cl. 155—136.)

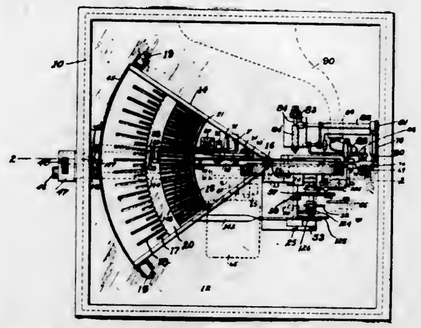


1. The combination with a chair of the class described of a back-rest consisting of two upright members flexibly

joined together by resilient means, adapted to be detached from said chair and collapsed, foldable supports for

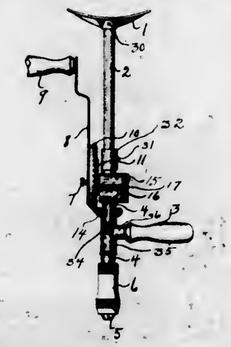
supporting said back-rest on said chair, said foldable supports being adapted to fold within and simultaneously with said chair.

1,422,320. PORTABLE FOLDING BED. FRANK M. STOLL, Denver, Colo. Filed July 22, 1921. Serial No. 486,788. 5 Claims. (Cl. 5—5.)



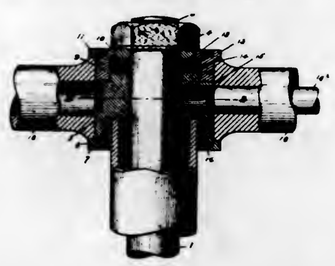
1. The combination, in a bed of the class described, of end bars supporting a flexible spring structure, said end bars being detachably braced and locked to foldable longitudinal bars; means for locking said cross bars to said longitudinal bars consisting of links pivoted at their upper extremities to said end bars and adapted to pass at their lower extremities through openings in said longitudinal bars, obstructions on said lower extremities adapted to prevent their removal from said openings, tongues or wedges slidably mounted on said links adapted to bring said obstruction into action; legs pivotally fastened to and braced from said longitudinal bars and adapted to fold thereon; cross bars connecting and braced from the pairs of legs at each end of said bed, said cross bars adapted to be disconnected at their mid point and folded parallel to said legs.

1,422,321. AUTOMATIC PHONOGRAPH. HADWEN SWAIN, San Francisco, Calif. Filed Aug. 2, 1917. Serial No. 184,101. 32 Claims. (Cl. 274—10.)



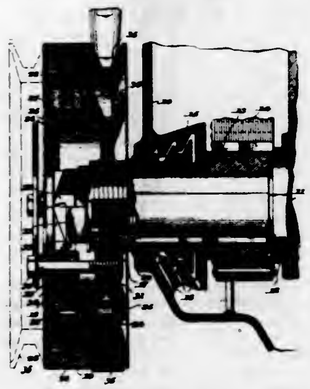
19. An automatic phonograph with suitable record rack, runways, a vertical turntable, with its operating parts, together with an arm passing close to and across the face of the turn-table to place the record that has been played back into the rack, said arm having a suitable roller or projection to raise one end of the lower runway into normal position after a large record has been played.

21. An automatic phonograph having a vertical turntable, a reproducer, a vertical reproducer arm, and a counter weight therefor so disposed as to continuously give the reproducer needle a slight constant impetus toward the rotating axis of the record.



24. In a multiple disk phonograph, a turn-table, a tone arm adapted to operate in conjunction therewith, and a swinging rack adapted to hold a plurality of disk records in a vertical position and in radial relation to the pivotal center of said rack and from which the records may be delivered to the turn-table.

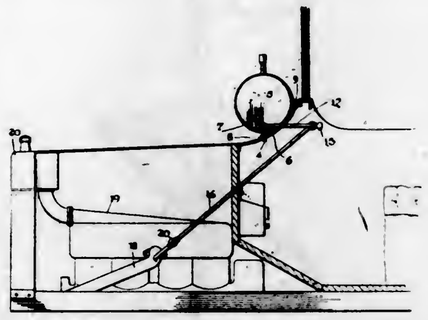
1,422,322. DRIVE FOR DRILLS AND SIMILAR TOOLS. WILLIAM THOMPSON and WILFRID J. ROY, Springfield, Mass., assignors to Consolidated Tool Works, Inc., New York, N. Y., a Corporation of New York. Filed Oct. 9, 1920. Serial No. 415,754. 2 Claims. (145—67.)



1. In combination, a casing comprising two adjacent notched socket members having sockets therein, a sleeve projecting from one socket member and adapted to be connected to a breast rest, a yoke projecting from the other socket member and secured to a sleeve adapted to support a revoluble spindle having a bevel gear secured thereto within the said yoke and adjacent the last mentioned socket member, a wheel having an outer bevel gear and an inner bevel gear, both of which are adapted to mesh with the first mentioned bevel gear, the said wheel having a spindle adapted to fit within either of the sockets of the said socket members so as to bring one or the other of its bevel gears into mesh with the first mentioned bevel gear, a reciprocating member mounted in a recess intermediate the said socket members, latch members pivoted to the said socket members the pivotal axes being parallel to the spindle and so connected to the said reciprocating member as to be operated by it, so that the said latch members are moved within or without the said sockets, the said spindle having a notch into which the said latches are adapted to fit so as to lock the same in the socket in which it is located.

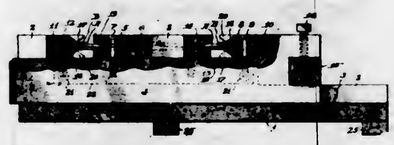
1,422,323. STEERING WHEEL. WILLIAM LINCOLN TOBIAS, Toronto, Ontario, Canada, assignor to Joseph William McNab, Toronto, Ontario, Canada. Filed Sept. 29, 1920. Serial No. 413,634. 3 Claims. (Cl. 74—33.)

1. In a steering wheel, a steering post, a tube enclosing said post and terminating short of the top end of said post, a spider, a bushing keyed to said post and having the opening therethrough enlarged adjacent to the lower end thereof to receive said tube, said bushing being flanged around its lower end to form a support for said spider, said bushing also being reduced in thickness at its top end and threaded exteriorly, a cap threading over said top end and flanged to extend over the edge of said spider, and a bolt slidable in said spider and adapted to be projected into said bushing to prevent rotation of said spider.



1,422,324. VIBRATION DAMPER FOR HYDROCARBON MOTORS. JESSE G. VINCENT, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 17, 1919. Serial No. 271,591. 9 Claims. (Cl. 74—6.)

1. In combination, a shaft, an inner member having a pulley groove therein, an outer member having a pulley groove on its outer surface and a flange portion extending inwardly from its inner surface and adapted to engage said inner member, and means for securing said members together.



1,422,325. WATER TANK. EVANS WOOD, Tuttle, Idaho. Filed Aug. 31, 1921. Serial No. 497,327. 2 Claims. (Cl. 280—5.)

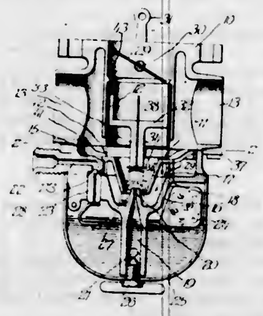
1. The combination with a motor vehicle having an internal combustion engine having a cooling system, said vehicle being provided with a cowl, of a tank secured on said cowl, a pipe extended rearwardly from the tank and having a laterally projecting branch, a valve interposed in said branch and arranged within convenient reach of the vehicle operator, a forwardly directed pipe connected

to said branch and having a valve, and means to connect the forward end of the pipe to the cooling system of the engine.

1,422,326. MACHINE FOR ASSEMBLING FRAME AND SPRING MEMBERS. CORBAN H. ZILES, Windsor, Ontario, Canada, assignor of one-half to Leggett & Platt Spring Bed Company, Limited, Windsor, Ontario, Canada, a Corporation of Ontario, Canada. Filed July 10, 1920. Serial No. 395,234. 14 Claims. (Cl. 29—87.1.)

1. A machine for attaching a frame member to one coil of each of a plurality of coiled springs by forming said frame member into engagement with said coils, said machine comprising means for supporting a frame member and a plurality of springs with said frame member extending adjacent that portion of the coils of the several springs to be secured thereto, means adjacent each spring for forming said frame member into engagement with the adjacent portion of the coil of each spring, and means for simultaneously operating said forming means.

1,422,327. PROCESS OF GASSING LIQUORS WITH SO_2. FRANK MORRISON ALLEN, Ridley Park, Pa., assignor to General Chemical Company, New York, N. Y., a Corporation of New York. Filed Apr. 29, 1920. Serial No. 377,703. 3 Claims. (Cl. 23—1.)

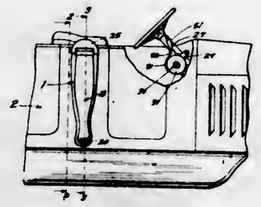


1. The process of gassing liquors with SO_2 which comprises introducing air under pressure not greatly above atmospheric pressure into a relatively small chamber containing molten sulfur and by controlling the velocity of the incoming air maintaining the temperature of the mixed gases moving from the chamber at approximately 550° F. and then introducing the mixed gases into a body of liquid, the dimensions of the chamber plus all air and gas conduits being such that the gases moving from the chamber are propelled with sufficient force to enable them to overcome the resistance of the liquor into which they are subsequently introduced.

1,422,328. MANUFACTURE OF GRAPE SUGAR. PAUL W. ALLEN, Cedar Rapids, Iowa, assignor, by mesne assignments, to Penick & Ford, Ltd., Incorporated, a Corporation of Delaware. Filed Feb. 17, 1919. Serial No. 277,579. 5 Claims. (Cl. 127—10.)

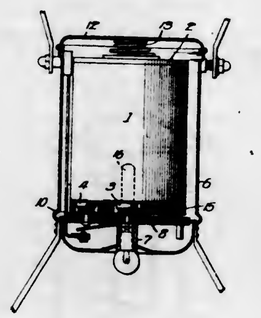
3. Improvement in the method of making grape sugar from starch which consists in subjecting a sugar liquor which is free from protein impurities at a temperature of about 145° Fahrenheit and at a density of about 42° Baumé, to a beating operation in the air, which gives the sugar a frothy, porous consistency, and then allowing it to stand until crystallization takes place.

1,422,329. CARBURETOR. FRED E. ASELTINE, Detroit, Mich., assignor to Cadillac Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Feb. 2, 1916. Serial No. 75,641. 6 Claims. (Cl. 261—44.)



1. In a carburetor, the combination with a mixing chamber, a fuel nozzle arranged therein, said mixing chamber having primary and secondary air ports, means comprising a movable plate arranged in said chamber for directing a greater proportion of the total quantity of incoming primary air towards the sides of the chamber as said plate approaches said nozzle, and means movable with said plate for directing the flow of said incoming primary air towards said nozzle when said plate is in its position closest to said nozzle.

2. In a carburetor, the combination with a mixing chamber, a fuel nozzle arranged therein, a throttle, means for supplying primary air to said chamber including an upwardly flaring strangle tube the lower end of which surrounds and is spaced from said nozzle, means for supplying secondary air to said chamber including a vertically slidable air valve and a suction operated plate positioned in said strangle tube for lifting said valve, and means cooperative with said plate operating when the throttle is nearly closed for increasing the suction at the nozzle.



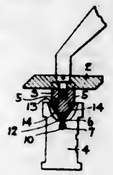
5. In a carburetor, the combination of a mixing chamber, a fuel nozzle arranged therein, said mixing chamber having primary and secondary air ports, a valve device for said secondary port, a tube arranged within said chamber tapering towards said nozzle, and provided with a deflector portion adjacent its lower end for directing the incoming primary air towards the center of said tube, a plate arranged within said tube and adapted to be actuated by the flow of air through the same, and means arranged on said plate and co-operating with said deflector portion for directing the incoming primary air towards said nozzle when said plate is in its position closest thereto.

1,422,330. DIRECTION INDICATOR FOR MOTOR VEHICLES. FRED M. ATHONS, Los Angeles, Calif. Filed June 2, 1920. Serial No. 386,010. 3 Claims. (Cl. 116—52.)

1. An indicator comprising a casing, bearings carried thereby, a shaft journaled in said bearings, a flexible spring connection between one of said bearings and said shaft, a semaphore having a support fixed on said shaft and a flexible connection secured to said shaft for rotating the same.

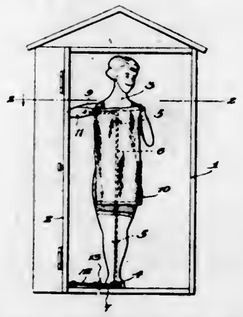
1,422,331. ADAPTER. FRANK T. BAIRD, Blue Island, Ill. Filed Jan. 13, 1921. Serial No. 436,944. 3 Claims. (Cl. 240—8.5.)

1. In a portable electric lantern, a lantern casing, a battery receptacle adapted to be inserted within it, fixed center contacts on the casing and on the receptacle, fixed outer contacts on the casing and receptacle, an insulating plate adapted to intervene between the casing and the receptacle, said plate having one hole at the center and another at the same distance from the center as the said fixed outer contacts, and double resilient contacts carried by said plate at said holes, one of each pair of resilient contacts pressing upward and the other downward for firmly engaging the respective fixed contacts when the parts are assembled.



1,422,332. BELTING TOOL. ANTONIO G. BAVA, San Francisco, Calif. Filed June 10, 1920. Serial No. 387,976. 7 Claims. (Cl. 1—50.)

1. A belt stapling device comprising a fixed jaw with transverse belt receiving grooves, a clamping jaw pivotally connected to the fixed jaw and having portions engage-

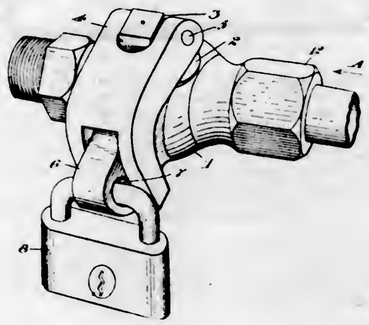


able with the belt ends disposed within the grooves, and a pressure lever fulcrumed near the first named pivot and movable to force a staple through the ends of a belt placed in one of said grooves.

1,422,333. MATRIX AND DISTRIBUTING APPARATUS FOR TYPE-CASTING MACHINES. ADOLPH BECKER, Wheeling, W. Va. Filed Apr. 23, 1921. Serial No. 463,867. 10 Claims. (Cl. 199—37.)

1. In a type-casting machine, the combination with a set of matrices each having a V-shaped notch, and having an opening adjacent to the said notch and communicating therewith by a restricted channel, of a transfer member having a beaded strip adapted to enter the said openings and to suspend the said matrices during transfer without engaging the sides of said V-notches.

1,422,334. TOY. STEPHEN S. K. BIROSCAK, Bridgeport, Conn. Filed Apr. 25, 1921. Serial No. 464,118. 3 Claims. (Cl. 46—40.)

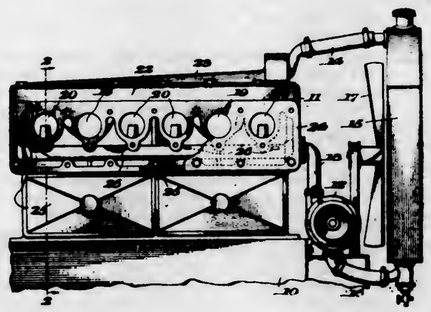


1. A toy comprising a housing having a door hinged for opening movement, a figure fixed to the floor of the housing and provided on its back with a vertical bearing, a shaft journaled in the bearing and having its lower end extended forwardly and secured to the free edge portion of the door and its upper end curved about one side of the figure and terminating in advance thereof, a body member of the figure free thereof, a member secured to the free end of the curved arm and to the opposite side of the body for being draped across the figure by movement of the curved arm upon opening the door.

1,422,335. METHOD OF MAKING CHLOROSULPHONIC ACID. THOMAS LYNTON BRIGGS, deceased, late of Flushing, N. Y., by Isabelle M. Briggs, executrix, Flushing, N. Y., assignor to General Chemical Company, New York, N. Y., a Corporation of New York. Filed Oct. 4, 1921. Serial No. 505,361. 8 Claims. (Cl. 23—1.)

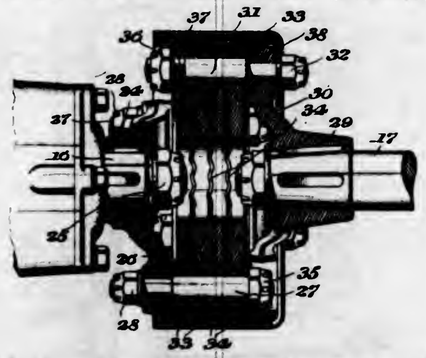
1. Method of making chlorosulphonic acid which consists in separately conducting controlled volumes of contact gas and of dry hydrochloric acid gas to a mixing chamber and causing the said gases to become mixed therein, conducting the resulting chlorosulphonic acid vapors, together with accompanying fluids and gases, all in the same direction through a long passage of restricted diameter and withdrawing the accumulating liquid chlorosulphonic acid to storage.

1,422,336. VALVE LOCK. JACK CATHRILL, Los Angeles, Calif. Filed Aug. 11, 1919. Serial No. 316,914. 1 Claim. (Cl. 70—125.)



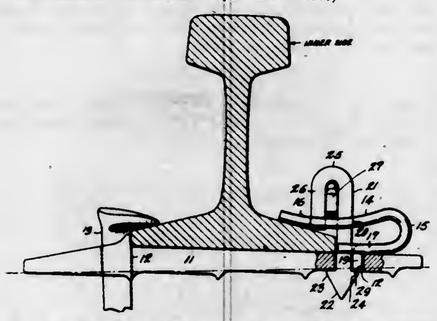
In a valve, a valve casing, a keeper lug on said casing, a rotary valve in the casing projecting from the side thereof at right angles to its length, an arm pivoted on said valve having a forked outer end adapted to extend astride a portion of the valve casing when the valve is in its open position and to extend astride the keeper lug when valve is in its closed position, and means for locking said arm on the keeper lug.

1,422,337. OXYSALT COMPOSITION. CHARLES CATLETT, Staunton, Va. Filed Aug. 3, 1921. Serial No. 489,608. 9 Claims. (Cl. 106—29.)



1. The process of preparing an oxychlorid composition of the character described which comprises commingling solid lime and solid calcium chlorid, both in finely divided form, under reacting conditions.

1,422,338. HYDROCARBON MOTOR. HAROLD D. CHURCH, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Apr. 27, 1918. Serial No. 231,124. 8 Claims. (Cl. 123—177.)

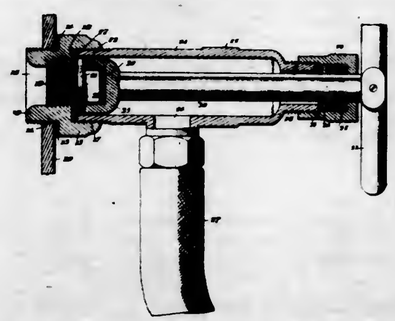


1. In a hydrocarbon motor, the combination with a jacketed cylinder having an exhaust valve seat, of means for feeding water to the interior of the cylinder jacket directly to a point between the cylinder wall and said seat and withdrawing it from the opposite side of said seat.

1,422,339. SHAFT COUPLING. HAROLD D. CHURCH, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 2, 1919. Serial No. 269,303. 6 Claims. (Cl. 64—96.)

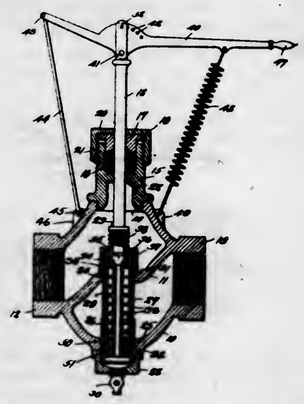
6. A coupling comprising shafts each having radial arms, bolts on said arms extending lengthwise of the shafts, the bolts of one shaft overlapping the bolts of the other shaft, coupling parts carried by said bolts, means for securing said parts on said bolts, a shield carried by one shaft and extending around said bolts, and means independent of the first mentioned securing means for securing said shield to said shaft.

1,422,340. ANCHOR AND CLIP FOR RAILS AND THE LIKE. FRANCIS W. COOPER and HENRY STEADWORTHY, Montreal, Quebec, Canada. Filed Dec. 1, 1921. Serial No. 519,201. 21 Claims. (Cl. 238—349.)



1. A device of the class described, comprising a member hooked at both ends to engage at one end under a plate and at the other end to overlie a rail base, and means to hold said hook member in position.

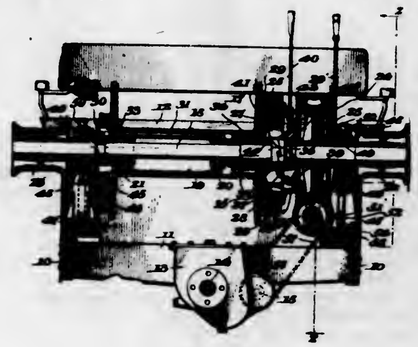
1,422,341. PHOTOGRAPHIC FILM RACK. GUY C. CROSS, Denver, Colo. Original application filed Jan. 8, 1920, Serial No. 350,201. Divided and this application filed Sept. 21, 1920. Serial No. 411,699. 3 Claims. (Cl. 95—100.)



1. As a new article of manufacture, a film rack comprising a U-shaped frame, a clamping bar having guides carried by its ends for slidably engaging the side bars of the frame, said side bars terminating in horizontal arms, as and for the purpose set forth.

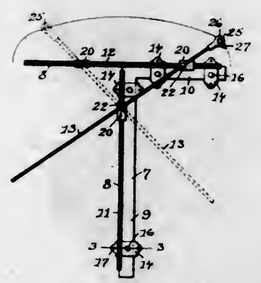
1,422,342. BUNG FOR TANK FILLING AND DISCHARGE FITTINGS. JOSEPH DARLING and WARREN W. CURRY, Chicora, Pa. Filed Dec. 2, 1919. Serial No. 341,944. 1 Claim. (Cl. 220—39.)

A bung comprising a bushing having an externally threaded reduced inner end adapted to extend through bung hole of the container, said reduced and threaded portion defining an annular shoulder adapted to be seated against the outer face of the container in fluid tight relation, said inner end also having a threaded central bore, the outer end of the bushing expanded and having an enlarged internally threaded counter bore defining an annular shoulder at its inner end, a packing ring seated on this shoulder, a plug having a wrench head at its outer end and the inner end threaded to be seated in the first mentioned bore of the bushing, an annular collar extending laterally from said plug intermediate its threaded portion and the wrench head, said collar adapted to be seated on said packing ring, the diameter of said collar being sufficiently less than the diameter of the counter bore to permit passage of the threaded end of a nozzle to be screwed into the counter bore past the collar and against the aforesaid packing ring.



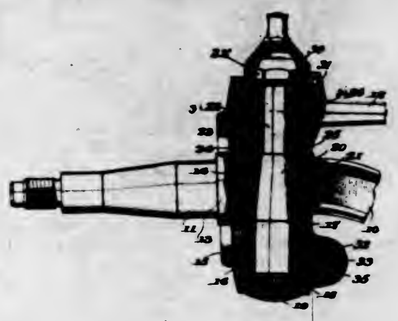
1,422,343. PISTON GLOBE VALVE. ELMER C. DAVIES, Portland, Oreg. Filed Feb. 19, 1920. Serial No. 359,784. 7 Claims. (Cl. 277—37.)

5. A valve comprising a body having an inlet and an outlet, a web extending between the inlet and outlet, a



cage having longitudinal openings and seated at one end in the web and at its other end in the body, a piston slidable within the cage and having openings for communication with the openings in the cage, said piston being hollow, means at one end of the piston and cooperating with one end of the cage for normally preventing flow of fluid under pressure through the piston, said piston having a longitudinal passage extending therethrough spaced from the wall of the piston, and a yieldingly held valve normally closing said passage at one end.

1,422,344. MOTOR-VEHICLE HOIST DEVICE. FRANK H. DAWBY, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Apr. 15, 1918. Serial No. 228,641. 8 Claims. (Cl. 74—36.)



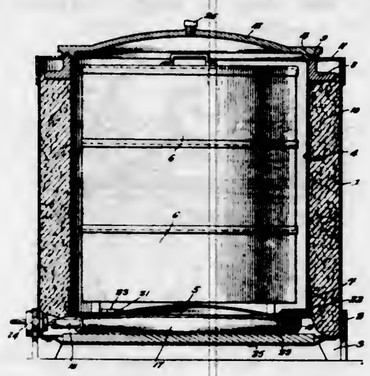
1. In a motor vehicle, the combination with the frame comprising side members, and a driving shaft supported by the frame, of a pair of uprights supported on said side members, a hoisting device comprising a shaft and drum, spherical bearings for said shaft in said uprights, gearing having a casing supported by said shaft and loosely connected to one of said uprights to prevent rotation of the casing, and a driving connection from said driving shaft to said gearing.

1,422,345. TRAMMEL. WILLIAM DOUGLAS, Pawtucket, R. I. Filed Mar. 7, 1921. Serial No. 450,132. 5 Claims. (Cl. 33—31.)

1. The combination with a square, of a trammel having a guide bar on one arm of the square, a guide bar on the other arm of the square, a slide on each guide bar, a traverse bar and means for adjustably securing the traverse bar to the slides.

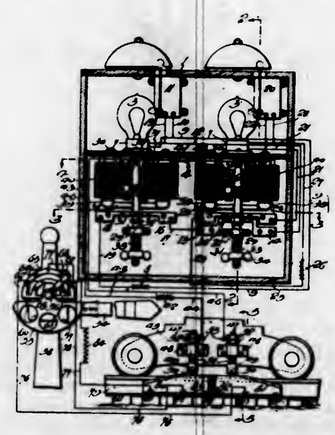
1,422,346. MOTOR VEHICLE. FRANK J. DRUAR, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Feb. 10, 1919. Serial No. 275,940. 12 Claims. (Cl. 280—96.1.)

1. In a steering knuckle, the combination with a knuckle member comprising an axle and a pivot pin, of a second knuckle member comprising a wheel spindle having a section formed with an interiorly curved seat, a separately formed pivot bearing section surrounding said pivot pin and having and exteriorly curved surface fitting said seat, and laterally extending means detachably securing said bearing section in place.



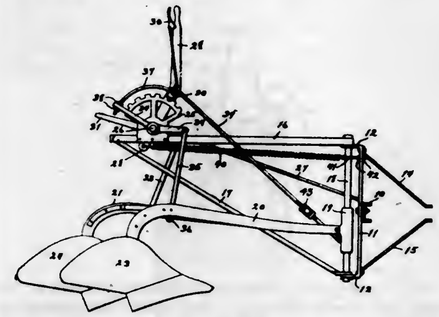
1,422,347. CIGARETTE HOLDER. THOMAS DUNCAN, East Chicago, Ind. Filed Jan. 3, 1920. Serial No. 349,143. 2 Claims. (Cl. 131—51.)

2. A cigarette holder comprised solely of a length of metal formed with a split ring and a pair of flat elongated straight cigarette gripping jaws, the inner portions of said straight flat jaws being formed with quarter twists whereby the axis of the cigarette between the jaws is at right angles to the axis of the split ring and whereby the spreading of the jaws is accompanied by a lateral movement of the ends of the split ring with relation to each other, the outer surfaces of said jaws being roughened.



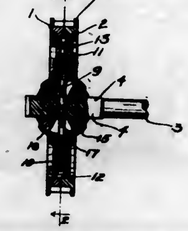
1,422,348. ELECTRIC STEAM-PRESSURE COOKER. WAYNE A. DUNCAN, Chicago, Ill. Filed Mar. 14, 1922. Serial No. 543,757. 5 Claims. (Cl. 219—35.)

1. In an electric steam pressure cooker, the combination with an insulated heat retaining receptacle, of a water circulating unit, an electric heater for converting said water into steam, means for permitting the escape



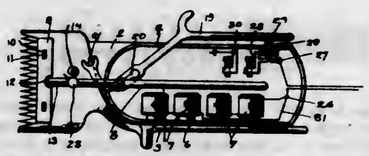
of the steam from the water circulating unit into the receptacle, and a steam tight closure for said receptacle.

1,422,349. SIGNAL-INDICATOR SYSTEM. HARRY C. EIGABROADT, Amsterdam, N. Y. Filed Oct. 3, 1921. Serial No. 505,064. 10 Claims. (Cl. 246—69.)



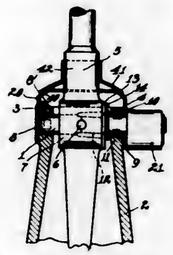
5. A safety device comprising an electrically operated indicator, a second electrically operated indicator, an energizing circuit for the first indicator including a normally open switch element, an energizing circuit for the second indicator including a normally open switch and spaced contacts adjacent the switch of the first circuit and bridged thereby when the switch of the first circuit is open, electrically operated switch closing means including an energizing circuit having spaced contacts for engaging spaced contacts of a completing circuit including a switch operated from a semaphore and conductors leading therefrom to the last mentioned contacts, a resistance positioned in one of the conductors, and spring means yieldably holding the switches of the indicator energizing circuits open, the spring means for the switch bridging the spaced contacts of the second indicator circuit having sufficient strength to prevent movement of the switch out of bridging engagement with the spaced contacts when current is passing through the resistance.

1,422,350. TRACTOR PLOW. LAWRENCE EMERSON, Percy, Iowa. Filed Feb. 7, 1921. Serial No. 443,014. 3 Claims. (Cl. 97—60.)



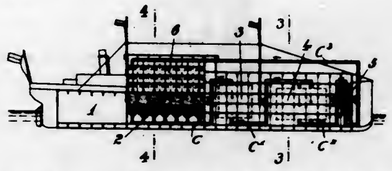
1. A tractor plow, comprising a frame member, a vertical spindle carried thereby, a member slidably mounted on said spindle, a plow beam secured at its forward end to said sliding member, a support extending rearwardly from said frame member above said plow beam, a lever fulcrumed between its ends on said support, a link pivotally connected at one end to said lever and having a sliding pivotal connection at its opposite end to the rear portion of said plow beam, and a link pivotally connecting said lever to the forward end of said plow beam, the last named link being adjustable as to length.

1,422,351. GEAR WHEEL. JOHN L. FLORIN, Davenport, Wash. Filed Apr. 21, 1921. Serial No. 463,249. 2 Claims. (Cl. 74—7.)



1. The combination with a shaft having a squared end with diametrically arranged grooves therein and a spherical hub on the shaft having complementary slots forming V-shape cavities with the grooves, of a wheel mounted on the hub, and radiating pins carried by said wheel having their inner ends located in said cavities.

1,422,352. HAIR CLIPPER. NICHITU V. GHETIA, Cleveland, Ohio. Filed June 22, 1921. Serial No. 479,602. 8 Claims. (Cl. 30—1.)

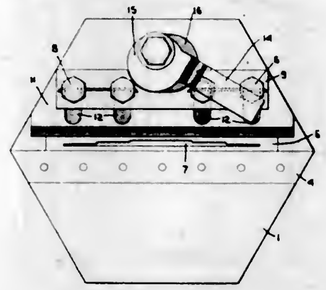


7. A clipper comprising relatively movable cutter plates, normally inoperative power operated means for producing relative movement of the plates, and a manually operated lever shiftable for operative connection with the plates or for rendering said power operated means operative.

1,422,353. GEAR-SHIFT LOCK. GEORGE B. M. GRAY, Oakland, Calif. Filed Sept. 25, 1920. Serial No. 412,761. 2 Claims. (Cl. 70—128.)

2. In combination, a standard, a shaft journaled in the upper end of said standard, a gear shift lever secured on said shaft, a lock mounted on the outer end of said shaft, said shaft having a bore and openings communicating with said bore, a cam in said bore actuated by said lock, means actuated by said cam to lock the lever in neutral position, said shaft being provided with openings communicating with said bore, a sleeve fitting on said shaft in said lever and secured to said lever, a flange on the end of said sleeve engaging the outside of said lever, said sleeve being provided with depressions registering with said openings in said shaft, and balls resting in said openings out of said depressions adapted to be forced outwardly by said cam partly into said depressions and partly in said openings when the cam is actuated by the lock to cause said locking means to lock the lever in neutral position.

1,422,354. SHIP FOR TRANSPORTING RAW PRODUCTS. HUGO GREFFENIUS, Frankfort on the Main, Germany. Filed June 6, 1919. Serial No. 302,369. 3 Claims. (Cl. 114—73.)



1. A ship adapted for the transportation of grain and the like having thereon facilities for storing the grain, a mill for grinding the grain during the transportation thereof, means for conveying the grain to the mill from the storage place, and means for storing the main and by-products resulting from the milling of the grain.

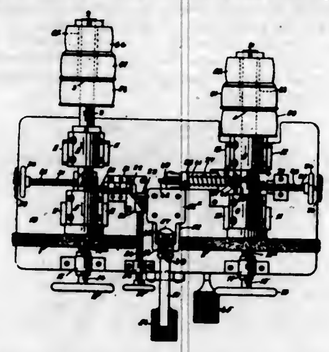
1,422,355. HANDLE. ROGER W. GRISWOLD, Erie, Pa., assignor to The Griswold Manufacturing Company, Erie, Pa., a Corporation of Pennsylvania. Filed Mar. 17, 1922. Serial No. 544,584. 6 Claims. (Cl. 16—120.)

1. In a handle, the combination of a shank; an eye bolt screwed into the shank; a handle of coiled wire arranged around the eye bolt; and a seat for the outer end of the coil having a spiral surface conforming to the last coil of the wire with a shoulder abutting the end of the coil, the outer face of the seat having a socket locking with the eye, the eye bolt being screwed into the shank to place and hold the coil under tension, the seat locking the coil against turning on the bolt.

1,422,356. EXTRUDING MACHINE. JACOB E. HELLER, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Jan. 3, 1920. Serial No. 349,311. 10 Claims. (Cl. 18—12.)

1. In an extruding machine, a die head, a plate having a die opening therein, a locking device over the plate and a lever to move the locking device off the plate.

1,422,357. SOLDERING IRON. HARRY F. HAMMOND, South Shaftsbury, Vt., assignor of one-half to John Alfred Davis, Dover, Vt. Filed Jan. 21, 1921. Serial No. 438,963. 2 Claims. (Cl. 113—105.)



1. A device of the character stated, comprising a soldering iron, a shank pivotally connected to the soldering iron, a spring pressed sleeve on the shank, and a head on the sleeve having a flat outer surface adapted to engage the end of the iron and support the same in alignment with the shank, and said head having notches in its outer face adapted to receive the corners of the iron and support the iron at an angle to the shank.

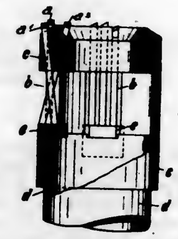
1,422,358. CUTLERY-POLISHING MACHINE. CARL H. HEMMING, New Haven, Conn. Filed Jan. 10, 1920. Serial No. 350,556. 7 Claims. (Cl. 51—80.)

1. A machine of the character described, comprising opposed abrasion wheels, rotatable shafts therefor journaled in standards mounted on rocker-shafts, and wheel tension springs adapted to normally force the wheels toward their central polishing position, means for normally holding one of said wheels in such central position,

a spring of greater tension than the wheel tension springs adapted to force the other of said wheels into open posi-

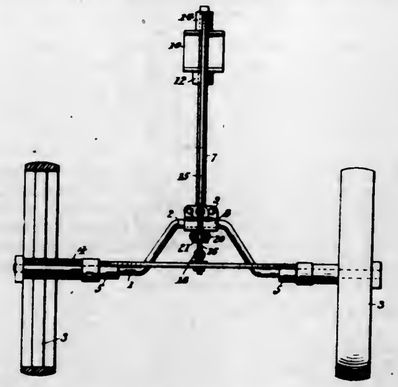
tion, and means adapted to temporarily release the greater tension spring and place said open positioned wheel under its wheel tension spring.

1,422,359. AIR AND WATER SERVICE HOSE LOCKER. CHARLES E. HILL, San Bernardino, Calif. Filed Nov. 26, 1921. Serial No. 517,960. 2 Claims. (Cl. 299—77.)



1. A hose locker comprising a casing, fluid distributing pipes within the casing including rigid sections and flexible sections, pulleys within the casing about which said flexible sections are trained, certain of said pulleys being bodily movable to permit of the untraining and retraining of the flexible sections, weighted tables for supporting the movable pulleys, and rollers carried by the tables and movable over said rigid sections for defining the movement of the tables within the casing.

1,422,360. PULLEY ADAPTER. GEORGE W. HUGHES, West Philadelphia, Pa. Filed Aug. 11, 1921. Serial No. 491,494. 2 Claims. (Cl. 64—17.)

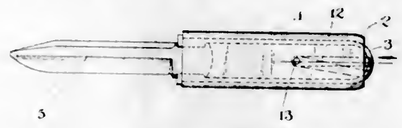


1. An adapter of the class described, comprising a split ring having its edges rolled to provide beads which project both inwardly and outwardly from said ring, the inner portions of said beads being adapted to contact with a transversely curved pulley, while the other portions of said beads constitute belt retaining means, and means for contracting said ring around the pulley.

1,422,361. TUBULAR ROCK DRILL. HANS HUNDRIESER, Halensee, near Berlin, Germany. Filed Jan. 19, 1921. Serial No. 438,507. 3 Claims. (Cl. 255—72.)

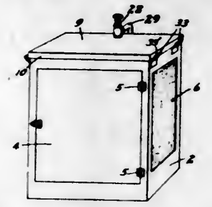
1. In a tubular rock core drill, the combination of a drill shaft, a crown sliding thereon, recesses in said crown, supports adapted to be arranged in said recesses and to be carried by said drill shaft, and cutters arranged in the crown and adapted to rest on said supports.

1,422,362. DISK TRUCK. EDWARD E. JOHANNES and RICHARD D. DUNKERTON, Devon, Kans. Filed Nov. 14, 1921. Serial No. 515,065. 1 Claim. (Cl. 280—83.)



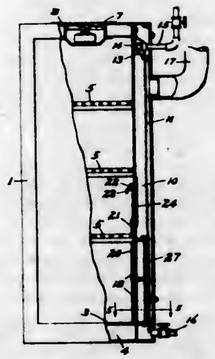
A disk truck comprising an axle having a crank portion, a standard having universal connection with said crank portion of the shaft at the lower end of said standard, an arcuate member connected at its end portions with said shaft on opposite sides of the crank portion of the latter, said arcuate member being extended forwardly, an inclined member having a rearwardly turned end mounted on the upper portion of said standard, said standard being adapted to support a draft element carried by an agricultural implement, means adjustable on said standard, said draft element being limited in its downward movement on said standard by the last mentioned means, a forward draft element adjustably mounted on said inclined member, means for pivotally connecting the lower end of said inclined member with said arcuate member and ground wheels carried by said axle.

1,422,363. POCKETKNIFE. JONAS JOHNSON, Ramsay, Mich. Filed Mar. 24, 1920. Serial No. 368,287. 5 Claims. (Cl. 30—10.)



1. A device of the character specified comprising a yoke or substantially U-shaped member and interchangeable

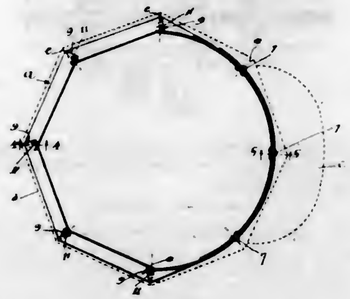
tools, each having at one end a shank whose opposite side edges are beveled, the yoke comprising a bight portion and arms diverging therefrom, and each arm having on its inner face at its free end a groove for engaging the adjacent beveled edge of the shank, the shank of the tool having outwardly extending pins intermediate the ends of the beveled edges, and the grooved ends of the yoke arms having alined openings for engagement by said pins,



means for clamping the yoke arms on the shank, said means comprising a flattened tubular sheath into which the bight end of the yoke is adapted to pass, the free ends of the yoke arms having oppositely extending lateral lugs to engage the end of the sheath to firmly clamp the grooved ends of the arms on the shank, and releasable means for locking the yoke in the sheath and to permit its withdrawal.

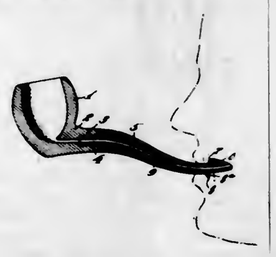
1,422,364. ICELESS REFRIGERATOR. CHARLES L. KIK, Los Angeles, Calif. Filed May 20, 1920. Serial No. 382,773. 3 Claims. (Cl. 45—133.)

3. In an iceless refrigerator, a sheet metal wall having an opening, the metal at the sides of the opening being bent upon itself and thence laterally and thence reversely to form guide ways, a framed screen inserted downwardly into the guide ways to cover the opening, and hooks extending upwardly from the screen and over the edge of the wall so as to support the screen.



1,422,365. ICELESS REFRIGERATOR. CHARLES L. KIK, Los Angeles, Calif. Filed Feb. 21, 1921. Serial No. 446,920. 6 Claims. (Cl. 45—133.)

2. A refrigerator including a chamber, means for supporting a porous saturated member in said chamber, said means comprising a clip havng slide portions forming a longitudinal slot, the end of said porous member fastened in said slot, and means for detachably supporting said clip in the upper part of said chamber.

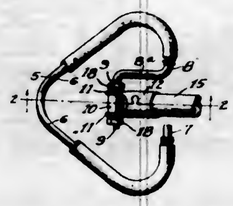


4. A refrigerator including a container, a water supply pipe on the outside of said container, perforations in said pipe, a porous member passed over said perforations and alongside said container.

1,422,366. CAP SHAPER. OSWALD C. LEGER, Los Angeles, Calif. Filed Nov. 21, 1921. Serial No. 516,719. 2 Claims. (Cl. 2—106.)

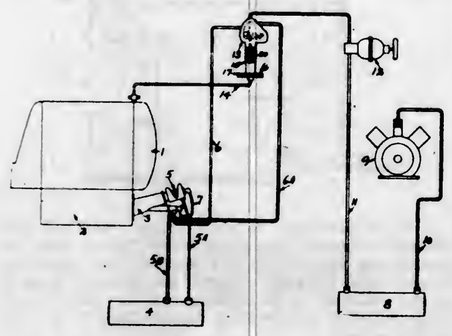
1. In a cap shaper, a band constructed from a straight strip of resilient material bent into a circle and having its ends secured to each other, one margin of the strip being provided with slits, and the material being lapped at the slits and the lapped portions being fastened together.

1,422,367. PIPE. HERMAN N. MATSEN, Cleveland Heights, Ohio. Filed Apr. 3, 1920. Serial No. 370,976. 2 Claims. (Cl. 131—12.)



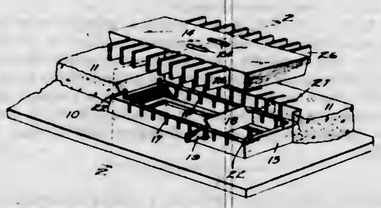
2. A pipe comprising a bowl, a stem and a mouthpiece having a continuous smoke passageway, extending upwardly from the mouthpiece to the bowl, said mouthpiece having an upper shoulder and a lower shoulder arranged close to the upper shoulder whereby the upper teeth of a smoker will hook against the front of the upper shoulder and the lower teeth will naturally bear against the rear of the lower shoulder to cause the pipe bowl to be elevated naturally by the closing of the teeth against said mouthpiece.

1,422,368. MOP FRAME AND HANDLE COUPLING. JACOB A. MEINHARDT, Chicago, Ill. Original application filed June 13, 1921, Serial No. 477,268. Divided and this application filed Dec. 19, 1921. Serial No. 523,852. 2 Claims. (Cl. 15—147.)



1. In a device of the class described, the combination with a screw-threaded shaft, of a socket member for a handle having at one of its ends a pair of spaced prongs

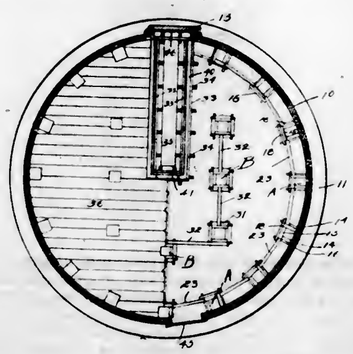
provided with apertures for said shaft, a sleeve located between said prongs around the shaft, a washer located on the outer side of each of said prongs around the shaft and against rotation thereon, a split spring washer located



around the shaft against the outer surface of each of the first named washers, and nuts engaging said shaft and located against the outer side of each of said spring washers.

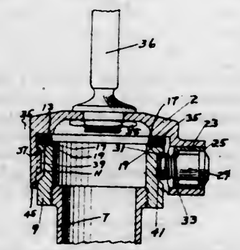
1,422,369. CONTROLLING DEVICE FOR BOILER FURNACES. ROBERT F. METCALFE, Erie, Pa. Filed July 25, 1919. Serial No. 313,419. 7 Claims. (Cl. 158—36.)

1. In a controlling device for boiler furnaces, the combination of a boiler; a burner leading to said boiler; means for supplying air to said burner; and a controlling device for the air comprising a valve chest having a valve face therein with a series of controlling passages through the face; a valve mounted to slidingly operate over said face and to successively operate on said openings; a pressure device controlled by boiler pressure; and means actuated by the pressure device to actuate said valve.



1,422,370. CORE FOR MAKING VENTILATED BLOCKS. EDWIN L. PAGE, Kingsley, Iowa. Filed May 11, 1921. Serial No. 468,473. 2 Claims. (Cl. 25—121.)

2. A two part core for the making of a ventilated building block, including an upper and a lower core member, said lower core member being hollow and having registering notches in its side for receiving the ends of said



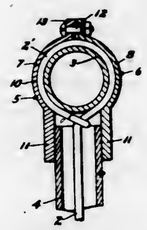
blades and adapted to have a portion of the blades received between the sides of said lower core member and projected upwardly therefrom, the ends of the blades being extended outwardly from the sides of said lower core member, the upper core member being designed to extend over a portion of the blades, the ends of the blades being designed to rest in a vertical plane so that the block material may be tamped without interfering with the blades.

1,422,371. VENTILATED-CORNCRIB-FLOOR MOLD. EDWIN L. PAGE, Kingsley, Iowa. Filed June 7, 1921. Serial No. 475,597. 4 Claims. (Cl. 25—118.)

1. A form for building a single unit concrete floor structure within the cutline of a circular wall above the ground, said form comprising a plurality of knock-down pier molds having one of their sides open and arranged with their open side against the circular wall, combined brace and false floor supporting members arranged between and supported on said pier molds for retaining the pier molds in position relative to each other, a false floor structure supported by said combined brace and false floor supporting members, said false floor having openings therein arranged to register with the pier molds permitting the pouring of the concrete as a single unit as specified.

1,422,372. LOCKING CAP FOR AUTOMOBILE RADIATORS. HARVEY S. PARDEE, Chicago, Ill., assignor to Miller & Pardee, Inc., Chicago, Ill., a Corporation of Illinois. Filed Apr. 25, 1921. Serial No. 464,324. 6 Claims. (Cl. 70—90.)

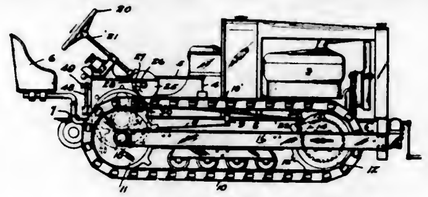
1. In apparatus of the class described, in combination, a cap, a lock in the cap, comprising a bolt, an annular member on which the cap fits, means rotatably mounted upon the annular member, a compressible gasket positioned between said means and said cap, whereby the rotation of the cap upon the annular member rotates simply the gasket and said means, the movement of the bolt into



locking position serving to secure the cap against removal from the annular member and also compressing the gasket to form a tight joint between the cap and the annular member.

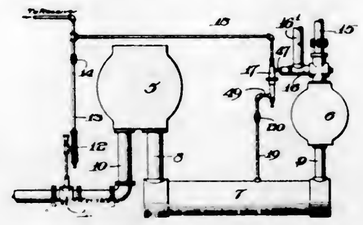
1,422,373. SILENCER. WALTER T. PEARCY, New Albany, Ind. Filed Nov. 21, 1921. Serial No. 516,655. 3 Claims. (Cl. 123—90.)

1. In a device of the kind described, a body portion arranged to engage the tappet lock of an automobile and provided with a pair of legs extending downward behind said tappet lock and having resilient arcuately bowed portions intermediate their extremities adapted to bear against the tappet guide shoulders of a crank case.



1,422,374. CONDUIT COUPLING. JOSEPH F. RAMBO, Pomona, Calif., assignor of one-half to Robert Andrew Schmitt, San Diego, Calif. Filed Apr. 29, 1920. Serial No. 377,518. 3 Claims. (Cl. 247—1.)

1. The combination with an electrical conduit pipe inclosing a ground wire, of means for connecting said conduit in contiguous and fixed relation to a grounding pipe; said means comprising a sectional coupling attachable to the said conduit and the said pipe and having fastening devices for securing the parts assembled; the sections having interior seats to receive the ground conductor.



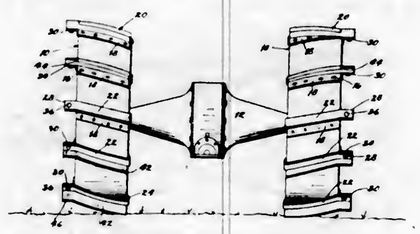
1,422,375. TRACTOR. HENRY CLAY REID, San Francisco, Calif., assignor to Pacific Fire Extinguisher Company, San Francisco, Calif., a Corporation of California. Filed June 1, 1920. Serial No. 385,513. 1 Claim. (Cl. 180—17.)

A tractor having side, traction belts and idler sprockets therefor; means for driving the belts, brakes for the belts and operative on said sprockets, and a device for steering the tractor comprising means for holding the driving means concurrently applied to each belt and releasing the brakes at that time, or for setting the

brake and releasing the drive of one belt and conversely acting on the other, said means having reversely acting connections to the drive means.

1,422,376. MULTISTAGE UNLOADER. GEORGE M. RICHARDS, Philadelphia, Pa. Filed July 3, 1918. Serial No. 243,140. 16 Claims. (Cl. 230—24.)

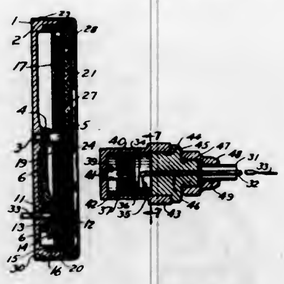
1. In a multi-stage unloader system, high and low pressure cylinders and an intercooler between them, in combination with a separate unloader and associated trigger valve for each cylinder, one unloader being a pressure unloader in the discharge pipe and which is initially unloaded, and common pressure supply for each trigger valve.



7. In a multi-stage system unloader, high and low pressure cylinders and an intercooler between them, in combination with an unloader and trigger valve for the low pressure cylinder, an unloader for the high pressure cylinder, a receiver connected with the high pressure cylinder, a trigger valve for the high pressure cylinder unloader, connections from the receiver to the trigger valve to operate the unloader with operation of the trigger valve, a diaphragm in the trigger valve, a valve controlled by the diaphragm to close discharge from the unloader and admit receiver pressure therein when the diaphragm moves, the one surface of the diaphragm being open to atmospheric pressure, a spring pressing against the diaphragm and fluid connections between the diaphragm and the intercooler to cause the atmospheric pressure to move the diaphragm when the intercooler falls ao a predetermined point.

15. In an unloader trigger valve, a trigger valve body having openings for connection with the receiver pressure and with the unloader, a double valve controlling the passage of receiver pressure to the unloader and open to the atmosphere at an intermediate point, a pressure-operated member adapted normally to hold the valve closed and a hand operated device engaging and moving the member.

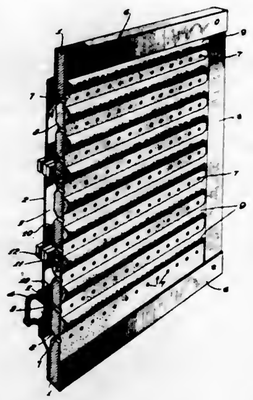
1,422,377. TRACTOR CLEAT. CURTISS ROBNETT, Columbia, Mo. Filed Nov. 19, 1920. Serial No. 425,148. 5 Claims. (Cl. 301—44.)



4. An auxiliary cleat for tractors comprising a base plate, a traction plate formed along one longitudinal edge of said base plate, an anchoring flange formed along one

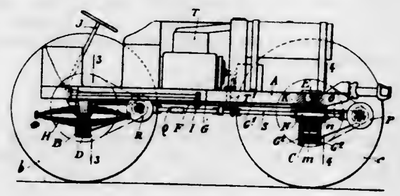
longitudinal edge of said traction plate and adapted to overhang and contact with the main cleat of a traction wheel, and hooks carried by the ends of said base plate, one of said hooks being detachable.

5. An auxiliary cleat for tractors comprising a base plate, a traction plate carried by said base plate, one end portion of said base plate and said traction plate being extended angularly and adapted to extend over the side of a tractor wheel, a hook detachably connected to the extended portion of said base plate, and a second hook connected to the other end portion of said base plate.



1,422,378. RADIOMETER. MICHAEL W. RYAN and MICHAEL UTTENDORFER, Seattle, Wash. Filed Nov. 9, 1921. Serial No. 513,991. 4 Claims. (Cl. 73—52.)

1. A device of the class described embodying a plug, a small plug inside of it, a coil spring similar to a watch spring made of thermostatic metal mounted in a slot in the small plug, a projection on the outer end of the spring, having a slot in it, a lever on the end of a wire projecting through the slot, a nut in the plug forming a bearing for the wire, a cap on the nut, a flexible tube held in the end of the cap, a cylindrical shaped casing, having a hole in its lower side, a flat bar projecting through the hole, a wire connecting this flat bar to the lever which projects through the slot in the projection on the spring, a gear segment mounted over the hole in the casing, having a slot in its end through which the flat bar also projects, a small pinion mounted on a pin in the casing meshing with the gear segment, a hub on the side of the small gear, a disc on top of these gears through which the hub projects, a spacing ring on which the disc rests, a pointer on the end of the hub outside of the disc, another spacing ring outside of the disc, another disc outside of the pointer, a glass disc on top of this one and a cap on the outside which may be sprung over a ridge on the casing.



1,422,379. HEATING ELEMENT. MAX SCHEY, Brooklyn, N. Y. Filed Aug. 20, 1921. Serial No. 496,263. 7 Claims. (Cl. 126—41.)

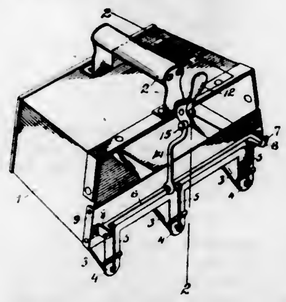
1. A heating element for broilers embodying a rigid, noninflammable and nonmetallic plate provided with flat faces and having parallel rows of perforations all of which perforations are of substantially the same size and through which gas is adapted to pass, and parallel ribs of hardened plastic mineral earth molded directly on to one face of the plate and positioned between successive

rows of perforations, whereby gas issuing from the perforations is adapted to burn between the ribs and heat said ribs to a high temperature, so that the heat taken up by the ribs may be radiated.

1,422,380. TRACTOR HAVING FOUR STEERING DRIVING WHEELS. EUGÈNE SCHNEIDER, Paris, France, assignor to Schneider & Cie., Paris, France, a Limited Joint-Stock Company of France. Filed Oct. 29, 1920. Serial No. 420,526. 3 Claims. (Cl. 180—50.)

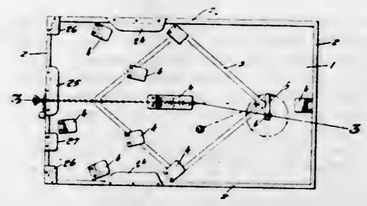
1. A tractor comprising a chassis provided with a fixed depending vertical pivot at one end and a vertical bearing at the opposite end, axles connected with the respective ends of said chassis for movement about the axes of said vertical depending pin and the vertical bearing, said axles being provided with driving wheels, steering means for said driving wheels comprising a steering member mounted on the chassis and steering sectors connected with the steering member and said axles, one of said sectors having a pivot pin journaled in said vertical bearing, and a horizontal pivot pin connecting one of said axles with said sector below the vertical pin thereof to provide for independent swinging movement of the axle transversely of said chassis.

1,422,381. DEVICE FOR INSERTING RIVETS. JOHANN SCHUETTE, Zeesen-Koenigs-Wusterhausen, near Berlin, Germany, assignor, by mesne assignments, to American Investigation Corporation, New York, N. Y., a Corporation of Maryland. Original application filed Apr. 25, 1919, Serial No. 292,767. Divided and this application filed Feb. 20, 1922. Serial No. 537,665. 8 Claims. (Cl. 78—51.)



1. In a portable tool for inserting rivets, adapted to be manually inserted within the article being riveted, rivet

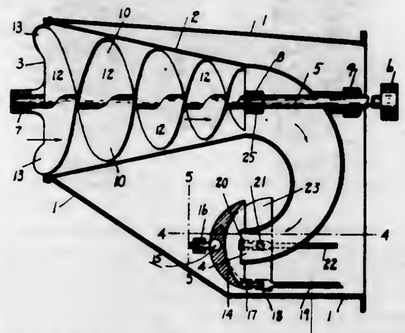
positioning means, rivet supporting and inserting means, means for holding the rivet on said supporting and inserting means, means for adjusting said holding means to



register the rivet with the hole in which is to be inserted and means for moving the rivet supporting and inserting means to insert the rivet in said hole.

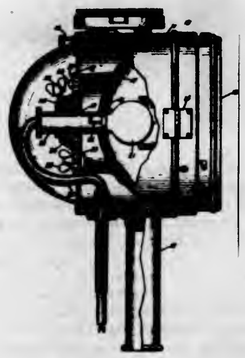
1,422,382. BATTER PITCHER. ADOLF J. SCHULTZ, Kansas City, Mo. Filed Apr. 25, 1921. Serial No. 464,174. 5 Claims. (Cl. 107—52.)

1. In a batter pitcher comprising a receptacle having a handle, a plurality of delivery spouts located at the upper end of said receptacle, and closures for said spouts, and means for simultaneously opening and closing said closures, substantially as set forth.



1,422,383. GAME DEVICE. HENRY J. SCHUMACHER and FRANK RICH, Meadville, Pa., assignors of one-third to S. D. Peterson, New Castle, Pa. Filed Jan. 28, 1921. Serial No. 440,579. 9 Claims. (Cl. 46—61.)

1. In a game device, the combination of a mechanically actuated batting means; means for delivering a ball to the batting means; and a chance device cooperating with one of said means varying the operative relation of the batting means and the delivery means to vary the action of the bat on the ball.

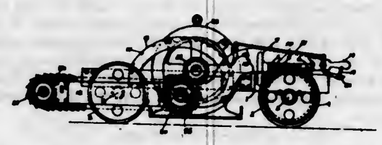


1,422,384. POWER PROPULSION DEVICE. MAHLON CLAUDE SOUTH, Cincinnati, Ohio, assignor of one-third to Cassius M. Garrison, Cincinnati, Ohio. Filed Sept. 6, 1921. Serial No. 498,781. 2 Claims. (Cl. 244—18.)

2. In a device of the character described, an element for the intake and outlet of air, means for drawing in said air, said element being wide at its mouth and contracted at its outlet so that the air therein will be compressed, a cup-shaped disc supported near the air outlet and mounted on a universal joint, the air at the outlet forced to impinge against said disc with great velocity and density, the guiding or steering rods of an aeroplane, each con-

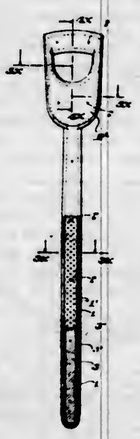
nected at one of their ends by a movable joint to said disc, enabling the operator to tilt said disc so that the same will assume various positions to enable a greater or less amount of air to pass out at a given point or points between said disc and the outlet of said air intake element, to guide the machine in its course.

1,422,385. FOCUSING MECHANISM FOR PROJECTORS. SVEN STALBERG, Nahant, Mass., assignor to General Electric Company, a Corporation of New York. Filed Nov. 20, 1920. Serial No. 425,490. 2 Claims. (Cl. 240—44.)



1. An adjusting mechanism for lamps and the like comprising a supporting wall having an opening, a lamp socket member loosely extending through said opening, clamping members having longitudinal slots slidably and pivotally connected to said wall and arranged to support said socket member and permit its axial and lateral adjustment in any direction parallel to itself, and means for securing said socket member in any adjusted position.

1,422,386. APPARATUS FOR SAWING NATURAL DEPOSITS. EDWARD B. STARR and HOWARD E. MARSH, Lompoc, Calif. Filed Feb. 26, 1920. Serial No. 361,377. 3 Claims. (Cl. 262—28.)

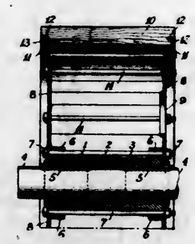


3. In an apparatus for sawing natural deposits a supporting means, a cutter bar pivotally mounted on said supporting means and having a rearward extension on the

opposite side of its pivotal mounting and serving as a lever for operating said cutter bar and provided with a handle

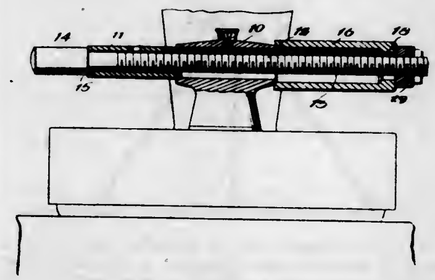
and with means for locking the cutter bar in adjusted position, a cutter chain carried by and movably mounted on said cutter bar, and means for driving said cutter chain.

1,422,387. TOOL HANDLE. WILLIAM HATTON STEVENS, Hollidaysburg, Pa. Filed Dec. 23, 1920. Serial No. 432,850. 7 Claims. (Cl. 145—61.)



1. A shovel handle comprising a tubular metal core, in combination with a molded body filling and encasing said core.

1,422,388. AUTOMOBILE FENDER. SARKIS H. SUMBULIAN, Fresno, Calif. Filed Aug. 30, 1921. Serial No. 497,043. 3 Claims. (Cl. 280—153.)

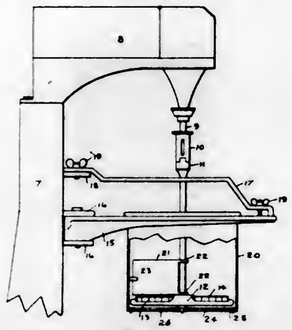


1. An automobile fender structure comprising an arched member adapted to fit over the automobile radiator, upwardly and outwardly inclined braces carried by the arched member, tie members between the braces and arched member and downwardly and rearwardly curved angle members cooperating with the braces and arched member to support the fender wings.

1,422,389. PULLEY. SETH R. SWAIN, East Orange, N. J. Filed Jan. 31, 1921. Serial No. 441,179. 6 Claims. (Cl. 64—17.)

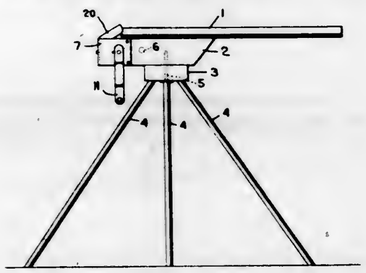
1. A pulley comprising in combination, a hub consisting of a plurality of tubular sections, means for holding said sections in end-to-end contact with each other, a plurality of peripherally spaced webs each connected to a corresponding one of said sections, a plurality of face-forming staves extending between said webs, and means for drawing said webs toward each other to cause them to clamp said staves.

1,422,390. BUSHING INSERTER OR REMOVER. OTTO F. TIMM, Wilsoncreek, Wash. Filed Apr. 8, 1921. Serial No. 459,674. 1 Claim. (Cl. 29—88.2.)



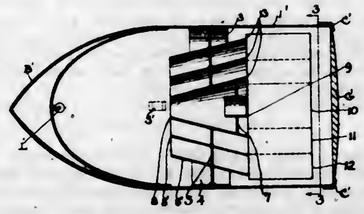
In a device for inserting and removing bushings from machine elements, bearings or the like, a shaft having a portion of its periphery threaded and adapted to be extended through the bushing operated upon, a head integral with the shaft at one end thereof and comprising an annular shoulder engageable with one end of the bushing, a sleeve arranged on the shaft and having one end beveled to adapt it for engagement with the machine element and having an inwardly extending annular flange at its opposite end adapted with the end of the sleeve to constitute a seat, and a nut engaging the threads of the shaft and abutting the seat of the sleeve, said shaft having its ends opposite from the head squared and having a transverse opening adjacent said squared portion whereby it may be held from turning.

1,422,391. FOOD MACHINE. JOSEPHINE TRUST and HENRY TRUST, Park Ridge, N. J., assignor, by mesne assignments, to Meteor Mixing Machine Co., Inc., a Corporation of New York. Filed Sept. 18, 1919. Serial No. 324,603. 1 Claim. (Cl. 146—11.)



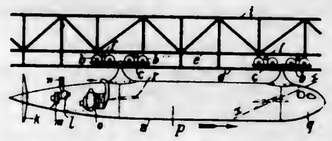
In a machine of the class described, a receptacle provided with an opening in the bottom, a cutting tool

adapted to rotate therein and a partition adjacent thereto for preventing the rotation of food therewith,



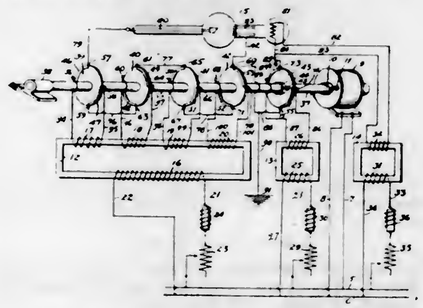
said tool provided with upper knife-like members extending radially and lower knife like members extending axially.

1,422,392. TOY MACHINE GUN. JOHN B. VAN DOREN, Rockland, Mass., assignor to The National Fireworks Manufacturing Company, West Hanover, Mass., a Corporation of Arizona. Filed Dec. 6, 1919. Serial No. 342,970. 4 Claims. (Cl. 42—57.)



1. A pyrotechnical toy for exploding successively a series of fulminate caps or patches of fulminate carried by a strip, comprising a plurality of juxtaposed rotatable rollers adapted to receive the fulminate bearing strip between them, means for rotating one of said rollers and resilient means for forcing said rollers towards each other with sufficient pressure to explode said caps successively as they pass between said rollers.

1,422,393. DIMMER. JOHN M. WADDELL, Alexandria, La. Filed July 16, 1920. Serial No. 396,828. 2 Claims. (Cl. 240—48.4.)

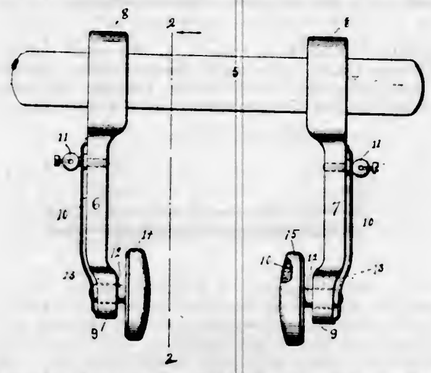


1. In a headlight for vehicles, the combination with a reflector and light source, of a light deflecting member placed in front of the reflector and comprising concentrically arranged frusto-conical elements with their edges lying substantially in the same vertical planes, the inner edge of each element being in overlapping relation with the outer edge of the enclosed element, and a grid comprising forwardly directed parallel plates carried at the front end of the deflecting member, said member having means for allowing it to be moved forwardly and rearwardly with relation to the light source and for rotary adjustment about the common axis of the frusto-conical elements.

1,422,394. SUSPENDED HIGH-SPEED RAILWAY. RUDOLF WAGNER, Hamburg, Germany. Filed Nov. 7, 1919. Serial No. 336,407. 8 Claims. (Cl. 104—23.)

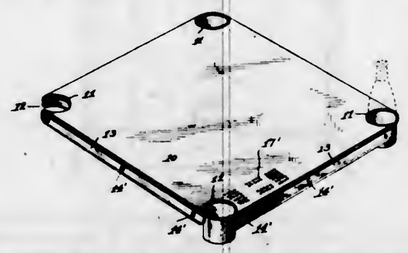
1. A suspended high speed railway, comprising a car of aerodynamically favorable shape, means for propelling the car comprising a motor and a propeller connected thereto, parallel rails, two or more trucks, each truck comprising a rigid frame supported upon two or more pairs of opposed wheels, and a single rigid connecting member between each truck and the car body, the said member being located substantially midway between the rails and being so mounted as to permit movement of the car body in directions transversely of the said track.

1,422,395. MULTIDISK ELECTRIC MACHINE. REINHOLD H. WAPPLER, Yonkers, N. Y., assignor to Wappler Electric Co., Inc., a Corporation of New York. Original application filed Aug. 11, 1919, Serial No. 316,584. Divided and this application filed Dec. 12, 1919. Serial No. 344,372. 11 Claims. (Cl. 175—364.)



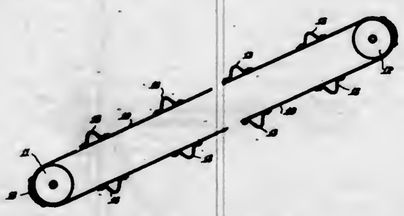
1. In an electric machine the combination of a plurality of a number of secondary windings, a plurality of rectifying disks associated with said secondary windings and mounted to rotate freely in air, conductors connecting said secondary windings with said rectifying disks in order to enable the rectifying disks to rectify the currents generated in said secondary windings, and means controllable at the will of the operator for adjusting one of said rectifying disks relatively to another, in order to cause one of said currents to lag behind another.

1,422,396. CLAMP MOUNTING FOR ELECTRODES. REINHOLD H. WAPPLER, Yonkers, N. Y., assignor to Wappler Electric Company, Inc., a Corporation of New York. Filed Feb. 14, 1921. Serial No. 444,810. 9 Claims. (Cl. 174—89.)



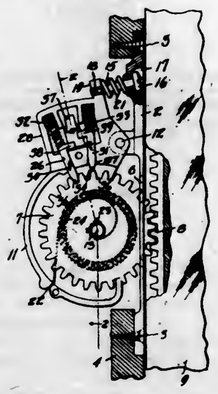
1. The combination, with a clamp consisting of a straight slat and a pair of arms slidably mounted thereon

and substantially parallel with each other, of a pair of electrodes and a pair of springs connected with said



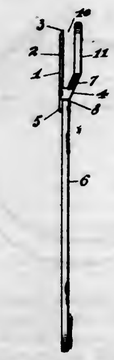
electrodes and with said arms, for the double purpose of supporting said electrodes resiliently upon said arms and of supplying electric currents to said electrodes.

1,422,397. SMOKER'S TABLE. JAMES WATSON, Athens, Pa. Filed Jan. 17, 1922. Serial No. 529,960. 4 Claims. (Cl. 45—122.)



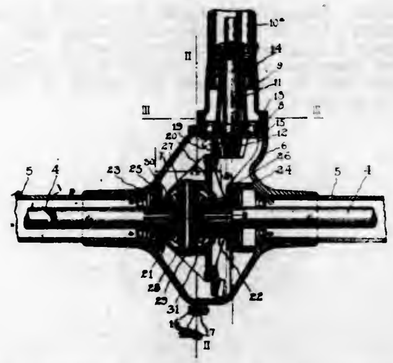
1. A game-table having openings formed at its corners and provided with an open side, a reenforcing-strip secured to the edge of the table and extending around one side of each of said openings to form a support for a cup-like receptacle, the top edge of said reenforcing-strip being positioned below the top-surface of the table to permit the bead around the top-edge of the receptacle to lie flush with the top-surface of the table.

1,422,398. CONVEYING BELT. JESS L. WENTZ, Passaic, N. J. Filed May 21, 1919. Serial No. 298,625. 1 Claim. (Cl. 198—199.)



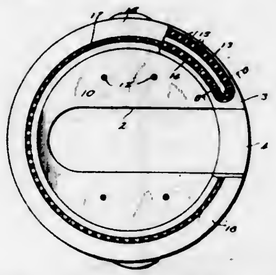
A flexible conveyer belt comprising a single layer of flexible material, a plurality of independent flexible flights supported at intervals directly upon said belt, each flight comprising a section of integral flexible material having its middle portion normally arched away from the belt and its opposite ends secured to said belt parallel to the latter, said flights elongating, when said belt passes over a pulley, to lie substantially parallel to said belt.

1,422,399. SASH LOCKING AND BALANCING MECHANISM. ARTHUR C. WHEELOCK, Oakland, Calif., assignor to American Automatic Lock and Lift Company, San Francisco, Calif., a Corporation of California. Filed Nov. 29, 1920. Serial No. 426,899. 5 Claims. (Cl. 16—201.)



2. In a device of the character described in combination with spring actuated balancing means, a ratchet, a plurality of tumblers adapted to engage said ratchet simultaneously and arranged when so disposed whereby one tumbler will lie in staggered relation with respect to the ratchet spaces when another tumbler is seated therein, each of said tumblers when engaged in one of said spaces being capable of preventing the movement of the ratchet with respect to the tumblers in opposite directions, and means for holding all of said tumblers disengaged from said ratchet.

1,422,400. CAN OPENER. FREDERICK L. WHITCOMB, Clyde, Ohio. Filed Aug. 19, 1921. Serial No. 493,636. 3 Claims. (Cl. 30—3.)

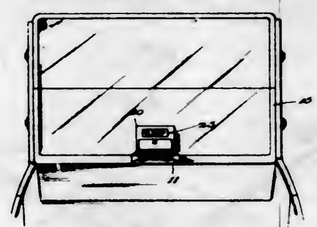


1. A can-opener comprising a cutting blade member provided with fulcrum ears disposed at right angles thereto, and having a prolonged tang, said blade member being formed from a sheet metal blank; and a metal handle off-set to form a terminal guide, the blade tang being integrally attached to the inside face of the handle member below the off-set, and the ears overlapping opposite edges of said handle.

1,422,401. DIFFERENTIAL DRIVING MECHANISM FOR MOTOR VEHICLES. JOHN W. WHITE, Detroit, Mich. Filed June 10, 1919. Serial No. 303,084. 3 Claims. (Cl. 74—99.)

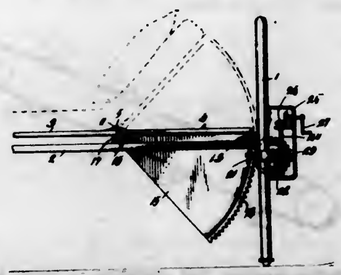
2. In differential driving mechanism, in combination, two driving axles arranged in line with one another, a hollow gear casing comprising two casing members secured together, and one of which members is provided with an opening formed entirely in said member, two bearings located one within each of said casing members; a rotatable differential pinion carrier located within said casing and the ends of which are supported in said bearings; differential gearing through which said axles are driven from said carrier; a third casing member secured in place over, and so as to register with said opening; a driving shaft located within said third casing member and arranged at right angles to said driving axles and the axis of which is in line with one of the bearings aforesaid; a driving pinion carried by said driving shaft; and a driven ring gear carried by said carrier and with which said driving pinion is in mesh.

1,422,402. WRENCH. OKEY M. WHITE and WILLIAM CHESTER MCCULLOUGH, Muskogee, Okla., assignors of one-third to Alexander Mathews, Muskogee, Okla. Filed Dec. 11, 1920. Serial No. 429,912. 3 Claims. (Cl. 81—119.)



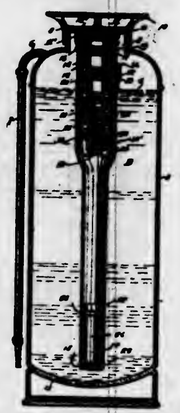
1. A wrench of the character specified, comprising a bit engaging element, and a ring in which the said element is journaled, the ring having a hinged portion adapted to swing upwardly to permit the insertion of the bit into the bit engaging element through the ring, and means for locking said hinged portion in closed position, and a ball bearing arranged between the bit engaging element and the ring, said bearing comprising arc-shaped grooves in the ring, one of said grooves being of a depth to entirely receive the balls of the bearing, and the other being of a depth to extend the balls into engagement with the bit engaging element, said grooves being connected at their ends by inclined passages, said grooves extending from one end of the gate opening to the other the inclined passages being at the opposite sides of the gate opening.

1,422,403. MUFFLER. FRANK A. WHITTEN, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed June 17, 1919. Serial No. 304,755. 9 Claims. (Cl. 137—160.)



1. A muffler consisting of a tubular member of substantially uniform area throughout its length and having two flanges extending outwardly from its periphery and longitudinally thereof and throughout the length of the muffler, and which flanges are spaced apart from one another to thereby provide an outlet passage between them.

1,422,404. THEFT SIGNAL FOR MOTOR VEHICLES. LUDWIG R. ZEPKA, Cleveland, Ohio. Filed Sept. 10, 1921. Serial No. 499,592. 6 Claims. (Cl. 40—15.)

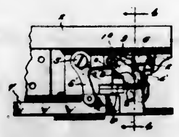


6. A theft signal for motor vehicles including a casing having a partition therein and open at opposite sides above the partition, a plate closing the casing below the partition, a signal plate shiftable through the partition to a position between said sight openings, a lock carried by said closure plate and having a bolt, and a bell crank pivoted within the casing forming an operative connection between the bolt and said signal plate whereby the lock may be operated for shifting the signal plate.

1,422,405. ELEVATING RACK FOR BEDS. CLIFFORD G. ALGUIRE, Madison, S. Dak. Filed Sept. 10, 1921. Serial No. 499,861. 2 Claims. (Cl. 5—43.)

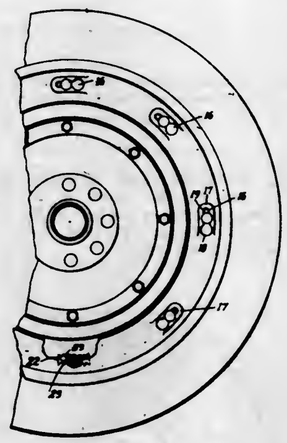
1. An adjustable head for beds comprising an adjustable frame adapted to be mounted on a bedstead adjacent the head thereof, lifting elements between the side rails of the said bed and adjusted vertically thereof, said elements normally engaging and supporting the adjustable frame in a horizontal position, bracket members carried by the head posts, a shaft mounted in said bracket members and extending transversely of the bed, pinions carried by said shaft for engaging with the lifting elements, a third pinion carried on one end of the said shaft adjacent one of the head posts, a frame connected to the post and adjacent the said third pinion, and means mounted in the frame for driving the said third pinion.

1,422,406. FIRE EXTINGUISHER. FREDERICK C. BARGAR, Columbus, Ohio, assignor to Foamite Firefoam Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 11, 1919. Serial No. 316,749. 50 Claims. (Cl. 169—32.)



1. A gas pressure generating attachment for a fire extinguisher comprising a shell adapted to be connected with the extinguisher and provided interiorly with a material which has potential energy and is transformable gradually into a gaseous product capable of exerting kinetic energy adequate to expel the extinguishing agent from the extinguisher.

36. A chemical fire extinguisher comprising a container for the chemical fire extinguishing agent, said container having an outlet, and mechanism for supplying a pressure of gas upon the agent in said container to expel said agent through the outlet, said mechanism comprising a means containing a material having potential energy and transformable in and of itself into a gaseous product capable of exerting kinetic energy and which means has its interior normally out of communication with the interior of the container and has communication therewith when the gaseous product has been formed, and means for setting the aforesaid means into gas producing activity at the time the gaseous product is to be used to expel the extinguishing agent from the container.

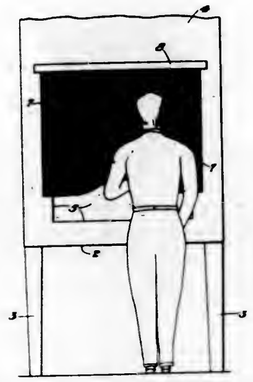


1,422,407. THREAD CUTTER. RUDOLPH BECKER, Roselle Park, N. J., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed Sept. 6, 1918. Serial No. 252,938. 10 Claims. (Cl. 112—252.)

2. In a sewing machine, a thread-cutter comprising a cutting blade having a fixed fulcrum, a second cutting blade coacting therewith having a floating fulcrum and a cam-surface, a pivotal connection between said blades intermediate their fulcrums, means for moving said first blade on its fulcrum, and means coacting with the cam-

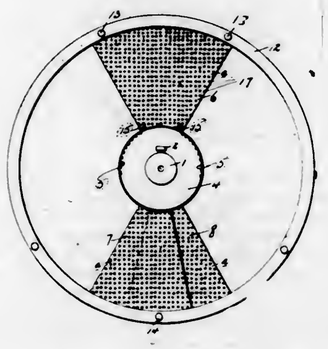
surface to move the second blade about the pivotal connection between the blades.

1,422,408. RIM CONSTRUCTION FOR PRESSED STEEL WHEELS. DAVID H. BELLAMORE, New York, N. Y., and THOMAS I. S. BOAK, East Orange, N. J.; said Boak assignor to said Bellamore. Filed Aug. 22, 1919. Serial No. 319,129. 1 Claim. (Cl. 301—23.)



As a new article of manufacture a wheel embodying a disc, the outer margin of which is bent laterally to form a fixed rim section, said disc being provided, adjacent the fixed rim section, with an annularly disposed slot, the inner and outer edges of which are serrated, a plurality of studs rigid with the disc and extending from one face thereof in an annular path, in combination with a ring member, the outer margin of which is bent laterally to form a removable rim section and which is provided with a plurality of inclined keyhole slots equal in number to the studs and similarly placed, whereby the ring member may be brought into position to cause all of the keyhole slots to receive the studs and thereafter rotate to tightly clamp the parts together, and a bolt provided with a polygonal portion adapted to extend through the slot in the disc and interfit with the serrated edges of said slot when said bolt is passed through said slot and through the aperture in the ring, for the purpose of locking the ring against retrograde rotation.

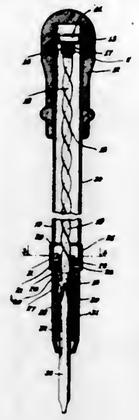
1,422,409. SAFETY SCREEN. JAMES L. BERNARD, Beaver, Pa. Filed May 31, 1921. Serial No. 473,991. 4 Claims. (Cl. 45—105.)



1. The combination with a laboratory table having a vertical front wall extending upwardly from the top thereof, and provided with a suitable opening through which an operator may manipulate any desired appara-

tus supported on said table, of a safety screen adapted to close said opening to prevent objects that may be exploded on said table striking the operator, said screen

comprising a flexible metallic intermeshed member having its one side secured along the top of said opening, and having its other three sides free.

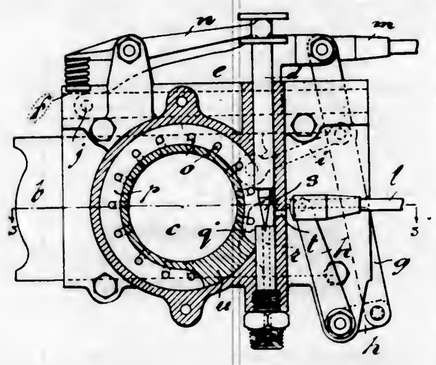


1,422,410. SHUTTER FOR MOTION-PICTURE-PROJECTING MACHINES. JOHN B. BLANTON, Chattanooga, Tenn., assignor of one-half to Harry A. Wingers, St. Louis, Mo. Filed Apr. 21, 1920. Serial No. 375,591. 16 Claims. (Cl. 88—19.3.)

1. A motion-picture projecting-machine shutter comprising in combination, a hub, a blade fixed relatively to the hub, a plurality of blades shiftable circumferentially relatively to the hub and the fixed blade for varying the number of light-obstructions presented by the shutter per revolution, and means for limiting the circumferential movement of the shiftable blades relatively to the fixed blade, the shiftable blades being circumferentially spaced from the fixed blade throughout their limit of movement.

1,422,411. SCREW DRIVER. FRANK V. BORICK, New York, N. Y. Filed June 4, 1920. Serial No. 386,454. 1 Claim. (Cl. 145—53.)

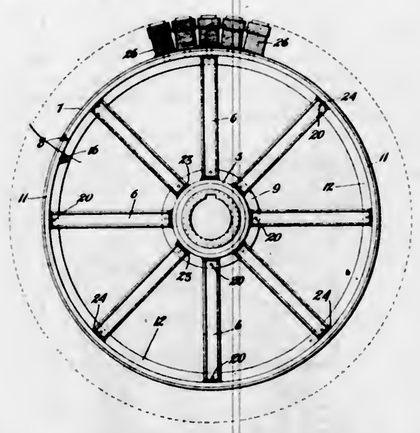
In a spiral tool driver, the combination of a tubular member terminating at its lower end in a series of projections provided with parallel straight side edges disposed axially thereof, a handle attached to the opposite end of said member, a spiral spindle composed of square material extensible in said tubular member, a ferrule enclosing the end of the tubular member having the said projections, the said ferrule being provided with an opening to receive the spindle therethrough and having its closed end spaced substantially away from the adjacent end of the tubular member, a complemental spring actuated member movable axially and rotatably within said ferrule and having upstanding projections similar to the first named projections and adapted to be received by



the latter, whereby rotation of the tubular member in either direction will cause a corresponding rotary movement of the complemental member, the latter member being provided with an upstanding central sleeve having a through square bore to embrace the walls of said spindle, whereby axial movement of the spindle and tubular member relatively to each other will cause the projections of the complemental member to remain in engagement with the projections of the tubular member when the tool is collapsed to drive a screw and to move the complemental member axially and then rotatably to disengage the said projections when the tool is extended.

1,422,412. MANUFACTURE OF ARTIFICIAL SILK. EMILE BRONNERT, Mulhausen, France. Filed Aug. 31, 1920. Serial No. 407,252. 2 Claims. (Cl. 18—54.)

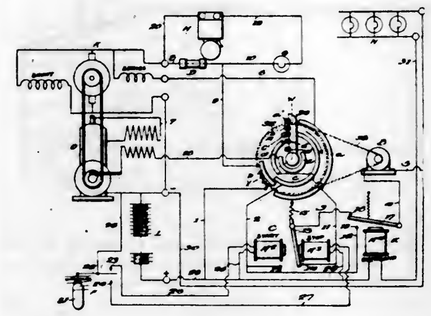
1. The step in the process of producing very fine viscose silk threads of 6 deniers or less, which consists in forcing the viscose through the usual aperture of 0.10 mm. diameter into a precipitant bath containing a concentrated solution of easily soluble bisulphites, the concentration of the bath being directly proportional to the fineness of the thread to be produced, so that the concentration is increased in accordance with the fineness of the thread desired.



1,422,413. CARBURETOR FOR INTERNAL-COMBUSTION ENGINES. CLEMENT BROWN, Birchfield, Birmingham, England. Filed Oct. 15, 1918. Serial No. 258,227. 1 Claim. (Cl. 261—51.)

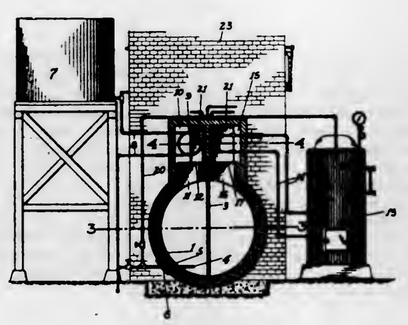
In a carburetor, a main air passage, a throttle valve controlling said passage, a fuel orifice, a cam moving parallel to said throttle valve, a guide to which said cam is pivoted, a member actuated by said cam for controlling said orifice, means for simultaneously moving said cam and said throttle valve, and means acting on

said first named means for moving said cam on its pivot independently of said throttle valve.



1,422,414. ROTOR SPIDER. JAMES BURKE, Erie, Pa., assignor to Burke Electric Company, a Corporation of Pennsylvania. Filed Nov. 6, 1919. Serial No. 336,214. 3 Claims. (Cl. 171—252.)

1. In a rotor for electrical machinery, the combination of a hub of cast metal having a central peripheral projection, channel bars radially extending therefrom welded to opposite sides of said projection and having the web of said channel bars facing said projection, a cylindrical ring of metal stock forming an outer field supporting ring, and means for fastening said ring to the ends of said bars to form a rim for said hub.

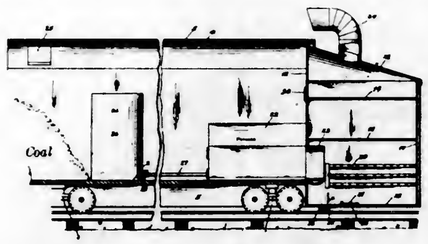


1,422,415. AUTOMATIC ELECTRICAL CONTROLLING DEVICE. CARL F. P. CARRIER, Philadelphia, Pa. Filed Oct. 9, 1919. Serial No. 329,440. 4 Claims. (Cl. 290—30.)

1. In a system for generating and distributing electricity, a dynamo electric machine having both shunt and series windings, a prime mover mechanically connected to said machine, a storage battery, a switching device means responsive to the electrical condition of the battery for automatically operating said switching device, and means, controlled by said switching device, for either connecting the battery to said machines so as to utilize the shunt winding only, when the machine is acting as

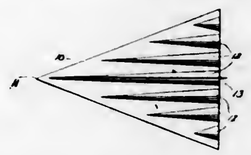
a generator, or for connecting said battery to the machine in such manner as to utilize the series winding when said machine is acting as a motor.

1,422,416. COMBUSTION AND MIXING CHAMBER FOR DEHYDRATORS. FRANK C. CHAPMAN, Modesto, Calif. Filed Sept. 28, 1920. Serial No. 413,452. 7 Claims. (Cl. 158—1.)



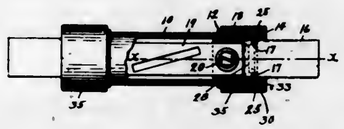
4. A device of the character described, including a combustion chamber, oil burners projecting thereinto, a steam supply pipe connected to said burners, a pair of independent chambers communicating with the combustion chamber, the oil supply pipe passing through one chamber and the steam pipe passing through the other, and means for independently regulating the amount of heat which may enter said chambers.

1,422,417. SNOWPLOW. ELI CLAYBORNE, Hot Springs, Ark. Filed Dec. 4, 1920. Serial No. 428,232. 2 Claims. (Cl. 37—60.)



1. The combination of a car, a hollow plow carried by the car and covering the entire front end of the same, a vertical partition extending across the front end of the car and forming the back wall of the plow, a door in said partition to establish communication between the car and the plow, horizontal partitions secured upon and projecting forwardly from said vertical partition across the plow, the forward edges of said horizontal partitions

being supported upon but in spaced relation to the front walls of the plow, a smoke pipe rising from the roof

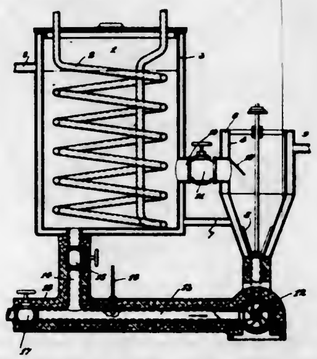


of the plow, and a heater within the car having an outlet extending through the vertical partition and into the plow below the bottom horizontal partition.

1,422,418. SUBSOIL ATTACHMENT FOR PLOWS. HENRY H. COLBY, Tallula, Ill. Filed Nov. 26, 1920. Serial No. 426,560. 3 Claims. (Cl. 97—32.)

3. A subsoil attachment of the character specified comprising a substantially flat blade having its longitudinal edges tapering to a point at its forward end, a carrying member projected upwardly from the central longitudinal part of the blade and a plurality of laterally spaced raised portions extending longitudinally of the blade and on opposite sides of the vertical carrying member, said portions tapering towards their forward ends to a point flush with the upper surface of the blade and in spaced relation to the leading edges of the latter, the upper surface of each portion being on a rearwardly inclined plane for lifting and depositing the subsoil rearwardly of the advancing blade to form moisture-retaining furrows below the surface of the ground.

1,422,419. RENEWABLE FUSE. FRANKLIN N. CONANT, Newburyport, Mass., assignor, by mesne assignments, to The Chase-Shawmut Company, a Corporation of Massachusetts. Filed July 10, 1919. Serial No. 309,813. 4 Claims. (Cl. 200—132.)

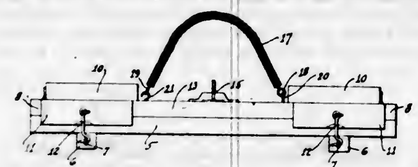


4. In an enclosed electric fuse of the cartridge type, the combination of a ferruled insulating fuse casing having an inturned lip at the end of the ferrule with oppositely disposed notches, a fusible element having a terminal blade with notches in its edges for engaging said lip by way of the notches therein, a holding plate for the terminal blade which substantially closes the open end of the casing, and lips fitting with the notches in the ferrule flange and other lips hugging the terminal blade with spring pressure, a yielding packing washer snugly fitting the blade and extended over the holding plate, a metal washer arranged over said yielding washer, and an end cap exerting pressure on said washer and holding the parts assembled.

1,422,420. RENEWABLE FUSE. FRANKLIN N. CONANT, Newburyport, Mass., assignor, by mesne assignments, to The Chase-Shawmut Company, a Corporation of Massachusetts. Filed July 26, 1919. Serial No. 313,580. 17 Claims. (Cl. 200—132.)

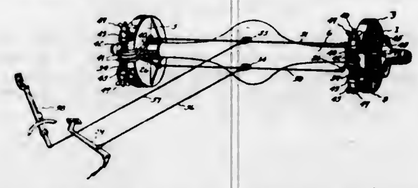
16. In an enclosed electric fuse of the cartridge type, the combination of a ferruled casing having an apertured side wall and an end wall with an aperture having a straight side, a fuse strip having its end portion extended through said aperture and bent over the straight side thereof, a removable plate having a projection which enters the aperture and having a tongue on said projection which enters the aperture in the side wall of the casing and having projections for engaging the end of the casing.

1,422,421. METHOD AND APPARATUS FOR MIXING SOLID MATERIALS WITH LIQUIDS. ORIN D. CUNNINGHAM, Buffalo, N. Y., assignor to National Aniline & Chemical Company, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 21, 1920. Serial No. 405,198. 9 Claims. (Cl. 23—3.)



1. The method of effecting the admixture of solids with liquids at low temperatures, which comprises circulating the liquid from and to a cooling chamber through a mixing chamber of relatively small capacity, admixing the solid with the liquid in the mixing chamber with vigorous agitation and continuously returning the liquid with the admixed solid and reaction products to the cooling chamber, the rate of addition of the solid and the rate of circulation of the liquid being so regulated as to maintain the desired low temperature.

1,422,422. FOLDING FEED BOX. MESHACK DAVIS, Schlater, Miss. Filed Aug. 13, 1921. Serial No. 491,963. 2 Claims. (Cl. 217—15.)



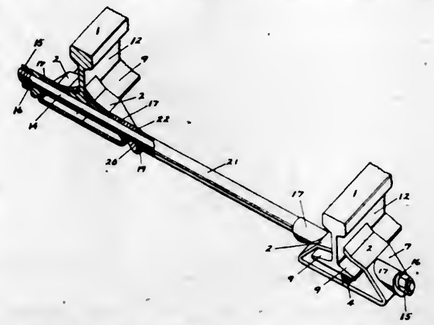
1. A device of the character described comprising a receptacle, a yieldable bail connected at one end to one of

the foldable members of the receptacle, and adapted to extend around a suitable support, and means carried by

said member of the receptacle for the reception of the opposite end of the bail to hold said bail in binding engagement with the support.

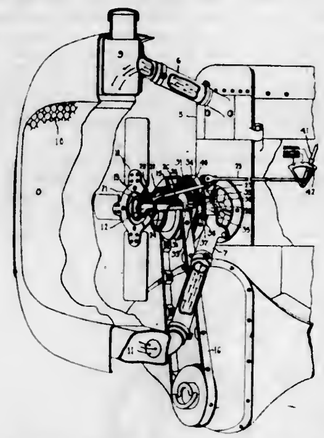
1,422,423. BRAKE MECHANISM. HUGO DOTZER and SAMUEL G. BARNARD, Seattle, Wash.; said Barnard assignor to said Dotzer. Filed Mar. 9, 1920. Serial No. 364,438. 2 Claims. (Cl. 188—204.)

1. In a vehicle of the character described, the combination with wheels at opposite sides of the vehicle having braking mechanism and arms movable to actuate the braking mechanism, of a cable connected at its ends to the ends of said arms and drawn taut between them, a brake lever and a connecting means fixed at one end to the brake lever, and at its opposite end having a movable connection with the first named cable whereby tension by actuation of the brake lever causes actuation of the brake arms and automatic adjustment of the connection along the arm connecting cable whereby equalization of tension on both braking mechanisms is effected.



1,422,424. ANIMAL TRAP. WILLIAM DUNN, Bannack, Mont. Filed Dec. 24, 1920. Serial No. 432,898. 3 Claims. (Cl. 43—87.)

1. In an animal trap, the combination with a frame, one portion of which is adapted to be bent upon the other part, of locking means for holding it in its closed position, an eye at each outer corner end of the lower portion of the frame, a looped cable secured to each outer corner end of the bent-over portion of said frame and projecting forwardly through a respective eye on the lower portion of the frame, a substantially wide loop formed on each cable end beyond its respective eye, and means adapted to be actuated by an animal to release the locking means, whereby the bent-over portion of the frame will spring upwardly and rearwardly to draw the looped ends of the cable tightly about said animal, for the purpose specified.

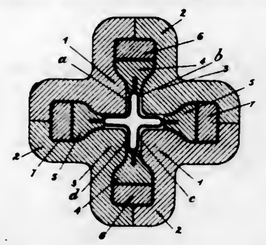


1,422,425. TRACK BRACE. WILLIAM DUNN, Bannack, Mont. Filed Dec. 24, 1920. Serial No. 432,899. 3 Claims. (Cl. 238—53.)

1. In a device of the type described, the combination with a pair of rails in track alinement, of compression means between said rails, a tension member passing beneath the rails and bearing on the under surface of each one of the latter, a clamping plate bearing on each side of the web of each rail and the upper surface of the

base of the latter, and wedge-shaped sleeves mounted on the tension member between the ends of the latter and the ends of the compression means for the purpose specified.

1,422,426. COOLING SYSTEM FOR INTERNAL-COMBUSTION ENGINES. WARREN H. FARR, New York, N. Y., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed June 10, 1919. Serial No. 303,086. 18 Claims. (Cl. 123—170.)



1. In a cooling system for internal combustion engines, a radiator through which a cooling liquid may flow; conduits connecting the upper and lower ends of the radiator with the cooling jacket of the engine; and means for causing the cooling liquid to flow through the cooling system provided by the elements aforesaid in a direction the reverse of the direction in which the said cooling liquid normally flows.

1,422,427. ELECTRIC APPARATUS FOR PROPELLING PROJECTILES. ANDRÉ LOUIS OCTAVE FAUCHON-VILLEPLÉE, Paris, France. Filed Apr. 1, 1919. Serial No. 286,799. 4 Claims. (Cl. 172—285.)

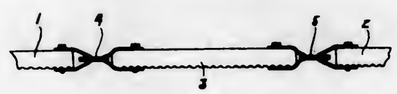
1. An electric gun comprising in combination energising bars adapted to create a field of electric forces extending over the whole length of the gun, a plurality of rails adapted to act as current feeding means and to guide in a direction at right angles to said field of forces, a projectile provided with an equal plurality of wings, said rail being provided with grooves in which said wings are

adapted to slide, the rails and bars being arranged parallel to each other in groups which are located at diametrically

opposite points around the longitudinal axis of the gun, and means for supporting the rails and bars.

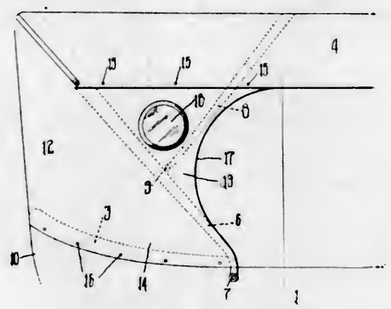
1,422,428. BRACELET LINK. OTTO FESSLER, Irvington, N. J. Filed Apr. 4, 1919. Serial No. 287,460. 13 Claims. (Cl. 24—236.)

3. In a link of the character described, the combination with opposite side parts having their adjacent faces recessed, of a middle part between said side parts in the form of a looped strip having at its lateral edges ears offset inwardly from that portion of its outer surface between said ears, said ears projecting into the recesses of said side parts to hold the middle part against displacement from between the side parts, and said portion of the outer surface of the middle part between said ears being substantially flush with the edges of the side parts.



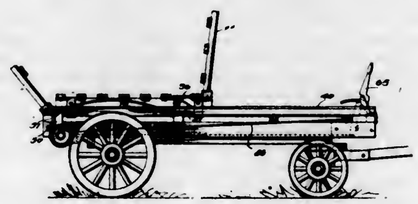
1,422,429. CONNECTION FOR ELECTRICAL APPARATUS. CHARLES D. FILKINS, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Apr. 21, 1919. Serial No. 291,608. 6 Claims. (Cl. 171—242.)

1. The combination in an apparatus of the class described of a fixed element, a movable element mounted on a trunnion so as to be capable of rotation with respect to said fixed element, and means for making an electrical connection to said movable element comprising a fixed coiled conductor surrounding said trunnion and in frictional engagement therewith.



1,422,430. FASTENING FOR DRIVING BELTS. ALEXANDER JOHN FORBES, Brooklea, North Kessock, Scotland. Filed Feb. 9, 1921. Serial No. 443,648. 1 Claim. (Cl. 24—32.)

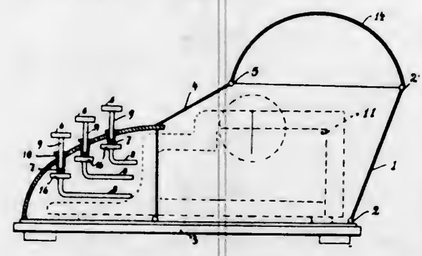
In a driving belt, an adjustable fastening comprising a flexible belt section of substantial length and of substantially the same cross-sectional figure as the driving belt, a pivoted left-hand screw coupling between one end of said flexible section and the belt and a pivoted right-hand screw coupling between the belt and the other end of said flexible section, each coupling comprising a slotted clip secured to one end of the flexible belt section, a screw



pivoted to said clip and movable in said slot, a second slotted clip secured to the belt, said screw passing freely through the slot of said second clip and an adjustable crosshead on said screw, said cross head being embraced by said second clip so that the pair of clips are movable towards each other but restrained from movement in the opposite direction.

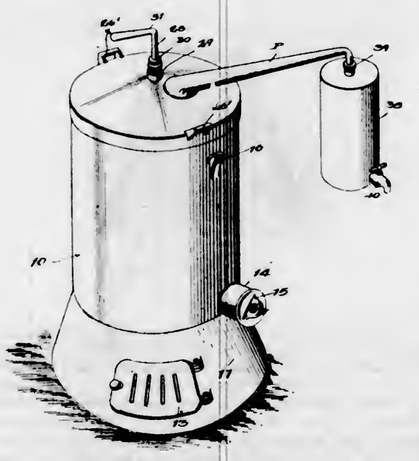
1,422,431. COMBINATION BACK AND SIDE CURTAIN. KINGSTON FORBES, Flint, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Mar. 1, 1920. Serial No. 362,389. 3 Claims. (Cl. 296—138.)

2. In a device of the class described, a vehicle body, a top, supports for supporting said top from said body, a back curtain secured to the rear of said body and top, side curtains secured to said back curtain and extending forwardly therefrom, a wing portion secured to the forward portion of each of said side curtains, said wing portions being detachably connected to said top, and terminating short of said body, substantially as shown and described.



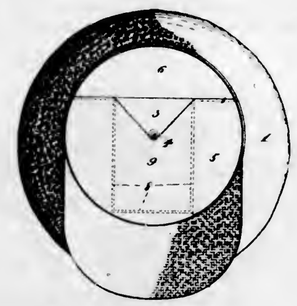
1,422,432. HAY LOADER. PERCY LLOYD FORBES, West Middlesex, Pa. Filed May 13, 1921. Serial No. 469,181. 10 Claims. (Cl. 214—81.5.)

1. In a device of the character described, a frame, ground wheels therefor, tracks on said frame, a carriage on said tracks, driving mechanism for said carriage including a pair of swinging bearings, a winding shaft



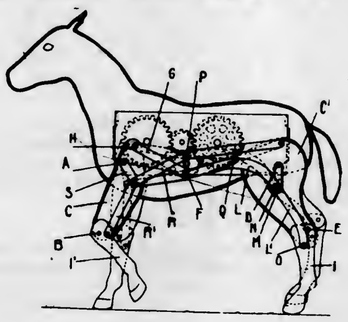
journaled in said bearings and a pair of driven friction gear wheels connected to said winding shaft and engageable with said ground wheels, controlling means for said drive mechanism adapted to yieldingly move said gear wheels into operative engagement with said ground wheels and to positively move said gear wheels out of engagement with said ground wheels, and motion transmission means between said winding shaft and said carriage.

1,422,433. TYPEWRITING MACHINE. RUDOLF FRIES, Berlin-Schoneberg, Germany. Filed Sept. 3, 1920. Serial No. 408,096. 2 Claims. (Cl. 197—186.)



1. Sound deadening device for typewriting machines which comprises a sound-proof casing adapted to enclose the typewriter and to be hingedly secured at its lower rear portion to the base-plate upon which the typewriter is mounted so as to be freely movable about its hinges into and out of operative position; a hinged window carried by said casing at the front part thereof; a hinged lid carried by the top part of the said casing; and a plurality of keys carried by said casing, in position to engage the keys of the typewriting machine when the casing is in operative position.

1,422,434. METHOD OF EXTRACTING FERTILIZING ELEMENTS FROM MANURE. COLL E. GARDAN, Wilson Creek, Wash. Filed June 1, 1922. Serial No. 565,097. 3 Claims. (Cl. 71—6.)

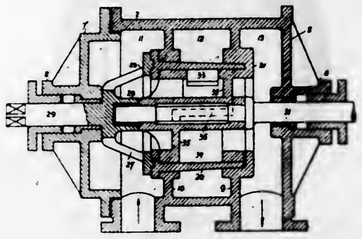


1. The method of extracting fertilizer elements from manure which consists in cooking manure in an aqueous suspension, and then submitting the manure to pressure while in said suspension.

1,422,435. CAP. HAROLD S. GOODING, Medford, Mass. Filed Sept. 7, 1920. Serial No. 408,416. 1 Claim. (Cl. 2—113.)

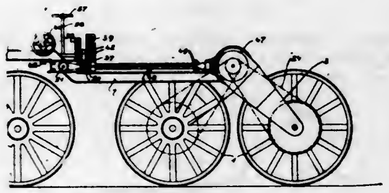
The combination in a cap, of a lining for the cap, said lining comprising separate sectional parts, a piece placed between said sectional parts of said lining, means for stitching said piece to the one sectional part of said lining whereby said piece and said sectional part of the lining may co-operate with one another to form a pocket presenting an open end, said piece having an extension forming a flap closing said open end of the pocket, a releasable fastener for holding the flap in place, and means for securing the other sectional part of said lining to said piece along the base edge of said flap and also to the said one sectional part of the lining on opposite sides of the open end of said pocket.

1,422,436. MOTION DEVICE FOR AUTOMATONS. FRANCESCO GORGELLINO, Turin, Italy. Filed Nov. 20, 1919. Serial No. 339,412. 4 Claims. (Cl. 46—40.)



1. In a device for producing life-like relative movement between the parts of mechanical toys, the combination with a body portion, of an articulated leg, comprising an upper portion jointed to the body portion and a lower portion jointed to the upper portion, and an operating mechanism comprising a separate crank arm for each of said leg portions, a separate operating connection from each of said crank arms to its respective leg portion, and means for causing said crank arms to rotate in a predetermined relation.

1,422,437. VALVE FOR STEAM ENGINES. GIJSBERTUS GROENEWEGEN, Delft, Netherlands. Filed Dec. 27, 1918. Serial No. 268,488. 2 Claims. (Cl. 121—140.)



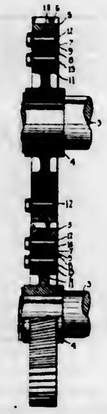
1. A valve, comprising a casing having a chamber formed therein and provided with a plurality of passages disposed at opposite sides of and in communication with

said chamber, said passages being arranged in pairs diametrically opposite each other, a shaft mounted for rotation in one end of said casing and carrying a valve liner having a pair of openings disposed in position to be brought into register with either pair of said passages, a shaft journaled at its opposite ends respectively in one

end of the casing and in the end of said first shaft and carrying a valve rotatable within said valve liner, said valve having a pair of chambers one in communication with a source of fluid supply and the other in communication with an exhaust outlet and provided with openings disposed in position to alternately communicate with the openings in said valve liner.

1,422,438. MOTOR TRACTOR. ERHARD GRÜBLER, Borsdorf, near Leipzig, Germany. Filed Oct. 3, 1921. Serial No. 505,007. 14 Claims. (Cl. 180—21.)

1. In a motor tractor the combination of a body frame, two rear road wheels, and means connecting said road wheels to said frame whereby said wheels are adjustable in the direction of travel and also at right angles to the planes of rotation.

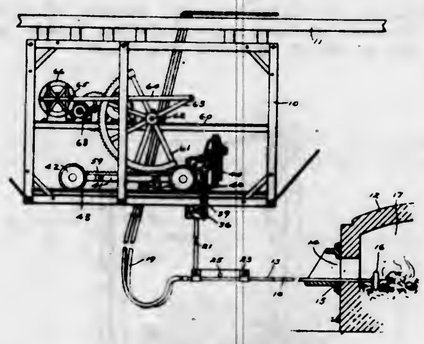


1,422,439. ANODE FOR LUMINOUS ARC LAMPS. CROMWELL A. B. HALVORSON, Jr., Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Sept. 26, 1919. Serial No. 326,652. 6 Claims. (Cl. 176—121.)

1. A positive electrode for luminous arc lamps, composed of an iron shell, a stem axially extending through the shell, and a copper core cold compacted in the shell and anchoring the stem.

1,422,440. CUSHIONED GEAR. ALEXANDER C. HAMILTON, Pontiac, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Aug. 23, 1919. Serial No. 319,454. 5 Claims. (Cl. 74—29.)

1. A resilient gear of the class described comprising concentric hub and rim portions having an annular channel formed in their sides and partly in one and partly in the other of said members, and the bottom or end wall of which channel is formed by annular flanges at the sides of said hub and rim the free edges of which flanges engage with one another to thereby prevent lateral movement of said rim; an annular yieldable connecting member lo-

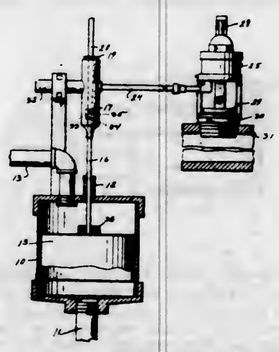


cated within said channel; two concentric retaining rings located within the open side of said channel and overlying said connecting member; and two series of fastening bolts one extending through one of said retaining rings, through said connecting member and through one of the side flanges aforesaid, and the other series through the other of said side flanges.

1,422,441. ATHLETIC SKIRT. ANNE HARMON, Irvington-on-the-Hudson, N. Y. Filed Apr. 10, 1920. Serial No. 372,743. 2 Claims. (Cl. 2—139.)

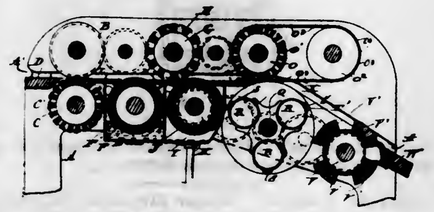
1. A skirt having a flexible diaphragm embodying depending leg-portions each being constructed from a piece of material having one straight long-side, end-edges formed at right-angles to said straight long-side, an opposite long-side which flares away from said straight long-side toward its ends to form a short outer side for the depending leg-portion, and an extended central panel to form long inner sides for both leg-portions and to the side-edges of which are connected the straight end-edges of the leg-portions, the flaring edges of said leg-portions and the front and rear edges of said central panel being secured all around the inner side of the skirt between the bottom edge and the waist-line thereof.

1,422,442. AUTOMATIC POKER. THOMAS MICHAEL HAUGH, LE ROY CRIS SCHILLING, and JOHN WESLEY FINCH, New Britain, Conn., assignors to The Eastern Malleable Iron Company, New Britain, Conn., a Corporation. Filed Jan. 14, 1918. Serial No. 211,855. 7 Claims. (Cl. 214—23.)



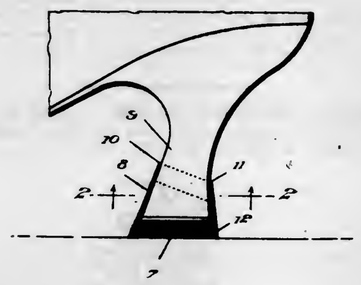
1. In combination in a poker structure, a rail supported truck having a limited to and fro movement, a frame operatively supported by the said truck for limited to and fro movement in the transverse direction, a poker structure connected to the said frame, and tripping mechanism operative to periodically effect a movement of the said frame and poker responsive to such to and fro movement of the truck.

1,422,443. LEADING-IN WIRES FOR INCANDESCENT ELECTRIC LAMPS. FREDERICK HOGE, Zoug, Switzerland. Filed Feb. 26, 1919. Serial No. 279,418. 1 Claim. (Cl. 176—36.)



For incandescent lamps, high vacuum apparatus and the like, a leading in wire or conductor made of ignoble cheap metal having a coating composed of eight parts by weight of tungsten and one part by weight of fused glass.

1,422,444. CONTROLLER FOR AUTOMATIC VACUUM BREAKERS. WALDO A. HOWLAND, Adams, Mass. Filed Apr. 14, 1921. Serial No. 461,359. 4 Claims. (Cl. 137—103.)

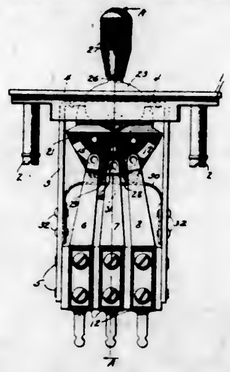


1. In a mechanism of the character described, a controlling valve comprising a hollow valve body formed with an annular seat, a valve normally resting on said seat, an inlet pipe entering the valve body above the seat and valve, an outlet pipe below the seat, and a tubular stem entering the opposite end of the valve body from the inlet pipe and having a diameter smaller than the diameter of the aperture in the annular seat, said stem having that end adjacent the valve open and having an outlet port in its length, the stem when shifted in one direction lifting the valve from its seat and permitting fluid to pass from the inlet pipe to the outlet pipe, said stem when lowered permitting the return of the valve to its seat and constituting an exhaust pipe.

1,422,445. RUG-SCOURING MACHINE. KENNETH C. JONES, Chagrin Falls, and JAMES H. JONES, Cleveland Heights, Ohio. Filed Apr. 12, 1920. Serial No. 373,163. 3 Claims. (Cl. 15—7.)

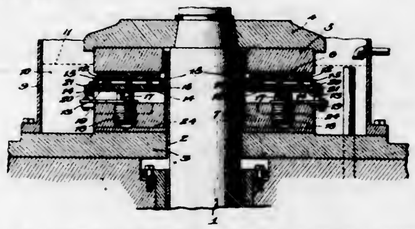
2. In a machine for scrubbing rugs, a vacuum roll and means for feeding said rug to said roll, a multiple number of suction chambers in said roll, each chamber having a suction opening and a spring pressed valve in each opening, each valve provided with a projection engaged by said rug in passing.

1,422,446. RUBBER HEEL. LOUIS KAPLAN, New York, N. Y. Filed May 27, 1921. Serial No. 473,144. 2 Claims. (Cl. 36—72.)



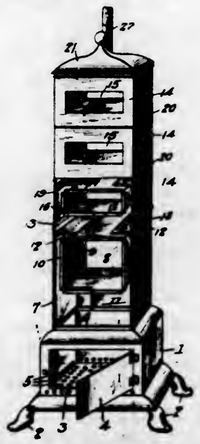
1. A detachable heel having a marginal retaining flange to embrace the heel of an article of foot wear, and an elastic band to embrace the second named heel having one portion connected to the corresponding portion of said flange and its opposite portion free to be disposed at the opposite portion of the second-named heel above said flange.

1,422,447. SWITCHING KEY. LE ROY WILSON KELSAY, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 8, 1921. Serial No. 443,338. 3 Claims. (Cl. 179—176.)



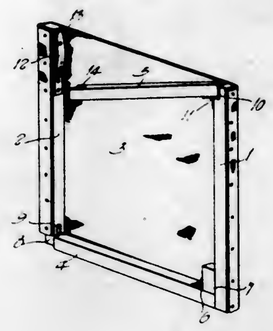
3. A switching key comprising a rectangular frame, contact springs attached to one end of said frame and parallel thereto, an oscillatory member pivotally supported at the opposite end of said frame and operable in a plane parallel

thereto, connecting blocks on said oscillatory member co-operating with said springs, and contact centering means



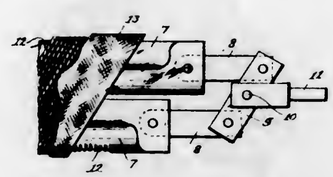
cooperable with said oscillatory member and supported on said frame intermediate the ends thereof.

1,422,448. BEARING. ALBERT KINGSBURY, Greenwich, Conn. Filed May 16, 1921. Serial No. 470,044. 26 Claims. (Cl. 64—25.)



1. A bearing comprising relatively movable bearing members one of which includes a plurality of two-part bearing shoes and distributed elastic means associated with each shoe for supporting one part of said shoe from the other.

1,422,449. PORTABLE HEATER. LOUIS O. KOCH, Little Rock, Ark. Filed June 14, 1921. Serial No. 477,378. 3 Claims. (Cl. 126—90.)



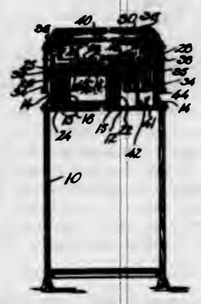
1. A heater comprising a base containing an open top compartment to receive the heating element, a series of superposed removable radiator sections each provided with a transverse open air flue, baffle plates carried by the bottoms of the flues and the side walls of each section, a cover for the upper section, and a vent pipe connected with said cover.

1,422,450. COVERED FOLDING FRAME. CARL R. KOSITZKY, Bismarck, N. Dak. Filed Nov. 8, 1920. Serial No. 422,727. 3 Claims. (Cl. 45—46.)

2. A device of the class described comprising a pair of side bars, a flexible sheet secured at two opposite edges thereto, a pair of spacing bars hinged to one of said side bars and adapted to extend between and to abut said side bars to space the same and stretch said sheet, means for holding one of said spacing bars in operative relation with one end of the other side bar, and an inwardly bowed spring anchored at one end to the other end of said other side bar, said spring having its free outer end bent laterally to form a stop for the other spacing bar, said spring being adapted to frictionally bind against the last-named bar end.

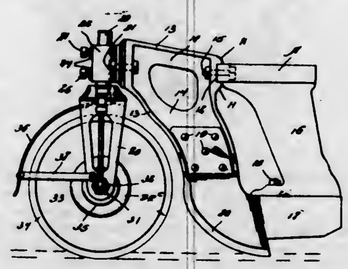
1,422,451. METHOD OF MAKING RUBBERIZED TIRE FABRIC. FREDERICK A. KRUSEMARK, Roanoke, Va., assignor to K. F. & C. Tire & Rubber Corporation, Roanoke, Va., a Corporation of Virginia. Filed Dec. 13, 1920. Serial No. 430,440. 3 Claims. (Cl. 154—2.)

2. The method herein described of making a two-ply tire fabric consisting in first making a flat tube of coiled cord, with the cords running diagonally, then applying an open-weave fabric to the outer face of the tube thus formed, and then longitudinally slitting the tube to form a fabric having one layer consisting of diagonally-arranged cords and the other layer of open-weave fabric.



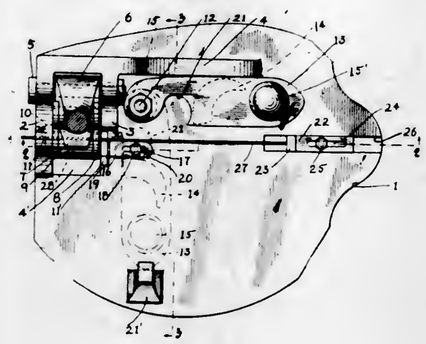
1,422,452. DENTAL-PLATE ANCHORAGE. EDWARD H. LACH, Vandergrift, Pa. Filed Apr. 6, 1922. Serial No. 550,113. 2 Claims. (Cl. 32—12.)

1. The combination with an anchoring natural tooth having a metal cap competely housing and permanently applied thereto, of a plate carrying artificial teeth and



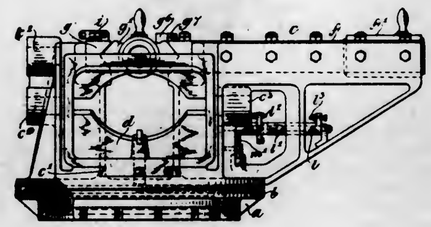
having a metal overcap shaped to snugly fit the capped anchoring tooth and to be removably mounted thereon.

1,422,453. PHONOGRAPH. PETER J. LANDIN, Denver, Colo. Filed Sept. 23, 1920. Serial No. 412,262. 6 Claims. (Cl. 274—2.)



1. In a phonograph, a casing having upstanding walls, sound reproducing means within said walls, said means comprising a pivoted amplifier having a tone arm thereon, said amplifier opening within said walls, and a hooded sound deflecting member above said amplifier but spaced from certain of said walls for the passage of sound vibrations.

1,422,454. COMBINATION ROLLING CUTTER AND SHOE-FURROW OPENER FOR CORN PLANTERS. LAMMERT H. LANGLAND, Windom, Minn. Filed Feb. 14, 1921. Serial No. 444,870. 2 Claims. (Cl. 111—85.)

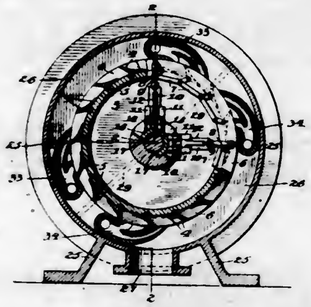


1. A corn planter attachment comprising in combination with a frame, a supporting member secured to the forward end of the frame, a boot depending from the frame, a shoe secured to the lower end of a boot and to the lower end of said support, a bearing member secured to the forward end of said support, a member having a cylindrical shank slidably and rotatably adjustable within said bearing frame, and a cutting disk journaled within said last named member.

1,422,455. WIRE-BENDING MACHINE. PHILIPP LIVA, Brooklyn, N. Y. Filed Nov. 20, 1920. Serial No. 425,430. 12 Claims. (Cl. 140—71.)

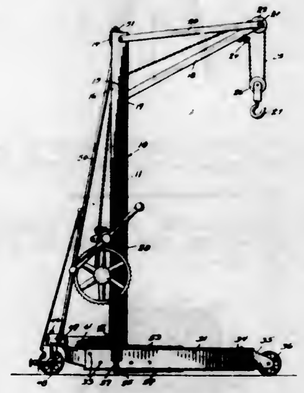
1. A wire bending and cutting device comprising in combination a base, a bending member pivotedly connected to said base adapted to swing in horizontal direction, said bending member being provided at its under-surface with an arcuated die, a lever swingably mounted on said base provided at its outer end with a cutter and at its inner end with a bender, said lever being adapted to swing in a vertical direction, an aperture formed in said base near the cutter end of said lever adapted to receive a wire to be bent, an adjustable stop member secured to said base and disposed opposite said aperture, a stationary clamping member secured to said base adapted to hold said bending member in a fixed position during the subsequent operation of said lever, and an adjustable die secured to said base near said lever and disposed on a line with said aperture.

1,422,456. BORING MACHINE. WALTER P. LOTZ, New Brunswick, N. J., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 3, 1921. Serial No. 442,185. 4 Claims. (Cl. 77—62.)



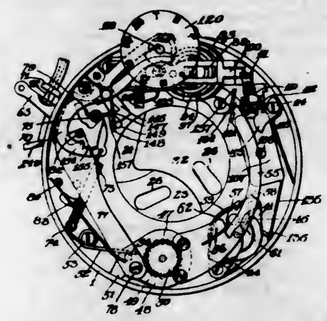
1. In a machine for boring or the like, in combination with a power shaft, a revoluble fixture, a work support on the fixture, a plurality of reciprocable cutting tools mounted on the fixture in different horizontal planes and adapted to move in paths at an angle to each other, and means to index the fixtures for connection of any one of said tools with said power shaft, as selected.

1,422,457. TROLLING LURE. THOMAS G. MCCLANAHAN, Seattle, Wash. Filed Nov. 19, 1920. Serial No. 425,062. 1 Claim. (Cl. 43—45.)



A fishing lure comprising an elongated metal body having its rear end substantially spoon shaped and its forward end substantially straight, and a longitudinal slot extending through said body along the center line forwardly from said spoon shaped portion.

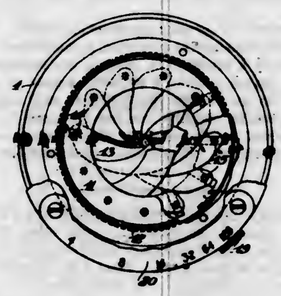
1,422,458. REVERSIBLE FLUID-PRESSURE TURBINE. JOHN WM. MCGOVERN, Port Alice, British Columbia, Canada. Filed Oct. 11, 1920. Serial No. 415,982. 2 Claims. (Cl. 253—51.)



1. A reversible turbine, comprising in combination, a driving head rotatably mounted within a casing, ports angularly directed on the rim of the driving head toward one direction of rotation, ports angularly directed on the periphery of the driving head toward the other direction of rotation, means for directing a fluid under pressure to either one or the other set of ports, double vanes set at an obtuse angle to one another pivotally mounted on the periphery of the driving head at the junction of the two vanes to project one set of vanes or the other angularly toward the direction of the fluid delivery, a lever secured to the pivot of each pair of vanes and projecting angularly toward the central portion of the driving head, links connecting these levers together in groups, means applied to each group for simultaneously reversing the angle of projection of the vanes, and means for directing the flow of the fluid under pressure through the ports toward which the vanes are directed.

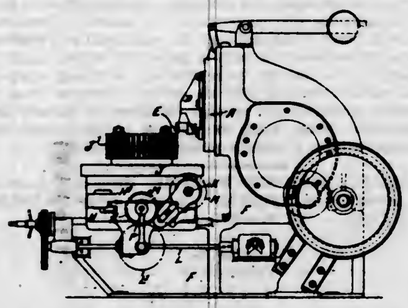
1,422,459. PORTABLE FLOOR CRANE. ROBERT E. MANLEY, York, Pa., assignor to The Manley Manufacturing Company, York, Pa., a Corporation of Pennsylvania. Filed July 27, 1920. Serial No. 399,384. 5 Claims. (Cl. 212—142.)

1. A hoist structure consisting of a superstructure, hoisting means carried thereby, a base for said superstructure, a tension member connecting said superstructure and said base, said base consisting of a cast metal portion in the rear of said superstructure, and rolled metal sections in front of said superstructure.



1,422,460. PHOTOGRAPHIC SHUTTER. PAUL J. MARKS, Rochester, N. Y. Filed Oct. 27, 1919. Serial No. 333,838. 79 Claims. (Cl. 95—63.)

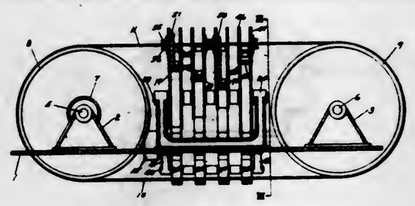
2. In a shutter, the combination of a casing having an aperture there through, a plurality of blades movably mounted in said casing for opening and closing said aperture, each of said blades having an opening for admitting light from the margin of the aperture simultaneously with the admission of light from the center thereof during the opening and closing movements of the blades, and means for moving the blades.



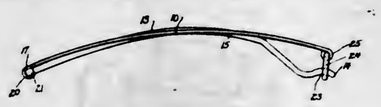
1,422,461. IRIS DIAPHRAGM. PAUL J. MARKS, Rochester, N. Y. Original application filed Oct. 27, 1919, Serial No. 333,838. Divided and this application filed Mar. 25, 1920. Serial No. 368,657. 9 Claims. (Cl. 95—64.)

1. In an iris diphragm, the combination of a casing having an aperture there through, said casing having a slot and provided with a circumferential groove in its outer wall, a diaphragm comprising a plurality of movable wings for controlling the admission of light through said aperture, a movable ring for controlling the position

of the wings, a second ring movable in the groove in the external wall of the casing, and a lug on said second ring projecting through the slot in the casing wall and operatively connected with the first mentioned ring.



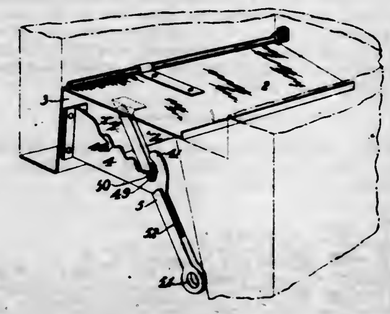
1,422,462. GEAR CUTTING, SLOTTING, AND LIKE MACHINE. JAMES HENRY MELLOY and WILLIE OWEN, Manchester, England, assignors to Wm. Muir and Company Limited, Manchester, England. Filed Feb. 19, 1920. Serial No. 359,893. 8 Claims. (Cl. 90—9.)



1. In a gear cutting machine, the combination with a constantly moving reciprocable cutter and a work-carrier mounted for reciprocation across the path of said cutter, of means for imparting to said work-carrier a step per stroke movement in one direction, and means for automatically imparting a quick return movement to said work-carrier after the desired complete pitch distance has been traversed, said movements occurring respectively during movement of the cutter away from and toward the work-carrier.

1,422,463. EDGER. ARNO MEREEN, Berkeley, Calif. Filed Oct. 12, 1920. Serial No. 416,350. 3 Claims. (Cl. 143—26.)

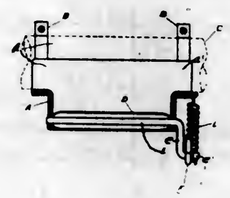
1. In a device of the class described, a band saw having a horizontal cutting run, a plurality of substantially parallel spaced endless conveyors having a path of travel beneath and substantially at right angles to said band saw, a plurality of co-axial pulleys mounted on a common shaft on each side of said band saw and traversed by said conveyors, the pulleys on the same side of the saw being of different diameters and the aligned pulleys on opposite sides being of corresponding diameters, a plurality of elongated trough-like feed boxes on one side of said band saw through which said conveyors pass, and a plurality of elongated troughlike receiving boxes on the other side of said band saws through which the conveyors pass, the receiving boxes being in alignment with the feed boxes, said feed boxes being disposed in substantially tangential relation to the pulleys on the same side of the band saw and having their bottoms in distinct horizontal planes.



1,422,464. BARRETTE. MILTON D. MESEROLE, Milford, Conn., assignor to Hayes & Meserole Mfg. Co., New Haven, Conn., a Firm composed of said Meserole and George M. Hayes. Filed Nov. 10, 1921. Serial No. 514,232. 6 Claims. (Cl. 132—48.)

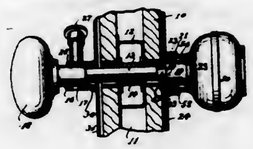
1. A barrette, including a bar formed with an opening, a pin hinged to one end of the bar and offset at its opposite end, and a loop hinged to the bar and adapted to engage with the point of the pin.

1,422,465. FIREPLACE DAMPER. GLENN A. MORRELL, Seattle, Wash., assignor of one-half to Charles W. Rodgers, Seattle, Wash. Filed Jan. 18, 1922. Serial No. 530,034. 6 Claims. (Cl. 126—288.)



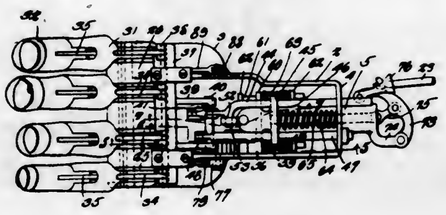
1. A fireplace damper comprising a hinged damper plate, a fixed ratchet bar and an arm hinged to the damper plate outwardly from its pivot and adapted to engage the ratchet bar to hold the damper in raised positions.

1,422,466. MUFFLER CUT-OUT. JOHN MOTT MORSE, Syracuse, N. Y. Filed Feb. 28, 1919. Serial No. 279,903. 1 Claim. (Cl. 251—11.)



A muffler cutout comprising a body formed with an elongated base, and an oblong box-like portion projecting from the base and extending lengthwise of the same and confining an oblong outlet passage, the base being shaped to seat on a cylindrical exhaust pipe and to extend beyond the ends of the box-like portion, whereby the box-

like portion and the outlet passage extends lengthwise of the exhaust pipe, a damper arranged in the box-like portion, a rock shaft arranged in the box-like portion and the outlet passage extending longitudinally of the box-like

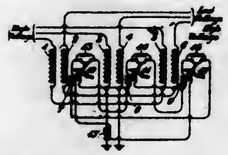


portion and also lengthwise of the damper, clamping means coacting with the projecting end portions of the base for holding the body onto the exhaust pipe and means at the end of the rock shaft for operating said rock shaft, substantially as and for the purpose described.

1,422,467. DOORKNOB LOCK. JOHN NELSON, Bridgeport, Conn. Filed Sept. 13, 1921. Serial No. 500,426. 3 Claims. (Cl. 70—91.)

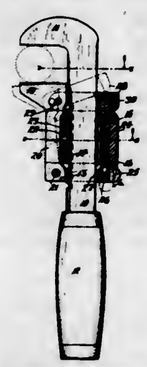
1. In a lock mechanism of the character described, the combination of a knob spindle for operating a latch bolt, knobs mounted on the opposite ends of said spindle, a lock mechanism contained in one of said knobs including a casing, a sleeve extending into and forming a part of the knob shank, a lock mechanism contained within the casing and including a rotatable key cylinder, an adjustable collar mounted upon the other end of the spindle, and adapted to be set in or out to position the spindle in or out, and means for engagement with the outer knob to prevent its turning when the said spindle and knobs are in their inner position.

1,422,468. ARTIFICIAL ARM. PETER NICOLA, Danville, Pa. Filed May 23, 1922. Serial No. 563,088. 8 Claims. (Cl. 3—12.)



1. In an artificial arm a hand portion including a body, a shaft mounted for rotation, jointed fingers and a jointed thumb operatively connected to said shaft for movement toward or from each other, separate pivotally mounted members for rotating the shaft in opposite directions respectively, a cross head, means for actuating the cross head, and separate means operated by successive movements of the cross head in one direction for actuating the respective pivoted members.

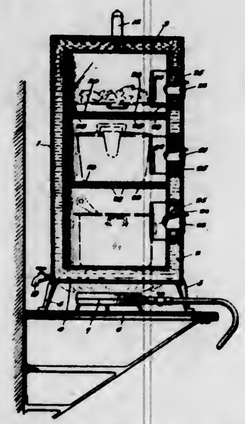
1,422,469. METHOD OF PRODUCING MOLDED ARTICLES OF PURE CELLULOSE. MAURICE G. OLIVIER, Paris, France, assignor to Societe Francaise de Crins Artificiels, Paris, France, a French Corporation. Filed Mar. 31, 1920. Serial No. 370,184. 2 Claims. (Cl. 18—56.)



1. The method of producing molded articles of pure cellulose which consists in applying a moistened sheet of pure cellulose to a metal core, raising the temperature of the cellulose coated core to a suitable degree in a heated drying room so as to dry the cellulose and expand the core, and thereafter rapidly cooling the core to cause a shrinkage thereof so as to enable the cellulose article to be freely withdrawn therefrom, substantially as described.

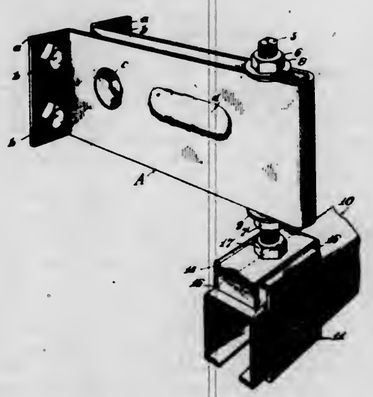
1,422,470. INDUCTIVE-INTERFERENCE-SUPPRESSION DEVICE. HAROLD S. OSBORNE, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Aug. 3, 1920. Serial No. 400,922. 9 Claims. (Cl. 175—294.)

1. In a power transmission system, the combination of a high tension circuit, a low tension circuit, a transformer having main and auxiliary windings, the said main windings being star-connected with a conductor from each neutral point to ground and the said auxiliary windings being delta-connected with a protective device connected therewith, to limit the current in said auxiliary windings, and means connected with the ground conductor from the neutral point of the primary windings to operate said protective device when the current in the ground conductor reaches a certain predetermined value.



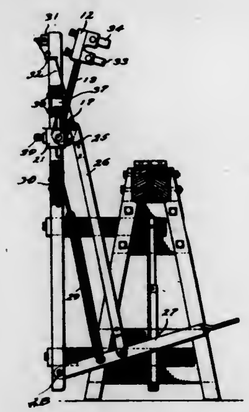
1,422,471. COMBINED WRENCH. GEORGE T. PARSLEY, Ashland, Oreg. Filed Mar. 5, 1919. Serial No. 280,739. 6 Claims. (Cl. 81—157.)

1. An adjustable wrench comprising a shank having a right angled arm, constituting a fixed jaw, and screw threads on the corresponding side of the shank, a cylindrical nut of larger interior diameter enclosing the shank and having threads engageable with those of the shank, a U-shaped frame, the side arms of which extend across the shank sides and between which the nut is turnable, a movable jaw fulcrumed between the open sides of the frame and coacting with the fixed jaw, a yoke fulcrumed to said movable jaw, and turnable to lock upon the frame, and maintain the movable jaw in parallelism with the



fixed jaw, and a spring between the back of the shank and the interior of the nut, to maintain the screw threads in engagement.

1,422,472. COOKER AND BOILER. WILLIAM A. PENROD, Dayton, Ohio. Filed June 10, 1920. Serial No. 387,893. 2 Claims. (Cl. 126—20.)



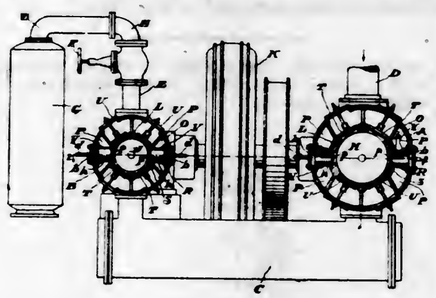
1. In an apparatus for the purpose set forth, a double walled cylinder, spaced annular ledges around the inner wall of said cylinder, removable partitions consisting of a plurality of mating sheet metal members for each of said ledges and adapted to rest thereupon and dividing the interior of the cylinder into a plurality of compartments, heat resisting members having the same size and shape as said sheet metal members and adapted to rest thereupon, encased entrance openings being provided in the inner and outer walls of said cylinder, doors for said openings, said doors having recesses filled with heat resisting material, and a damper on each of said doors, said sheet metal members and said heat resisting members being of a size to pass through said entrance openings.

1,422,473. MEANS FOR SECURING OVERHEAD TRACKS IN PLACE. ELLIS J. G. PHILLIPS, Aurora, Ill., assignor to Richards-Wilcox Manufacturing Company, Aurora, Ill., a Corporation of Illinois. Filed Nov. 10, 1921. Serial No. 514,251. 5 Claims. (Cl. 104—111.)

1. The combination with an overhead track and means for supporting it in place, said means comprising a bracket extending over and partially beneath the track, of a pressure member overlying the upper wall of said bracket and resting upon the track, and means for forcing said member firmly down against said track.

1,422,474. STAMP. ORIEN BYRON PICKERING, Endicott, N. Y. Filed Oct. 26, 1921. Serial No. 510,558. 6 Claims. (Cl. 101—3.)

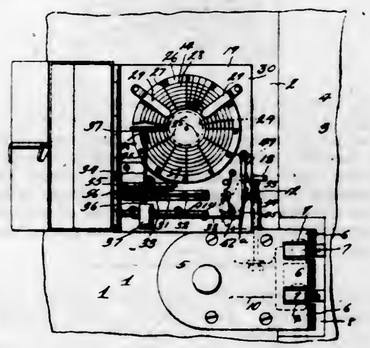
6. In a device of the character described, a vertical standard, a bracket slidably engaging the standard, means for releasably locking the bracket to the standard in adjusted positions therealong, a holder pivotally supported upon said bracket and having a tubular portion extending laterally thereof, and a hammer having a handle held at one end in the tubular portion of said holder and being provided at its other end with a head adapted to hold a die.



1,422,475. DISTILLING PROCESS. FRITZ POLLAK, Vienna, Austria. Filed May 1, 1920. Serial No. 378,244. 10 Claims. (Cl. 260—138.)

3. The described distilling process which consists in heating a volatile liquid wherein volatile substances are dissolved in small portions to a temperature exceeding the vaporization point of the least volatile constituent and in then condensing the escaping vapors whereby a distillate is obtained, each portion of which contains the same components, no matter what vaporization points the individual constituents of the mixture under treatment may have.

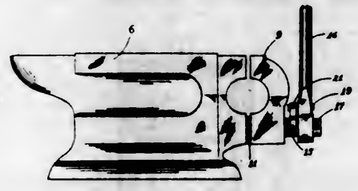
1,422,476. CLEARANCE VALVE FOR COMPRESSORS. WILLIAM PRELLWITZ, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Apr. 21, 1921. Serial No. 463,196. 2 Claims. (Cl. 230—24.)



1. In a compressor, a compressor cylinder formed with inner and outer walls having a clearance pocket between them and aligned openings in the walls, a cylindrical valve guide extending inwardly from the opening in the outer wall, said guide having a differential bore and a cover for its outer end, means for admitting pressure from an external source to the outer end of said guide, a cylindrical differential clearance valve of the poppet type movable within said guide and adapted to cooperate with a seat at the said opening in the inner wall of the cylinder, the larger outer pressure area of the valve being subject to said external pressure tending to maintain the valve closed against variable pressure upon the smaller inner

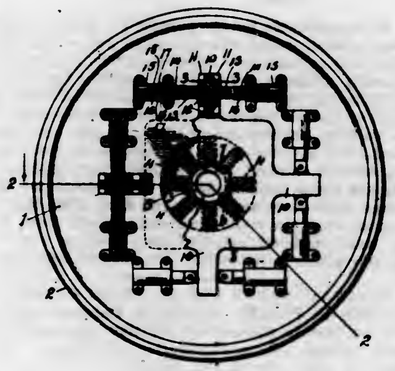
pressure area changing with the stroke of the compressor tending to open the valve, whereby the passage of

fluid from the cylinder to the clearance pocket is controlled in accordance with the load of the compressor at substantially constant compressor speed.



1,422,477. TIME RECORDER. GEORGE PULLMAN, New York, N. Y. Filed Apr. 5, 1921. Serial No. 458,797. 5 Claims. (Cl. 234—1.)

2. A time recording device comprising a casing, a time controlled movable disc carried by said casing, a vertically disposed and horizontally pivoted recording arm carried by the casing, the upper end of said recording arm being provided with a piercing member adapted to cooperate with the time controlled movable disc, a horizontally disposed longitudinally and outwardly movable plate carried by the casing and cooperating with the recording arm for forcing the piercing member carried thereby inwardly, said recording arm being longitudinally movable, a hinged and spring actuated horizontally disposed lug plate carried by the casing, said lug plate being so positioned that the recording arm may be disposed between any of its lugs, and means for actuating the horizontally disposed longitudinally and outwardly movable plate.

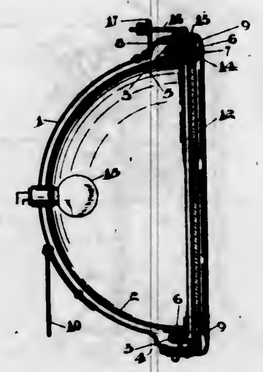


1,422,478. HANDLE FOR BLACKSMITHS' VISES. GORDON REES, East New Annan, Nova Scotia, Canada. Filed June 11, 1921. Serial No. 476,815. 3 Claims. (Cl. 81—33.)

1. A vise comprising a fixed jaw, a movable jaw connected to said fixed jaw, said fixed jaw formed with a bore and counter bore, an extension formed on said movable jaw and adapted for location within said counter bore, a shaft extending through said movable jaw and extension, said shaft having a toothed section extending through the said bore, a pinion fixedly secured to said shaft, an operating lever loosely mounted on said shaft, a pawl member pivotally connected to said lever and

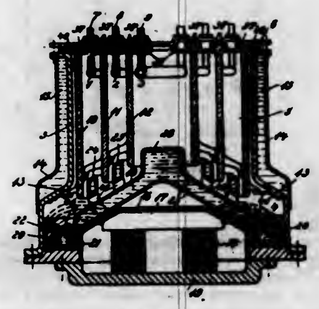
said pawl member adapted for engagement with said pinion when the said lever is reciprocated in either direction to advance or retract the said movable jaw with respect to said fixed jaw.

1,422,479. VEHICLE WHEEL. NEAL MOORE ROBINSON, Kansas City, Kans. Filed June 21, 1920. Serial No. 390,493. 1 Claim. (Cl. 152—45.)



In a vehicle wheel, a body adapted to support a tire, a radially movable hub, resilient means supported by the body and supporting the hub, a driving member mounted on and rotatable with the hub and provided with radial arms, each of which is provided with radial dove-tail grooves on its opposite sides respectively, members respectively slidably fitted in said grooves, bearing members respectively fastened to said slidable members, bearing members secured to said body and respectively slidably engaging the first named bearing members, and compression springs interposed between said pairs of bearing members respectively, the bearing members which are attached to said slidable members being movable tangentially, substantially as set forth.

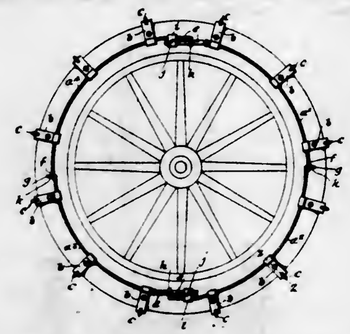
1,422,480. VEHICLE-LICENSE-NUMBER HOLDER AND ILLUMINATOR. JOHN ELMER RUTHERFORD, Toronto, Ontario, Canada. Filed Sept. 16, 1921. Serial No. 501,180. 7 Claims. (Cl. 40—132.)



2. In a license number holder and illuminator, an outer open fronted casing; an inner reflector member having its edges substantially paralleling the front edges of the casing; a rim member secured to the edges of the casing and reflector and holding them in spaced relationship and

provided with an outwardly facing seat; a felt covering for said seat having its edges held in position between

parts of the rim casing and reflector; and a transparency holder provided with a flange fitting over the rim and casing.

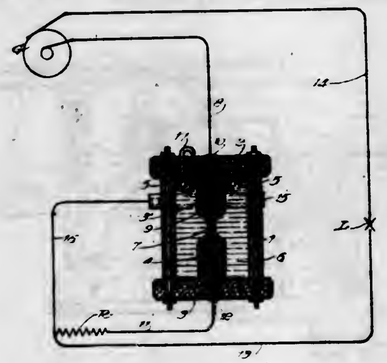


1,422,481. ELECTRIC VACUUM APPARATUS. MORITZ SCHENKEL and JOSEPH JÜST, Charlottenburg, near Berlin, Germany, assignors to Siemens-Schuckert-Werke G. m. b. H., Berlin, Germany, a Corporation of Germany. Filed Aug. 12, 1916, Serial No. 114,644. Renewed Aug. 27, 1920. Serial No. 406,500. 18 Claims. (Cl. 175—354.)

1. In an electric vacuum apparatus the combination with a container and a cathode therein, of a plurality of concentric annular anodes mounted in the container and having different annular diameters and insulating partitions separating said anodes from each other.

1,422,482. FASTENING DEVICE. HERMAN F. C. SCHULTZ and FRED W. SCHULTZ, Youngstown, Ohio. Filed Apr. 12, 1921. Serial No. 460,672. 2 Claims. (Cl. 24—206.)

1. In a device of the character described, a separable fastener, one element of which has a flattened portion provided with a series of notches, the other element carrying

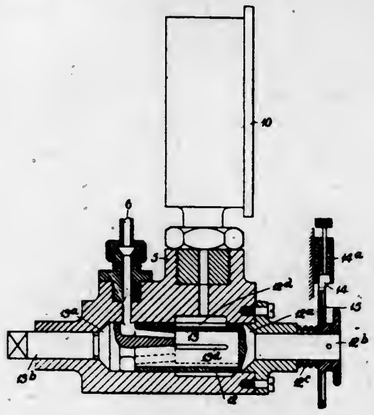


a loop bent at substantially right angles, and a link slidably mounted upon said second element.

1,422,483. PLASTIC COMPOSITION. EARLE E. SCHUMACHER, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 30, 1920. Serial No. 427,395. 1 Claim. (Cl. 106—34.)

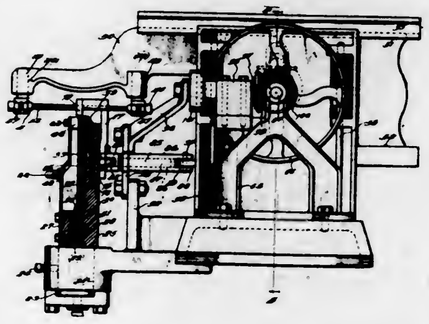
A plastic composition of approximately the following composition:

Glycerin—4 parts.
Plaster of Paris—10 parts.
Water—1¼ parts.



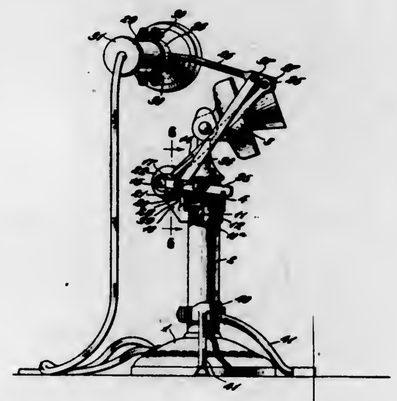
1,422,484. MEANS FOR CONTROLLING AND MEASURING A CURRENT FLOWING IN AN ALTERNATING-CURRENT CIRCUIT. EDMUND O. SCHWEITZER, Chicago, Ill. Filed Feb. 13, 1919. Serial No. 276,766. 10 Claims. (Cl. 171—266.)

1. The combination with an alternating current circuit, of a measured electrode connected in series therewith, electrolyte in which said electrode is immersed, a container for said electrolyte comprising a cylindrical carbon electrode and means for shunting a part of the current flowing in said circuit through said measured electrode, electrolyte, and carbon electrode at a rate insufficient to cause the formation of gas at said electrodes.



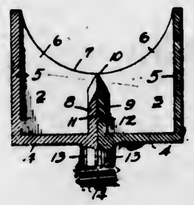
8. The combination with an alternating current circuit, of a measured electrode connected in series with said circuit and means for disintegrating said electrode at a rate proportional to the flow of current in said circuit comprising a single cell of which said measured electrode forms an electrode.

1,422,485. POWER INDICATOR FOR INTERNAL-COMBUSTION ENGINES. HARRY SHEPHARD, Coventry, England. Filed Oct. 12, 1920. Serial No. 416,546. 7 Claims. (Cl. 73—185.)



1. Power indicator for internal combustion engines comprising a pressure gauge, a fitting adapted for open communication with the interior of the engine cylinder a U-tube containing a semi-viscous liquid and having the two limbs thereof connected up respectively with the gauge and fitting, and means incorporated with said U-tube whereby pressure communication between the gauge and the engine cylinder through the U-tube may be momentarily established at any desired point in the stroke of the engine piston.

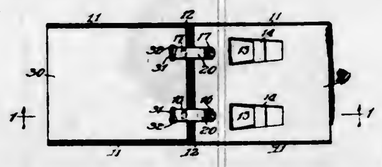
1,422,486. SAW-FILING MACHINE. LUDLOW S. SHERWOOD, Chicago, Ill. Filed July 6, 1920. Serial No. 394,137. 20 Claims. (Cl. 76—35.)



1. In a saw-sharpening machine, the combination of a device for supporting a saw to be sharpened, a sharpening device extending at an angle to the saw, means for producing relative movement between said devices in a path crosswise of the plane in which the saw extends to perform the sharpening operation, said first-named device being adjustable to vary the angle at which the saw extends relative to said sharpening device, and means operating, when actuated, to feed the saw along said first-named device, said last-named means being operatively connected with said first-named device and movable therewith in the adjustment of the latter.

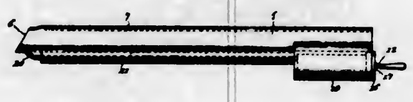
1,422,487. TELEPHONE ATTACHMENT. THOMAS W. SMALL, Cleveland, Ohio. Filed May 19, 1919. Serial No. 298,027. 3 Claims. (Cl. 179—149.)

1. In a telephone attachment of the character set forth, the combination of a bracket secured to the telephone, a receiver supporting arm pivoted to the bracket, and adapted to be swung in a vertical plane from a position forward of the telephone to a position rearwardly thereof, a finger extending across the receiver hook and pivotally supported to the rear thereof, and a link directly connecting parts of the receiver supporting arm and the aforesaid finger adjacent their pivots.



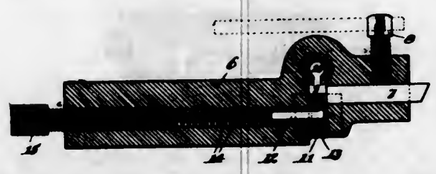
1,422,488. DENTAL IMPRESSION TRAY. ERNEST ROBERT SMITH, San Francisco, Calif. Filed Nov. 3, 1921. Serial No. 512,578. 8 Claims. (Cl. 32—6.)

1. A dental device consisting of a divided, impression-taking tray, a split post perpendicular to and on the bottom of the tray and means for clamping the tray sections together and being detachably carried by the tray while it is applied, and consisting of a nut mounted on said post and jamming against the tray bottom.



1,422,489. MEMORANDUM-PAD STAND AND PAD SHEETS. GEORGE W. SMITH, Chicago, Ill. Filed Sept. 13, 1920. Serial No. 409,972. 8 Claims. (Cl. 129—1.)

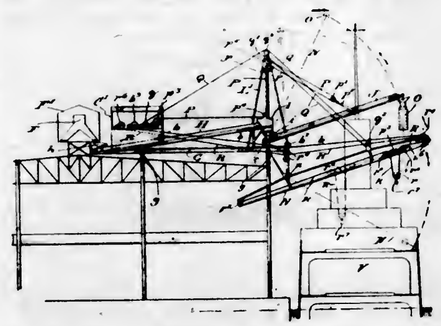
1. In a memorandum pad stand, the combination of a base, a substantially U-shaped spring member for holding pad leaves, the spring member being formed of strip material and the legs thereof being adapted to spring apart from their normal operative relative positions, the free ends of the spring member being formed to rest firmly upon the base to provide a stable support, each end portion of the spring member having a locking aperture, and a pair of spaced-apart locking projections carried by the base, the projections being adapted to enter said apertures respectively when the spring legs are forced toward each other slightly beyond their normal operative relative positions.



4. A memorandum pad sheet having a pair of spaced-apart holes each adapted to receive loosely a sheet-holding member in strip form having a width substantially the length of the hole in the sheet, said holes being relatively long and narrow throughout a considerable portion of their extent with their longitudinal axes in line with each other, the long and narrow portion of each hole terminating in an enlarged portion at one end only thereof.

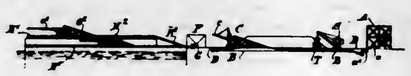
1,422,490. VETERINARY SURGICAL INSTRUMENT. OTTO STADER, Oconomowoc, Wis. Filed Mar. 26, 1921. Serial No. 455,742. 4 Claims. (Cl. 128—234.)

1. An instrument of the character described comprising a sight tube, means carried by said tube and communicating therewith adjacent one of its ends to receive animal semen, and additional means carried by the tube for maintaining the semen substantially at its original temperature.



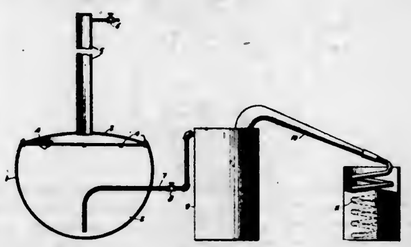
1,422,491. TOOL HOLDER. GUSTAV H. STAHL, Menomonie, Wis., assignor to Progress Manufacturing Company, a Copartnership consisting of Gustav H. Stahl and Richard Goerner, Erie, Pa. Filed Oct. 24, 1918, Serial No. 259,580. Renewed Nov. 12, 1921. Serial No. 514,827. 7 Claims. (Cl. 29—96.)

1. A construction of the class described comprising a holder bar; a tool socket at one end of said bar, there being a notch in said bar to give resiliency thereto; and a spring-held plunger in said bar spanning said notch substantially as described.



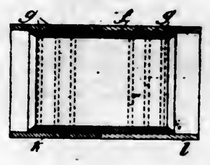
1,422,492. CONVEYER. FRANCIS LEE STUART, New York, N. Y. Filed June 18, 1920. Serial No. 389,878. 13 Claims. (Cl. 198—88.)

1. The combination with a pier shed having a roof, of a supply conveyer mounted on the roof of the shed, a transfer conveyer receiving material from the supply conveyer, a carriage movable along the roof and on which



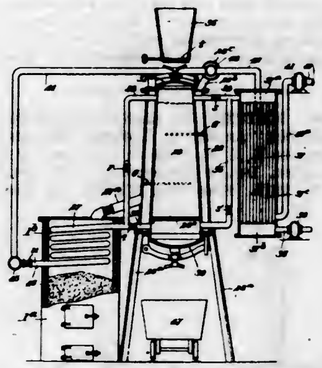
said transfer conveyer is supported, and means associated with said transfer conveyer for delivering material to a vessel adjacent the shed.

1,422,493. SYSTEM OF CONVEYING AND DELIVERING MATERIAL TO CARRIERS. FRANCIS LEE STUART, New York, N. Y. Filed Feb. 17, 1921. Serial No. 445,606. 8 Claims. (Cl. 214—14.)



8. A system for handling material, comprising a source of material supply, a plurality of conveyers arranged in a group, a series of loading machines associated with said conveyers and movable from place to place while in operative relation with said conveyers and without interference with each other or with other machines, and means for delivering material on each side of the group from one or more of the inner machines of the group.

1,422,494. METHOD OF MANUFACTURING DIPHENYLAMINE. ARTHUR P. TANBERG, Wilmington, Del., assignor to E. I. du Pont de Nemours and Company, Wilmington, Del., a Corporation of Delaware. Filed May 31, 1917. Serial No. 172,054. 19 Claims. (Cl. 260—128.)



1. The process which comprises condensing aniline to diphenylamine by the presence of a substance containing chlorine, the proportion of chlorine-containing substance being such as to enable it to function only as a catalyser.

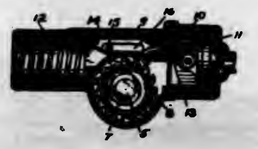
1,422,495. **REPAIRING PATCH FOR PNEUMATIC TIRES.** ALFRED THIELE, Magdeburg, Germany, assignor to Firm of Emmy-Thiele, Berlin, Germany. Filed June 10, 1919. Serial No. 303,216. 1 Claim. (Cl. 152—24.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

A patch for rubber tires, tubes and the like, having a series of juxtaposed, wide and deep grooves provided in the face thereof which is to be applied to the tire and having the central portion of its said face left plane, said grooves being in the form of concentric, closed curves which are spaced from one another and which have sharp or abrupt edges throughout their entire extent; whereby when the grooved face of the patch is coated with an adhesive substance and is applied to the tire, the application of pressure upon the patch along the grooved portion thereof will expel the air and most of the adhesive from said grooves and will force the air out from between the patch and the tire so as to create vacuua in said grooves, and the adhesive substance will prevent the re-entry of air into said grooves, so that the patch will be held uniformly and evenly against the tire by the pressure of the atmospheric air during the setting of the adhesive substance.

1,422,496. **PROCESS FOR DISTILLING CARBONACEOUS MATERIAL.** WALTER THOMAS, Nanaimo, British Columbia, Canada. Filed June 8, 1916. Serial No. 102,552. 2 Claims. (Cl. 202—8.)

1. The process of distilling fuel material containing sulphur in a vertical retort and obtaining pure liquid distillate products and desulphurized smokeless fuel, which consists in heating purified gas to the required temperature and forcing it alternately at different points one above the other, into a body of material for more quickly and uniformly effecting distillation of the whole body by direct internal heat, and carrying off the resulting volatile products by such gas and condensing the products to obtain pure distillate liquids.

1,422,497. **PIN-TUMBLER LOCK.** FRANK E. THOMPSON, Stamford, Conn., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Filed Sept. 2, 1921. Serial No. 497,894. 4 Claims. (Cl. 70—47.)

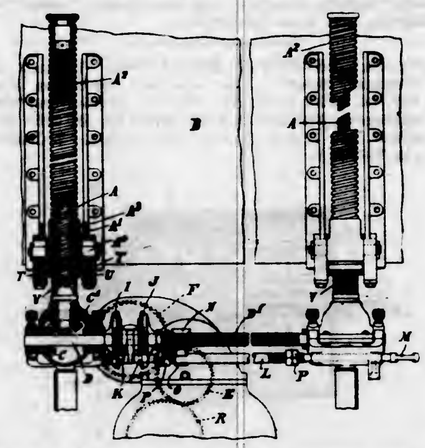


1. As a new article of manufacture, a tumbler lock the plug of which is provided with a plurality of hardened steel pins arranged at an angle to the axis of the plug at opposite sides of the key slot and partly within the plane of the tumblers.

1,422,498. **CAMPING TRAILER.** WILLIAM J. VINT, Stockton, Calif. Filed Oct. 25, 1920. Serial No. 419,195. 4 Claims. (Cl. 296—23.)

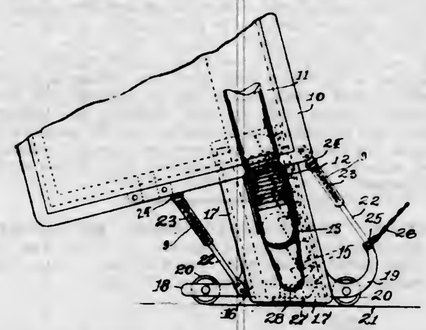
1. In a camping trailer, an interior compartment having an entranceway at one end of the trailer, wash tubs normally positioned within the compartment, and means whereby the tubs may be moved outwardly through the entranceway at will while still being supported from the compartment.

1,422,499. **AUTOMATIC SLACK ADJUSTER.** HENRY A. WAHLERT, St. Louis, and JOHN E. REDFORD, Kinloch Park, Mo., assignors to The American Brake Company, St. Louis, Mo., a Corporation of Missouri. Filed June 30, 1920. Serial No. 392,949. 3 Claims. (Cl. 188—203.)



3. In a brake slack adjuster, the combination with a casing, a ratchet wheel mounted in said casing, and a pawl for operating the ratchet wheel, of a piston subject on one side to fluid under pressure and operatively connected to said pawl, a spring for opposing the fluid pressure on said piston, a member carried by said piston and provided with an elongated guide slot, and a guide pin secured to said casing and engaging in said slot.

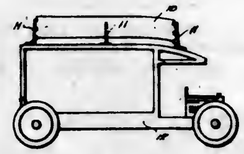
1,422,500. **MOTOR TIP WAGON.** EDWIN ROBERT WALKER, Wigan, England, assignor to Walker Brothers (Wigan) Limited, Wigan, England. Filed Nov. 5, 1919. Serial No. 335,802. 2 Claims. (Cl. 298—21.)



1. In a motor vehicle having a body adapted to be tipped by the power of the engine, a tipping arrangement

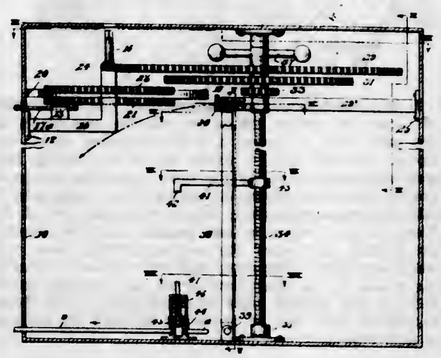
comprising a screw mechanism for raising and lowering the vehicle body, a trunnion connection between the vehicle body and the screw mechanism, a shaft disposed across the end of said body for driving the screw mechanism, a pair of toothed gears loose on said shaft adapted to be driven from the engine, a clutch for locking one or

the other of said gears in driving connection with the cross shaft, an axially slidable clutch rod mounted parallel with the cross shaft, and a nut capable of travelling on the cross shaft to move the clutch rod axially when the vehicle body has reached its appointed limits of travel so as to automatically throw the clutch into neutral position and stop the drive of the cross shaft.



1,422,501. **STREET SWEEPER.** EDWARD K. WARD and PIER C. WARD, St. Paul, Minn. Filed Oct. 6, 1919. Serial No. 328,856. 2 Claims. (Cl. 15—11.)

1. In a vacuum street sweeper a rigid frame, a second frame movable laterally beneath said rigid frame, articulated and telescopic means connecting the forward and rearward ends of said movable frame with said rigid frame, a housing carried by said movable frame and having an opening adjacent to the surface of the street, a flexible conduit connecting said housing with the suction pipe of said sweeper, frictional cleaning means within the opening in said housing and means for supporting and for guiding said movable frame horizontally.



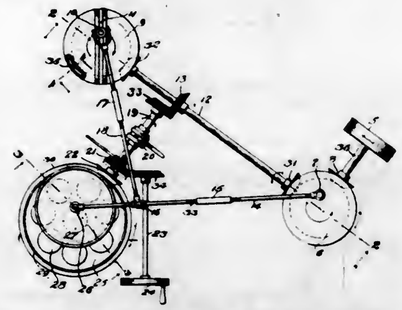
1,422,502. **SIGN AND ITS SUPPORTS.** WILLIAM J. WARK, Salem, Ohio. Filed Sept. 12, 1921. Serial No. 500,086. 2 Claims. (Cl. 40—125.)

1. A sign consisting of a panel and supporting brackets for the panel, each of said brackets having a base piece including a flat apertured portion and a vertically disposed wing, and an upright arm having laterally spaced

lugs in pairs in its length and having spaced ears at its lower end straddling and pivoted to the said wing of the base.

1,422,503. **AEROPLANE CONTROL.** PIOTR WARMINSKI, Baltimore, Md. Filed Dec. 22, 1921. Serial No. 524,054. 2 Claims. (Cl. 244—1.)

1. Means for controlling the flow of fluid comprising a fluid pipe, a controlling valve therefor, motor operated means to stop the flow of fluid including a gearing train, a screw shaft rotated thereby, a valve actuating arm threaded on said shaft rotated thereby, a valve actuating arm threaded on said shaft adapted to be moved into engagement with the valve, and a slotted guide for the valve actuating arm to prevent rotary movement of the arm relative to the screw shaft, said slotted guide being movable relative to said arm to permit the arm to be moved relative to the screw shaft whereby the same may be initially set in the desired position on the screw shaft.

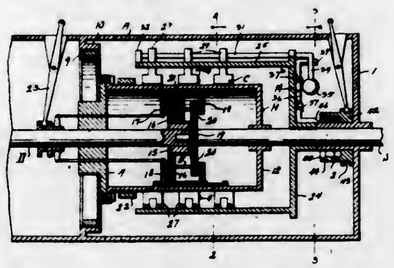


1,422,504. **LATCH.** THOMAS A. WATTS, Springfield, Ohio, assignor to The Springfield Metallic Casket Company, Springfield, Ohio, a Corporation of Ohio. Filed Jan. 10, 1921. Serial No. 436,265. 4 Claims. (Cl. 292—228.)

1. In a device of the character described, a plate, a housing secured thereto, a latch partly located in said housing, and a flat spring in said housing bearing on

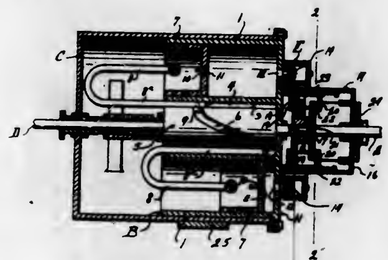
said latch and also having a bearing point on one wall of the housing and also on said plate to provide for supporting the same.

1,422,505. GRINDING AND LAPPING MACHINE. FLOYD CALVIN WEAVER, Washington, D. C. Filed Nov. 11, 1920. Serial No. 423,371. 10 Claims. (Cl. 51—132.)



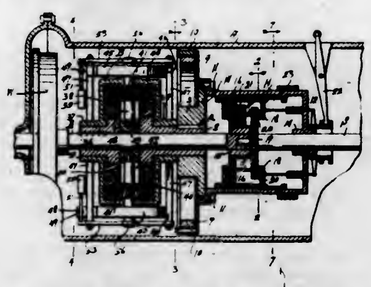
1. In a machine of the class described, the combination of a pair of plates, means for rotating said plates at the same rate of speed, a work supporting plate contiguous to said pair of plates, means for driving said work-supporting plate at the same speed the first-mentioned plates are driven, a lapping plate contiguous to said work-supporting plate, means connecting one of the first-mentioned plates to said lapping plate for moving the lapping plate over the work-supporting plate, and means adjustably connecting said just-mentioned connecting means to the other plate of the pair whereby movement of the lapping plate with reference to the work-supporting plate will be controlled through the medium of said first mentioned plate.

1,422,506. PROCESS OF MAKING DIPHENYLGUANIDINE. MORRIS L. WEISS, Brooklyn, N. Y., assignor to Dovan Chemical Corporation, Wilmington, Del., a Corporation of Delaware. Filed July 2, 1921. Serial No. 482,143. 10 Claims. (Cl. 260—125.)



10. In a process of making diphenylguanidine containing as a reaction impurity carbodiphenylimide, the steps which comprise dissolving the same in hot toluol, cooling, and then washing the crystals thus formed with pure toluol, and then drying.

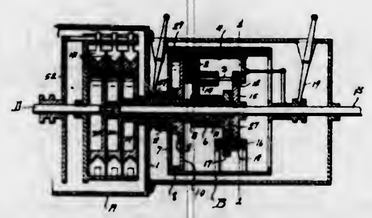
1,422,507. POWER-TRANSMISSION MECHANISM. WILLIAM I. WHEELER, Scottville, Ill. Filed Nov. 20, 1920, Serial No. 425,463. Renewed Jan. 7, 1922. Serial No. 527,762. 9 Claims. (Cl. 74—34.)



1. In a transmission mechanism, a driving shaft, a driven shaft, means operatively connecting said shafts including a member constituting a drum, said member being loosely mounted on both of said shafts, a gear assembly carried by the member and coacting with said shafts, a clutching unit carried by one of the shafts and coacting with the drum, means operable under the influence of centrifugal force for adjusting the clutching element into frictional engagement with the drum, and means directly engaging said last named means for rendering the same inoperative.

1,422,508. REVERSING MECHANISM. WILLIAM I. WHEELER, Scottville, Ill. Original application filed Feb. 24, 1920, Serial No. 360,955. Divided and this application filed Aug. 9, 1920, Serial No. 402,080. Renewed Jan. 7, 1922. Serial No. 527,763. 3 Claims. (Cl. 74—34.)

1. A mechanism of the class described comprising, in combination, a driving shaft, a driven shaft, means operatively connecting said shafts, said means including a casing mounted upon the driving shafts, said casing and the driving shaft being capable of relative independent rotation, a housing carried by the casing into which the driving shaft extends, a gear fixed to the portion of the driving shaft within the housing, the driven shaft also extending within the housing, a gear fixed to said portion of the driven shaft, a carriage mounted for sliding movement within the housing in a direction longitudinally of the driving and driven shafts, unitary gears carried by the carriage, one of said gears being constantly in mesh with the gear of the driving shaft, a second gear of said unitary gears meshing with the gear of the driven shaft when the carriage is in one position, and a gear carried by the carriage and constantly in mesh with the first named of the unitary gears, said last named gear meshing with the gear of the driven shaft when the carriage is in a second position and whereby the direction of rotation of the driven shaft is reversed.



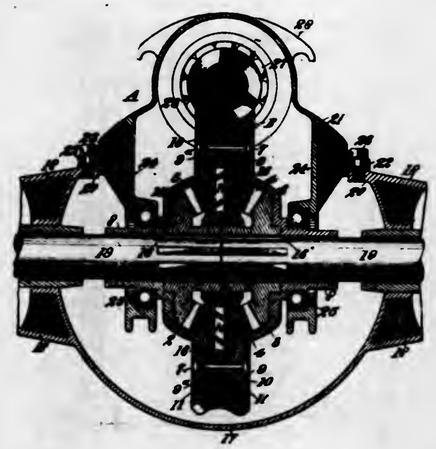
1,422,509. POWER-TRANSMISSION MECHANISM. WILLIAM I. WHEELER, Scottville, Ill. Filed Aug. 7, 1920, Serial No. 401,892. Renewed Jan. 7, 1922. Serial No. 527,764. 7 Claims. (Cl. 74—34.)

1. In a transmission mechanism, a driving shaft, a driven shaft, and means operatively connecting said shafts

including a member loosely mounted on both of the shafts, a gear assembly carried by the member and coacting with the shafts, a gear carried by said member and concentric to the driving shaft, a gear fixed to the driving shaft, an element having rotary movement around the driven shaft independently thereof, an idle gear carried by said element and in driven connection with both of the last named gears, and clutching means carried by said element and coacting with the idle gear to retard the rotation of said idle gear about its axis.

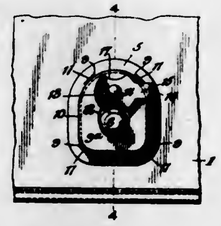
1,422,510. TRANSMISSION MECHANISM. WILLIAM I. WHEELER, Scottville, Ill. Filed Dec. 31, 1920, Serial No. 434,256. Renewed Jan. 7, 1922. Serial No. 527,765. 2 Claims. (Cl. 74—34.)

1. A transmission mechanism including a drive shaft, a driven shaft, a gear fixed on the driven shaft, a sleeve surrounding the driven shaft and provided with a gear, a gear assembly operatively connecting the gear of the sleeve and the gear of the driven shaft, a second sleeve surrounding the first sleeve and provided with a gear, a gear assembly operatively connecting the gear of the second sleeve and the gear of the driven shaft, coacting clutch mechanisms carried by the drive shaft and the driven shaft and each of the sleeves, a member supported for rotation around the driven shaft and carrying the gear assemblies, and means for locking said member against rotation, one of said gear assemblies being supported for movement in a direction lengthwise of the driven shaft and including reversely rotating gears, one of said gears meshing with the gear of the driven shaft when said assembly is in one position and the second of said gears meshing with the gear of the driven shaft when said assembly is in a second position.



1,422,511. SPRING HEEL. EDWARD L. WHITE, Brooklyn, N. Y. Filed July 13, 1921. Serial No. 484,358. 4 Claims. (Cl. 36—37.)

1. A spring heel including a heel plate, a coil spring secured to the bottom of the heel plate, and means for adjusting the tension of the spring comprising a clip pivoted to the bottom of the heel plate, the free end of the clip being movable along the spring.

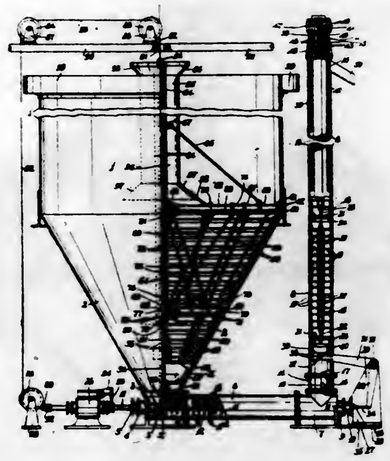


1,422,512. BRONZE WORM-GEAR MOUNTING. JOHN W. WHITE, Jr., Oakland, Calif. Filed May 28, 1919. Serial No. 300,299. 6 Claims. (Cl. 74—99.)

1. The combination with a two-piece differential housing, of an annular flange carried by each section of said housing, and an annular seat member formed on each flange and of a diameter less than the same, of a ring gear adapted to be received by said seat and embraced by the said flanges, a series of spline members formed on the circumferential edge of one of the flange members,

and recesses formed in the side of the ring gear similar in number and location to the spline members for the reception thereof to secure the ring gear from circumferential movement about the housing.

1,422,513. VEHICLE CURTAIN FASTENER. CLARENCE S. APPLAS, Sacramento, Calif. Filed Mar. 10, 1921. Serial No. 451,415. 1 Claim. (Cl. 24—211.)



In combination with a headed post or stud secured to a fixed part, a flanged plate secured to a movable part and provided with an opening for the passage of said post, a disk pivoted on the flanged plate and provided with an operating arm for rotating the disk, said disk having its peripheral edge normally engaging the post to prevent separation of the flanged plate from the post, and having a cut-out portion adapted to aline with the post to permit separation of the parts, the free end of the operating arm engaging the flanged portion of the plate for either locking the disk in engaging or releasing position with the post.

1,422,514. APPARATUS FOR SEPARATING THE LIQUID AND SOLID COMPONENTS OF MIXTURES OF LIQUIDS AND CRUSHED OR GROUND ORE PRODUCTS. ALEXANDER JOHN ARBUCKLE, Johannesburg, Transvaal, South Africa. Filed Dec. 30, 1921. Serial No. 525,995. 17 Claims. (Cl. 210—55.)

1. Apparatus for separating the liquid and solid components of mixtures of liquids and crushed or ground ore

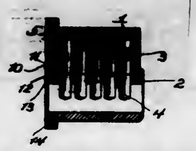
products, comprising, in combination, a settling vessel, and means for removing the settled solids therefrom including a casing, which is in communication with the bot-

tom of the vessel, a rod adapted to be reciprocated in said casing, and plates having openings and arranged upon and spaced apart along the length of said rod.

1,422,515. PIN-TUMBLER LOCK. PETER F. AUGENBRAUN, Stamford, Conn., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Filed Sept. 2, 1921. Serial No. 497,896. 6 Claims. (Cl. 70—47.)

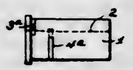
1. A pin tumbler lock the cylinder of which is provided in rear of its front face with a slot, and a hardened steel armor plate secured in said slot and covering approximately that part of the cylinder above the plug.

1,422,516. PIN-TUMBLER LOCK. PETER F. AUGENBRAUN, Stamford, Conn., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Filed Sept. 2, 1921. Serial No. 497,897. 3 Claims. (Cl. 70—47.)



1. A pin tumbler lock comprising a cylinder and a plug, both provided with armor plates covering their outer faces the armored face of the plug being mounted to turn in an opening formed in the armored face of the cylinder.

1,422,517. PIN-TUMBLER LOCK. PETER F. AUGENBRAUN, Stamford, Conn., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Filed Sept. 2, 1921. Serial No. 497,898. 3 Claims. (Cl. 70—47.)



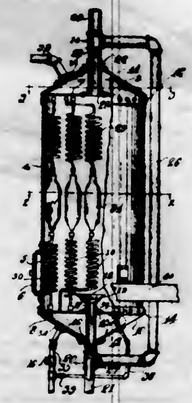
1. A pin tumbler lock comprising a cylinder and a plug, an elongated armor plate secured to the cylinder and having an opening in line with the plug, and an elongated armor plate secured to the end of the plug.

1,422,518. PIN-TUMBLER LOCK. PETER F. AUGENBRAUN, Stamford, Conn., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Filed Sept. 2, 1921. Serial No. 497,899. 6 Claims. (Cl. 70—47.)

1. The combination with a lock cylinder socketed at its end, of a hardened steel armor on the end of said cylinder and having means entering the socket portion of the latter, and securing means for said last-mentioned means.

1,422,519. PIN-TUMBLER LOCK. PETER F. AUGENBRAUN, Stamford, Conn., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Filed Sept. 15, 1921. Serial No. 500,832. 4 Claims. (Cl. 70—47.)

2. A plug for a pin tumbler lock provided therein with hardened armor disks located one in advance of another and entering said ping alternately from diametrically opposite portions thereof.

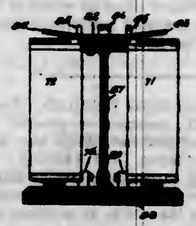


1,422,520. PIN-TUMBLER LOCK. PETER F. AUGENBRAUN, Stamford, Conn., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Filed Sept. 15, 1921. Serial No. 500,833. 2 Claims. (Cl. 70—47.)

1. A plug for a pin tumbler lock provided therein adjacent to the key-way with a longitudinal slot, and a hardened armor strip in said slot, said armor strip having a notched inner edge to permit passage of the pin tumblers of the lock.

1,422,521. WATER HEATER. ROBERT W. AVERITT, Fort Worth, Tex. Filed Aug. 9, 1920. Serial No. 402,247. 3 Claims. (Cl. 257—229.)

1. A water heater consisting of a steam chamber, a water receiving chamber and a hot water holding chamber, coils inside said steam chamber and connected with said water receiving chamber, coils inside said steam chamber and connected with said hot water holding chamber, cylindrical heating chambers inside said steam chamber and connected with and interposed between said coils, a means for supplying steam to said steam chamber, an exhaust outlet from said steam chamber, a water intake connection connected to said receiving chamber and a water outlet

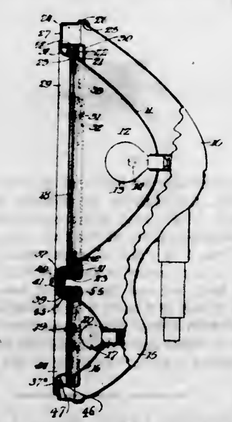


connection from said hot water holding chamber, a means for controlling the draw-off through said water outlet connection, a means for allowing the condensed steam in said steam chamber to be drawn off and a supporting means for the said steam chamber.

1,422,522. PIPE AND TUBE TESTER. JOHN CHARLES BARNISS, Philadelphia, Pa. Filed Feb. 17, 1920. Serial No. 359,401. 9 Claims. (Cl. 73—51.)

1. In a tube testing machine, means to clamp a tube in testing position and permit its rotation on its own axis when in such position, and means operable to admit fluid under pressure to the tube by the clamping action.

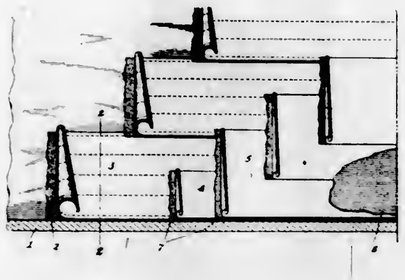
1,422,523. SIGNALING MECHANISM. CLARENCE E. BEACH, Binghamton, N. Y., assignor, by mesne assignments, to The Gamewell Fire Alarm Telegraph Company, a Corporation of New York. Original application filed Oct. 12, 1914, Serial No. 866,322. Divided and this application filed June 18, 1917. Serial No. 175,309. 8 Claims. (Cl. 175—337.)



1. In a signaling mechanism, an electro-magnet, an armature structure therefor movable into a plurality of different positions, and supporting means for said armature structure arranged to provide a plurality of predetermined definite leverages between said armature structure and electro-magnet corresponding to predetermined positions assumed by said armature structure.

1,422,524. BAG HOLDER. RALPH W. BEAL and WARREN V. BEAL, Alliance, Nebr. Filed May 3, 1922. Serial No. 558,104. 4 Claims. (Cl. 83—26.)

1. A bag-holder comprising a pair of laterally spaced supporting-bars having vertical apertures, springs seating in said apertures and anchored at their upper ends to the bars, cross-bars positioned beneath the supporting bars, to which cross-bars the springs are anchored at their lower ends, and bag-supporting means on the cross-bars.



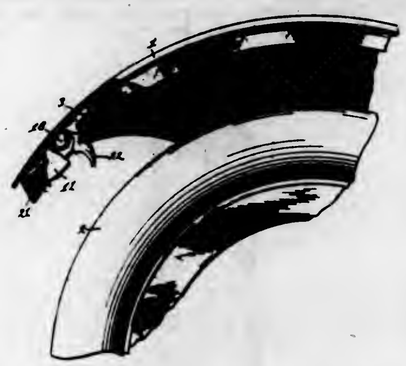
1,422,525. LAMP RING. WILLIAM A. BELL, Kenosha, Wis., assignor to C. M. Hall Lamp Company, Detroit, Mich., a Corporation of Michigan. Filed July 29, 1920. Serial No. 399,845. 4 Claims. (Cl. 240—41.)

1. The combination of a lamp casing member, a glasing constituting a front closure for said casing, a locking ring member insertable in said casing over the glasing, and means for retaining said ring in the casing comprising a plurality of locking means respectively located on opposite sides of the casing, each of said locking means comprising

a lug and an opening therefor respectively provided on said members, one of said lugs being shiftable to permit insertion or removal of the ring.

1,422,526. ROOFING. JACOB M. BERDAN, Paterson, N. J., assignor to Johns-Manville Incorporated, a Corporation of New York. Filed Aug. 4, 1920. Serial No. 401,117. 3 Claims. (Cl. 108—6.)

1. A roofing structure having the following parts in combination: a foundation and supporting member, an intermediate member comprising a resilient layer of loosely assembled particles resting directly upon said foundation, and a superposed layer of waterproof fabric of relatively low tensile strength resting directly on said intermediate member, whereby an exposed, elastically supported upper surface is secured and any expansion or contraction of the foundation member is compensated for in the intermediate layer and not transmitted to the superposed waterproof layer.



1,422,527. COLOR PRINT VIEWABLE BY LIGHTS OF DIFFERENT COLORS AND PROCESS OF MAKING THE SAME. CHRISTIAN BERGER, New York, N. Y., assignor of one-half to Frederick L. Sawyer, New York, N. Y. Filed Jan. 20, 1920. Serial No. 352,735. 6 Claims. (Cl. 88—1.)

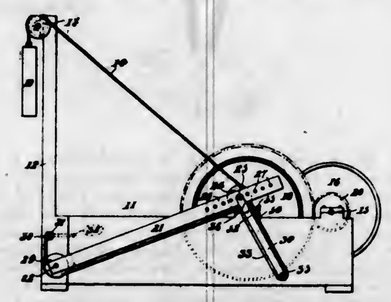
5. A print viewable by lights of opposite colors such as red and green, for example by viewing it through color filters of said colors, said print consisting of a support bearing superposed prints of the two opposite colors, such that when viewed by light of either color the appearance of the print of that color is substantially diminished, the surrounding field, but not the support beneath the printed colors, being tinted of a color which completely neutralizes any contrast with either diminished print, whereby viewing by light of either color discloses the print of the opposite color without trace of the print of the first color.

1,422,528. FENDER LAMP. HENRY J. BERRINGER, San Francisco, Calif. Filed June 6, 1921. Serial No. 475,469. 3 Claims. (Cl. 240—7.)

1. The combination with a fender arranged to be mounted adjacent the wheel of a vehicle and provided with a lamp engaging socket secured upon the under side thereof, of a reflector removably engaged by the socket; an electric lamp mounted within the reflector; means carried by the reflector arranged to form electrical connection between the lamp and the socket when the reflector is engaged by

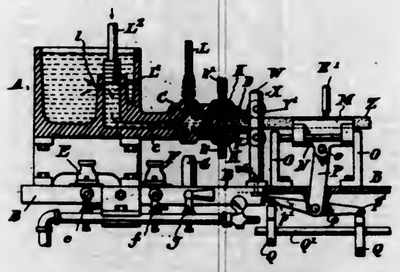
said socket; and a spring clip secured upon the fender to engage the reflector and retain the same in engagement with said socket.

1,422,529. ADVERTISING DEVICE. RAYMOND A. BINGAMAN, Batavia, Ohio. Filed June 5, 1920. Serial No. 386,763. 2 Claims. (Cl. 40—7.)



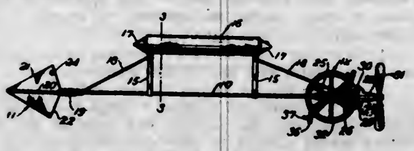
2. A permanently open box for displaying material, a back portion integral with the box but of greater height and width than the box, a brace for said back portion securely fastened thereto and to the forward edge of the box, a poster detachably secured to the upper edge of said back portion and being of the same width as the latter, said back portion being provided with directions for disposing of the contents of the box.

1,422,530. CARBONIZING METHOD. WALTER BONSOR, South Bend, Ind., assignor of one-half to Walter C. Steenburg, South Bend, Ind. Filed Mar. 6, 1922. Serial No. 541,560. 4 Claims. (Cl. 148—30.)



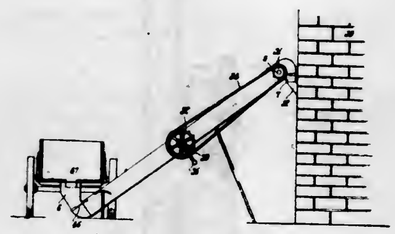
1. The method of carbonising ferrous metal which consists in heating the ferrous metal in contact with humus soil containing less than 15% of moisture and characterized in that its dry solids contain more than 30% of carbon and more than 3% of nitrogen, with lime salts to the extent of not less than 4.4% CaO.

1,422,531. AUTOMATIC TOOL-DROPPING MACHINE. CARROL R. BOYCE, Wautoma, Wis. Filed May 18, 1921. Serial No. 470,724. 4 Claims. (Cl. 255—13.)



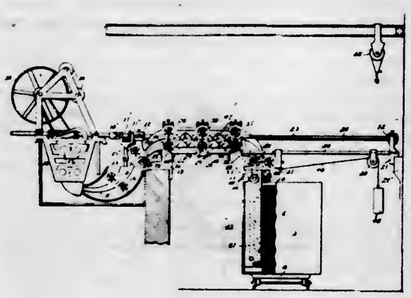
1. A tool-elevating machine comprising an inclined beam mounted for oscillations, a cable adjustably attached to the beam, a tool secured to the free end of the cable, a power shaft, a crank upon said shaft, pitman connections between said shaft and beam, a propelling gear upon said shaft, clutch members between said shaft and gear adapted for automatic release when the tool is at its most elevated position, manual releasing means for the clutch, adjustable winding means for the cable and an accelerating means for the crank carried by the crank adjacent the power shaft.

1,422,532. MACHINE FOR MAKING ORNAMENTAL RULES AND BORDERS. MARTIN M. BERIT, San Antonio, Tex., assignor of one-half to Light Publishing Company, San Antonio, Tex., a Corporation of Texas. Filed May 31, 1921. Serial No. 473,992. 3 Claims. (Cl. 207—1.)



1. A machine for making ornamental rules and borders from molten metal, comprising a table, a mold thereon for giving strip form to the metal, devices supported on the table and engaging the strip for advancing it in a straight horisontal path after leaving the mold, and means supported on the table between the mold and the strip-advancing devices for forming a design on the edge of the strip.

1,422,533. WATER CYCLE. GRACE C. BROWN, San Francisco, Calif. Filed July 12, 1920, Serial No. 395,575. Renewed Dec. 19, 1921. Serial No. 523,591. 3 Claims. (Cl. 9—18.)



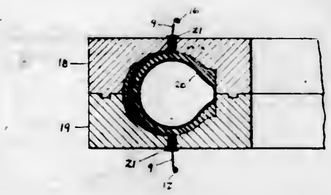
1. A water cycle comprising a pair of floats disposed substantially on the same plane and converging toward the forward end of the structure; a sling supported between said floats; a rigid shaft fixed to the floats and disposed therebeneath and centrally thereof; veined steering member resiliently and yieldably mounted at the forward end of said shaft, and a pedal operated propelling mechanism disposed at the opposite end of said shaft.

1,422,534. GRAIN ELEVATOR. ORLANDO HOMER BROWN, Victoria, British Columbia, Canada. Filed Feb. 24, 1921. Serial No. 447,522. 7 Claims. (Cl. 198—48.)

1. In an apparatus for elevating grain from wagons, the combination with a casing and rotatably mounted shafts arranged therein, of gears mounted on said shafts, a chain actuated by said gears, means for guiding and supporting the upper flight of said chain, a plurality of bucket sections pivoted to each other and secured to alternate links of said chains and operable therewith, means for connecting said casing to the wagon and means for actuating said chain.

1,422,535. FEEDING MECHANISM FOR TINNING MACHINES. DARIO BUCCICONE, Canonsburg, Pa. Filed May 16, 1921. Serial No. 470,073. 14 Claims. (Cl. 271—11.)

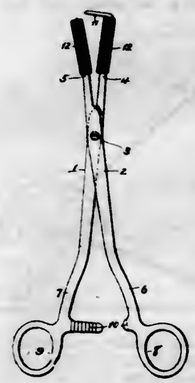
1. The combination with an overhead means for feeding plates to a tinning pot, means for elevating plates one by one from a substantially vertical stack to said overhead feeding means and including a movable friction member engaging the outermost plate of the pile and movable transversely of the latter for maintaining frictional engagement with said outermost plate, said overhead feeding means being extensible in a direction transversely of the pile of plates and engaging the plate elevating means so as to move it transversely of the pile of plates when said overhead feeding means is extended, means to normally extend said overhead feeding means, driving means for said overhead feeding means, and detachable operating connections between the overhead feeding means and the plate elevated means, said feeding means and elevating



means being devoid of interconnections with the exception of said operating connections, and a portable carrier for the pile of plates upon which said elevating means is mounted.

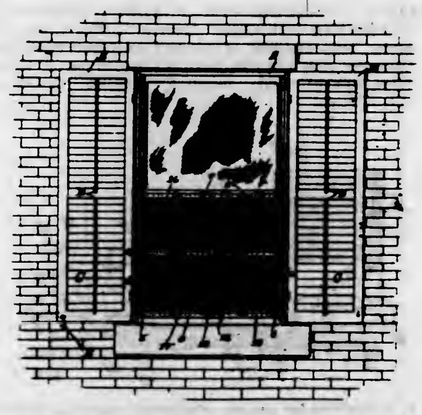
1,422,536. SELECTIVE COUPLING. LESTER H. BULLARD, San Leandro, Calif. Filed July 12, 1921. Serial No. 484,081. 11 Claims. (Cl. 103—62.)

1. The combination with driving and driven shafts of a selective coupling comprising a head secured to one of said shafts and slidably engaged on the other shafts, a latch on said head associated with each of said other shafts, and means for engaging a selected latch with its associated shaft.



1,422,537. PROCESS OF MAKING TIRES. WILBUR B. BURKE, Cleveland, Ohio. Filed Aug. 20, 1919. Serial No. 318,722. 4 Claims. (Cl. 18—56.)

1. In a method of making tire casings, the steps which consist in assembling the composite layers of the casing in proper order, interposing a vulcanizing element adapted to be electrically heated, and then simultaneously applying heat exteriorly to such casing and passing a heating electric current through said element.



1,422,538. TOOL. WILLIAM H. CAMERON, Pittsburgh, Pa., assignor to Radium Chemical Company, Pittsburgh, Pa. Filed Jan. 13, 1921. Serial No. 436,988. 2 Claims. (Cl. 128—321.)

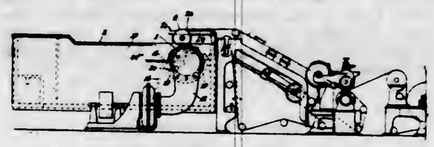
1. A tool for handling surgical tubes, comprising relatively movable padded jaws, one of said jaws provided with a finger disposed in the plane of said jaw and at substantially right angles thereto, said finger adapted to

project beyond the free end of the other jaw, and means whereby said jaws may be relatively moved.

1,422,539. WINDOW SCREEN. ISAAC W. CHERRY, Pensacola, Fla. Filed Sept. 7, 1920. Serial No. 408,654. 1 Claim. (Cl. 156—14.)

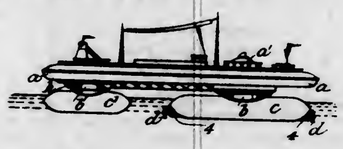
The combination with a window frame, guides carried by the stiles of the window frame, of a window screen comprising a frame having side flanges, the longitudinal intermediate portion of said flanges being substantially crimped to provide a tongue, said tongue being slidable in the guides, and means carried by the free edges of said flanges for holding the screen in various positions.

1,422,540. FIBER-BOARD BOX. JOHN L. CHRISTENSEN, Chicago, Ill. Substitute for application Serial No. 445,348, filed Feb. 16, 1921. This application filed May 5, 1922. Serial No. 558,571. 9 Claims. (Cl. 229—41.)



1. A box having upper and lower sections each comprising a main portion with end and side walls swingable relative to the main portion, one of the side walls being common to both sections and forming a hinge therebetween, portions connecting the adjacent end walls of the two sections having notches in their free edges and scored to permit the two sections to be swung into interfitting relation, and means for securing the outer side wall of

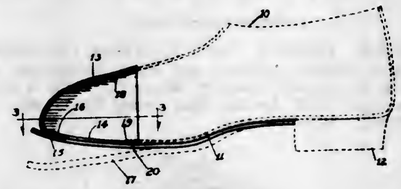
each section to the adjacent end walls, the outer side wall of one of the sections having a pair of spaced scores therein along which it may bend when drawn outwardly at its center so as to cause the adjacent end walls to swing inwardly.



8. A box comprising a main wall with end and side walls swingable relative thereto, rectangular corner portions integrally connecting the end and outer side walls together, one of each pair of walls thus connected being scored diagonally so as to permit the corner portion therebetween to be swung bodily into perpendicular position against the other wall and secured thereto, and one of the adjoining walls being scored diagonally to permit it to be swung outwardly from the main wall while the adjoining wall is swung inwardly flat upon the main portion.

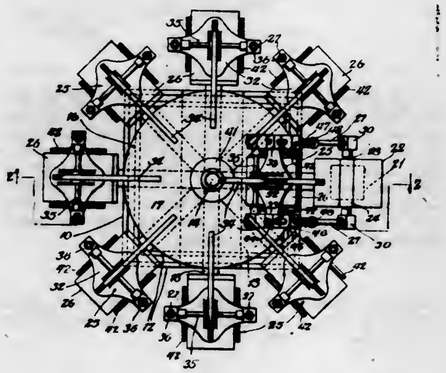
1,422,541. CYLINDER PAPER-MAKING MACHINE. WILLIS S. CRANDELL, Elsmere, N. Y., assignor to A. P. W. Paper Co., Albany, N. Y., a Corporation of New York. Filed June 16, 1919. Serial No. 304,155. 14 Claims. (Cl. 92—43.)

1. In a cylinder paper machine, the combination of a cylinder mould, rollers supporting the outside of the periphery, and rollers supporting the inside of the periphery.



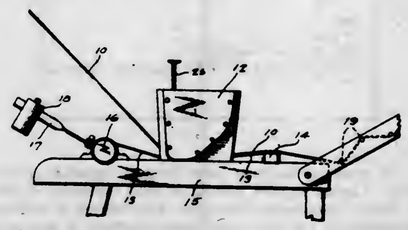
1,422,542. MULTIPLE-HULL BOAT. FREDERICK GEORGE CREED, Croydon, England. Filed Dec. 3, 1919. Serial No. 342,226. 8 Claims. (Cl. 114—61.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. A ship embodying a superstructure and a plurality of float-structures each embodying a float, one of said floats being horizontally rotatable for steering purposes and having a hollow supporting member, means for rotating the float through the medium of said hollow supporting member, said rotatable float carrying trimming means consisting of a pair of vanes arranged at opposite sides of the float, a transverse shaft carrying said vanes, and means for rocking said shaft embodying a member extending up through the tubular member and rotatable with the float.



1,422,543. REPAIR TIP FOR SHOES. NICOLA D'ANDREA, Bridgeport, Conn., assignor of one-half to Michael Persichino, Bridgeport, Conn. Filed Jan. 25, 1922. Serial No. 531,601. 5 Claims. (Cl. 36—77.)

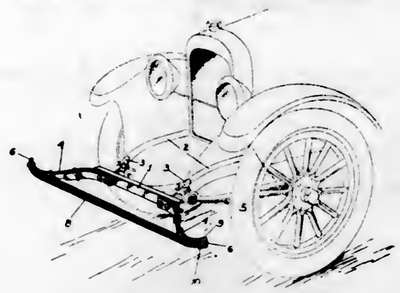
1. As an article of manufacture, a repair tip for shoes, comprising a toe cap having an inturned lower edge, a toe cap welt secured to the under face of said lower edge



and extending outwardly beyond said toe cap, and means securing said inturned edge and welt to each other.

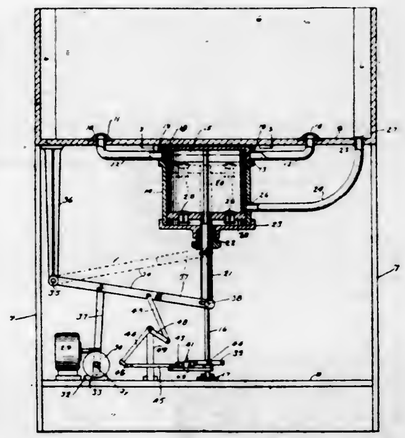
1,422,544. BOX MACHINE. LOREN W. DARLING, Sycamore, Ill., assignor of one-half to Albert E. Hammerschmidt, Sycamore, Ill. Filed Jan. 27, 1922. Serial No. 532,206. 12 Claims. (Cl. 93—36.)

1. In a box machine, the combination of a base, a turntable rotatively mounted thereon, and having a plurality of lower pressure heads extending up therefrom, circumferentially about its axis of rotation, and upper pressure heads, one co-operating with each lower pressure head and fulcrumed on said turntable, said upper pressure heads having pressure blocks capable of being moved over said lower pressure heads and movable lengthwise of said head, and pressure levers for clamping said pressure blocks upon the folded flaps of a carton.



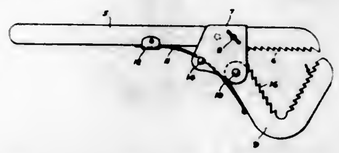
1,422,545. COATING APPARATUS. CURTIS I. DAYTON, Chicago, Ill., assignor of one-half to Ernest L. Dayton, Detroit, Mich. Filed June 1, 1920. Serial No. 385,707. 5 Claims. (Cl. 91—12.)

1. In a coating apparatus, a fountain for holding a supply of liquid coating material and having an outlet through which the material passes to the article to be



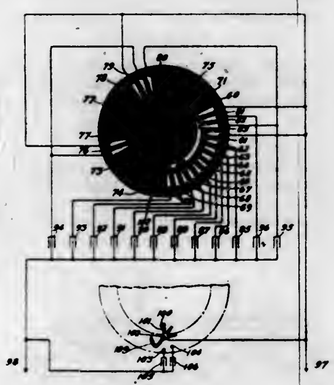
coated, and a distributor removably mounted in the fountain over the outlet thereof and having means for dividing the coating material into separate streams.

1,422,546. BUMPER. PAUL E. DEMMER, Marysville, Calif., assignor, by direct and mesne assignments, to D & W Specialty Company, Marysville, Calif., a Corporation. Filed Jan. 23, 1922. Serial No. 531,099. 3 Claims. (Cl. 293—55.)



2. A bumper for vehicles including spaced spring members fixed to and projecting beyond the frames of the vehicle, the springs being arranged for deflection transversely of the vehicle, and their free ends tending to separate from each other, and a flexible structure fixed to and extending between the free ends of the springs, the latter being forced together somewhat before the flexible structure is mounted thereon whereby to hold the flexible structure normally under tension.

1,422,547. WASHING MACHINE. HERMAN C. DOMAN, Oshkosh, Wis. Filed Aug. 5, 1919. Serial No. 315,439. 6 Claims. (Cl. 68—37.)

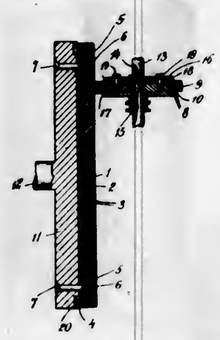


1. A washing machine comprising a container, a plurality of spray nozzles located in said container so that the water discharged therefrom will impart a whirling movement to the garments being washed, a source of washing fluid, a pump, and means for intermittently putting said pump into communication with said nozzles one at a time for the purpose described.

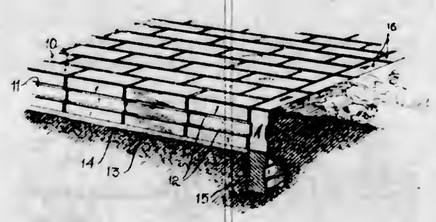
1,422,548. PIPE WRENCH. WENZEL DVORAK, Fernie, British Columbia, Canada. Filed Aug. 24, 1921. Serial No. 494,811. 2 Claims. (Cl. 81—106.)

1. A pipe wrench having a handle member, there being notched configurations on the inner end of the said handle member, a bracket member slidably engaged with the said handle member, a V-shaped jaw member having notched configurations on the inner edges thereof, one terminal of the said V-shaped jaw member pivotally connected to the said bracket member, a spring affixed intermediate its ends to the said bracket member, one terminal of the said spring substantially secured to the said handle member, the opposite terminal of the said spring bearing against the said body member and means securing the said slidable bracket member in any desired position.

1,422,549. MULTIPLE SWITCH. AUGUSTUS J. EAVES, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 14, 1918. Serial No. 249,820. 7 Claims. (Cl. 200—7.)



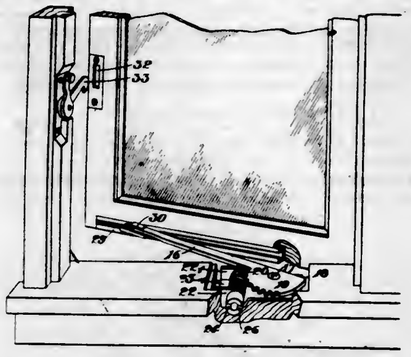
1. A multiple switch comprising a stationary member having a recessed portion therein, a plurality of contact members mounted in the recessed portion, a plurality of additional contact members mounted on the stationary member and in a different plane from said first contact members, and a movable member provided with separate means each of which in turn is adapted to consecutively engage the contact members mounted in the recessed portion until all such members are engaged, and additional means for engaging the contact members mounted in a different plane.



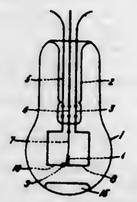
1,422,550. FRICTION-DRIVING DEVICE. HENRY C. EGERTON, Ridgewood, N. J. Filed Oct. 15, 1918. Serial No. 258,276. 14 Claims. (Cl. 74—26.)

1. In friction driving devices, a drive member and a replaceable facing member therefor comprising a stiffened

body having a plurality of layers of canvas carrying and impregnated with cured phenolic condensation cementing material, a vulcanized rubber facing secured to said stiffened body and a fabric connector interposed between said body and facing and securely united thereto, projecting aligning portions on said body containing fibrous material and carrying phenolic condensation cementing material cemented to said body, and threaded securing devices embedded in said facing member and cooperating with said stiffened body.



1,422,551. PAVING BLOCK AND ROADWAY CONSTRUCTED THEREFROM. JOHN D. FLETCHER, Evansville, Ind. Filed Sept. 22, 1919. Serial No. 325,388. 1 Claim. (Cl. 94—11.)



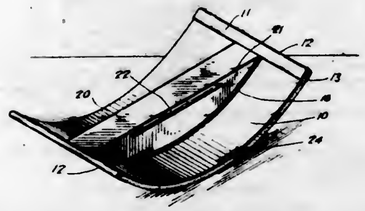
In a road-way, a plurality of blocks having furrows formed longitudinally of their side of greatest dimension, a layer of sand beneath and forming a bed for the blocks, said blocks being spaced from each other, some of said blocks being arranged in parallel courses upon opposite sides of and to form curbs for the road bed each parallel course being spaced from the blocks forming the road and consisting of two layers of blocks, one above the other and in spaced relation, the upper surfaces of the lower layer of blocks extending approximately to the level of the sand forming the road-bed and thereby preventing it being washed away or otherwise dislodged, all of said spaces being adapted to receive a cementitious material whereby every block is spaced from every other block.

1,422,552. WINDOW ADJUSTER. FREDERICK FOURNIER, San Francisco, Calif. Original application filed Feb. 25, 1920, Serial No. 361,127. Divided and this application filed Mar. 9, 1921. Serial No. 451,036. 3 Claims. (Cl. 268—14.)

1. The combination with a framed opening and a swinging closure therefor mounted to swing about vertical supports, of an operating mechanism for said closure comprising a pivoted operating lever, a guide track carried by said closure adjacent the bottom thereof, a sliding block engageable with the guide track and adapted to be detachably connected to the operating lever and a keeper plate pivotally mounted on the sliding block for retaining the operating lever in connection with the sliding block.

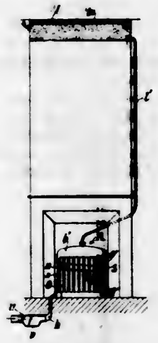
1,422,553. INCLOSED-ARC LAMP AND METHOD OF STARTING THE SAME. ERNST FRIEDERICH, Berlin, Germany, assignor to General Electric Company, a Corporation of New York. Original application filed Oct. 13, 1914, Serial No. 866,438. Divided and this application filed Jan. 28, 1916, Serial No. 74,935. Renewed Dec. 7, 1921. Serial No. 520,719. 11 Claims. (Cl. 176—1.)

1. An electric arc device comprising the combination of a sealed envelope, refractory metal electrodes therein adapted to operate at incandescence and remaining substantially intact when supporting an arc discharge, and a supply of vaporizable halogen salt having a luminous spectrum for imparting light of desired color to an arc between said electrodes.



1,422,554. BAG FRAME. FRANK A. FULLER, Newark, N. J., assignor to The J. E. Mergott Company, Newark, N. J., a Corporation of New Jersey. Filed Dec. 1, 1919. Serial No. 341,679. 3 Claims. (Cl. 150—29.)

1. A bag frame comprising hinged members, each frame member comprising a channelled main body portion and



hinged members, means for pivotally connecting the lower ends of said frame members, the hinge members adjacent their pivotal connection on the top side only abutting thereby presenting a continuous or unbroken top surface, and the under side of said hinge members adjacent their pivotal connection being cut away to present an open space to permit the bag material to enter in order to facilitate the maximum opening of the bag frame.

1,422,555. BLOTTER. FRANZ A. FULLER, Newark, N. J., assignor to The J. E. Mergott Co., Newark, N. J., a Corporation of Delaware. Filed Aug. 27, 1921. Serial No. 496,000. 3 Claims. (Cl. 120—24.)

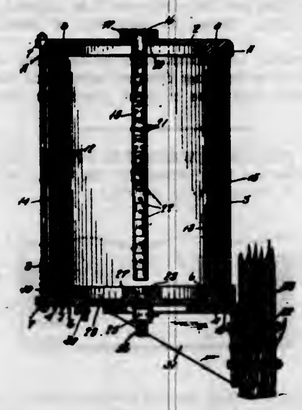
3. A blotter comprising an oblong rectangular metallic plate having a uniform arcuate curve, open transverse loops at the ends of said plate, a pair of spaced ribs raised on the concave side of said plate extending from end to end thereof, depressed seats arranged in paired intervals interjacent said ribs there being open slots intervening said seats and ribs, a handle formed of sheet metal having a flat top and right-angled sides cut to fit said plate between said ribs, outstanding ribs on the sides of said handle, and prongs extending radially from the arcuate edges of said handle sides through the mentioned slots and clenched upon said seats thereby forming a substantially level bottom on the convex side of said blotter plate.

1,422,556. HEATING SYSTEM. GUSTAVE GABET, Paris, France. Filed Dec. 10, 1919. Serial No. 343,700. 5 Claims. (Cl. 126—132.)

1. In a central heating system, the combination with a chimney having an open fireplace, a chamber placed at the lower part of the fireplace, a chamber placed at the upper part, vertical tubes connecting the two chambers, the upper part of said tubes being bulged outwardly and a substantially horizontal tube placed in the concavity formed by the bulged portions of the tubes and connected to certain of said pipes.

1,422,557. PISTON-RING COMPRESSOR. GEORGE GARRETH, Stockton, Calif. Filed Jan. 5, 1921. Serial No. 435,118. 7 Claims. (Cl. 29—96.4.)

1. A piston ring compressor comprising a split spring band whose ends normally overlap and shaped to form a circle, a pair of handles extending parallel to the axis of the band, one handle being directly connected to the band, and means between the other handle and the band and connected to both, and at a point on the band opposed to the connection of the first named handle therewith, the handles being arranged to be manipulated in unison to alter the size of the band circle.



1,422,558. TRACTOR. LOU M. GARDINER, Pittsburgh, Pa., assignor to The Iron Horse Tractor Co., Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Apr. 15, 1920. Serial No. 374,185. 14 Claims. (Cl. 180—8.)

1. In a tractor, the combination of a frame, a vertically adjustable sub-frame associated with the frame, ground penetrating means carried by the sub-frame, and means also carried by the sub-frame to actuate the ground penetrating means; said actuating means comprising a motor and a transmission gearing with a connection to raise and lower the sub-frame and another connection to drive the ground penetrating means.

1,422,559. LIQUID CONTAINER. BERNARD F. GERMANI, Seattle, Wash. Filed Apr. 22, 1921. Serial No. 463,480. 1 Claim. (Cl. 221—95.)

A liquid container, consisting in combination in a base and top formed with aligned concentric grooves in their upper and lower faces, respectively, a glass cylinder secured in liquid-tight condition in said grooves, external rods to secure said base and top in fixed relation, fixed curved plates arranged in said grooves on opposite sides and exteriorly of said cylinder and extending each approximately ninety degrees about said cylinder, movable plates slidable in said grooves intermediate said cylinder and said fixed plates adapted to close the spaces between and slidable behind said fixed plates, a filling tube extending axially within said cylinder and dependent from an aperture in said top, said tube being formed with spaced holes along its length and increasing in number towards

said top, and with graduation marks along its length, said base having a raised central boss and an annular depression thereabout, an outlet for liquid in said boss and an outlet for sediment in said depression.

1,422,560. PROCESS OF MAKING ALUMINUM CHLORIDE. HARRY D. GIBBS, Pennsgrove, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed May 19, 1921. Serial No. 470,841. 10 Claims. (Cl. 23—13.)

7. The process of producing aluminum chloride which comprises subjecting aluminum to the action of chlorine at a temperature below 0° C.

1,422,561. RUBBER-FORCING MACHINE. JOHN WILLIAM GOMERSALL, Manchester, England. Filed Nov. 1, 1920. Serial No. 421,153. 2 Claims. (Cl. 18—12.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In a rubber-forcing machine, the combination with the single roller of a doctor located below it and adapted to be automatically drawn towards the periphery of the roller by a spring, and a spring operatively connected with the said doctor.

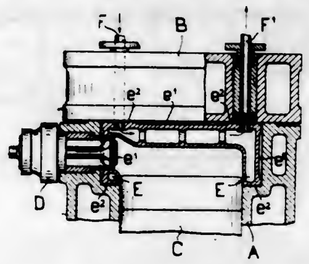
1,422,562. UNDERFRAME AND DRAFT-ARM CONNECTION. GEORGE N. GOOCH, Macon, Ga., assignor of one-half to Harry B. Grimshaw, Portsmouth, Va. Filed Oct. 14, 1921. Serial No. 507,707. 4 Claims. (Cl. 105—426.)

1. An underframe including draft-arms or timbers, center sills, a filler interposed between the upper halves of the center sills, a body bolster, a block between the rear ends of the draft-arms or timbers extending to the

body bolster and holding the arms spaced apart, and a supporter extending around said parts.

1,422,563. WRENCH. NELSON WOODTHORPE GRAHAM, Johannesburg, Transvaal, South Africa. Filed Sept. 15, 1920. Serial No. 410,556. 4 Claims. (Cl. 81—103.)

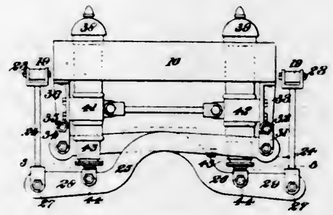
1. A wrench comprising a handle portion provided with a fixed jaw, and a movable jaw, the latter having an extension in which a row of holes is formed in the direction of its length, a part pivotally connected to the fixed jaw and having an opening through which the movable jaw extension passes and moves in a direction parallel to the handle portion, and also having a hole which passes through the sides thereof and communicates with said opening, and a pin which is adapted to engage in said hole and also in any one of the row of holes in the movable jaw extension to retain the movable jaw in different positions relative to the fixed jaw.



1,422,564. PROCESS OF SULPHONATING CARBON COMPOUNDS. ARMIN R. GROB, Wilmington, Del., and CARLETON C. ADAMS, Pennsgrove, N. J., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed June 30, 1920. Serial No. 393,101. 11 Claims. (Cl. 23—24.)

1. A process of sulphonating an organic compound which comprises bringing together the compound to be sulphonated and sulphur trioxide in a medium of liquid sulphur dioxide.

1,422,565. COOLING DEVICE FOR INTERNAL-COMBUSTION ENGINES. CARL GRUNWALD, Essen-Bredeney, Germany, assignor to Fried. Krupp Aktiengesellschaft Germaniawerft, Kiel-Gaarden, Germany. Filed Nov. 9, 1921. Serial No. 514,045. 4 Claims. (Cl. 123—173.)



2. A cooling device for internal combustion engines having a cylinder cover over its combustion chamber, said device comprising an exchangeable hollow member at the combustion end of the cylinder, said member having

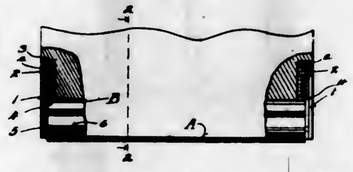
apertures for receiving the valve cages and spaces for cooling fluid, surrounding said valve apertures, recesses between the outer surface of the walls, of said hollow

member, remote from said combustion chamber, and the adjacent parts of the cylinder and the cylinder cover, and connecting means between said recesses and between said combustion chamber and said recesses.

1,422,566. AIR-SPRING RIGGING. LUCIEN R. GRUSS, San Francisco, Calif., assignor to Pneumatic Cushion Co., San Francisco, Calif., a Corporation of Arizona. Filed Aug. 27, 1919. Serial No. 320,229. 3 Claims. (Cl. 267—18.)

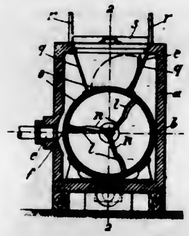
2. The combination with a frame and axle of a vehicle and a leaf spring interposed between and having one end connected to the frame and extending longitudinally thereof of a telescopic cushion device having one member connected to the frame and carried out of line with the leaf spring and a flexible load carrying connection between the remaining member of the telescopic device and leaf spring, said connection including a transversely arranged lever fulcrumed on the vehicle frame and pivotally connected to the cushioning device and a pendent link connection between the lever and leaf spring.

1,422,567. VEHICLE SUSPENSION. RENÉ GUILLERY, Aubervilliers, France, assignor to Société des Etablissements Malicet & Blin, Aubervilliers, Seine, France. Filed Nov. 11, 1920. Serial No. 423,393. 6 Claims. (Cl. 280—104.)



1. In a suspension for vehicles, a chassis, suspension springs on the chassis, a shaft mounted for swinging movement with repect to the chassis, levers arranged at the ends of said transverse shaft, and means connecting each of said levers to the corresponding suspension spring of the vehicle.

1,422,568. MANUFACTURE OF ALUMINUM CHLORIDE. FRANK W. HALL, Port Arthur, Tex., assignor to The Texas Company, New York, N. Y., a Corporation of Texas. Original application filed Mar. 1, 1920. Serial No. 362,199. Divided and this application filed Sept. 20, 1921. Serial No. 501,985. 8 Claims. (Cl. 23—13.)

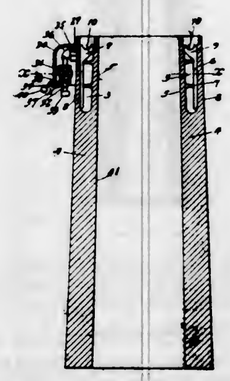


4. The process of manufacturing aluminum, chloride which consists in reacting chlorin, sulfur and powdered alumina under conditions to form aluminum chloride.

1,422,569. FLOATING WEATHER STRIP. JOHN W. HAMMES, Racine, Wis. Filed May 23, 1921. Serial No. 471,805. 1 Claim. (Cl. 20—68.)

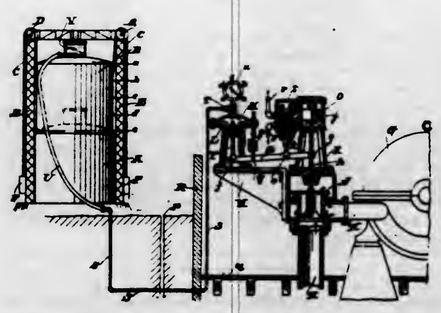
In a swinging closure having a longitudinally disposed cavity in its edge, a yieldable floating roller mounted in the cavity and adapted to engage an opposed fixed surface to seal the gap between the fixed surface and the movable closure the combination of an auxiliary strip associated with the floating roller for engagement with the inner walls of the cavity, whereby currents of air tending to travel therethrough are checked.

1,422,570. APPARATUS FOR COOLING AND FREEZING OF FISH AND THE LIKE. WILLIAM BATE HARDY and JEAN JULIEN PIQUÉ, Westminster, London, England. Filed Oct. 12, 1920. Serial No. 416,508. 2 Claims. (Cl. 257—82.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



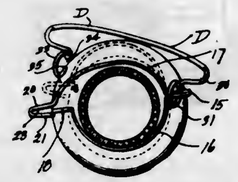
1. In a device for freezing perishable articles, a tank having a feed opening, an inner chamber, a gutter disposed within the tank for directing articles to the interior of the inner chamber, a cover for closing the feed opening, a chute for directing articles to the gutter, means for supplying and regulating a quantity of fluid to the inner chamber, and agitating means operating in the inner chamber.

1,422,571. METHOD OF EXTRACTING POTASSIUM SALTS FROM BITTERNS. IVAN F. HARLOW, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich., a Corporation of Michigan. Filed Nov. 27, 1916. Serial No. 133,717. 1 Claim. (Cl. 23—22.)



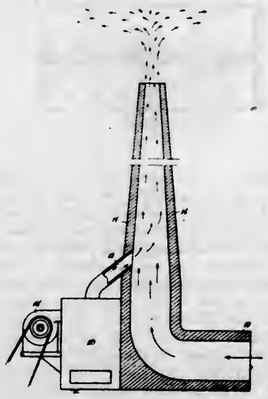
The method of recovering potassium salts from a bittern containing potassium carbonate among other potassium salts and also containing sodium salts, such bittern being concentrated approximately to the point of saturation, which consists in adding calcium chloride thereto in an amount chemically equivalent to the potassium present; heating the solution to approximately 95 degrees C., whereby calcium carbonate is precipitated out, leaving the potassium in solution in the form of the chloride; further heating the residual solution so as to concentrate the same to approximately three-fourths of its former volume, whereupon the sodium salts crystallize out of such solution while still hot; separating such crystallized salts from the mother liquor; and then cooling such liquor to approximately 20 degrees C., whereupon the potassium chloride will crystallize out practically pure.

1,422,572. INGOT MOLD. SAMUEL E. HITT, Elyria, Ohio, and JOSEPH I. PEYTON, Chicago, Ill. Filed Dec. 18, 1920. Serial No. 431,641. 13 Claims. (Cl. 22—147.)



1. In a mold for casting ingots and the like characterized by the provision of a vacuum chamber in the upper portion of the mold wall, said vacuum chamber having an outer wall and an inner wall and being provided with means connecting said inner wall with said outer wall to compensate for the unequal expansion and contraction of said inner and outer walls of said vacuum chamber in both a longitudinal and a transverse direction.

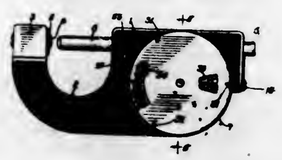
1,422,573. GAS-BOOSTER REGULATOR. PAUL HOFFMAN, Easton, Pa., and FORREST C. REED, Harriette, Mich., assignors to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Oct. 20, 1920. Serial No. 418,277. 4 Claims. (Cl. 48—173.)



1. Apparatus for regulating the output of a power driven machine for boosting or compressing gas, comprising in combination with the supply tank or holder of gas and a gas bell for supplying the booster, of the inlet valve of the driving element of the machine, and a regulator connected to control said valve and responsive to hydrostatic pressure dependent upon the elevation of the said gas bell of the supply tank or holder, whereby the said driving element is regulated in accordance with the varying conditions of supply of gas to said tank and the regulator tends to maintain the gas bell of the tank in a certain average position.

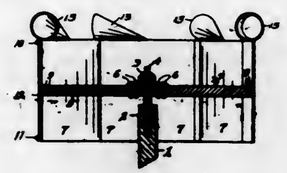
1,422,574. MILK-BOTTLE CARRIER. CLARENCE E. HOUGH, Bowen, Ill. Filed Dec. 29, 1920. Serial No. 433,873. 8 Claims. (Cl. 215—100.)

1. In a carrier structure, the combination of a collar split upon one side thereof, outwardly projecting portions formed upon the free ends thereof having aligning apertures therein, said collar having an outwardly projecting portion thereon diametrically opposite said split in the collar; and a bail permanently attached to said last mentioned projection of the collar, and adapted for insertion through the apertures in the free end projection portions for maintaining the collar in closed position.



1,422,575. PROCESS OF DISCHARGING SMELTER GASES. WILLIAM H. HOWARD, Salt Lake City, Utah, assignor to American Smelting and Refining Company, New York, N. Y., a Corporation of New Jersey. Filed Mar. 8, 1921. Serial No. 450,756. 8 Claims. (Cl. 266—1.)

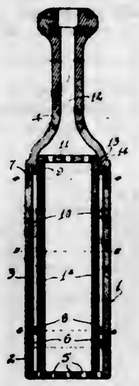
1. In the art of safely discharging into the air, furnace gases which are obnoxious or harmful to vegetation or animal life, the method which consists in discharging such gases into a chimney or similar conduit extending high into the air, and simultaneously discharging into the chimney so as to mix thoroughly with the obnoxious gases therein, a gas of an unobjectionable character having a temperature higher than the temperature of the atmos-



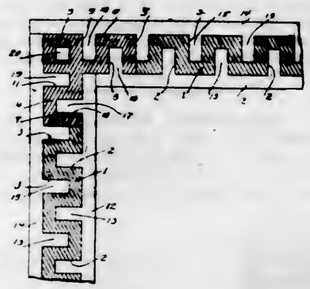
phere and in a volume sufficient to mix with and thus dilute the obnoxious gases to an extent such that the mixture formed in the chimney will readily diffuse into the atmosphere and by extreme dilution of the obnoxious gases therein have its objectionable characteristics reduced before it can come in contact with vegetation in the vicinity.

1,422,576. MEASURING GAUGE. WILLIAM HUMPHREYS, Fullerton, Pa., assignor to Wilmort Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 26, 1919. Serial No. 347,554. 8 Claims. (Cl. 33—147.)

1. In a measuring gauge the combination of a frame member having an extension supporting an adjustable contact screw, said frame member comprising an open housing for enclosing an indicating dial, a gauging stem slidable in said housing and adapted to cooperate with said contact screw, a cover plate for closing said housing, a shaft in said housing for supporting said dial, and jewel bearings mounted in said housing and in said cover plate for pivotally supporting said shaft, said jewel bearings comprising shank portions pressed into rigid setting in openings in said housing and said cover plate and having heads bearing against said housing and said cover plate.



1,422,577. ADVERTISING WHEEL. OSCAR W. JONES, Cambridge City, Ind. Filed Feb. 7, 1921. Serial No. 443,086. 1 Claim. (Cl. 40—39.)

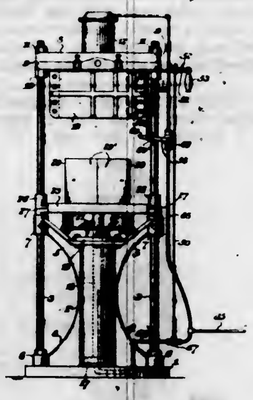


A construction of the nature set forth comprising a vertical post, a pivot extending up from the upper end of the post, a hub having a central cavity to receive said pivot, a set-screw for securing the hub in place on the pivot, a plurality of spokes radiating from the hub, a sheet metal band connecting the outer ends of the spokes and bent to form display portions each extending from the end of one spoke to the side of the spoke next thereto thereby forming wings each parallel with its respective spoke, all of said display portions and wings being integral parts of said metal band, a removable plate adapted to be placed over the face of each of said display portions, and means for retaining said plates removably in position, all substantially as shown and described.

1,422,578. CIGAR AND CIGARETTE ASH RETAINER. CARSTEN H. KATTENBERG, San Francisco, Calif. Filed July 6, 1920. Serial No. 394,130. 1 Claim. (Cl. 131—22.)

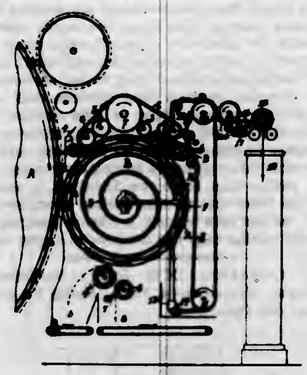
A device of the character described including a tube within a tube, the outer tube having a mouth piece and constructed in threaded sections, one of the sections comprising a perforated end closure, the inner tube having radial lugs for spacing the same from the outer tube to provide a cooling chamber around the inner tube and having an open front end and a perforated opposite end, and said inner tube being produced from a heat resisting substance and capable of a sliding withdrawal movement from the outer tube.

1,422,579. METHOD OF MAKING RUBBER TILING. WILLIAM J. KENT, Brooklyn, N. Y., assignor to Peerless Rubber Manufacturing Company, a Corporation of New York. Filed Apr. 9, 1921. Serial No. 460,105. 2 Claims. (Cl. 18—61.)



1. A method of making tiling which comprises forming similar strips with integral projections in pairs simultaneously from a single sheet of rubber, the projections of one strip being formed from the stock between the projections of the other strip, assembling the strips thus formed with other portions of the tiling having recesses by fitting the projections in said recesses and finally vulcanizing the tiling.

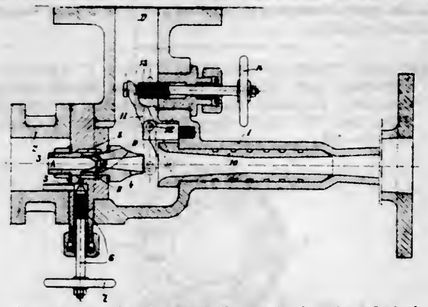
1,422,580. BOX-PRESSING MACHINE. MATHIAS R. KONDOLF, Philadelphia, Pa. Filed May 9, 1921. Serial No. 468,132. 15 Claims. (Cl. 93—36.)



1. In a box pressing machine, the combination, with a female form having an angular cross-section, of a male form having a similar cross-section and adapted to press

a box therein, said male form having relatively movable angular sections and means for moving said sections

toward the respective angles of said female form while permitting their automatic adjustment relatively to the material under pressure.

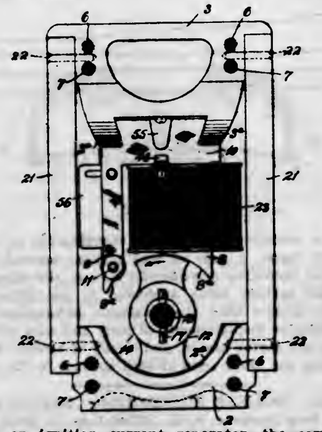


1,422,581. PROCESS OF AND APPARATUS FOR PREPARING TEXTILE FIBERS FOR SPINNING. GUILLAUME CLEMENT LAURENCY and MARCEL VIGIER, London, England. Filed May 26, 1921. Serial No. 472,851. 4 Claims. (Cl. 19—99.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. The process of preparing textile fibers for spinning consisting in the removal of the fibers from the carding engine cylinder in a series of separate tufts, carding and combing a portion of said tufts during removal, retaining the tufts by sectional combs whilst carrying them away from the card, ironing said tufts under the application of heat and friction and removing the fibers from the carrying means by friction whilst their forward ends are combed, seizing said forward ends to enable the rear ends of the tufts to be combed, and joining the combed fleeces together so as to form a continuous wide sheet.

1,422,582. STEAM EJECTOR. MAURICE CHARLES ARMAND LEBLANC, Val-sur-Seine, par Croissy, France, assignor to Societe Anonyme pour l'Exploitation des Procedes Westinghouse-Leblanc, Paris, France. Filed Dec. 19, 1919. Serial No. 346,196. 5 Claims. (Cl. 162—1.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

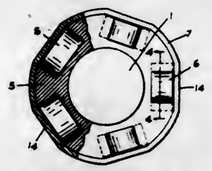
1. In combination in an ejector, a diffuser communicating at one end with a source of fluid to be compressed and at the other with a region of higher pressure into which fluid is to be compressed, a motive fluid delivery nozzle formed in parts arranged end to end and spaced



to form an opening between the parts for the admission of variable amounts of motive fluid to the nozzle.

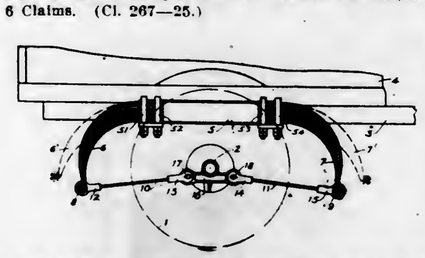
1,422,583. PROCESS OF PURIFYING HIGHER SECONDARY ALCOHOLS. ROBERT B. LEBO, Elizabeth, N. J., assignor to Standard Oil Company, Bayonne, N. J., a Corporation of New Jersey. Filed Feb. 16, 1921. Serial No. 445,477. 6 Claims. (Cl. 260—156.)

1. The process of purifying secondary alcohols higher than isopropyl alcohol when in a mixture including isopropyl alcohol which comprises adding benzol at least sufficient to form a low-boiling-point mixture with the isopropyl alcohol and subjecting the mixture to fractional distillation.



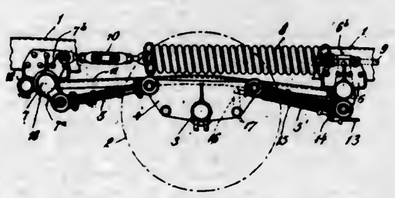
1,422,584. ELECTRIC GENERATOR. LEON J. LE PONTOIS, Lakewood, Ohio; Anna Le Pontois, administratrix of said Leon J. Le Pontois, deceased, assignor to The Teagle Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 28, 1917. Serial No. 158,094. 3 Claims. (Cl. 171—209.)

1. In an ignition current generator, the combination of a bottom pole piece of cast iron formed on its top side with a polar surface and on its bottom side formed to rest upon and be secured to a suitable support for the generator, a top pole piece comprising a cast iron block and a plurality of bifurcated laminae secured thereto and forming depending polar projections with polar surfaces at their lower ends opposite the polar surface of the bottom pole piece, nonmagnetic end plates rigidly attached to the said pole pieces and forming therewith a rigid supporting frame, permanent magnets in the form of straight bars disposed on opposite sides of said supporting frame with their north pole ends abutting one pole piece and their south pole ends abutting the other pole piece, a generating winding in inductive relation to one of said polar projections, and an unwound inductor rotor operably



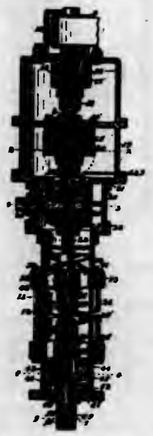
mounted in said end plates and shaped and correlated to said polar surfaces of the poles alternately to establish a flux path through said winding and then a path outside of said winding.

1,422,585. THRUST BEARING. DARCY E. LEWELLEN, Columbus, Ind., assignor to Lewellen Manufacturing Company, Columbus, Ind., a Corporation of Indiana. Filed Mar. 18, 1920. Serial No. 366,748. 3 Claims. (Cl. 64—50.)



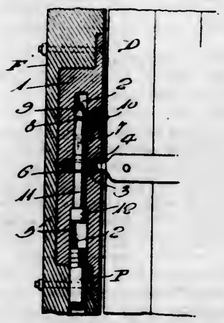
3. A thrust bearing comprising a cage of relatively small circumference having a series of spaced recesses around its periphery, a roller of relatively large axial diameter fitting in each of said recesses and having its ends flat and at right angles to its axis, the edge face of said cage being flattened at the bottom of each recess, and a band adapted to extend around the periphery of said cage for retaining the rollers in the recesses, said band being bent inwardly at points in registration with the flat spaces on the cage and said bent-in portions flattened and extended in line with the flat ends of the rollers to form bearings whereby the entire outer end surfaces of the rollers will be engaged by said inwardly bent portions.

1,422,586. VEHICLE SUSPENSION. BENJAMIN LIEBOWITZ, New York, N. Y. Filed Apr. 27, 1916, Serial No. 93,837. Renewed Apr. 17, 1917. Serial No. 162,757. 6 Claims. (Cl. 267—25.)



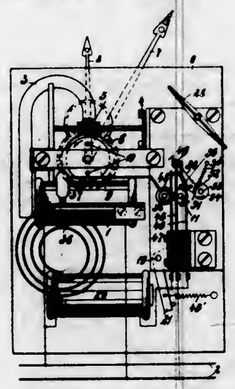
4. In a vehicle suspension the combination of an axle, a vehicle frame, a pair of leaf springs secured to said frame and extending downwardly on opposite sides of the axle, said springs being subjected to an initial strain which is greater than the maximum subsequent strains due to relative displacements of body and axle within the limits of the spring design, and a pair of tension members connecting the lower ends of said springs to the axle.

1,422,587. VEHICLE SUSPENSION. BENJAMIN LIEBOWITZ, New Rochelle, N. Y. Filed July 31, 1919. Serial No. 314,559. 7 Claims. (Cl. 267—20.)



2. In a vehicle suspension, a bell crank carried by the frame, an initially strained spring in which the subsequent stress variations due to relative displacement of body and axle are substantially within the nonfatiguing range of the spring material, said spring having one end fixed to the frame and having the other end connected with an arm of the crank, a tension member connecting the other arm of the crank with the axle, and a second tension member connecting the axle with the frame.

1,422,588. DEEP-WELL PUMP. ELIJAH D. MCDONALD, Los Angeles, Calif. Filed Feb. 2, 1921. Serial No. 441,920. 7 Claims. (Cl. 253—182.)

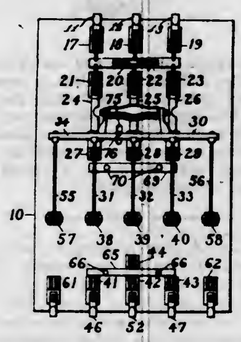


1. In a pump, the combination of a rotatable shaft having a steam passage extending downward through said shaft, means for admitting steam thereto, screw impellers on said shaft, a casing surrounding said shaft and impellers and comprising a plurality of casing sections, circular members disposed between said sections and having an annular shaft guide supported by said circular members, packing means on said guide, means for securing each circular member to adjacent circular members, said members provided with water passages having their outer perimeter of lesser radius than the screw impellers, a suction cage fixed to the lower end of said casing, a water-tight compartment within said casing, a thrust bearing disposed within said suction cage and adapted to center such shaft.

1,422,589. CAR-DOOR LOCK. JOHN D. MCQUISTON, Sioux City, Iowa. Filed June 4, 1921. Serial No. 474,903. 3 Claims. (Cl. 292—33.)

1. A car door lock comprising a casing for permanent connection to the car body, a hasp for connection to the door, a temporary locking device in said casing for cooperation with the hasp, means for retaining said device in inoperative position, and a second fluid operated permanent locking device also designed for co-operation with the hasp, said second device serving to automatically move said first device to inoperative position when said second device is rendered operative.

1,422,590. CLOCK. PAUL MANSEL, Siemensstadt, near Berlin, Germany, assignor to Siemens & Halske A. G., Berlin, Germany, a Corporation of Germany. Filed Feb. 6, 1917. Serial No. 146,939. 2 Claims. (Cl. 58—38.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. In an electrically actuated lock in combination a rack strike work, an electromagnet adapted to only drive said strike work, an armature actuated by said magnet, means permanently connected to said armature and operated by the same for lifting the striker, retarding means, permanently connected to said lifting means, and means for releasing the striker from all its operating elements when it has reached its uppermost position.

1,422,591. ALLOYS OF ALUMINIUM AND PROCESS OF PRODUCING THE SAME. ANTON MANHART, Vienna, Anatria. Filed Aug. 12, 1920. Serial No. 403,156. 4 Claims. (Cl. 75—1.)

1. A hard, non-brittle, castable aluminum alloy having manganese, copper and tin as ingredients thereof, the amount of the aluminum present in the said alloy being in excess of the amount present of any other ingredient of the said alloy.

1,422,592. COMPENSATING STARTING SWITCH. VAN N. MARKEL, Chicago, Ill. Filed Oct. 23, 1919. Serial No. 332,659. 10 Claims. (Cl. 172—179.)

2. The combination with a three wire feed line, a motor and compensating coils connected to a common terminal, of a multiple blade, double throw switch hinged to the motor circuit terminals for directly connecting said motor circuit to the line in the running position of the motor, and having auxiliary blades cooperating with the main blades for connecting said motor circuit terminals in divided circuits with said coils and to said common terminal in the starting position of the switch and arranged to completely disconnect said coils from all the wires of said line when the switch is in its running position.

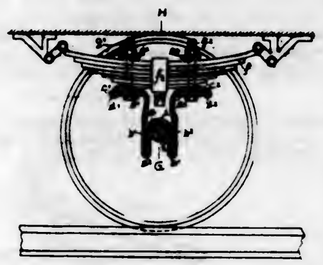
1,422,593. HAIR CURLER AND WAVER. ALFRED V. P. MARTIN, Brooklyn, N. Y. Filed Apr. 9, 1921. Serial No. 459,969. 4 Claims. (Cl. 132—41.)

4. As an article of manufacture, a hair curler and wever, comprising a frame member and a locking member, the latter being formed of a single piece of spring material doubled up to provide two normally overlying parts, the bend of the piece forming an elongated eye slidingly and pivotally engaging one end of the frame member, the said parts of the locking member being adapted to be pried apart to receive a portion of a bunch of hair between them, the free end of the one member being adapted to be interlocked with the free end of the other member to clamp another portion of the same bunch of hair between the members.

1,422,594. PIN-TUMBLER LOCK. MAXWELL C. MAXWELL, Stamford, Conn., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Filed Sept. 2, 1921. Serial No. 497,939. 6 Claims. (Cl. 70—47.)

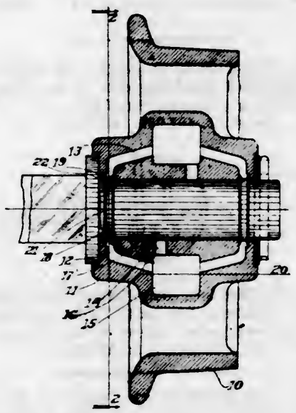
1. A pin tumbler lock comprising a cylinder and a plug, said plug comprising two parts having interlocking connection with each other, one of said parts made of hardened metal and constituting an armor head.

1,422,595. CYLINDER LOCK. MAXWELL C. MAXWELL, Stamford, Conn., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Filed Mar. 29, 1922. Serial No. 547,814. 2 Claims. (Cl. 70—46.)



2. The combination with a lock cylinder having recesses in its peripheral wall, of an armor cap or facing on the end of the cylinder, ears projecting from said armor cap or facing and entering said recesses in the cylinder wall, and fastening devices passing through said ears and entering the cylinders.

1,422,596. EMERGENCY BEARING FOR RAILWAY CARS. FERDINAND MEHLIS, Berlin-Buchholz, Germany. Filed Dec. 28, 1921. Serial No. 525,440½. 2 Claims. (Cl. 105—224.)

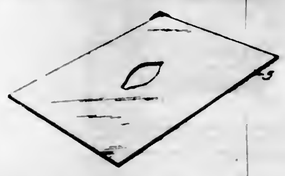


2. An emergency bearing for railway cars, comprising, in combination, a structure consisting of a middle part

forming an inverted U, legs extending upwards from the sides of said middle part, and horizontal flanges extending

from the upper ends of said legs to opposite directions; and means for affixing said structure to the bearing-springs of a railway car.

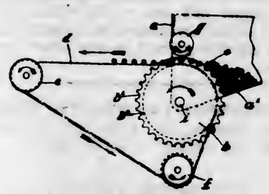
1,422,597. WHEEL. FREDERICK B. MILLER, Scottdale, Pa. Filed Apr. 27, 1920. Serial No. 376,964. 1 Claim. (Cl. 64—26.)



A self-lubricating wheel with a hub, a bearing portion in the hub for receiving an axle, an annular groove in the hub surrounding the axle and adjacent to the end of the hub, said groove provided with a counterbore in the side of the groove adjacent to the end of the hub, a ring in the groove hugging around the axle, said ring having two outwardly extending flanges, one of said flanges concentric within the counterbore means by which a lubricant flows to the bottom or periphery of the groove communicating with the bearing portion.

1,422,598. FRICTIONAL BUSHING COUPLING. LINDSAY WILSON MISENHEIMER, Great Falls, S. C. Filed Oct. 27, 1921. Serial No. 510,692. 6 Claims. (Cl. 287—52.)

1. In a coupling of the character described, the combination of a shaft, with an inner split bushing keyed to the shaft, an outer bushing, an element mounted upon the outer bushing, said outer bushing with the element thereon being mounted upon the inner bushing, and an adjusting means between the element and the inner bushing for rigidly connecting the parts together and causing the outer bushing to compress the inner bushing and bind it upon the shaft.



1,422,599. ORNAMENTING DEVICE AND METHOD. HARRY CECIL MITCHELL, Yonkers, N. Y. Filed Apr. 4, 1921. Serial No. 458,449. 5 Claims. (Cl. 41—26.)

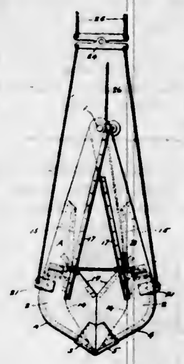
1. Means for ornamenting surfaces comprising a stencil plate of colored material capable of being abraded having a pattern cut therein, and a buffer operable to abrade and remove particles of the material forming the plate and to apply the same to the surface to be ornamented.

1,422,600. APPARATUS FOR COLLECTING AND CONVEYING CIGARETTES OR THE LIKE. WALTER EVERETT MOLINA, London, England. Filed July 7, 1920. Serial No. 394,585. 5 Claims. (Cl. 131—39.)

4. In apparatus for collecting and conveying cigarettes and other articles and in combination, a hopper for the articles, a rotary cylinder having flutings to engage with the articles in the hopper and provided with peripheral grooves, endless moving conveyor chains mounted in the peripheral grooves in the fluted cylinder, and means for positively driving said chains at a higher peripheral speed than that of said cylinder.

1,422,601. BUCKET FOR HANDLING LOOSE MATERIALS. LEDLIE D. MOORE, Newtonville, Mass. Filed June 17, 1920. Serial No. 389,572. 14 Claims. (Cl. 37—30.)

1. In a material handling bucket, the combination of a pair of jaws, each comprising a shell having an end plate, and a pair of side plates having portions constituting arms projecting up beyond the shell, means pivotally connecting the upper ends of the arms of one jaw with the arms of the other jaw; and stiffening and strengthening means for each jaw including braces extending downward from the arms, inward toward each other and to the end



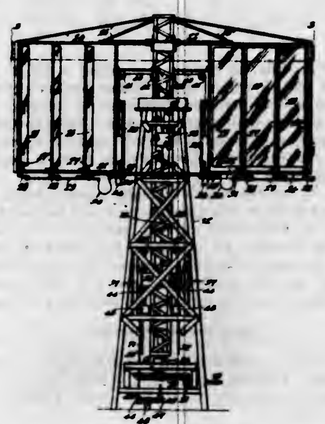


plate of the shell, said braces being rigidly secured to said arms and end plate, and together with the side plates and end plate forming a triangular system of bracing for the jaw.

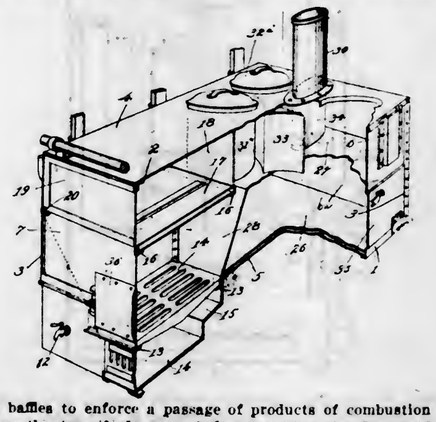
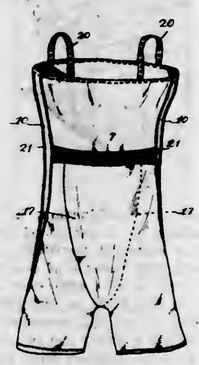


1,422,602. WINDMILL. RAY MORRIS, Niagara Falls, N. Y. Filed Apr. 15, 1920. Serial No. 374,027. 9 Claims. (Cl. 170—26.)

1. A motor of the character described, comprising a horizontal wheel, an upright rock shaft journaled in the wheel and having a crank, an upright vane carried by said shaft, a horizontally-swinging adjusting lever mounted on said wheel and connected with said crank, and means for actuating said lever.

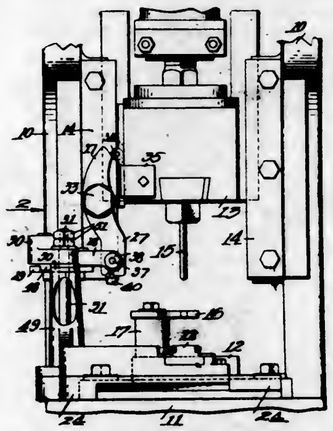


1,422,603. ROLLING KITCHEN. JAMES MORRISON, Cincinnati, Ohio, assignor to The Trailmobile Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 22, 1920. Serial No. 367,736. 3 Claims. (Cl. 126—276.)

1. In a rolling military kitchen, the combination of a substantially rectangular frame and shell, with the interior of the shell at the rear divided into a fire box, two water compartments and a cooker above the fire box and the interior of the shell at the front divided into a single oven transverse the shell having a back wall forming part of the fire box, a plurality of supports for vessels for cooking formed in the top of the shell, a flue for the escape of products of combustion, vessels for cooking on the supports, said vessels presenting their lower surfaces

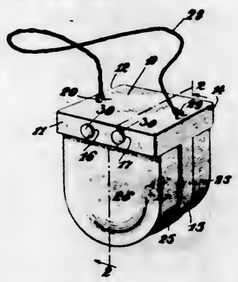
as baffles to enforce a passage of products of combustion over the top of the oven before reaching the flue, said cooker division of the fire box terminating short of the oven back wall, whereby the vessels receive direct heat and the oven top does also.

1,422,604. UNDERGARMENT. EDWARD B. MOWER, Chicago, Ill., assignor to The Futurist Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 19, 1920. Serial No. 425,034. 2 Claims. (Cl. 2—144.)



1. A garment of the character described, comprising a front section consisting of a single piece of fabric extending the full length of the garment, and forming the front of the leg portions thereof, upper and lower back sections substantially less in width throughout the upper and waist portions of the garment than said front sections, and relatively narrow side sections of inelastic fabric inserted between said front and back sections, and tapering from the upper and lower edges thereof toward the waist line.

1,422,605. PRESS-FEEDING MECHANISM. WILLIAM H. NEEDHAM, Worcester, Mass., assignor to Boston Pressed Metal Co., Worcester, Mass., a Corporation of Maine. Filed Apr. 13, 1918. Serial No. 228,441. 3 Claims. (Cl. 113—113.)

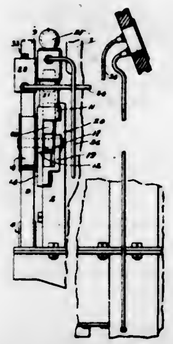


1. Press feeding mechanism having, in combination, separable holding jaws, a slide for said jaws, means to

move said slide and jaws alternately to receiving and delivery positions, an adjustable stop effective to spread

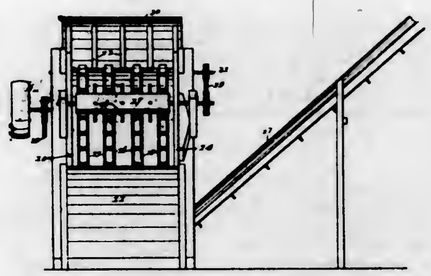
said jaws as they approach receiving position, and means to change the locus of the movement of said slide.

1,422,606. CONTAINER. EDNA A. NEIMAN, Brooklyn, N. Y. Filed Apr. 11, 1921. Serial No. 460,594. 5 Claims. (Cl. 132—83.)



1. In a container, in combination, a body member, means for maintaining a plurality of cosmetic sticks within the body, an extended partition carried by the body, two containers, each capable of retaining a powder compact and each formed of a side wall and a bottom, pivotally attached to the body at opposite sides of the partition and capable of pivotal movement with respect to each other and means whereby the two containers may be maintained in parallel position with their open tops facing each other.

1,422,607. PIN. ADOLF NONNENMANN, New York, N. Y. Filed Mar. 24, 1919. Serial No. 284,534. 1 Claim. (Cl. 132—52.)

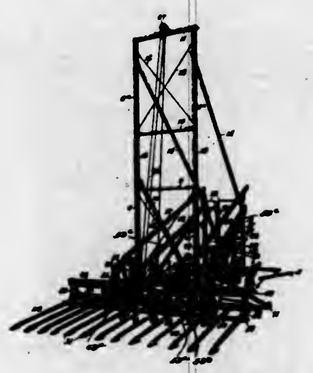


A hair pin constructed of a single length of material and comprising a pair of converging inclined legs, having contact with each other at their extremities, a pair of V shaped portions projecting inwardly from the top of the pin towards said extremities, the outer legs of the V shaped portions being parallel with the converging legs, an inverted V shaped portion provided intermediate of the pair of V shaped portions, said inverted portion forming a spring to hold the extremities of the legs resiliently in contact and projections extending from the junction of the converging legs and the pair of V shaped portions, adapted to be grasped to compress the inverted intermediate spring portion to open the extremities of the converging legs.

1,422,608. LUBRICATING DEVICE FOR AUTOMOBILES. CARL V. NORD, Seattle, Wash. Filed Aug. 9, 1921. Serial No. 490,972. 1 Claim. (Cl. 184—27.)

An oil circulating pump, comprising a block member having a plate portion with a flange projecting laterally therefrom and of predetermined contour adapted to fit a portion of an engine casing, said plate portion having a bearing therein, a bracket secured to the plate portion and extending upwardly to form a bearing in alignment with the first-mentioned bearing, a shaft mounted in the bearings; the block member being formed into a pump above the plate portion and having a piston mounted to reciprocate therein, means on the shaft between the bearings for operating the piston in the rotation of the shaft, a pulley mounted on the shaft beyond the plate portion, and connections with the crank case of an engine whereby oil may be circulated therein.

1,422,609. CORN-HUSKING MACHINE. GUSTAVUS NORGREN, Centerville, S. Dak. Filed Dec. 21, 1920. Serial No. 432,282. 5 Claims. (Cl. 130—5.)



1. A corn husking apparatus having an ear feeding mechanism provided with an endless apron or belt, husking mechanisms having chutes for receiving the ears in endwise progressive position, and ear positioning means located adjacent to the delivery end of the feed mechanism for disposing the ears in parallelism with the direction of progress, said positioning means consisting of a rotary drum disposed axially in transverse relation to the movement of the apron of the feed mechanism and provided with fingers for engaging the ears carried by said apron.

1,422,610. RETAINING CLIP. JOSEPH J. O'BRIEN, Springfield, Mass. Filed Feb. 5, 1920. Serial No. 356,523. 12 Claims. (Cl. 24—11.)

1. The combination with a pen cap or the like having an encircling groove of a retaining member having a band in gripping relation to the cap or the like and a lug interlocked with said groove.

1,422,611. AUTOMATIC HAYSTACKER. LUCY OERTLI and CASPER OERTLI, Hamilton, Mont., and HENRY TURNELL, Elm Creek, Nebr. Filed July 13, 1920. Serial No. 395,840. 12 Claims. (Cl. 214—133.)

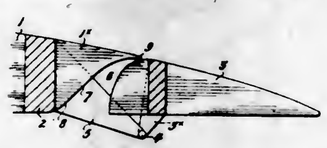
1. A haystacker comprising a vehicle, an upright frame erected on one end of the vehicle, said frame being hinged intermediate of its height, and upper and lower braces for holding the frame upright and permitting the folding of the upper section toward the lower section, the upper braces being disconnectible from the upper part of the frame.

1,422,612. RECORD CABINET FOR TALKING MACHINES. JOHN BROWNING OGDEN, Lynchburg, Va. Filed Mar. 21, 1921. Serial No. 454,075. 4 Claims. (Cl. 45—52.)

1. In a record cabinet designed to support a talking machine thereupon, said cabinet having substantially the same width and length as the talking machine and provided with legs, side panels and a door with no top, a four-sided open frame seated within and secured to the cabinet below the upper edges of the panels and door, the

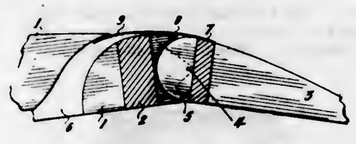
said upper edges of the panels and the door being shaped to fit the underside of the molded base of the talking machine, and constitute the support for the same.

1,422,613. CONVERTIBLE STAND AND TABLE. JOHN B. OGDEN, Lynchburg, Va. Filed Dec. 27, 1921. Serial No. 525,027. 4 Claims. (Cl. 45—92.)



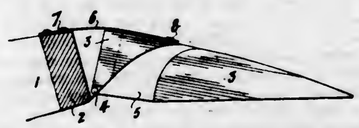
1. A convertible stand designed to support a talking machine thereon and present the appearance of a unified structure, or to be used as a table when the talking machine is removed, said stand having no top but being of substantially the same width and length as the talking machine, and comprising corner legs, a series of transverse rails connecting the legs at the top and forming therewith a rectangular support for the machine, said rails and said legs each having their upper edges formed with a bead, which beads are in alinement and form a continuous flange around the top of the stand, thereby providing a seat for the reception of either the base of a talking machine or a removable table top, said machine or said top closing the upper part of the stand when either is in use.

1,422,614. MEANS FOR BALANCING AND REGULATING THE LIFT OF AIRCRAFT. FREDERICK HANDLEY PAGE, London, England, assignor to Handley Page Limited, London, England. Filed Dec. 6, 1921. Serial No. 520,420. 4 Claims. (Cl. 244—29.)



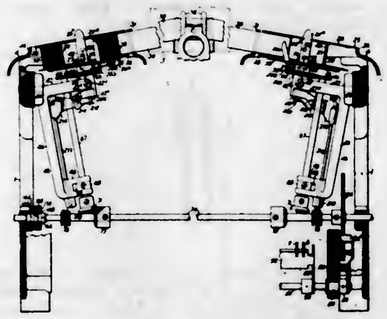
1. In laterally balancing or regulating the lift of the wings of aeroplane flying machine; the combination with

said wings, of flaps located at the rear edges of said wings, hinge members to support said flaps, and means extending from the structure of said wings to support said hinge members in such position relatively to said



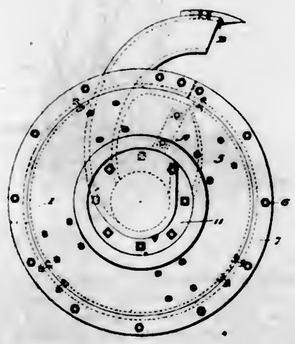
wings and said flaps, that a slot is formed between the forward edge of each of said flaps and the rearward edges of said wings when said flaps are turned downwards about their hinges, and said slot is closed when said flaps are in their normal or upturned positions.

1,422,615. MEANS FOR BALANCING AND REGULATING THE LIFT OF AIRCRAFT. FREDERICK HANDLEY PAGE, London, England, assignor to Handley Page Limited, London, England. Filed Dec. 6, 1921. Serial No. 520,421. 5 Claims. (Cl. 244—29.)



1. In laterally balancing or regulating the lift of the wings of aeroplane flying machines; the combination of flaps located at the rear edges of said wings, hinge members to support said flaps, means extending from the structure of said wings to support said hinge members, said wings having a slot from the under surface to the upper surface of said wing structure adjacent the leading edge of each hinged flap, said slot extending in length transversely to the line of flight, and means connected to and operable by said flap to close the opening of said slot in said wing structure when said flap is either in its normal or upward position, and to open said slot when said flap is moved into its turned down position.

1,422,616. MEANS FOR BALANCING AND REGULATING THE LIFT OF AIRCRAFT. FREDERICK HANDLEY PAGE, London, England, assignor to Handley Page Limited, London, England. Filed Dec. 6, 1921. Serial No. 520,422. 4 Claims. (Cl. 244—29.)

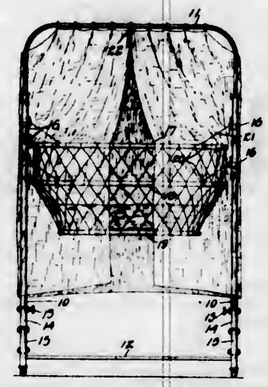


1. In laterally balancing or regulating the lift of the wings of aeroplane flying machines, the combination of flaps located at the rear edges of said wings, hinge members located adjacent the forward end of each flap and connected to the main wing structure to pivotally support sad flap, said flap having a slot extending from the under surface and adjacent the forward end of said flap to the upper surface of said flap, said slot extending in length transversely to the line of flight, and means in operative connection with the main wing structure to open said slot in said flap when the latter is turned into its downward position to admit of the passage of air through said slot from the under surface to the upper surface of said flap and to close said slot when said wing flap is in its normal or raised positions.

1,422,617. TYPEWRITING MACHINE. JOSEPH PHELPS, North Caldwell, N. J., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed Apr. 9, 1921. Serial No. 459,902. 14 Claims. (Cl. 197—160.)

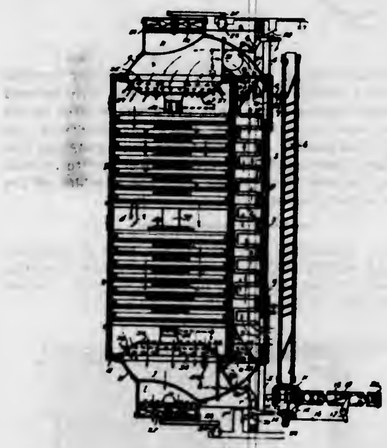
1. In ribbon reversing mechanism for typewriting machines, the combination of a ribbon spool, a reversing device controlled by the ribbon on said spool, a gravity operated lever, a slide pin connecting said lever with said device, a reversing pin suspended from said lever, a ribbon driving shaft, and a worm connected thereto, said reversing pin co-operating with said worm.

1,422,618. DRUM FEEDER. GORDON T. POLLARD and OSCAR H. JOHNSON, Denver, Colo., assignors to The Mine & Smelter Supply Company, Denver, Colo., a Corporation of Colorado. Filed Aug. 5, 1919. Serial No. 315,560. 6 Claims. (Cl. 83—9.)



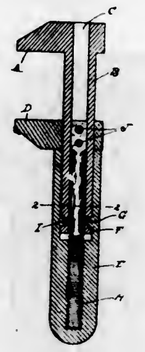
1. In a rotary feeder, a combined internal and external scoop cast in a single piece with a partition between the two, so that the feeds therethrough are kept separate and distinct until they reach the outlets of the scoops.

1,422,619. BASSINET. ALESSANDRO POMILIO, New York, N. Y. Filed Oct. 3, 1921. Serial No. 505,055. 7 Claims. (Cl. 5—56.)



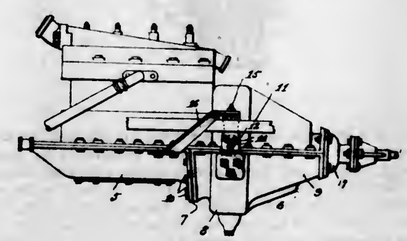
2. In a knock-down bassinet, a basket and a supporting frame therefor, said frame comprising a pair of tubular

uprights each resting on a supporting structure and a U-shaped member extending through the supporting struc-



ture and into the lower end of each side member, substantially as set forth.

1,422,620. DEHYDRATOR OR DRIER. DUDLEY P. POWER, Portland, Oreg., assignor of one-third to Everett P. Babcock and one-third to Frank Delano, both of Portland, Oreg. Filed June 21, 1921. Serial No. 479,218. 9 Claims. (Cl. 34—39.)

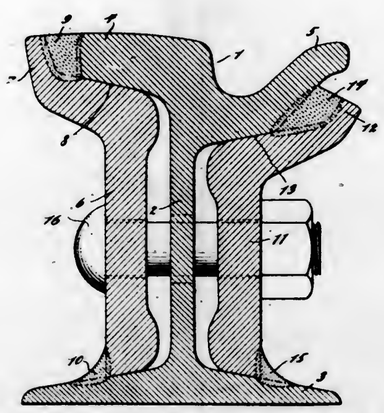


1. A dehydrator or drier comprising a drying chamber, an ante-chamber at each end of the drying chamber, such ante-chambers communicating on one side with the exterior of the drying chamber and on the other side with the exterior air, gates controlling the exterior air ports of said ante-chambers, fans adapted to cause currents of air to pass through said ante-chambers and said drying chamber, means for preheating the air admitted into said ante-chambers, automatic means adapted to operate said gates relatively to the predetermined movement of the air, and in time therewith to control the action of the devices for effecting the movement of the air through said drying chamber, the means controlling the air moving devices being adapted to reverse the latter at predetermined periods.

1,422,621. WRENCH. ARTHUR A. PREVOST, Detroit, Mich. Filed Jan. 23, 1922. Serial No. 531,091. 3 Claims. (Cl. 81—174.)

1. A wrench comprising a jaw member, a bifurcated shank extending therefrom and provided with notches adjacent to its end, a hollow handle member sleeved upon said bifurcated shank and having an inwardly extending flange engageable with said notches when the furcations are sprung inward, said handle being also provided with a threaded socket, a jaw member sleeved upon said shank member, a member insertable between the furcations of said shank member, being threaded for engagement with said threaded socket, and a cross connection between said last-mentioned member and the jaw member which is sleeved upon the shank, whereby the rotation of said handle will adjust said jaw member.

1,422,622. UNDERCASING FOR MOTOR-VEHICLE ENGINES. ROBERT DEE RIDDLE, Spartanburg, S. C. Filed Dec. 2, 1921. Serial No. 519,394. 6 Claims. (Cl. 180—64.)



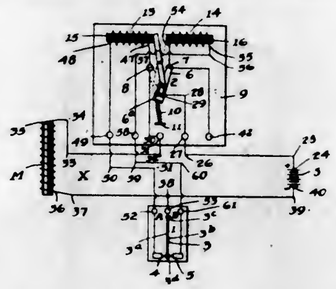
1. In combination with a supporting frame, an engine casing consisting of an upper part and a lower part, this lower part being divided transversely, means for securing the adjoining edges of the divided parts together, and a hanger means for the two parts consisting of independent hangers for said two parts, one of said hangers consisting of two separable parts bolted removably together.

1,422,623. WELDED RAIL JOINT. ELY M. T. RYDER, Yonkers, N. Y. Filed Jan. 27, 1922. Serial No. 532,180. 9 Claims. (Cl. 238—164.)

1. In combination, alined rails having at their tops laterally-extending flanges, a fish-plate less in length than

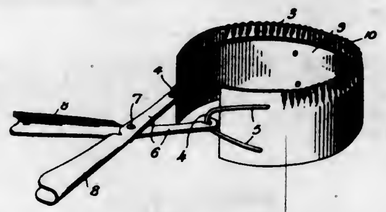
either adjacent rail having a surface engaging the under sides of said flanges and extending outwardly and upwardly adjacent thereto past the plane of such surfaces

and forming with said flanges upwardly-facing grooves, and welding material within the grooves welding the side of said plate to the sides of said flanges.



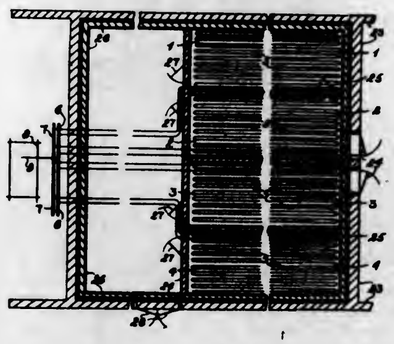
1,422,624. POULTRY ROOST. FRANK C. SCHLINGLOF, Kenton, Ohio, assignor to The Corona Manufacturing Company, Kenton, Ohio, a Corporation of Ohio. Filed Sept. 27, 1920. Serial No. 412,962. 4 Claims. (Cl. 119—25.)

1. In a device of the type described, the combination of a disinfectant container and a perch adapted to be superposed thereon, said perch having means embedded therein to limit the rising of the oil or disinfectant under the capillary action with respect to the poultry-roosting surface or portion of said perch, and means integral therewith and depending into and adapted to automatically transfer said disinfectant from said container for destroying vermin.



1,422,625. ELECTRICAL CONTROL APPARATUS. CARL SCHWAATZ, New Rochelle, N. Y., assignor to Vapor Car Heating Company, Inc., New York, N. Y., a Corporation of New York. Filed Feb. 27, 1918. Serial No. 219,368. 3 Claims. (Cl. 175—375.)

1. In combination, a thermostatically-operated initial switch, a main switch comprising a pair of fixed contacts and a movable contact, electrically operated means the circuit of which is controlled by said main switch, a pair of solenoids each being provided with a winding the energization of which is controlled by said thermostatically-operated initial switch, a common armature for said solenoids slidably connected to said movable contact member and a spring anchored at one end and having its other end attached to said movable contact member for assisting the

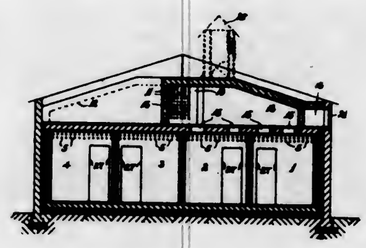


solenoid armature in actuating the movable contact member from one fixed contact to the other when either of said solenoids is energized.

1,422,626. FRUIT-JAR HOLDER. LEWIS H. SHANK, Paradise, Pa. Filed Aug. 13, 1920. Serial No. 403,270. 1 Claim. (Cl. 81—32.)

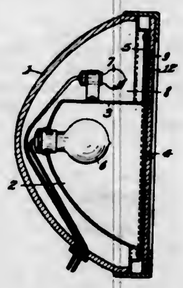
A combined fruit jar holder and closure remover therefor comprising a flexible metallic band, a pliable strip secured on the inner surface of the band, eye pieces secured to the respective ends of said band, tongs engaging said eye pieces for contracting and expanding the band, and the upper edge of said band being crimped whereby to provide a bearing element for engaging with the shoulder of the jar, substantially as set forth.

1,422,627. PROCESS OF CHILLING AND FREEZING ANIMAL SUBSTANCES. JOHN COUTTS SHAW, Pretoria, Transvaal, South Africa. Filed Sept. 5, 1918. Serial No. 252,772. 9 Claims. (Cl. 99—14.)



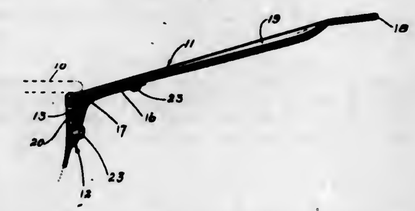
2. A process such as described which consists in continuously withdrawing for approximately ten hours air and

vapors from the chamber containing the meat under conditions forming a partial vacuum, simultaneously chilling the meat and finally freezing it.



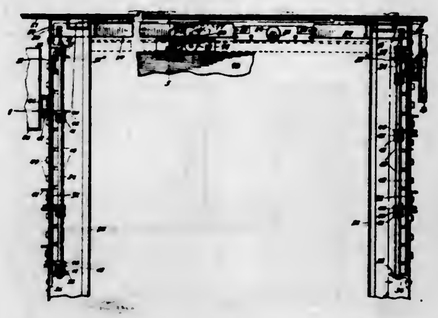
9. A process such as described which consists in chilling the meat in a chamber, continuously withdrawing air and vapors from the chamber under conditions forming a partial vacuum, then continuously circulating one and the same body of air through the chamber under substantially atmospheric pressure, continuously cooling the circulating air, simultaneously chilling the meat and finally freezing the meat.

1,422,628. APPARATUS OR PLANT FOR CHILLING AND FREEZING ANIMAL SUBSTANCES. JOHN COUTTS SHAW, Pretoria, Transvaal, South Africa. Original application filed Sept. 5, 1918, Serial No. 252,772. Divided and this application filed Mar. 11, 1920. Serial No. 365,112. 3 Claims. (Cl. 62—99.)



1. Apparatus for chilling and freezing animal substances, comprising a chamber, means for withdrawing air from the chamber, means for cooling the air withdrawn from the chamber, means for controlling the flow of the withdrawn air to either pass it to the atmosphere or to return it to the chamber, and means in the chamber for freezing the animal substances.

1,422,629. COMBINED HEADLIGHT AND DIRECTION INDICATOR. WALTER H. SHEEHAN, Steubenville, Ohio. Filed Sept. 1, 1921. Serial No. 497,469. 1 Claim. (Cl. 40—132.)

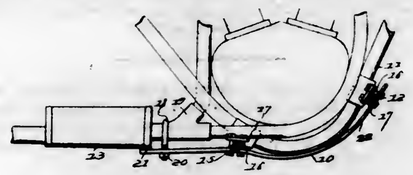


A combined head light and direction indicator comprising a lamp casing, a reflector disposed within said casing, a lamp located within said reflector, said reflector having a substantially horizontal upper wall extending to the front of said casing, said wall being located slightly above the axial plane of said casing and being adapted to intercept and reflect downward substantially all of the upwardly directed rays from said lamp, a lamp disposed within said casing above said wall, said reflector having formed integral therewith an upright wall forming a non-transparent shield located in front of the last mentioned lamp, said shield having openings cut therein in the form of direction indicia, and a covering of transparent material for said openings, said shield and said covering being of corresponding color.

1,422,630. HANDLE. JOSEPH FREDERICK SMART, New Britain, Conn., assignor to Landers, Frary & Clark, New Britain, Conn., a Corporation of Connecticut. Filed Aug. 30, 1919. Serial No. 320,767. 5 Claims. (Cl. 53—1.)

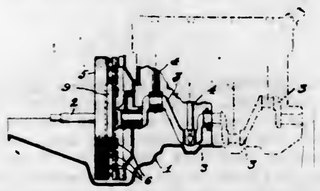
1. A handle comprising an attaching member provided with a body portion having a flange adapted to engage against and be secured to a utensil, an outwardly extending boss located inside of said flange, and a tang extending outwardly from said boss; and a handle portion overlying and secured to said tang and also having a tang fitting within the recess provided by said boss and secured to said boss.

1,422,631. DESK-DRAWER LOCK. ION A. STAFFORD, Jamestown, N. Y. Filed Sept. 22, 1920. Serial No. 412,072. 12 Claims. (Cl. 45—94.)



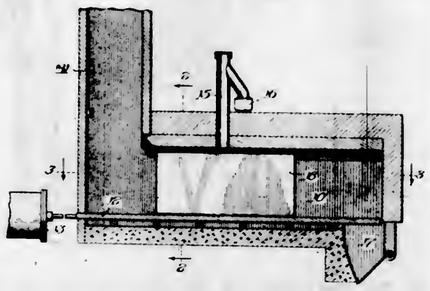
5. In a desk drawer lock, the combination with a desk frame and a plurality of desk drawers arranged therein, of a vertical rock shaft mounted in said frame, a plurality of locking dogs vertically adjustable on said rock shaft and adapted to lock said drawers, a rocking plate pivotally mounted on said frame coaxially with said rock shaft and provided with a vertical row of retaining devices for said locking dogs, and means for actuating and locking said rocking plate.

1,422,632. GUARD FOR MOTOR CYCLES. ROY STENDEL, Magdalena, N. Mex. Filed July 13, 1921. Serial No. 484,399. 3 Claims. (Cl. 208—140.)



1. A guard for motorcycles and the like having an arcuate plate extended longitudinally beneath the vehicle

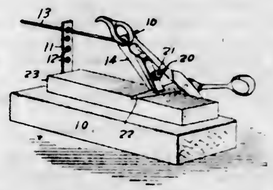
frame from the front foot rest bar to the muffler and conforming substantially to the shape of the lower side



of the frame, means being provided for securing said plate to the foot rest bars.

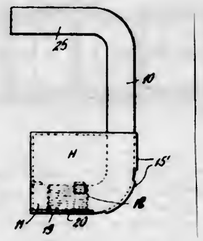
1,422,633. COUNTERBALANCE FOR THE CRANK SHAFTS OF INTERNAL-COMBUSTION ENGINES. FRANK O. STEARETT, Rochester, Nev. Filed Aug. 11, 1921. Serial No. 491,630. 4 Claims. (Cl. 74—6.)

1. The combination with the crank shaft of a multi-cylinder internal combustion engine having its cranks disposed in the same plane, and a fly wheel mounted thereon, said fly wheel being counter-weighted in such manner that the counter-weighted portions are disposed thereon with respect to said cranks at substantially 90° intervals.



1,422,634. RETORT. LELAND L. SUMMERS, Chicago, Ill. Filed Aug. 12, 1920. Serial No. 402,944. 11 Claims. (Cl. 202—9.)

1. A coke oven comprising a retort having relatively large side wall area as considered in relation to the floor area, a reciprocating floor in said retort, means for feeding material to one end of said floor and for restraining the material against movement except in a direction toward the retort, and means for increasing the frictional resistance between the floor and the material.



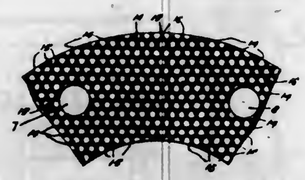
1,422,635. GRINDING MECHANISM. ARTHUR O. S. TAYLOR, Billings, Mont. Filed Dec. 27, 1920. Serial No. 433,258. 1 Claim. (Cl. 51—158.)

A base, a vertical standard attached to said base near the end of said base forming an abutment for an abrasive stone on said base, said standard having a vertical series of holes, a rod of smaller diameter than said holes, the rod adapted to reciprocate in either of said holes, and a

transverse clamp adjustably attached to one end of said rod to hold a blade against the upper surface of said stone.

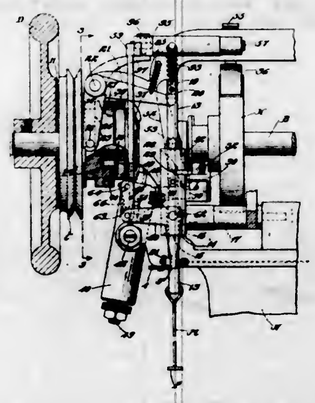
1,422,636. CONCRETE INSERT. CHARLES C. TOMKINSON, Plainfield, N. J., assignor to J. Edward Ogden, Mountainville, Town of Cornwall, N. Y. Filed June 8, 1921. Serial No. 475,849. 5 Claims. (Cl. 72—105.)

1. A concrete insert comprising a bar having a ledge through which there is an opening, a housing extending over the opening, said housing comprising a pair of side walls and a roof, flanges bent over from the walls into contact with the bar whereby relative displacement between the bar and housing in one direction is prevented, and means extending from the side walls over the ledge for preventing displacement of said parts in the opposite direction.



1,422,637. SPOKE-TIGHTENING SHIM. JESSE D. TUCKER, Sacramento, Calif., assignor to Tucker Brothers Manufacturing Company, Sacramento, Calif., a Copartnership. Filed Feb. 27, 1922. Serial No. 539,661. 4 Claims. (Cl. 301—81.)

1. A spoke tightening shim comprising a flat member adapted to be placed about the tenon of a spoke, and yieldable prongs punched from the shim and projecting beyond one face thereof.

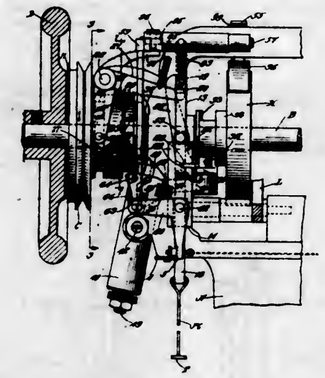


1,422,638. FLEXIBLE COUPLING. GUSTAV A. UNGAR, Pelham Manor, N. Y. Filed July 23, 1920. Serial No. 398,401. 4 Claims. (Cl. 64—96.)

3. A device of the character described comprising, in combination, a driving and a driven member, each including a spider having arms symmetrically disposed around the axis of rotation at angles of less than 180° relative to each other, the arms of one spider alternating with those of the other around said axis, and a flexible torque transmitting element attached to each of said arms, said flexible element comprising a plurality of layers of fabric

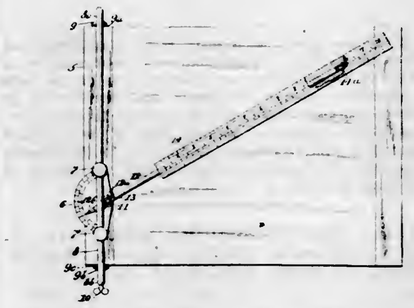
secured together and forming a single flat ring or disk-like member, each of said layers composed of three sets of strands interwoven with each other, the sets of strands arranged at angles of less than 180° relative to each other and parallel to the lines of pull between the arms of one spider and those of the other, respectively.

1,422,639. STOP MOTION FOR SHOE-SEWING MACHINES. FELIX EMILE VALOIS, Haverhill, Mass., assignor to Hamel Shoe Machinery Company, Lynn, Mass., a Corporation of Massachusetts. Filed July 31, 1916. Serial No. 112,230. 34 Claims. (Cl. 112—219.)



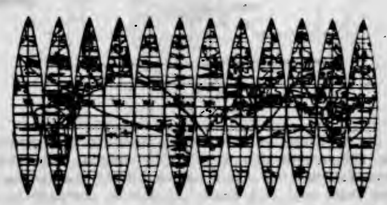
1. In combination with a machine including stitching mechanism, driving mechanism therefor, a stop motion which acts on the driving mechanism to increase the speed of the machine and then to stop it, and mechanism acting on the stop motion to prevent it stopping the machine except during a predetermined part of the cycle of operation of the stitching mechanism.

1,422,640. STOP MOTION. FELIX EMILE VALOIS, Haverhill, Mass., assignor to Hamel Shoe Machinery Company, Lynn, Mass., a Corporation of Massachusetts. Original application filed July 31, 1916, Serial No. 112,230. Divided and this application filed Oct. 31, 1917. Serial No. 199,402. 17 Claims. (Cl. 192—116.)



1. In a machine of the class described, in combination, a shaft, variable speed drive mechanism therefor, invariable speed drive mechanism, brake mechanism for

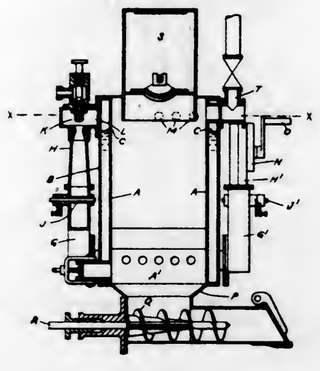
said shaft and devices constructed and arranged to cause said shaft to be driven momentarily at a predetermined



speed by said invariable speed drive mechanism immediately prior to the stopping thereof.

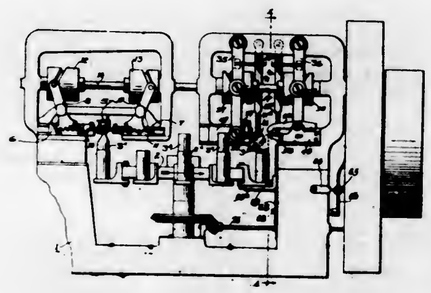
1,422,641. DRAFTING INSTRUMENT. CHARLES A. WALTERS, Marion, Iowa. Filed May 3, 1921. Serial No. 466,590. 4 Claims. (Cl. 33—76.)

1. A drafting instrument, comprising a protractor, a guide on which it is slidably mounted, a rod adapted to serve as a straight-edge and angle indicator pivoted at the protractor center, a clamping nut to bind the rod in position, and a slidable scale mounted revolubly on said rod.



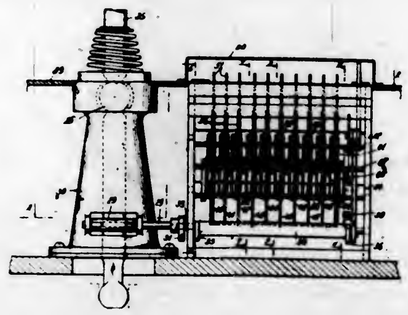
1,422,642. RUBBER GLOBE. ELIZABETH MARY WALTERS, Hove, England. Filed Nov. 1, 1920. Serial No. 421,151. 3 Claims. (Cl. 35—5.)

1. The method of producing a rubber globe for use as an educational toy consisting in the employment of a



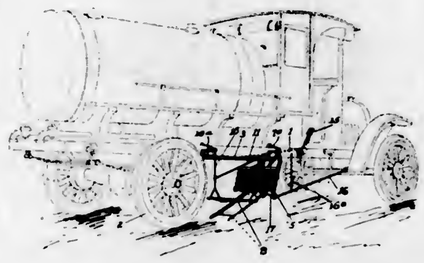
hollow air filled rubber ball, the surface of which is divided into a number of lunes, extending from pole to pole, the markings being produced by lithographic transfers in the form of paper gores corresponding to the shape of the lunes, the paper only being afterwards removed.

1,422,643. GAS PRODUCER. JOHN WELLS, Cairo, Egypt. Filed Nov. 1, 1919. Serial No. 335,079. 2 Claims. (Cl. 48—67.)



1. In a gas producer, a body comprising inner and outer shells forming a space adapted to receive water, a plurality of tubes carried at opposite sides of the body and extending through said space and terminating in the inner and outer shells, twyers mounted in said tubes, air manifolds arranged at opposite sides of the body and connected to said twyers for feeding air to the interior of the body, and means for controlling the supply of air through the twyers.

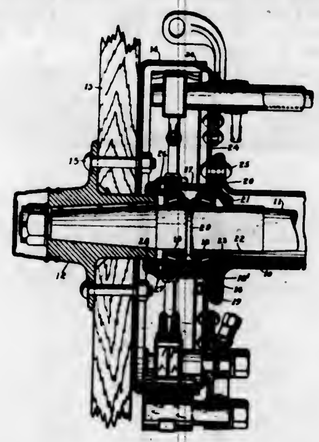
1,422,644. TUBE-CLOSING MACHINE. ISAAC W. WEPPLO, Chicago, Ill. Filed Nov. 10, 1919. Serial No. 337,007. 15 Claims. (Cl. 113—1.)



1. In a collapsible tube closing and clip fastening machine, the combination with a tube carrying turntable, a cam shaft relatively timed and a folding mechanism operated from said cam shaft; of devices operated by the cam shaft and co operating to align, seat and press a clip over the fold of the tube after the clip has been loosely dropped on the tube.

1,422,645. PERMUTATION LOCK. JAMES O. WILSON, Jersey City, N. J. Filed Oct. 26, 1920. Serial No. 419,619. 31 Claims. (Cl. 70—53.)

1. In a lock of the character described, a bolt, locking tumblers therefor, connecting means between said tumblers operative to bring the tumblers to a predetermined position when the tumblers are actuated in a prearranged order, and actuating devices for the respective tumblers.



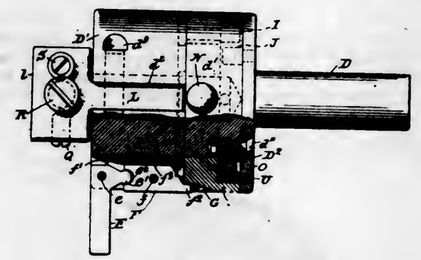
1,422,646. ANTISKID DEVICE. GEORGE D. WINTERS, Sanger, Calif. Filed Aug. 9, 1920. Serial No. 402,403. 6 Claims. (Cl. 188—4.)

1. An anti-skid attachment for vehicles comprising a mat normally and releasably hung from the frame of the vehicle clear of the ground on each side thereof, guides fixed to the frames under each mat and projecting downwardly in the plane of the wheels, hinged extensions on the lower ends of the guides, said guides and extensions when in alinement projecting toward the point of contact of the wheels with the ground, but the extensions being normally raised out of such alinement, and means whereby when the mat is released the extensions will be simultaneously released to move in alinement with the guides.

1,422,647. AXLE. THOMAS ZIMMERMAN, Cleveland, Ohio, assignor to The Standard Parts Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 14, 1919. Serial No. 304,123. 2 Claims. (Cl. 74—56.)

1. In axle construction, the combination of an axle housing having an integral radial flange at the end, an extension having a radial flange and an axially extending flange surrounding said housing flange, a brake anchor member mounted upon said extension in abutting relation

to one of said radial flanges, and means for securing said member and said radial flanges together.

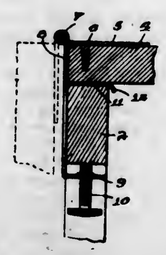


1,422,648. METHOD OF PRODUCING RIM BOARDS. ALLAN A. ADAMSON, Brooklyn, N. Y., and WILLIAM F. GAUPP, Hudson Heights, N. J. Filed June 17, 1918. Serial No. 240,463. 2 Claims. (Cl. 93—40.)

1. The method of forming built-up rectangular boxes, comprising feeding a continuous length of board in substantially flat relation, feeding a continuous length of finish paper in approximate relation to the fed flat length of board, affixing the finish paper to the board while in flat relation and providing an extension of the finish paper projecting laterally of the board length, severing the length of the board having the finish paper affixed thereto, while in flat relation and of a length equal to the perimeter of the box part, discharging the severed length of board having the finish paper affixed thereto in flat relation and thereafter folding the severed length to form the box part and affixing the extension of the finish paper to contiguous parts of the box.

1,422,649. SELF-OPENING KNURLING TOOL. EMMANN BACH, Woonsocket, R. I. Filed July 25, 1921. Serial No. 487,335. 5 Claims. (Cl. 80—5.1.)

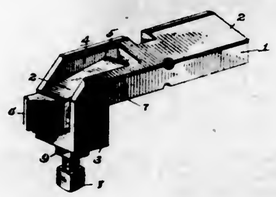
5. A self-opening knurling-tool device, comprising a shank adapted to be held rigidly in the turret of a screw-machine, tiltable knurling-tool holding members carried by said shank, springs also carried by said shank and engaging said members to tilt the tool-holding ends thereof away from the work, a rotatable cam-ring carried by said shank and engageable with said tool-holding members to tilt the tool-holding ends thereof toward the work, a spring motor operatively associated with said shank and said cam-ring for moving the latter to release said tool-holding members, a tiltable latch fulcrumed on said shank and engageable with said cam-ring to hold the same against rotation under



the influence of said motor, and a tripping-member pivoted to said shank and engaging said latch for tilting the same to release said cam-ring.

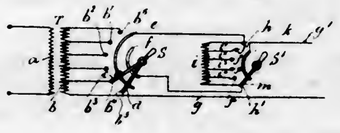
1,422,650. OVERHEAD WIRE TRANSPORT SYSTEM. WILLIAM L. BARTON, Vancouver, British Columbia, Canada, assignor of forty-five per cent to John L. Kerr, Vancouver, British Columbia, Canada. Filed Sept. 24, 1921. Serial No. 502,862. 8 Claims. (Cl. 104—112.)

3. An overhead transportation system wherein a loop of the track rope passes around a sheave at the outer end of the track and the ends are wound on separate reels of a hauling mechanism, which mechanism has provision by which the line may be wound or unwound simultaneously on or off both rtels.



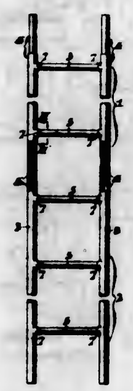
1,422,651. HINGE. WILLIAM C. BAXTER, Rochester, N. Y., assignor to Edward M. Trimble, doing business as The E. M. Trimble Manufacturing Company, Rochester, N. Y. Filed Jan. 22, 1921. Serial No. 439,266. 1 Claim. (Cl. 16—149.)

A hinge comprising a member provided with two spaced portions projected from one face thereof, one of said portions extending from one end of the member and the other extending from a point in spaced relation to both ends, a second member pivotally connected to the first named member at the end opposite from which the first mentioned portion projects and adapted within one extreme position to lie at right angles to the member and in spaced



relation to the last mentioned portion, and when in another position to lie parallel with the first mentioned member, and a clamping device arranged on the portion at the end of the first mentioned member.

1,422,652. THREAD-CUTTING TOOL. NAPOLEON BENOIT, Watervliet, N. Y. Filed Sept. 6, 1919. Serial No. 322,147. 2 Claims. (Cl. 29—96.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

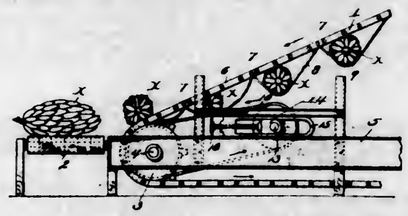


1. A thread cutting tool, including a holder formed with an angular extension, said holder and extension provided with a recess, the recess extending vertically entirely through the holder, a cutting tool formed with a plurality of cutting teeth mounted in the recess and pivotally connected to the holder and means carried by the extension for adjusting the cutting tool.

1,422,653. ELECTRICAL TRANSFORMER FOR REGULATING OR VARYING THE VOLTAGE OF THE CURRENT SUPPLIED THEREFROM. FREDERICK EDMUND BEARY, Hayes, England. Filed Dec. 27, 1918. Serial No. 268,506. 1 Claim. (Cl. 171—119.)

In an electrical transformer, the combination with one of the secondary windings of said transformer provided at intervals along its length with leads dividing said winding into sections, and a supply conductor connected to one end of said winding, of voltage regulating means comprising consecutively arranged stationary terminal contacts connected to said leads and arranged in a substantially common plane, two insulated stationary segmental contacts also in a substantially common plane, two movable switch arms insulated from each other and constantly bearing on the respective segmental contacts and adapted to simultaneously bear against any two adjacent terminal contacts so as to connect the interposed section of the winding across the segmental contacts, an auto-transformer winding having its ends connected across said segmental contacts, a series of insulated terminal contacts connected to the ends and to intermediate portions of the auto-transformer winding, and a supplementary movable switch arm in constant electrical connection with a second supply conductor and adapted to be brought into connection with any of the terminal contacts connected to the winding of the auto-transformer, substantially as described.

1,422,654. LADDER AND PROCESS OF MANUFACTURING THE SAME. WALTER A. BILGER and ALAN C. WALKER, Philadelphia, Pa., assignors to The American Pulley Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 20, 1921. Serial No. 471,185. 6 Claims. (Cl. 228—55.)



1. A metallic ladder comprising tubular side rails, each provided at intervals with pairs of spaced integrally formed lips, projecting outward, and a series of tubular rungs respectively inserted into the tubular rails between opposed pairs of lips and welded thereto.

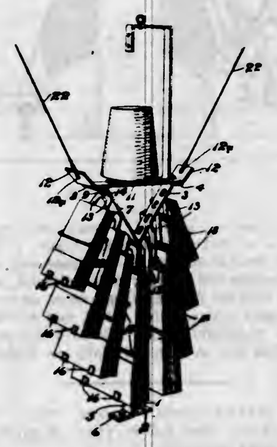
1,422,655. BEARING AND METHOD OF MAKING SAME. WILLIAM G. H. BREHMER, Cleveland, Ohio, assignor to The Cleveland Graphite Bronze Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 2, 1920. Serial No. 407,786. 9 Claims. (Cl. 29—149.5.)

1. In a method of making bushings, the steps which consist in extruding a cylindrical tube provided with a series of longitudinally extending grooves, and then filling such grooves with a lubricant.

1,422,656. BANANA UNLOADER. JAMES BRENNAN, New Orleans, La. Filed Aug. 5, 1921. Serial No. 490,030. 5 Claims. (Cl. 98—185.)

1. In an unloading apparatus of the class having a travelling conveyer provided with depending pockets to contain articles, a travelling member operating adjacent to the conveyer and gradually engaging the pockets thereof while the conveyer advances to thus lift articles contained in the pockets.

1,422,657. LIFE RAFT. HARRY W. BROADY, Bayside, N. Y., assignor to American Balsa Company, Inc., a Corporation of New York. Filed Jan. 4, 1919. Serial No. 269,691. 5 Claims. (Cl. 9—11.)

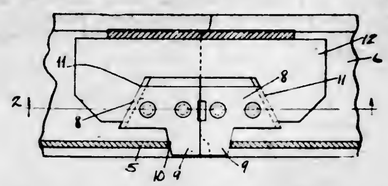


1. A raft composed of a series of layers of light pithy wood which has been treated to make the same waterproof, said layers being connected together by dowels suitably driven into said layers in wedging relationship to hold the same together and a series of reinforcing plates embedded in said light pithy wood between adjacent layers thereof.

1,422,658. NECKTIE RETAINER. LLOYD B. BROOKS, Philadelphia, Pa., assignor to George K. Thorman, Joseph W. Lassen, Leon C. Heller, and Lloyd B. Brooks, Copartners, trading as Stay-Rite Mfg. Co., Philadelphia, Pa. Filed Aug. 21, 1920. Serial No. 404,984. 5 Claims. (Cl. 24—85.)

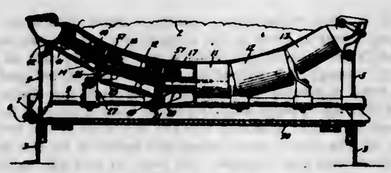
3. A shirt-front necktie retainer comprising a pair of slightly divergent overlapping resilient leaves with an attenuated crotch at their junction adapted to wedge upon and grip a shirt-front edge, and a fine, springy, flexible, necktie-piercing and retaining pin with its shank anchored to one of said leaves near one end thereof and its point free and extending forward and outward from near the free end of said leaf.

1,422,659. BAG HOLDER. ELVAH O. BULMAN, Grand Rapids, Mich. Filed Feb. 28, 1921. Serial No. 448,714. 8 Claims. (Cl. 211—2.)



1. In combination, a support comprising two bars located against each other and formed at their lower ends with oppositely located out-turned foot portions and at their upper ends with portions bent outwardly and upwardly at an angle to the vertical and away from each other, each of said last mentioned portions terminating in horizontal end parts, and each being formed in its length with a plurality of spaced apart outwardly struck tongues, bolts passing through the two bars to detachably connect the same together, a horizontal bar formed at its ends with outwardly and upwardly turned portions connected detachably to the upper ends of the first bars, and bag holders detachably suspended one from each tongue, substantially as described.

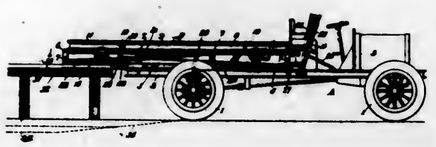
1,422,660. LOOP-FORMING TERMINAL CLAMP. GEORGE P. BUMP, La Crosse, Wis. Filed Apr. 15, 1922. Serial No. 553,102. 4 Claims. (Cl. 24—129.)



1. A terminal clip or clamp comprising a tube to be slipped along a wire bent upon itself to form a loop; said tube having an open slot at one end into which the free end of said wire may be bent laterally, and the ends of the slot walls at the open end of the slot being constructed to be closed inwardly behind said laterally bent end to lock it in place.

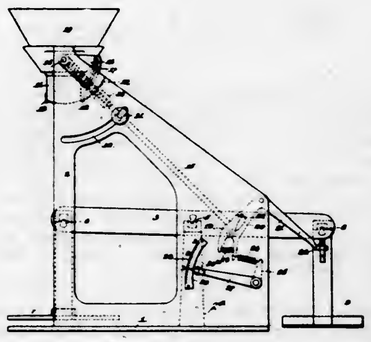
1,422,661. DEMOUNTABLE VEHICLE WHEEL RIM. HARRY E. BUTCHER, Cleveland, Ohio, assignor to The Standard Parts Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 30, 1917. Serial No. 199,228. 4 Claims. (Cl. 301—15.)

1. The combination of a wheel; a demountable rim therefor of the transversely split type; a stop on said wheel adapted to locate said rim thereon; a transversely movable plate adapted to be inserted between said rim and wheel so as to support the former in spaced relation on the latter, said plate being formed to laterally engage said rim to force the same against said stop and also being formed to engage the ends of said rim and draw the same together; and other interengaging means on said wheel and rim-ends, respectively, adapted to draw the latter together.



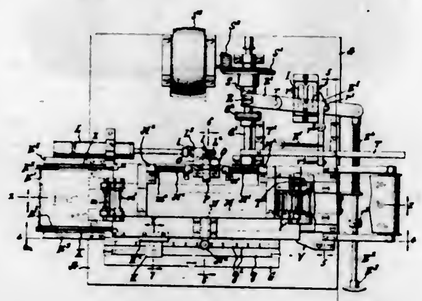
1,422,662. TROUGHING PULLEY FOR BELT CONVEYERS. FRANS IVAR L. BYLGER, Jersey City, N. J. Filed June 3, 1919. Serial No. 301,486. 25 Claims. (Cl. 198—192.

23. A supporting bracket for adjacent belt supporting pulleys, having an inclined web extending between the pulleys and shaped so as to deflect the dust passing from one pulley away from the adjacent pulley.



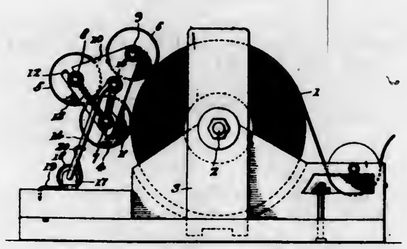
25. In a conveyer belt support, spaced bearings, a shaft mounted therein, a pulley having a tapering hub mounted on said shaft and extending between said bearings, the diameter of the smaller end of the hub being less than the diameter of the bearing adjacent thereto, and the diameter of the larger end of said hub being greater than the diameter of the bearing adjacent thereto.

1,422,663. LOADING AND UNLOADING MEANS AND PORTABLE BODY FOR TRUCKS. ABNER F. CALLISON, Buffalo Creek, Colo. Filed Dec. 24, 1920. Serial No. 432,982. 17 Claims. (Cl. 214—38.)



1. A removable-body truck comprising a vehicle, and a removable body carried thereby, in combination with a track or support for the removable body, and a depressed runway for the vehicle below the track, whereby the body is automatically lifted from the vehicle by the support when the vehicle is progressively moved along the runway.

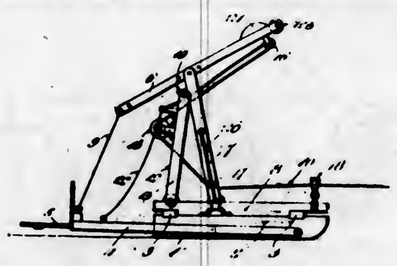
1,422,664. AUTOMATIC SCALE. HUGH CAMERON, Newark, N. J., assignor to Robert D. Kent, Passaic, N. J. Filed Nov. 15, 1919. Serial No. 338,308. 24 Claims. (Cl. 249—1.)



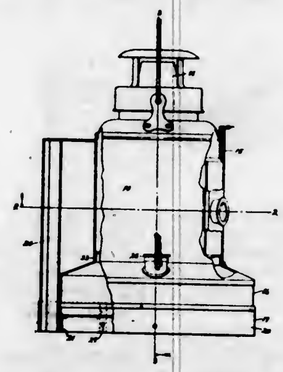
22. A scale comprising a frame, a beam pivoted in the frame, a tray carried by the beam at one side of the pivot, a weight carried by the beam at the opposite side of the pivot, a chute for delivering material to be weighed to the tray, a pivoted valve cooperating with the chute, an arm adapted to pivot with the valve, a lever pivoted to the frame, said lever engaging beneath the beam at the weight side of the beam pivot when the beam is in the inert position, said arm engaging the lever to lock the valve in open position, a spring for withdrawing the lever from engagement with the arm to release the valve, means for adjusting the tension of the spring, means independent of the beam for closing the valve, and a stop for limiting the movement of the valve.

1,422,665. FILM-TESTING MACHINE. GASTON LOUIS CHANIER, Jersey City, N. J., assignor to Pathe Exchange, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 5, 1921. Serial No. 490,054. 34 Claims. (Cl. 95—75.)

33. Apparatus of the character described, comprising an electric light, and an electric circuit therefor, a partition with a light aperture therein, means for passing the negative film and the positive film to be printed in superposed relation past said aperture, and means controlled by said last mentioned means for varying the intensity of the light passing through said aperture, comprising a series of resistance coils included in the electric circuit, and a bridge moving with said films and closing the electric circuit successively through said resistance coils.



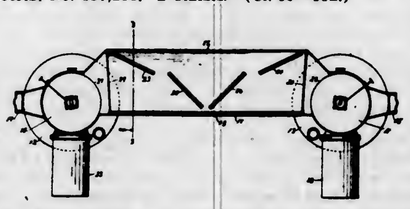
1,422,666. TAPE OR WEB PRINTING MACHINE. OWEN LEE CHENAUTT, Atlanta, Ga. Filed Apr. 18, 1921. Serial No. 462,317. 4 Claims. (Cl. 101—213.)



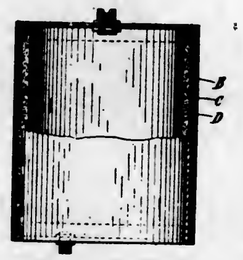
1. In combination, a stand, a paper roll supported in the stand, a bracket affixed to the stand, a drum journaled in the bracket over which the paper web is led from the roll, printing and blotting rollers bearing on the web as it passes over the surface of said drum, an inking roller in contact with said printing roller, and means for supporting and yieldingly urging said printing and blotting rollers against the web, substantially as described.

1,422,667. HAYSTACKER. JOSEPH FRANK CHLADEK, Niobrara, Nebr. Filed Jan. 27, 1921. Serial No. 440,436. 9 Claims. (Cl. 214—131.)

1. A device of the class described comprising a base, a swinging standard mounted thereon, a rocking beam carried by the standard, a load-carrier having connection with said beam, and means for first acting on the latter and moving it approximately through a half circle so that it will assume a predetermined vertical position without affecting a movement of the standard, said means serving then to swing the standard and beam as a unit toward the discharge end of the device.

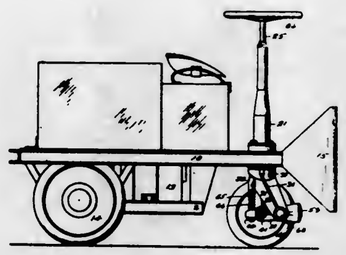


1,422,668. SIGNAL LAMP. CHRISTIAN A. CHRISTOFFERSON, St. Paul, Minn. Filed Sept. 30, 1919. Serial No. 327,487. 5 Claims. (Cl. 240—22.)



1. In a signal lamp, a font comprising a cup having an exterior bead, a composite supporting ring surrounding said cup and comprising inner and outer rings secured together, the outer ring extending above the inner ring, said exterior bead resting upon the top edge of the outer ring and the lower corner of the cup resting upon the top edge of the inner ring.

1,422,669. ILLUMINATED SIGNAL. CHRISTIAN A. CHRISTOFFERSON, St. Paul, Minn. Filed Mar. 31, 1921. Serial No. 457,281. 2 Claims. (Cl. 40—132.)

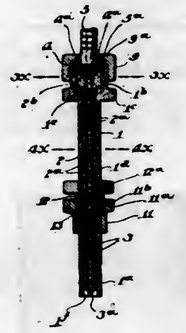


1. A signal comprising, in combination, a casing, a lamp at each end of said casing adapted to illuminate its interior, a signal in the front of said casing out of range of the direct rays from said lamp and comprising a plurality of diaphanous characters, a plurality of reflectors in the casing each arranged to receive the direct rays from one of said lamps and to reflect such rays upon one of the signal characters, and signals separate from said first-named signal, each illuminated by direct rays from one of said lamps.

1,422,670. RECEPTACLE, FLEXIBLE CONDUIT, GAS MASK, AND THE LIKE. CHARLES ANGUS CLEGHORN, Bedfordshire, England, assignor to The Gayner Pneumatic Company, Limited, London, England. Filed Dec. 26, 1918. Serial No. 268,429. 19 Claims. (Cl. 154—46.)

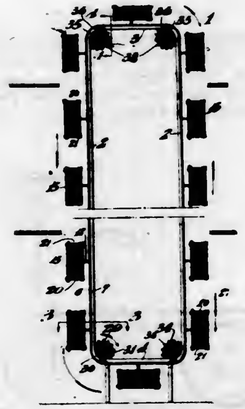
1. A petrol-container made of a substance which as normally employed would be attacked by the petrol but which is coated with Turkish birdlime, to prevent such attack, substantially as described.

1,422,671. SPRING STEERING FORK FOR WHEELED VEHICLES. CLYDE E. COCHRAN, Cleveland, Ohio, assignor to The Elwell-Parker Electric Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 27, 1919. Serial No. 279,516. 8 Claims. (Cl. 280—92.)



2. The combination of a bifurcated member, means for guiding and turning it, a yoke having a pair of arms and a connecting portion, a wheel mounted on an intermediate portion of the yoke between the arms thereof, said yoke arms being pivoted to the bifurcated member on one side of the wheel axis, there being extensions of the yoke on the other side of the wheel axis, pins extending downwardly from the bifurcated member and rigidly carried thereby, and passing freely through the extensions of the yoke and having stops on their lower ends.

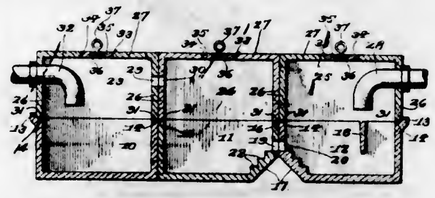
1,422,672. THERMOCOUPLE. THOMAS G. COGHLAN, Wellsburg, W. Va. Filed Mar. 9, 1921. Serial No. 451,025. 8 Claims. (Cl. 171—73.)



1. A thermo-couple comprising different metals forming a union and means comprising an open chamber for

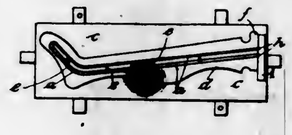
housing said union so as to permit its exposure to heat transfer from gaseous products of combustion and prevent

its ignition of an unexploded fluid adapted for providing such gaseous products.



1,422,673. PARCEL AND PACKAGE ELEVATOR OR CARRIER. JAMES COLLINS, Lancaster, Pa. Filed July 1, 1921. Serial No. 481,806. 9 Claims. (Cl. 198—129.)

1. In a device of the character stated, a lower driving shaft, outer sprocket wheels fast thereon, inner idler sprocket wheels loose on said shaft, an outer endless apron driven by said outer sprocket wheels, an inner endless apron in mesh with said idler sprocket wheels upper sprocket wheels for said aprons, bars secured at intervals to one of said endless aprons, and baskets secured to said bars.



1,422,674. SETTLING AND SEPTIC TANK. EDWARD F. COOK, Freeport, N. Y. Filed Mar. 21, 1922. Serial No. 545,412. 2 Claims. (Cl. 210—6.)

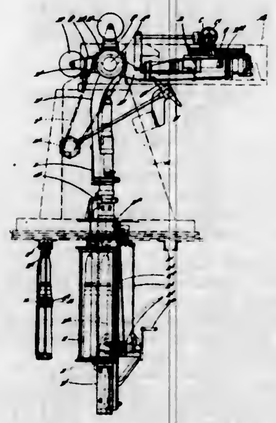
1. A septic tank for sewage comprising a plurality of tanks, a cover for each tank, communication between two adjacent tanks, communication between two other adjacent tanks, through the covers thereof, a baffle in one of the tanks for receiving sewage thereagainst and for breakage thereof, a rising series of solids breaking means leading to the first communication, a descending series of solids breaking means leading from the first com-

munication, means for conveying liquids from the device, and means for leading sewage to the device and discharging same against the said baffle.

1,422,675. MEANS FOR MANUFACTURING CASTINGS FOR SHAPING AND DRYING HOSIERY. ALBERT EDWARD COTTOM, East Brunswick, near Melbourne, Victoria, Australia. Filed Apr. 26, 1921. Serial No. 464,531. 1 Claim. (Cl. 22—124.)

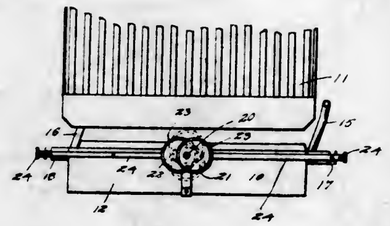
A mould for the purposes specified having a steam passage formed by shaped piping therein, means at the top of the mould providing a pathway transverse to the ends of the pipe, the ends of the pipe being also at the top of the mould and leading into the pathway substantially as described.

1,422,676. DRINKING-GLASS HOLDER. BOLESLAW V. CZARNECKI, Schenectady, N. Y. Filed Mar. 11, 1922. Serial No. 542,967. 2 Claims. (Cl. 248—22.)



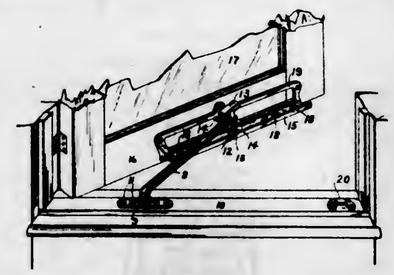
1. A holder for containers of the class described comprising a body portion having means permitting the holder to be secured to a support, a spring finger on said body portion adapted to project into a container and to clamp the wall of the container, said body portion being transversely curved to form a depression in alignment with said finger affording a seat for a portion of the container, the finger clamping the container in said seat, said finger being longitudinally curved so as to engage the container wall over but a limited area.

1,422,677. METHOD OF MANUFACTURING COMPOSITE ARTICLES FOR BEARINGS OR OTHER PURPOSES. ERNEST G. DANN, Cleveland, Ohio, assignor to The Dann Products Company, a Corporation of Ohio. Filed Jan. 9, 1918. Serial No. 211,094. Renewed Nov. 10, 1919. Serial No. 337,111. 8 Claims. (Cl. 64—19.)



1. Method of providing a metal body with a friction reducing surface which consists in forming a plurality of non-communicating under-cut cavities in the surface of the metal body by application of an acid thereto, and filling said cavities with a solid adherent lubricant.

1,422,678. AMMUNITION HOISTING AND LOADING APPARATUS FOR ORDNANCE. ARTHUR TREVOR DAWSON and GEORGE THOMAS BUCKHAM, Westminster, London, England, assignors to Vickers Limited, Westminster, London, England. Filed Oct. 26, 1921. Serial No. 510,654. 40 Claims. (Cl. 89—46.)

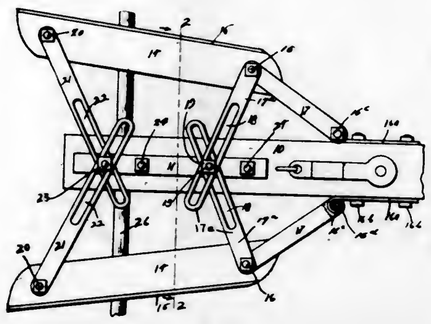


15. In ammunition hoisting and loading apparatus for ordnance, the combination of a lifting tray for raising ammunition to a position contiguous to the breech end of the gun, means for pivoting said tray so that it can move at the side of the gun about an axis transverse to the gun from a substantially vertical receiving position into a transferring position substantially parallel to the axis of the gun, a transversely movable loading tray for conveying ammunition from said lifting tray, when the latter occupies its transferring position, into a loading position in line with the bore of the gun for ramming therein, a withdrawing device on said loading tray for engaging with the ammunition in the lifting tray and withdrawing it therefrom during the movement of said loading tray towards the loading position, a curved plate carried by part of the gun cradle said plate, when the loading tray occupies its loading position, serving to bridge a gap formed in the loading tray for enabling the latter to embrace the ammunition in the lifting tray when the loading tray occupies the receiving position with said withdrawing device in position for withdrawing the ammunition from the lifting tray, means for pivoting said plate about an axis parallel to the axis of the gun, and a spring controlling said plate.

1,422,679. DRAINAGE TANK FOR AUTOMOBILE RADIATORS. WILLIAM H. DAY, Lockport, N. Y. Filed Oct. 1, 1920. Serial No. 414,149. 3 Claims. (Cl. 123—174.)

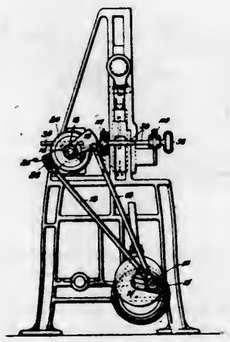
1. In combination with a water circulating means of an internal combustion engine, a drainage tank for the water in said means, said tank having inner and outer sections to provide a heat insulated space around the innermost section, a tube extending through said sections and beyond the outer section, a conduit leading from said means to said tubes, a valve operable in said tube, and means to operate said valve engageable therewith through the outer end of said tube.

1,422,680. STAY FOR CASEMENT WINDOWS. DONALD DONALD, Sydney, New South Wales, Australia. Filed July 14, 1921. Serial No. 484,598. 3 Claims. (Cl. 292—271.)



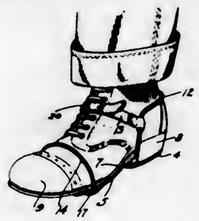
1. An improved stay for casement windows comprising an arm loosely pivoted at one end to a bracket adapted to be secured to the window frame and having at its free end a projecting tongue, a pair of laterally projecting lugs, and an operating handle; a channel-way having a plurality of holes therein and a raised back rail adapted to be secured to the casement window; and a bevelled catch member adapted to be secured to the window frame substantially as and for the purpose herein set out.

1,422,681. ADJUSTABLE REPAIR TONGUE HOUND. FRANK J. DOLTMEIER, Manning, Iowa. Filed July 6, 1920. Serial No. 394,315. 2 Claims. (Cl. 278—43.)



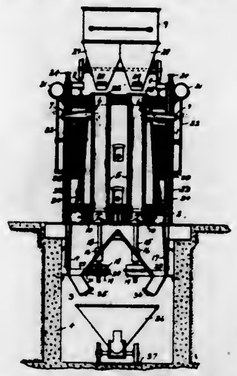
1. The combination of a tongue having flat top and bottom surfaces with bars resting on said top and bottom surfaces and fastened to said tongue, screw-threaded members secured to said plates against rotation, and extending upwardly from the top bar and downwardly from the lower bar, spaced hound members, a pair of links pivoted to the forward end of each hound member,

one member of each pair of links being adjustably mounted on the forward bolt of the upper bar, and the other member of each pair being mounted on the forward bolt of the lower bar, means for fastening said links on said bolts against movement, a pair of links pivoted to the



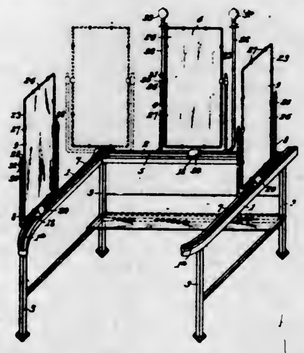
rear end of each hound member, one member of each of said latter pairs of links being adjustably mounted on the rear upper bolt, and the other member of each of said latter pairs being adjustably mounted on the rear lower bolt, and means for securing said rear links rigidly to said rear bolts.

1,422,682. MECHANICAL MOVEMENT. JOHN GUSTAV EKLUND, St. Joseph, Mich., assignor to St. Joseph Iron Works, St. Joseph, Mich. Filed Sept. 30, 1920. Serial No. 413,854. 15 Claims. (Cl. 74—54.)



1. A mechanical movement including a driving shaft, a driven shaft, a pair of ratchet wheels secured to the driven shaft, said ratchet wheels having their teeth extending in opposite directions, a pair of pawls interposed between the ratchet wheels and driving shaft whereby the latter is connected to either ratchet wheel to turn the same, manually operated means mounted on the driven shaft for disconnecting either pawl from its respective ratchet or both pawls from both ratchets, whereby either ratchet may be turned or both ratchets may remain idle and means for adjusting or varying the extent to which either ratchet wheel is turned by each stroke transmitted from the driving shaft.

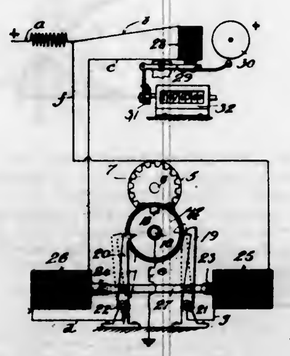
1,422,683. BOOT PROTECTOR. JOHN N. ELTGROTH, Fairmont, Minn. Filed Nov. 12, 1921. Serial No. 514,605. 6 Claims. (Cl. 36—63.)



1. A boot protector having a sole plate provided with a heel-engaging shoulder, a toe bail attached to the sole plate, and a heel bail pivoted to the sole plate.

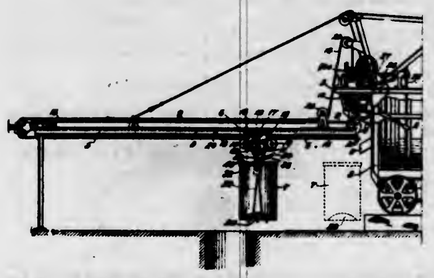
1,422,684. VERTICAL SMELTING FURNACE. FERDINAND FIECHTL, Cherryvale, Kans. Filed Jan. 28, 1921. Serial No. 440,761. 1 Claim. (Cl. 266—19.)

In a smelting furnace, vertical retorts, removable covers therefor, movable bottoms for the retorts, a manual mechanism operatively connected to each bottom through the manipulation of which it may be opened or closed, and means for introducing air under compression into the furnace around the retorts.



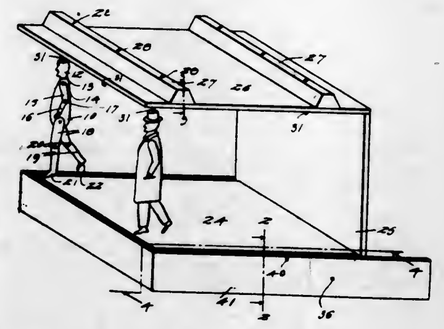
1,422,685. MIRROR STRUCTURE. CHARLES LEE FITCHET, San Francisco, Calif. Filed June 5, 1920. Serial No. 386,727. 9 Claims. (Cl. 45—99.)

1. A mirror structure comprising a frame formed to provide a partial enclosure for the person of the user,



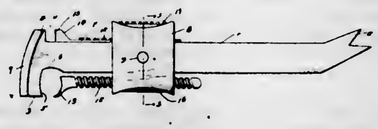
parts of said enclosing frame being shaped to form trackways, carriages movable along said trackways, each carriage having pivotally related trucks providing for free travel thereof throughout its trackway, each carriage embodying a part rotatable on a vertical axis, and a mirror carried by said rotatable part.

1,422,686. FARE-RECORDING APPARATUS. PARIS R. FORMAN, Rahway, N. J., assignor to National Pneumatic Company, New York, N. Y., a Corporation of West Virginia. Filed July 22, 1919. Serial No. 312,532. 14 Claims. (Cl. 235—45.)



4. In a fare registering apparatus, the combination with a registering mechanism, a signal device, and electrically operated means to actuate the same, and contact devices to control the circuit of said signal actuating means, of relatively separable yieldingly connected devices operated by the registering mechanism for controlling said contacts.

1,422,687. APPARATUS FOR CONVEYING AND DELIVERING MATERIAL. DONALD FRASER and SAMUEL SHAFER, Jr., Milwaukee, and CHRISTOPHER W. LEVALLEY, deceased, late of Milwaukee, Wis., by Helen P. Levalley, Milwaukee, Wis., and Wisconsin Trust Company, a Corporation of Milwaukee, Wis., executors, assignors to Chain Belt Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Jan. 6, 1920. Serial No. 349,777. 12 Claims. (Cl. 212—79.)

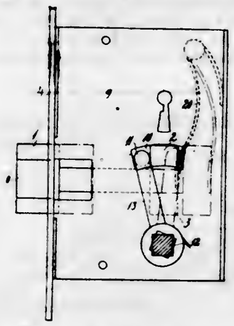


1. The combination of a track, a carriage arranged to traverse the track, a bucket capable of being discharged suspended from the carriage, means for causing the carriage to traverse the track, means for controlling the raising and lowering of the bucket relative to the carriage and means for causing the discharge of the bucket while suspended, at any position within the range of vertical movement of the bucket, over the desired place of deposit, operated by the means that control the raising and lowering thereof.

1,422,688. AMUSEMENT DEVICE. JOSEPH D. FROMAN, Vevay, Ind. Filed Dec. 8, 1920. Serial No. 429,130. 3 Claims. (Cl. 46—40.)

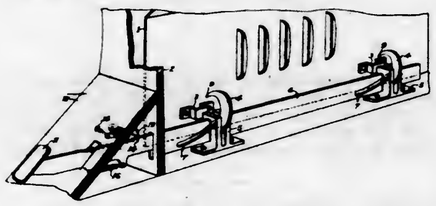
1. A toy consisting of an articulate figure, means to suspend said figure, an inherently rigid platform, means to pivotally mount said platform, and means to bodily rock said platform on its pivot for cooperation with the figure to impart simulative dancing movement thereto.

1,422,689. COMBINATION WRENCH. EVERETT W. FUNK, Columbus, Ohio. Filed July 29, 1921. Serial No. 488,320. 1 Claim. (Cl. 81—100.)



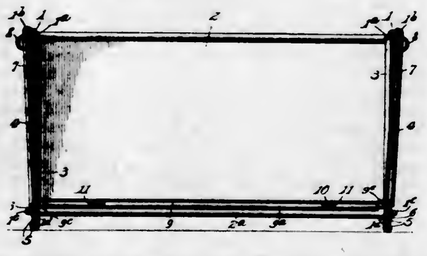
A wrench comprising a shank oppositely arranged stationary jaws formed on said shank and one of said jaws having an arcuate active face, and the other jaw having a straight active face, a housing secured to said shank, stems having feed threads slidably received by the housing and extending parallel with the shank, movable jaws carried by said stems, and one of said jaws having an arcuate active face and the other movable jaw having a straight active face, feed nuts journaled to said housing and engaging the stems for actuating the movable jaws, said housing having cut-away portions to expose the adjusting nuts, said shank having a portion arcuately curved to cooperate with the arcuate active faces of the stationary and movable jaws.

1,422,690. DOOR LOCK. ADOLF GABLENZ, Lubeck, Germany. Filed Dec. 11, 1920. Serial No. 430,036. 4 Claims. (Cl. 70—29.)



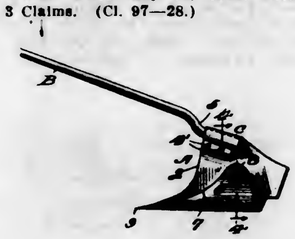
1. A latch bolt having at one end an enlarged head with side flanges with an intermediate beveled face

whereby the bolt may serve either as a right or left hand one, and at the other end a cross bar, guides for said



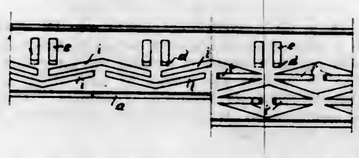
cross bar, a knob spindle, and a lever rigidly mounted thereon and having a removable head permitting the bolt to be removed and reversed.

1,422,691. HOOD FASTENER. HENRY B. GAPE, Detroit, Mich. Filed June 18, 1920. Serial No. 390,011. 4 Claims. (Cl. 292—111.)



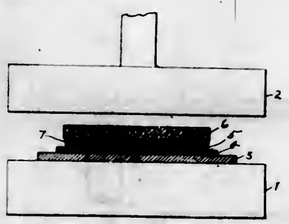
1. A locking device for an automobile hood comprising a bar mounted for longitudinal movement, a bracket guiding the movement of the bar, a hooked cam member pivotally mounted on the bracket with a portion of the cam member engaging a cam surface on the bar, and another portion of the cam member adapted to engage a movable member to hold it in locked position.

1,422,692. COLLAPSIBLE BOX. NATHAN ALLEN GIBBONS, Martins Ferry, Ohio, assignor to Whitaker-Glessner Company, Wheeling, W. Va., a Corporation of West Virginia. Filed July 11, 1921. Serial No. 483,777. 8 Claims. (Cl. 220—6.)



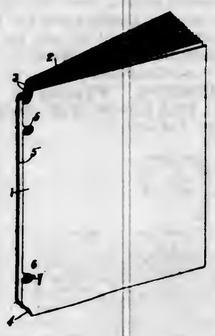
1. A collapsible sheet-metal boy comprising wire frames of substantially rectangular form, side panels having their ends attached to the side members of said frames, end panels depending from the upper horizontal members of said frames and having their lower ends extending below the lower members of said frames to form feet, a bottom having hinge-like connection with the lower portion of one of said side panels, and means formed on the opposite side panel for supporting the free lateral edges of said bottom.

1,422,693. LAWN EDGER. BENJAMIN C. GOCHENOUR, Spokane, Wash. Filed May 31, 1921. Serial No. 473,748. 3 Claims. (Cl. 97—28.)



2. A lawn edger comprising a handle and a blade-member, the blade member having a trough-shaped bottom and upwardly extending side walls, the front edges of the side walls sharpened, one side wall provided at its top edge with a handle receiving socket and at its rear edge with a flat extension in the same plane as the side wall to form a shovel, for the purpose described.

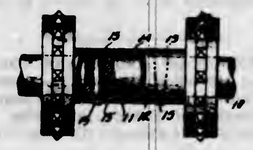
1,422,694. ROLLED IRON BAR. HEINRICH GOCKEL, Neuwied-on-the-Rhine, Germany. Filed Aug. 21, 1919. Serial No. 319,042. 3 Claims. (Cl. 72—109.)



1. An iron bar provided with a body portion slitted upon angular lines with the slits alternately disposed, and overlapped and arranged in rows inclined to the longitudinal axis of the bar.

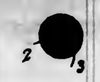
1,422,695. METHOD OF FORMING CELLULOID PRINTING PLATES. FREDERICK C. GOLDENBAUM, Kearny, N. J., assignor to International Printing Plate Company, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 31, 1920. Serial No. 407,280. 6 Claims. (Cl. 18—51.)

1. That method of forming a printing plate which consists in pressing a body of material rendered plastic by heat, between a mold heated to a temperature sufficient to render the material plastic, and a yieldable body of similar material.



1,422,696. SYSTEM OF KEEPING NOTES. CHARLES H. GOODYEAR, Cedar Rapids, Iowa, assignor to Missouri Paper Products Company, St. Joseph, Mo., a Corporation of Missouri. Filed Oct. 29, 1917. Serial No. 198,949. 7 Claims. (Cl. 120—1.)

1. In a device of the class described, the combination, of two sections of paper, each of which is formed of a plurality of sheets of paper folded across the center thereof, a cord extended along the inner surface of the fold of each section and across the edges of both sections at the top and bottom thereof, the ends of said cord being tied together.

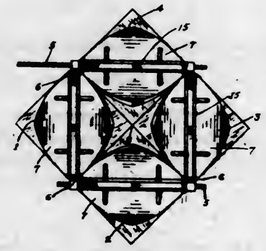


7. In a device of the class described, the combination, with a plurality of units and a plurality of process tabs, each of said units and tabs being composed of a plurality of sheets bound together, and each process tab being associated with a corresponding unit, of a binder in which the units may be permanently bound after they have been detached from their corresponding process tabs, and means for fastening said units in said binder.

1,422,697. WHEEL-SECURING DEVICE. EDWIN B. GRACE, Memphis, Tenn., assignor of one-half to Gordon Erskine, Memphis, Tenn. Original application filed Apr. 24, 1918, Serial No. 230,436. Divided and this application filed Feb. 18, 1921. Serial No. 446,132. 9 Claims. (Cl. 287—52.)

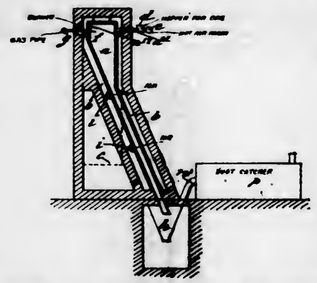
1. A hub having a sprocket at each end and means for attaching the same to a shaft comprising pairs of diametrically opposed openings in the hub one opening of each pair having screw-threads, substantially as set forth.

1,422,698. KINDLING DEVICE. HANS GROSSMANN, Zurich, Switzerland. Filed June 27, 1921. Serial No. 480,831. 6 Claims. (Cl. 44—42.)



1. A match substitute, comprising a pellet having a core and an ignition coating, said core comprising a mixture of a combustible substance and a porous substance capable of leaving a form retaining skeleton after burning.

1,422,699. PROCESS OF PRODUCING PHOSPHORIC ACID. ERNEST W. GUERNSEY and JEW YAM YEE, Washington, D. C. Filed June 28, 1921. Serial No. 481,082. 6 Claims. (Cl. 23—1.)

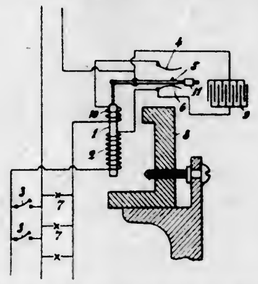


4. The process of making phosphoric acid, comprising forming an intimate mixture of phosphate rock, silicious material and carbonaceous material in such proportions that the molecular ratio of the combined CaO to the silica will be 1 : 1, forming the material so mixed into briquettes, heating the briquettes at a temperature not to exceed incipient clinkering until all the phosphorus has been expelled, forming oxides of the expelled phosphorus and recovering such oxides.

1,422,700. WATER-POWER APPARATUS. JOHN G. HACKING, Detroit, Mich., assignor of one-half to Walter Gudith, Detroit, Mich. Filed Nov. 20, 1920. Serial No. 425,306. 7 Claims. (Cl. 253—136.)

1. The combination with three or more wheels having complementary interfitting buckets rotatable through adjacent paths, of means for directing a moving fluid upon the apices of said buckets.

1,422,701. ROASTING COMPLEX ZINC SULPHIDE ORES OR THE LIKE. FRANK WILLIAM HARBORD, London, England. Filed Feb. 13, 1919. Serial No. 276,807. 7 Claims. (Cl. 75—17.)



1. A process of roasting complex zinc sulphide ores or concentrates or zinc blends which consists in injecting the finely subdivided material by a blast of air against a surface within an externally heated muffle chamber which surface is heated to such a temperature as will partially roast the material at the part to the chamber where the injection occurs and then causing the material to travel within the chamber to complete the desired degree of roasting, substantially as and for the purpose set forth.

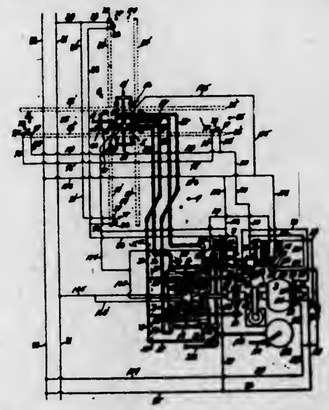
1,422,702. RETARDED ELECTROMAGNETIC SWITCH. ANDREAS MARIUS HASLEV, Randers, Denmark. Filed May 27, 1919. Serial No. 300,194. 1 Claim. (Cl. 200—97.)

In a device of the class described, an operating circuit comprising a relay coil and a stationary contact, a light-

ing circuit comprising a relay coil and a stationary contact, said coils being mounted in alinement and a core movable therein, a counterbalanced lever connected to said core and adapted to engage either contact and close the

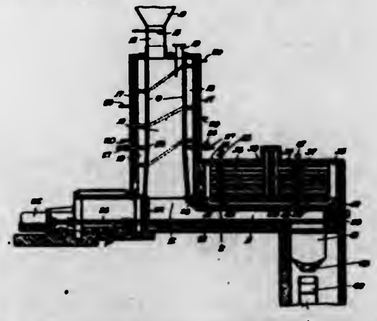
circuit therethrough, and an adjustable permanent magnet mounted below and in alinement with said core and adapted to hold said core in one position under predetermined conditions.

1,422,703. PROCESS FOR THE MANUFACTURE OF CHROMIC OXIDE AND SODIUM SULPHIDE FROM SODIUM CHROMATE. CASIMIR JAMES HEAD, London, England. Filed Jan. 14, 1921. Serial No. 437,158. 1 Claim. (Cl. 23—13.)



A process for the preparation of sulphur free chromic oxide (Cr_2O_3) and sodium sulphide (Na_2S) from sodium chromate (Na_2CrO_4) comprising mixing five parts of carbon (5C) two parts of sulphur (2S) with two parts of sodium chromate ($2Na_2CrO_4$) so as to produce a mixture of correct molecular proportions to produce the desired result, heating the mixture to a dull red heat in a closed chamber until the reaction is completed, treating the residue with water to dissolve the sodium sulphide (Na_2S), separating the insoluble chromic oxide (Cr_2O_3) from the solution, washing, drying, calcining and treating the said chromic oxide (Cr_2O_3) to suitably purify it and prepare it for use substantially as described.

1,422,704. OIL-WELL PACKER. CHARLES M. HEETER, Butler, Pa. Filed Sept. 26, 1918. Serial No. 255,765. 4 Claims. (Cl. 166—10.)

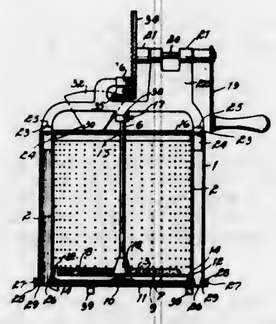


1. A well packer, comprising a casing, a tube telescopically mounted with respect to said casing, a flexible packing member surrounding said tube, flanged means detachably secured to said casing for supporting the lower end of said packing member, said flanged means being disconnected from said tube to permit movement of the tube therethrough, expanding means on said tube for expanding said packing member when the tube is moved through said flanged member into the casing, and a frangible connection between said tube and said casing permitting the tube to be removed without removing the packing member in case the packing should stick, but permitting removal of the packer as a unit in case the parts thereof do not stick, substantially as described.

1,422,705. TELEMOTOR. CHARLES A. HELFER, Los Angeles, Calif. Filed July 29, 1919. Serial No. 314,173. 18 Claims. (Cl. 138—23.)

10. In an appliance of the character described; a pair of power cylinders; pistons in said cylinders; a motor connected to and adapted to move the pistons in said power cylinders; means for starting said motor; a pair of auxiliary cylinders for each power cylinder; by-passes connecting each pair of auxiliary cylinders to their respective power cylinders; pistons in said auxiliary cylinders that are connected with a switch controlling said motor, said pistons arranged in said auxiliary cylinders so that excess pressure in said power cylinders will actuate them to stop said motor; a compound cylinder connected to said power cylinder, said compound cylinder having pistons therein that move coordinately with the pistons in said power cylinders.

1,422,706. METHOD OF AND MEANS FOR DISTILLING COAL. ARTHUR W. HELMHOLTZ, Harrisburg, Ill., assignor to Continuous Process Coke Company, Chicago, Ill., a Corporation of Maine. Filed Sept. 18, 1919. Serial No. 324,565. 13 Claims. (Cl. 202—9.)

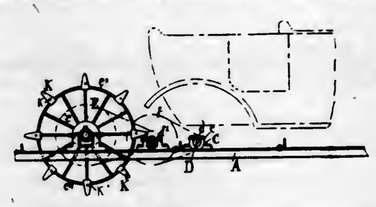


13. The method of distilling coal consisting first in heating the coal in a mass until the mass assumes a

plastic condition, during which time by-products are driven off, then adding oil to the mass to control its volatile content, then heating the mass at a higher temperature for driving off more by-products, and then compressing the mass for forming a firm coke.

1,422,707. POLISHING COMPOUND FOR FINISHING TABLE CUTLERY. GUSTAV F. HEMMING, New Haven, Conn.; Theresa L. Hemming administratrix of said Gustav F. Hemming, deceased. Filed Oct. 21, 1920. Serial No. 418,546. 1 Claim. (Cl. 51—280.)

A polishing compound for use in a tumbling barrel consisting of the waste products resulting from 1st, the glazing of the steel cutlery with fine emery, beeswax, and tallow; and 2nd, the cleansing of the cutlery in a distillate.



1,422,708. POTATO-PEELING MACHINE. HERBERT W. HODGDON and PANSY F. GREEN, St. Louis, Mo. Filed Dec. 5, 1921. Serial No. 519,860. 1 Claim. (Cl. 146—14.)

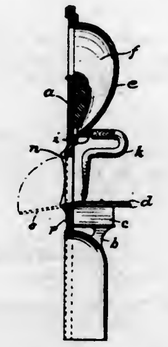
A machine for peeling vegetables; comprising a cutting-cylinder having cutters projecting from its inner surface; a vertical shaft mounted in said cylinder and extending therein axially from a point near the lower end of said cylinder to a point adjacent the upper end thereof; a rotary supporting, peeling and driving disk, carrying cutters which project from its upper surface, and said disk fixed upon said shaft near the lower end of said cylinder; the lower end of said cylinder being open, to permit the discharge thereat of the waste material; means for discharging a supply of water into the upper portion of said cylinder, to wash the peelings from said cutters, and discharge the same at the lower end of said cylinder; driving-means connected to the upper end of said vertical shaft, and located above the said cylinder, supporting-feet fixed to the lower end of said cutting-cylinder, to hold same a distance above the support for said feet, and provide a free passage for the waste water and peelings, between said support and the lower end of said cylinder, and an outer casing supported by said cylinder, and arranged to be detached from the latter, which may be lifted out of said casing, and be used independently thereof.

1,422,709. ATTACHMENT FOR CONVERTING MOTOR-DRIVEN CHASSIS INTO TRACTORS FOR AGRICULTURAL PURPOSES. JAMES HODGSON, Carlisle, England. Filed Mar. 8, 1918. Serial No. 221,280. 3 Claims. (Cl. 180—16.)

1. An attachment for converting a motor driven vehicle having an axle provided with a differential into a tractor for agricultural purposes, comprising an auxiliary frame to fit beneath the vehicle chassis, bearings thereon to receive the rear axle of the vehicle, a centrally placed tractor wheel at the rear of said auxiliary frame upon which said frame is supported, means connected to both ends of the

rear axle of the vehicle for locking the differential and a driving connection from said vehicle axle to said tractor wheel.

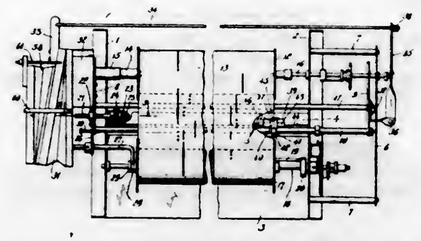
1,422,710. PROCESS OF ANNEALING MALLEABLE CAST IRON. CHARLES T. HOLCROFT, Detroit, Mich. Filed Jan. 20, 1921. Serial No. 438,608. 12 Claims. (Cl. 148—13.)



1. The method of annealing malleable iron castings which consists in exposing the material to temperatures variable in a definite progression, such progression being effective to raise the temperature of the material at a rate proportionate to the thermal conductivity to a predetermined point of reaction, to maintain reaction temperature for a predetermined time, and then to lower the temperature to a point below which rapid cooling will not injuriously affect the material.

1,422,711. PAINT. ALBERT C. HOLZAPFEL, New York, N. Y. Filed Mar. 2, 1922. Serial No. 540,589. 6 Claims. (Cl. 134—51.)

4. The process of deodorizing paints having residual pitch derived from the treatment of oils and fats as a material ingredient which comprises adding from one to five per cent of acetone thereto.

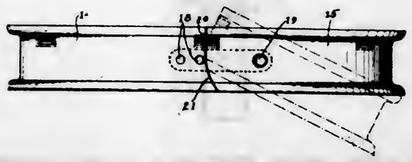


1,422,712. TALKING MACHINE. DELAWARE J. HOOD, Philadelphia, Pa. Filed Apr. 24, 1919. Serial No. 292,430. 1 Claim. (Cl. 274—2.)

A talking machine comprising a vertically disposed hinged support adapted to form a closure for a chamber, a motor casing supported on the rear side of the support, a rotary record table above the casing adapted to rotate

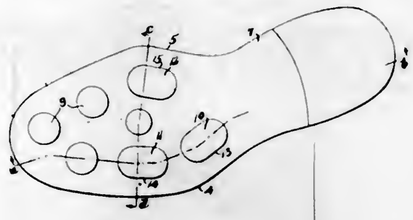
about a vertical axis, an amplifier mounted on the rear side of the support above the table, a sound arm connected to the lower portion of the amplifier and extending downwardly toward the table, a sound box on the lower end of the sound arm, there being an opening through the upper portion of the support communicating with the amplifier, there also being an opening through the support in the plane of the rotary table, the arrangement being such that the support can be swung on its hinges to move all of the parts out of the chamber.

1,422,713. TRACKING DEVICE FOR PLAYER PIANOS. JOSEPH P. HULDER, New York, N. Y., assignor to The Unit Player Action Co., a Corporation of New York. Filed Oct. 19, 1920. Serial No. 417,893. 6 Claims. (Cl. 84—140.)



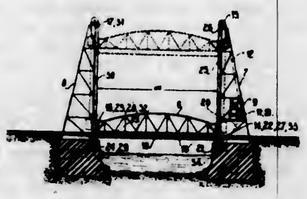
1. In combination a traveling note-sheet, a member having a pair of openings and a connecting groove disposed in the path of travel of an edge of the sheet, one of the openings being partly, and the other opening and the groove being entirely, covered by said edge, and a pneumatic tracking device connected with said openings and governed by lateral displacements of the sheet for automatically correcting such displacements.

1,422,714. JOINTED ARTIFICIAL HAND. PAUL ALFRED INGOLD, Paris, France. Filed Aug. 1, 1921. Serial No. 489,023. 9 Claims. (Cl. 3—12.)



1. An artificial hand comprising a body portion, finger members having their first phalanges integral with said body portion and second phalanges pivoted to said first phalanges.

1,422,715. RIM. OTTO H. JONSKI, Cleveland, Ohio, assignor to The Standard Parts Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 12, 1919. Serial No. 344,443. 4 Claims. (Cl. 301—32.)

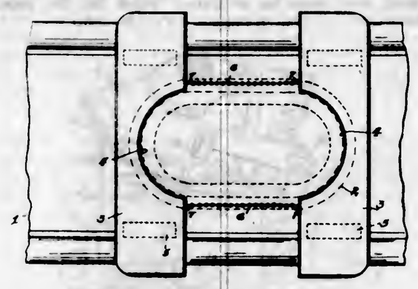


1. In a device of the class described, the combination of a vehicle wheel rim divided transversely at two points to form substantially equal arcuate sections, the lines of division each comprising a straight portion and a curved portion, and hinge plates connecting the adjacent ends of the rim sections whereby said sections are relatively movable about an axis eccentric to said curved portions, one of said hinge plates having a lost motion connection with one of said sections to permit circumferential motion of said end when the sections are moved about their axis.

1,422,716. SHOE SOLE. PAUL JONES, Hanson, Mass., assignor to Commonwealth Shoe & Leather Company, Whitman, Mass., a Corporation of Massachusetts. Filed Oct. 22, 1921. Serial No. 509,533. 1 Claim. (Cl. 36—30.)

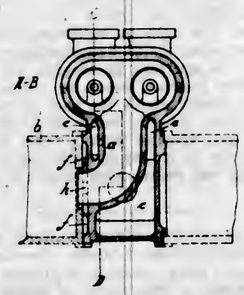
A shoe sole having resilient projections outstanding therefrom and constituting elements of the wear surface thereof, one of such projections being arranged near the inner edge of the sole and another near its outer edge, the latter of said projections being of greater height than the other.

1,422,717. LIFT BRIDGE. PIETER JOOSTING, Utrecht, Netherlands. Filed Mar. 7, 1921. Serial No. 450,165. 5 Claims. (Cl. 14—42.)



1. In a lift bridge, the combination with stationary towers, of a span adapted for vertical travel between said towers, a fixed lifting and lowering machinery, flexible pulling means extending from said machinery over guiding means at the upper part of the tower adjacent to said machinery and thence over guides in the span to a fixed point in the upper part of the other tower, and means adapted to prevent the span from going out of square with the towers.

1,422,718. SUSTAINING MEANS FOR INFANTS' BATHTUBS. CLARENCE C. KEEHN, Canandaigua, N. Y., assignor to The Lisk Manufacturing Company, Ltd., Canandaigua, N. Y., a Corporation of New York. Filed Nov. 4, 1921. Serial No. 512,936. 5 Claims. (Cl. 4—2.)



1. Sustaining means for an infants' bath tub comprising two members having opposed receptacle receiving recesses,

and flexible connections between said members of such lengths as to permit the members to be held in spaced

relation to each other and so constructed as to permit the movement of the members toward each other in their common plane.

1,422,719. AIR-COOLED INTERNAL-COMBUSTION ENGINE. RUDOLF KRONENBERG, Ohligs, Germany. Filed July 27, 1920. Serial No. 399,417. 1 Claim. (Cl. 123—177.)

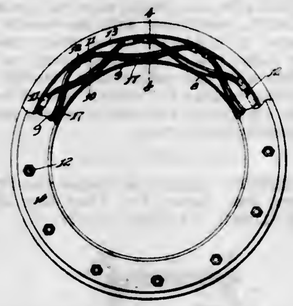
In an internal combustion engine, a valve casing, a cylinder head with a passage connecting the same and an annular cavity surrounding said passage and communicating with the atmosphere adapted for the circulation of atmospheric air therethrough and around the said passage by natural draught, an annular cavity between the said casing and head, and openings communicating with said last-named cavity.

1,422,720. METHOD OF MANUFACTURING INSULATING AND RESISTANT ARTICLES AND PRODUCTS THEREOF. FRANK T. LANEY, Akron, Ohio. Filed Mar. 11, 1921. Serial No. 451,613. 12 Claims. (Cl. 106—23.)

1. A method of manufacturing material of the character described, comprising the steps of treating vegetable fibres with a dilute alkali solution, in the presence of a vulcanisable oil and rubber at a temperature which does not destroy the structure of the fibre, adding a vulcanizing agent and heating until the oil is precipitated within the structure of the fibre and the material is vulcanized.

1,422,721. ELECTRICALLY-HEATED UTENSIL. JOSEPH F. LAMB, New Britain, Conn., assignor to Landers, Frary & Clark, New Britain, Conn., a Corporation of Connecticut. Filed Aug. 18, 1919. Serial No. 318,188. 15 Claims. (Cl. 219—28.)

1. In a utensil provided with a handle and handle stem fitting therein, a threaded member fitting within said handle stem and provided with projections entering notches in said handle stem in order to prevent relative rotation between the parts, and a second threaded member

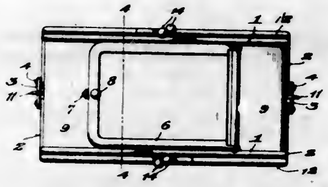


insertable in the outer end of said handle and engageable with said first threaded member.

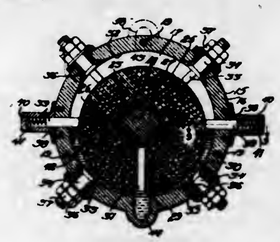
1,422,722. WEFT SUPPLY AND PLACING MECHANISM. CHARLES LEA, Boston, Mass., assignor, by mesne assignments, to Mohawk Carpet Mills, Inc., Amsterdam, N. Y., a Corporation of New York. Original application filed Nov. 2, 1916, Serial No. 120,072. Divided and this application filed Oct. 23, 1919. Serial No. 332,784. 11 Claims. (Cl. 139—40.)

11. In weaving mechanism, a weft needle, a bracket supporting said needle near one end thereof, a guide along which said bracket is longitudinally reciprocable, means for reciprocating said bracket, a pair of rigid laterally projecting jaws carried at the end of said needle opposite said bracket, one fixed, the other movable relatively thereto, and a pair of aligned cams upon said guide to actuate said movable jaw during the reciprocation of said needle-carrying bracket.

1,422,723. AUTOMOBILE TIRE. FREDERICK J. LEISSE, St. Louis, Mo. Filed July 6, 1920. Serial No. 394,054. 4 Claims. (Cl. 152—37.)



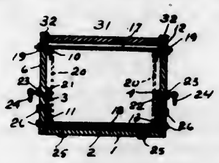
4. A tire of the class described comprising a plurality of leaf springs arranged in pairs of heavy and light tension and in staggered relation, a housing supporting the same, bearing boxes located in the housing in which the ends of the springs are seated, a tread member carried by the periphery of the housing, said tire being so constructed as to be attached to the rim of an ordinary automobile wheel, substantially as specified.



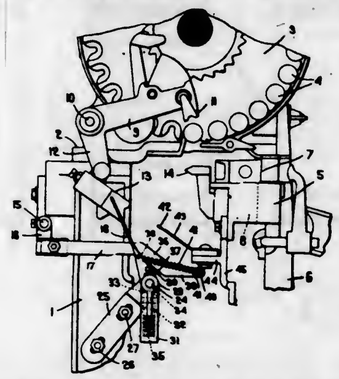
1,422,724. COMBINED PURSE AND VANITY-CASE FRAME. ISIDOR JOSEPH LEVY, New York, N. Y., assignor to Levy & Mersbach, New York, N. Y., a Firm composed of Isidor Joseph Levy and Louis Mersbach. Filed Oct. 10, 1921. Serial No. 506,588. 6 Claims. (Cl. 150—29.)

1. In a combined purse and vanity case frame, a central frame having a vanity case opening and having inverted

and opposed U-shaped sides secured thereto and depending therefrom, a hinged closure for the opening, and corresponding inverted U-shaped members hinged at their free ends to the free ends of the U-shaped sides and cooperating therewith to form mouths for purse bags.

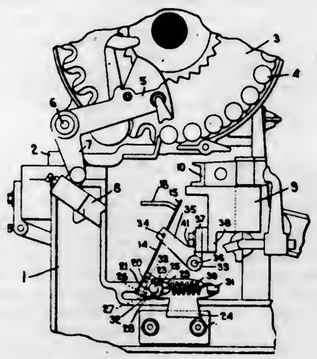


1,422,725. COMBINED SPARK TIMER AND OIL PUMP. JOHN MCCLELLAND, Philadelphia, Pa., assignor of one-half to Dallas B. Wiggins, Philadelphia, Pa. Filed Mar. 8, 1921. Serial No. 450,695. 4 Claims. (Cl. 200—26.)



1. A device of the character described including a casing providing a chamber; a member eccentrically mounted in said chamber and movable with respect to the casing; resiliently pressed members movably mounted in said casing and held in sliding engagement with the eccentric surface of said member to divide the space in the chamber to form a fluid compartment, said casing having an opening communicating with said compartment; electric contact members on said casing; and electric contact means on said member adapted to successively engage said members; substantially as described.

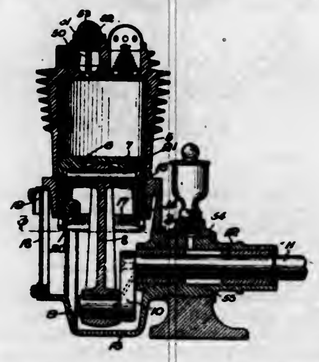
1,422,726. COFFIN. GEORGE M. MAHAR and PHILIP M. M. PHELPS, Fair Haven, Vt. Filed May 20, 1921. Serial No. 471,041. 3 Claims. (Cl. 27—7.)



1. In a coffin the combination of a bottom slab of stone, end slabs of stone having their lower edges resting on the ends of the bottom slab, side slabs of stone enclosing between them the bottom slab and the end slabs, upper and lower cross rods holding the side slabs against the end and bottom slabs, supporting strips intermediate the ends having their centre portions secured to the upper face of the bottom slab and having their end portions upwardly extending and secured to the inner faces of the side slabs, and longitudinal rods extending along the side slabs and provided at their ends with means for holding the end slabs against movement either inward or outward.

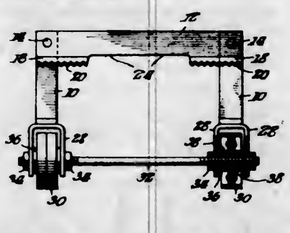
1,422,727. FILLING-END CLEARER FOR FILLING-REPLENISHING LOOMS. ALFRED E. STAFFORD, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Feb. 24, 1920. Serial No. 360,803. 8 Claims. (Cl. 139—85.)

1. In an automatic filling replenishing loom comprising a lay having an opening therethrough to permit the discharge of an abandoned filling carrier, and transferring mechanism, a filling end clearer pivotally mounted to oscillate below the path of reciprocation of the lay, means for positioning the filling end clearer adjacent the rear wall of the aperture in the lay as the lay approaches transfer position, means for causing the clearer to sweep transversely across the path of the abandoned filling carrier after transfer, before the shuttle is picked, after having been supplied with a fresh filling carrier, and means carried by the lay for removing the filling end from the filling end clearer upon backward movement of the lay.



1,422,728. FILLING-END-WITHDRAWING MEANS FOR WEFT-REPLENISHING LOOMS. EDWARD S. STIMPSON, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Oct. 14, 1920. Serial No. 416,810. 5 Claims. (Cl. 139—85.)

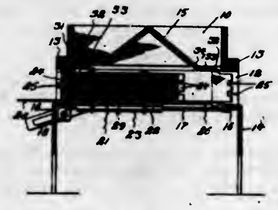
1. In a filling replenishing loom comprising a frame, a lay provided at its end with a shuttle box having an aperture therethrough to permit the discharge of an abandoned filling carrier, hooked teeth projecting downwardly from the forward wall of said aperture and pointing toward the adjacent end of the lay; a toothed filling end catcher pivotally mounted upon said frame, positioned below and closely adjacent to the path of the bottom of said lay end and behind the path of the discharging



filling carrier during replenishment, acting as the lay recedes to engage and bend the filling end abruptly around the toothed under edge of the lay end, and a filling end clearer yieldably mounted on said lay below said filling end catcher adapted to cross the path of the discharging filling carrier upon the beat-up of the lay, and upon rearward movement thereof to engage said filling end and produce a bight thereof around said filling end catcher at the time the shuttle is picked next succeeding transfer.

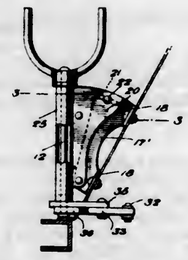
1,422,729. PISTON. HAROLD D. WATERHOUSE, Quincy, Mass., assignor to Bay State Pump Company, Boston, Mass., a Corporation of Massachusetts. Filed Feb. 3, 1919. Serial No. 274,637. 3 Claims. (Cl. 74—108.)

1. In a piston for air compressors, the combination of two separate and distinct packing means, one of said packing means comprising a continuous metallic piston ring having inwardly tapering edges, mechanical expansion means acting positively to expand said continuous piston ring, the other of said packing means comprising a resiliently expansible split piston ring.



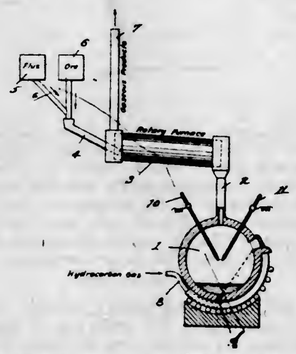
1,422,730. PORTABLE TRUCK. MONTRAVILLE M. WOOD, Berwyn, Ill. Filed Apr. 25, 1921. Serial No. 464,362. 3 Claims. (Cl. 280—61.)

1. In a device of the class described two small angle members, a truck wheel supporting each, a bar connecting the angle members having an angularly turned serrated edge for application to a trunk edge, for the purposes set forth.



1,422,731. POTATO CUTTER. HARVEY L. BEUCLER, Lake Park, Minn. Filed Oct. 4, 1921. Serial No. 505,275. 2 Claims. (Cl. 146—7.)

1. A device of the character described comprising a frame open at its top, bottom and both ends, supports secured to the ends of the frame, a hopper mounted upon the top of and discharging into said frame, a plurality of intersecting blades within the open ends of the frame and constituting dies, a carriage mounted for reciprocatory movement within the frame and including a block having its ends grooved for accommodation of the die blades, means for reciprocating said carriage, tubular members

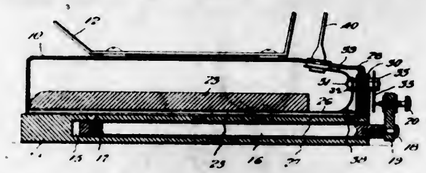


secured upon the underside of the carriage, and guide rods secured beneath the frame and passing through said tubular members.

1,422,732. MOVABLE HEADLIGHT. H. DIXON BOUGHTER, Decatur, Ill. Filed Feb. 19, 1921. Serial No. 446,357. 3 Claims. (Cl. 240—62.)

1. Dirigible headlights for motor vehicles comprising lamp supporting standards, a connection between the lamps whereby the latter are simultaneously rotated, a bracket for each lamp, said bracket including a wing shaped member fixed to the adjacent fender of the vehicle, a second wing-like member relatively adjustable to the first mentioned member, means for holding the adjustable member fixed in a given position, the latter mentioned member being formed to provide a bearing arranged along the outer side thereof and in which the adjacent lamp standard is mounted for partial rotation, and means whereby said standards are turned incident to the steering of the vehicle for the purpose specified.

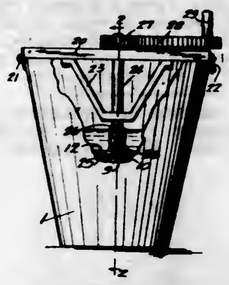
1,422,733. METHOD OF PRODUCING IRON AND STEEL. WALTER E. F. BRADLEY, New York, N. Y. Filed July 17, 1918. Serial No. 245,368. 11 Claims. (Cl. 204—63.)



5. The method of reducing ores of iron which comprises passing finely divided ore and flux continuously

through a rotary drum furnace and into an electric furnace, fusing the mass in the electric furnace and simultaneously passing a reducing gas in opposite direction into the electric furnace, through the fused charge of ore and flux therein and through the rotary drum furnace.

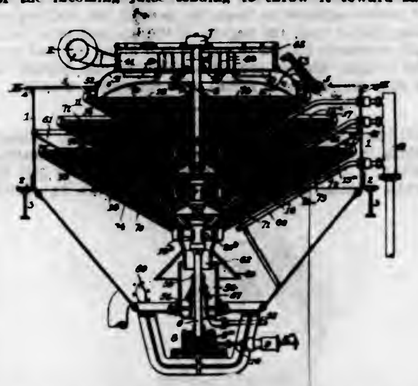
1,422,734. METALLURGICAL PROCESS. WALTER E. F. BRADLEY, Nyack, N. Y. Filed Sept. 4, 1918, Serial No. 252,587. Renewed Dec. 5, 1921. Serial No. 520,157. 8 Claims. (Cl. 75—4.)



1. A metallurgical process, comprising reducing ores by a hydrocarbon gas, and introducing into the reduced molten charge an addition of metal oxide with free carbon.

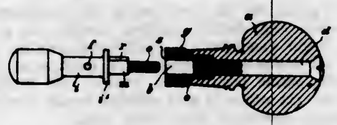
1,422,735. AUTOMATIC MEANS FOR CONTROLLING ELECTRICALLY-HEATED DEVICES. ALBERT FRANKLIN BROWN, Los Angeles, and LAWRENCE BURROUGHS BURCK, Pasadena, Calif. Filed Jan. 16, 1918. Serial No. 212,091. 1 Claim. (Cl. 219—25.)

The combination with a body to be maintained at a substantially uniform temperature, of an expansion bar mounted therein, an adjustable contact element carried by the bar, and a resilient contact element with reference to which the adjustable contact element is movable upon the expansion and contraction of the bar, the contacts maintaining the circuit during the expansion and contraction of the bar to a given degree and breaking the circuit upon further expansion.



1,422,736. ORE SEPARATOR. EARL R. BROWN, Redlands, Calif. Filed Mar. 24, 1921. Serial No. 455,004. 3 Claims. (Cl. 83—87.)

1. An ore separator comprising a fluid receptacle, an ore receptacle mounted therein and having an opening in its base to said fluid receptacle, means for creating a whirling motion of the fluid within said ore receptacle, means for supplying ore to the periphery of the base of said ore receptacle, and a spiral riffle upon the base of said ore receptacle forming a spiral passageway for said ore leading to said opening in the ore receptacle.



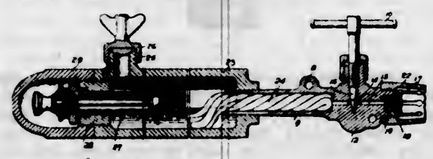
1,422,737. STRAINER FOR SUGAR JUICES. MARTIN E. CARTER, Philadelphia, Pa. Filed Feb. 7, 1919. Serial No. 275,522. 5 Claims. (Cl. 210—63.)

1. In a strainer for sugar juices and the like, the combination of a casing; a vertical shaft therein; a funnel-shaped straining screen carried by said shaft, means for introducing juice to said screen, a depending flange extending within the upper zone of said screen, a dedector for the incoming juice tending to throw it toward said

flange and into the upper portion of the screen, means for rotating the screen, and separate outlets leading from the bottom of the casing for the discharge of juice and the material strained therefrom.

1,422,738. TENSIONING PEG FOR STRINGED INSTRUMENTS. KARL CARPARI, Frankfort-on-the-Main-Ginnheim, Germany. Filed Aug. 29, 1921. Serial No. 496,750. 2 Claims. (Cl. 84—304.)

1. An improved tensioning peg for stringed instruments comprising in combination an externally screw threaded stem, and a peg, a head on said peg, an internally threaded pin in said peg head connecting said peg head with said externally threaded stem, a cylindrical projection on said peg head, having a groove in the inner boring, a feather on said stem engaging with said groove, a peg box and a bearing member in said peg box supported by said cylindrical projection.

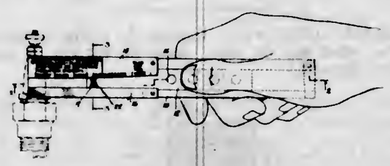


1,422,739. BRUSH. JORGEN E. CHLESO, San Francisco, Calif. Filed Nov. 4, 1921. Serial No. 512,887. 2 Claims. (Cl. 15—173.)

1. In a device of the character described, a handle provided with an annular shoulder adjacent one end thereof, a ferrule fitted on the end of the handle and engaging said shoulder, the inner walls of said ferrule be-

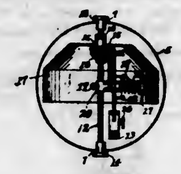
ing inclined outwardly from the handle, a casing within the ferrule, said casing comprising complementary semicircular sections, one of which is provided with angular extensions and the other with notches to receive said extensions, and an apertured cross strip connecting the sections, bristles set in the casing, and fastening means passing through the aperture of the cross strip and embedded in the handle for drawing the casing against the inclined wall of the ferrule.

1,422,740. GASOLINE SOLDERING IRON. WILLIAM COHEN, Bayonne, N. J. Filed Jan. 14, 1921. Serial No. 437,242. 1 Claim. (Cl. 158—27.)



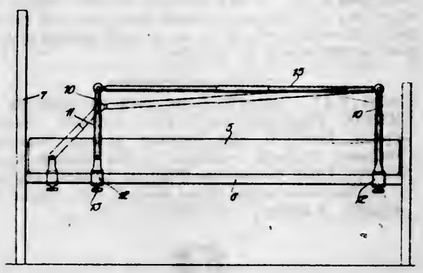
In a soldering iron a soldering head, a burner for heating said head, a frame carrying said head and mounted on said burner, a liquid fuel tank for supplying fuel to said burner, said tank having an open rear end, a sleeve having a continuous external thread and an internally threaded neck portion arranged in said open rear end, a hollow cap having a rounded end and threaded on said sleeve so as to cover the same and enclose part of the sleeve, the outer surface of the cap being flush with that of the container and said cap acting as a continuation or end piece to the container, and an air pump threaded into the neck of said sleeve with the discharge end extending into the container, and the manually operated end normally projecting into said cap and housed thereby.

1,422,741. GREASE RETAINER. SHADE B. COLLIER, Orlando, Fla. Filed July 20, 1921. Serial No. 486,200. 3 Claims. (Cl. 64—21.)



3. The combination with an axle and a housing therefor, of a sleeve fitting the axle, said sleeve being spirally slit, the metal adjacent the slits being turned outwardly to provide a flanged channel, and a strip of flexible material in the channel engageable with the housing.

1,422,742. TESTER. WILLIAM PEDRICK COOK, Laramie, Wyo. Filed Mar. 8, 1921. Serial No. 450,611. 4 Claims. (Cl. 175—183.)



1. A tester including a pair of metallic members spaced one from the other, one of said members presenting an inclined longitudinal edge adapted to co-operate with the second of said members, and means for moving said second member with respect to said first named member.

1,422,743. GRADOMETER. DANIEL P. CORCORAN, Gridley, Calif. Filed Sept. 4, 1920. Serial No. 408,162. 2 Claims. (Cl. 33—215.)

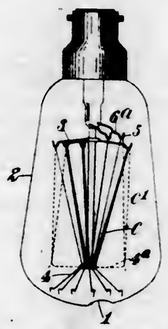
1. A gradometer including a casing provided with an apertured covering plate and adapted to be secured to a vehicle, a vertical shaft mounted within said casing, means associated with said shaft and adapted to rotate thereon, said means including a gear wheel, a master wheel and a calibrated conical indicator, a balance wheel comprising a gear portion and a quadrant member, said gear portion meshing with the gear wheel mounted on said shaft and imparting rotary movement thereto, means adapted to support said balance wheel on said vertical shaft, said means including a clamping element and an integrally formed horisontal shaft, a tension element encircling said shaft, and an index adjacent the aperture of the covering plate of said casing and adapted to cooperate with the calibrated conical indicator to register the grade of the road bed along which said vehicle is traveling.

1,422,744. BED ATTACHMENT. FRANK CORTESE, New Brunswick, N. J. Filed Nov. 8, 1921. Serial No. 513,778. 1 Claim. (Cl. 5—41.)

A bed attachment including clamping members, socket members associated with said clamping members, certain of said socket members being pivotally attached to said clamping members, shafts adapted to have their ends extending into said socket members, and interconnected rods having their ends pivotally associated with said shafts.

1,422,745. ATTACHMENT FOR SPINNING MACHINES. ARTHUR J. COTE and ADRIAN COTE, Franklin, Mass. Filed Apr. 19, 1921. Serial No. 462,637. 2 Claims. (Cl. 117—32.)

1. An attachment of the class described comprising a pair of jaw members between which the roving is adapted

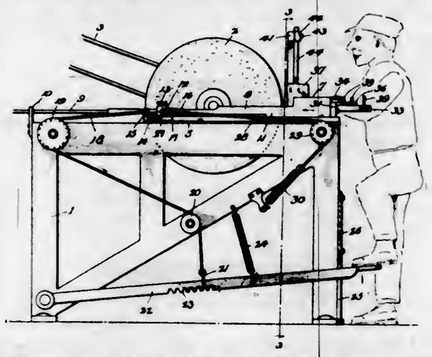


to pass, a movable member having a hook-shaped thread engaging part thereon for holding the said member in inoperative position as long as the thread is unbroken but acting under the action of gravity, when the thread breaks, to close the jaws upon the thread, and an anti-friction member arranged in the hook part for engaging the thread.

1,422,746. KEYWAY LOCATOR. KIBBEY W. COUSE, New York, N. Y. Filed Sept. 8, 1920. Serial No. 408,897. 7 Claims. (Cl. 33—185.)

1. A keyway locator, including a pair of calipers each comprising a pair of legs pivotally secured together adjacent one of their ends, means connecting and permitting a universal swinging of one of said calipers with respect to the second of the same.

1,422,747. RENEWAL OF THE FILAMENTS IN METAL FILAMENT ELECTRIC LAMPS. SYDNEY COXON, Liverpool, and WILLIAM ALBERT WILLIAMS, Wallasey, England, assignors to The Aladdin Renew Electric Lamp Corporation Limited, London, England, a British Corporation. Filed Sept. 2, 1920. Serial No. 407,755. 5 Claims. (Cl. 176—7.)



1. The process of renewing the metallic filament upon the permanent supports within an electric incandescent lamp without removing them from the bulb, comprising making an opening in the bulb, winding the new filament directly round the upper permanent scaffold wires and the roots of the lower permanent frail scaffold wires, setting the filament, then moving the depending loops of the filament from the roots to the outer ends of the lower scaffold wires.

1,422,748. HAND-BAG CATCH. BERNARD P. CULLEN and MATTHEW J. WOCHNA, Jersey City, N. J. Filed Apr. 29, 1920. Serial No. 377,664. 4 Claims. (Cl. 292—86.)

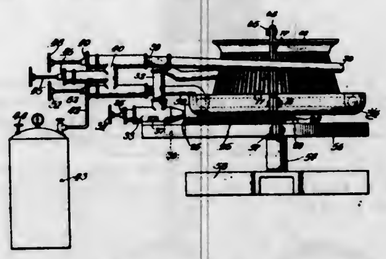
1. The combination with a hand bag, including a pair of coacting separable frame jaws, of a headed spring catch carried by one jaw, the other jaw having an irregular shaped opening therein, the walls of said opening being engageable with the catch to depress the same and permit its entrance therebetween, said catch adapted to interlock with the walls of said opening after its entrance therebetween, means concealing said catch when the jaws are closed, and one of said frames having an opening therein permitting the introduction of a tool for releasing said catch.

1,422,749. WORK HOLDER. ADOLPHUS DAMERON, Cleveland, Ohio. Filed Dec. 30, 1920. Serial No. 434,165. 6 Claims. (Cl. 51—240.)

1. The combination with a supporting frame, and a grinding member mounted thereon, of a carrier movable longitudinally of the frame in a plane parallel with the grinding member, a work-holder secured to said carrier, a foot lever, a yielding coupling fitted to the carrier, a flexible connection between the said coupling and the foot lever, means for holding the lever normally raised, and means acting upon the carrier in opposition to the foot lever.

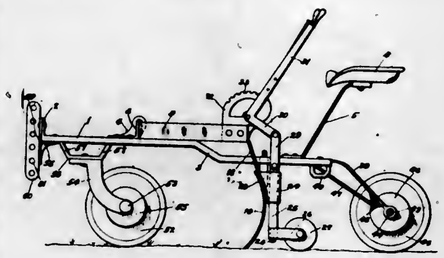
1,422,750. LOCK NUT. HARMON L. DAVIS, Greenville, Pa. Filed Mar. 31, 1921. Serial No. 457,415. 1 Claim. (Cl. 151—25.)

A lock nut comprising a body having a bolt opening and provided in one wall of the opening with a recess



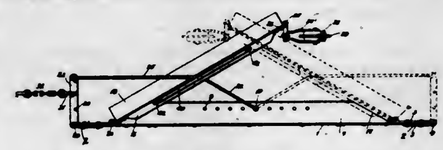
extending substantially tangential thereto, the recess opening through one face of the nut and terminating short of the opposite face thereof and being closed at the front and the back of the nut, one wall of the recess remote from the bolt opening being straight, the opposite wall of the recess for a portion of its length being located in a plane divergent to the plane of the first mentioned wall, a resilient locking element seated within the recess and comprising a shank resting against the first mentioned wall of the recess and provided near its end with a bend forming a locking tooth resiliently held against the second mentioned wall of the recess and with its engaging end projecting into the bolt opening whereby to engage and bite into the threads of the bolt upon which the nut is threaded, the last mentioned wall of the recess having a notch formed therein to receive a key for engagement with the tooth of the locking element for the purpose of springing the tooth to inactive position when the key is rotated, the front side of the nut being provided with an opening communicating with the recess and the said notch and adapted to receive the said key, and a plug closing the other end of the recess and engaging the adjacent end of the shank of the locking element.

1,422,751. MOTOR-DRIVEN SLED. FRED W. DENBROOK, Fond du Lac, Wis. Filed Apr. 18, 1921. Serial No. 462,103. 5 Claims. (Cl. 180—8.)



1. A device of the class described comprising a support, a plurality of rearwardly and downwardly inclined surface engaging steppers pivotally mounted on said support, a supporting member on which said steppers rest and by which they are guided, and means for elevating said member to move the same in a circular manner to cause the steppers to assume a forwardly and downwardly inclined position, whereby to drive the support in a reverse direction.

1,422,752. HYDROCARBON BURNER. FOREST V. DETWILER, Pottstown, Pa. Filed Nov. 24, 1919. Serial No. 340,105. 12 Claims. (Cl. 158—71.)



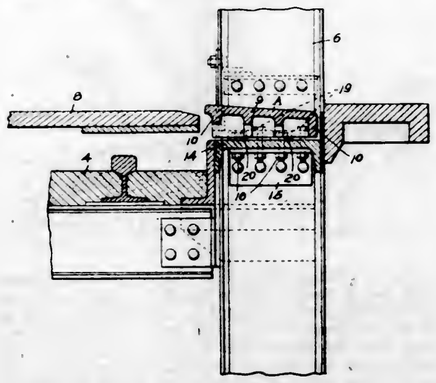
12. A hydrocarbon burner embodying a burner chamber, said chamber embodying top and bottom portions separate from each other, one of said portions encompassing the other portion and being spaced therefrom, each of said portions being of sectional construction, abutting flanges on the proximate edges of the respective sections, fastening devices passing through the flanges, there being burner openings through the outermost portion, a vaporizing pipe encompassing the chamber, means whereby vapor from the pipe may be delivered into the said chamber, a sectional flame deflector removably seated upon and encompassing the top of the said chamber and projecting beyond the wall thereof, and means for clamping the deflector to the top of the chamber.

1,422,753. GRADING MACHINE. HENRY L. DEVER, Owensboro, Ky. Filed Dec. 9, 1920. Serial No. 429,405. 4 Claims. (Cl. 37—49.)

1. In a grading machine, the combination of a main frame bar, a blade pivotally connected with the bar, an arcuate locking frame having a flat web slidably resting on the bar in advance of the blade and an upstanding web rising from the convex edge of the flat web, hangers depending from the ends of said frame and secured to the blade, a latch mounted on the bar to engage the flat web of said frame and secure it in a set position, and a guiding socket secured upon the bar in advance of said frame and having an overhanging portion engaging over the upper edge of the upstanding web of said frame.

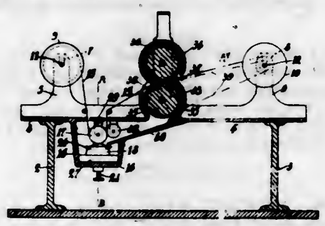
1,422,754. GRADER. HENRY L. DEVER, Owensboro, Ky. Filed Jan. 7, 1921. Serial No. 435,704. 3 Claims. (Cl. 37—5.)

2. In a grader, the combination of a landside, a blade, means for detachably connecting either end of the blade to the corresponding end of the landside, a draft bar pivotally fitted to the blade at the center thereof, and a brace bar pivoted at its rear end to the landside and having its front end pivotally engaged upon the draft bar.



1,422,755. VEHICLE SPRING. HERMANN B. DIPWORTH, Saginaw, Mich. Filed Mar. 21, 1921. Serial No. 454,021. 2 Claims. (Cl. 267—47.)

1. A vehicle spring comprising the combination with a vehicle axle and frame, of a plurality of spaced superposed leaves of progressively increasing length, the lower or shorter leaves being secured upon the axle and the uppermost leaf being provided at its ends with knuckles adapted for connection with hangers associated with the vehicle frame, hangers pivotally connected with the ends of all the leaves and extending upwardly, bolts extending



through the upper portions of the respective hangers and engaging against the upper sides of the leaves next above, and a roller journaled intermediate the ends of each hanger and engaging against the underside of the leaves next above.

1,422,756. APRON FOR COKE-OVEN DOORS. LEMAN E. DOTY, Elyria, Ohio, and FRANKLIN H. SMITH, Brentwood Borough, Pa. Filed Feb. 7, 1921. Serial No. 442,988. 3 Claims. (Cl. 214—23.)

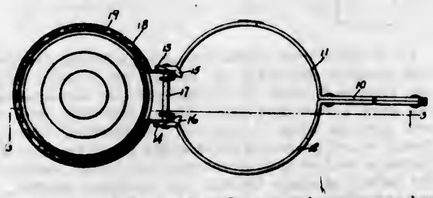
1. The combination with a coke oven having an exit doorway, and buckstays along the sides of said doorway, of a coke guide adapted to travel along the front of said oven and to clear said buckstays, a supporting member secured to said buckstays, and an apron plate mounted on said supporting member between said buckstays adapted to bridge the space between said oven and said coke guide, and bolts passing through elongated slots in said apron plate and said supporting member for securing said apron plate in position.

1,422,757. APPARATUS FOR INKING RIBBONS FOR TYPEWRITERS OF ANY MAKE. OTTO FRANKENBACH, Vienna, Austria. Filed June 23, 1920. Serial No. 391,195. 7 Claims. (Cl. 91—18.)

1. An inking apparatus of the kind described, comprising in combination a suitable base plate, a plate supported horizontally on said base, a depending trough on said plate, a rotatable drum journaled in said trough, a hollow yielding cushion below said drum and cooperating with the same, discharge openings in the top of said cushion, said cushion being filled with ink, means for regulating the discharge of ink from said cushion, and means for continuously moving a ribbon to be inked between said drum and cushion, substantially as set forth.

1,422,758. ATTACHMENT FOR NECKSCARFS. MORRIS GOLDBERG, Brooklyn, N. Y. Filed Nov. 6, 1918. Serial No. 261,381. 2 Claims. (Cl. 2—83.)

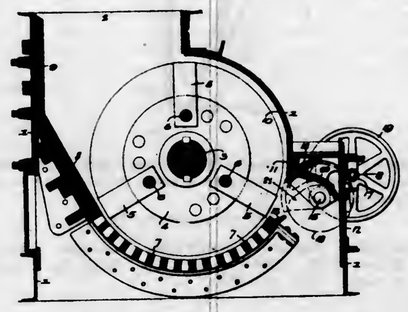
1. In combination, a tie folded upon itself and knotted to provide a knot and a loop extending from one side of the knot, a tape having one end secured to the loop and means



including a removable member secured to the knot for detachable connection with the opposite end of the tape.

1,422,759. PUMP. HENRY M. GREEN, Los Angeles, Calif. Filed Aug. 31, 1921. Serial No. 497,340. 12 Claims. (Cl. 103—225.)

1. A pump including a working barrel and having a reciprocating plunger, and packing within and adapted to be forced from one end of said plunger against said barrel by the weight of the pumped fluid above said plunger.

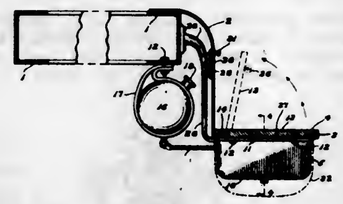


1,422,760. WRENCH. BENJAMIN W. HANLE, Roselle Park, N. J. Filed Dec. 22, 1921. Serial No. 524,218. 6 Claims. (Cl. 81—3.1.)

1. As a new article of manufacture, a jar-cap wrench of the class described, comprising a handle having a pair of

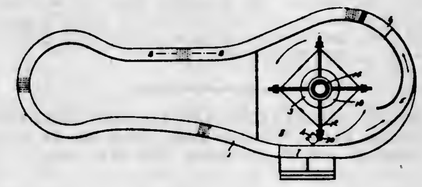
curved jaws, the ends of which are spaced apart, a rod joining the ends of said jaws, a one-piece cap band having its ends slidably mounted on the rod, and cam members attached to the ends of the handle jaws and co-operating with the ends of the cap band to move them inward along the rod to decrease the diameter of the cap band to grip the jar cap.

1,422,761. HAMMER CRUSHER. WILLIAM H. HARTMAN, Philadelphia, Pa., assignor to Pennsylvania Crusher Company, New York, N. Y., a Corporation of New York. Filed Nov. 10, 1920. Serial No. 423,164. 7 Claims. (Cl. 83—11.)



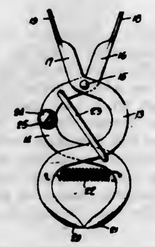
1. The combination in a hammer crusher of a cage having inlet and outlet openings; a series of rotary hammers in the cage; and a rotatably adjustable valve mounted adjacent the outlet opening, said valve including a circumferential face adjustable into position to form a portion of the cage wall when the outlet opening is closed, and also including a portion extending from said face inwardly toward the axis of rotation of the valve to constitute a deflecting plate when the outlet opening is open.

1,422,762. CASING SWAGE. FLOYD H. HATFIELD, Rawlins, Wyo. Filed Jan. 12, 1921. Serial No. 436,763. 8 Claims. (Cl. 153—80.5.)



2. A swage comprising a sleeve having a lower portion apertured at its side and tapered to a point, and a mandrel movable longitudinally in the sleeve and through the apertured tapered portion thereof.

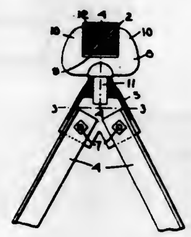
1,422,763. WASHBASIN FOR AUTOMOBILES. WILLIAM H. HOLLIS, Germantown, Pa., assignor of one-half to Dr. Vivian Pinnock-Bailey, Philadelphia, Pa. Filed Nov. 8, 1921. Serial No. 513,730. 5 Claims. (Cl. 280—164.)



1. The combination with the running board and chassis of an automobile of a lavatory basin, a cover for said lavatory basin adapted to seat in flush with the surface of said running board, means for supplying water to said lavatory basin, and means associated with the running board apron whereby said reservoir may be replenished.

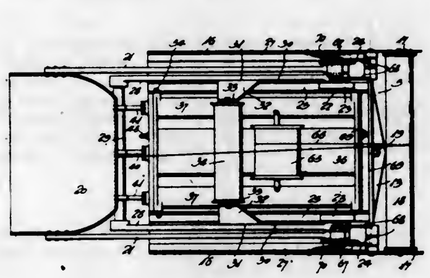
1,422,764. AMUSEMENT RIDE. JACOB IASCH, New York, N. Y. Filed Dec. 8, 1921. Serial No. 521,029. 8 Claims. (Cl. 104—53.)

1. An amusement ride of the character described comprising a track, a rotatable power member, a carriage, a coupler for connecting the carriage with the rotatable power member whereby the power member will move the carriage in a circle, guiding means arranged adjacent the power member for guiding the carriage to the track when released from the power member and manually actuated means for releasing said coupler.



1,422,765. BATTERY GRIP. CARL EBEN JOHNSON, Chanute, Kans. Filed June 1, 1921. Serial No. 474,240. 1 Claim. (Cl. 173—273.)

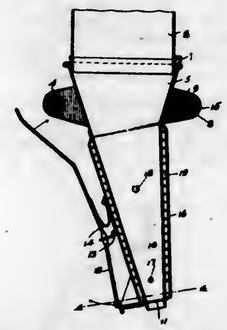
A battery grip, comprising S-shaped jaw members pivoted near their upper ends, handles integral with the jaw members and extending above the pivot point, flattened sharpened ends formed on the lower extremities of the jaw members in alinement with one another so that they abut, a spring connected to the jaw members and extend-



ing between them to normally retain the ends of the jaw members in engagement with one another, screw attaching means mounted on one of the jaw members, and a guide for controlling the movements of the jaw members associated with them.

1,422,766. SEESAW. THOMAS E. JORDAN, Malden, Mass., assignor to Oliver Whyte Co. Inc., Boston, Mass., a Corporation of Massachusetts. Filed June 12, 1920. Serial No. 388,619. 4 Claims. (Cl. 46—22.)

3. In a see-saw, the combination with a stand, of a fulcrum member having a shank or stem swiveled in the stand and provided with a fulcrum edge, and two arms extending upwardly at each end thereof, and a channel-iron beam member received between said arms and fulcrumed on said fulcrum edge.



1,422,767. EXCAVATING AND LOADING MACHINE. ERNEST KEAST, Negaunee, Mich. Filed Jan. 24, 1921. Serial No. 439,569. 9 Claims. (Cl. 214—134.)

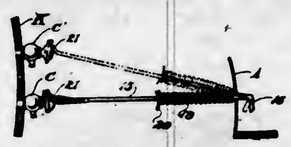
1. In a structure of the character described, a truck, a carriage mounted upon said truck for transverse swinging movement, an arm extension at one end of said carriage intermediate its width, actuating means movable longitudinally of said truck and positioned adjacent the sides thereof, guides carried by said truck, cables connected with said arm and engaging certain of said guides and slidably engaging said actuating means and secured to said truck, and a cable engaging other of said guides and having its end portions connected with said actuating means at the opposite ends thereof from said first mentioned cables.

1,422,768. DISPENSING DEVICE. EARL KENT and GLENN KENT, Tacoma, Wash. Filed May 3, 1921. Serial No. 466,472. 2 Claims. (Cl. 221—11.)

2. A dispensing device, including a nozzle, a funnel merging into the upper end of said nozzle, a heating jacket enclosing said nozzle, a gate valve, a lever pivotally secured to said nozzle and having one of its ends attached to said valve, handles secured at diametrically opposite

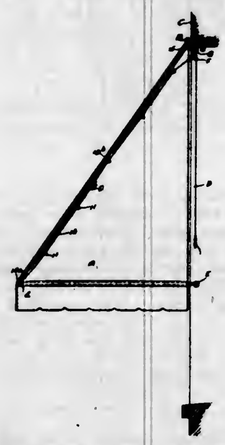
points to the outer face of said funnel, said lever having one of its ends extending to a point in proximity to one of said handles.

1,422,769. BANJO STRUCTURE. CALVERT PARKER, Keene, N. H. Filed Oct. 30, 1920. Serial No. 420,669. 5 Claims. (Cl. 84—271.)



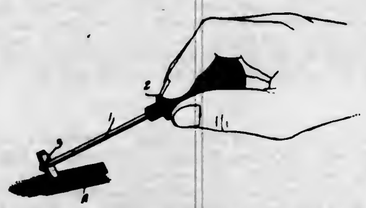
1. A banjo comprising a rim, a neck, a dowel post extending from the neck across the rim, a skin head disposed across one face of the rim, a sounding board built into the rim and completely closing the space beneath the skin head, said sounding board lying between the dowel post and the skin head and an adjustable tone regulating device located between the dowel post and the sounding board to control the vioration of the sounding board.

1,422,770. CORNER BRACE. WALTER ROBERT KROPF, San Francisco, Calif., assignor of one-half to Adolph Gustave Siebert, San Francisco, Calif. Filed May 31, 1921. Serial No. 473,986. 3 Claims. (Cl. 45—48.)



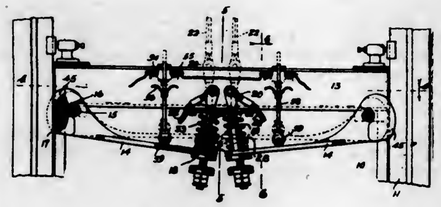
2. A corner brace for furniture produced from a metal sheet cut longitudinally and bent both longitudinally and transversely to form a tongue, and transverse bracing strips, two of the strips extending in opposite directions from one another at right angles to the tongue and with their flat surfaces in the same vertical plane, a third strip extending lengthwise of the two first-named strips and with its flat surface in a plane intersecting the plane of the said two first-named strips, said tongue member having prongs on its forward edge and spurs struck up from its sides and adapted to be embedded in a corner post of a furniture structure, said two first-named strips having their respective ends bent outwardly and adapted to be attached to frame members of the furniture structure.

1,422,771. GAUGE-COCK-OPERATING TOOL. SHERMAN T. KUNKEL, Los Angeles, Calif. Filed Dec. 3, 1921. Serial No. 519,670. 1 Claim. (Cl. 137—139.)



In combination, a magneto casing having gauge cocks arranged one above the other, a running board apron having an opening in horizontal alinement with one of the gauge cocks, and an operating tool movably sustained in the opening to be alternately applied to the cocks for actuating the latter, and means for urging the tool inwardly toward said cocks.

1,422,772. ATTACHMENT FOR AWNINGS. JOHN AMBROSE LENHOFF, Hockessin, Del. Filed Aug. 17, 1921. Serial No. 493,165. 6 Claims. (Cl. 156—15.)

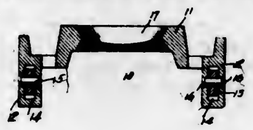


6. An attachment for awnings consisting of a flexible strip separate from the awning material and having means to secure it to the awning at separate points to rise and fall with the raising and lowering of the awning, and be free from the awning material between said securing points, said strip having means to secure it independently of the awning to the structure on which the awning is supported, said strip furthermore having eyelets offset therefrom through which a hoisting and lowering cord of the awning may pass.

1,422,773. VIGNETTING TOOL. WILLIAM J. MCCARTHY, Rochelle Park, N. J. Filed Dec. 13, 1921. Serial No. 522,171. 3 Claims. (Cl. 81—3.)

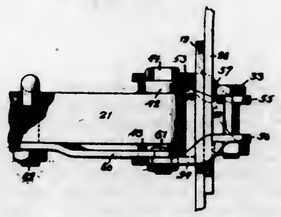
1. A vignette tool which comprises a rod having a hand portion at one end and a plate fastened to the other end, said plate disposed substantially transversely to the rod, serrations formed on the upper and lower edges of the plate, said serrations disposed transversely of the edges.

1,422,774. SAFETY DEVICE FOR ELEVATORS. HARRY MCGILLIVRAY, New York, N. Y. Filed Mar. 22, 1921. Serial No. 454,330. 5 Claims. (Cl. 187—87.)



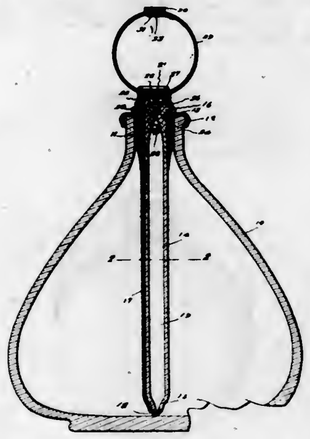
3. In a safety device for elevators, the combination with an elevator car and counterweights therefor movable between vertical guide rails in the elevator shaft, of means for frictionally locking the car and counterweights within the shaft in event of breaking of the cables, comprising levers pivoted respectively to the car and counterweight, each of said levers including cammed heads, a spring adapted to coact therewith for rocking the lever to a position to effect frictional engagement of the cammed head with the guide rail, a cable connection between each set of car and counterweight levers for holding the levers normally inactive to retain the cammed heads out of engagement with the guide rails, and means interposed between the lever and the car or counterweight structure constituting the abutments for limiting the compression of the springs whereby the carrying load is carried by said means.

1,422,775. TOY. LEON MARTOCCI-PISCULLI, New York, N. Y. Filed Mar. 9, 1921. Serial No. 450,990. 2 Claims. (Cl. 46—41.)



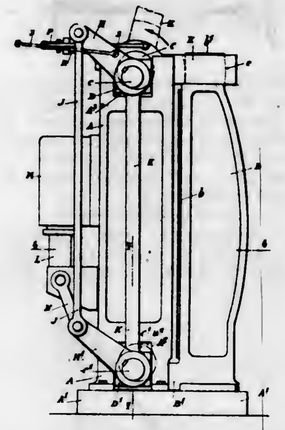
1. A toy, including a body, a dial fixedly secured to said body, a magnetic needle rotatably mounted with respect to said dial, a handle having a bifurcated end, said handle being attached to said body.

1,422,776. FLEXIBLE METALLIC STRUCTURE. HYACINTH MAXENCHS, New York, N. Y. Filed June 4, 1921. Serial No. 475,131. 3 Claims. (Cl. 59—80.)



1. A flexible metallic structure comprising a plurality of individual members of substantially U-shape in cross section, said U-shaped members having longitudinal channels in the legs thereof, and means of connection extending through said channels.

1,422,777. BUMPER BRACKET. RICHARD T. NEWTON, New York, N. Y. Filed Mar. 17, 1922. Serial No. 544,462. 12 Claims. (Cl. 293—55.)



4. In bumper supporting means, a pair of members adapted to straddle a support, and apertured to freely receive a bumper attaching element, together with means for clamping said members on the support and for cramping them into engagement with said attaching element.

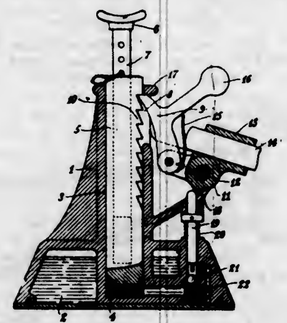
1,422,778. ATOMIZER. EDWARD CHARLES PETCHER, St. Louis, Mo. Filed Apr. 26, 1921. Serial No. 464,617. 5 Claims. (Cl. 128—177.)

1. An atomizer comprising a container, a combined chamber and atomizer tube normally positioned within the container and adapted to be removed therefrom for use, said tube having an air channel, a compressible bulb carried by the tube and communicating with said container through the air channel and a valve controlled air escape port for said tube.

1,422,779. PLATE-BENDING PRESS. JEAN ALBERT PERONY, St.-Ouen, France, assignor to Societe D'Outillage Mecanique et D'Usinage D'Artillerie, St.-Ouen, Seine, France, a Limited Joint-Stock Company of France. Filed July 21, 1920. Serial No. 398,019. 2 Claims. (Cl. 153—48.)

1. A plate bending press comprising a fixed abutment block provided with a recessed guide portion, an angularly formed press head having one side shaped to provide a bending tool and the other side formed to provide a flange engaging in the recessed guide portion of said abutment block, and means adapted to impart parallel reciprocating motion to the press head with respect to the abutment block, said means including a tie rod operatively connected with said press head and axles journaled in the abutment block and extending through said tie rod and the flange of said press head respectively.

1,422,780. ANTISLAP SPRING FOR PISTON RINGS. HENRY C. PHELPS and JOHN C. FOX, Glendale, Calif. Filed June 20, 1921. Serial No. 478,970. 2 Claims. (Cl. 74—109.)

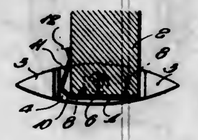


1. A piston ring expander comprising a strip of resilient material alternately transversely slitted from its side edges and longitudinally slotted both ways from the transverse slits, and the ends of the lips thus formed being turned outwardly, the uncut ends of one set of lips being nearly in transverse alinement with the uncut ends of the adjacent lips at the opposite side.

1,422,781. LIFTING JACK. ARCHIBALD DOUGLAS POWELL, Braintree, England. Filed Oct. 26, 1920. Serial No. 419,597. 10 Claims. (Cl. 254—95.)

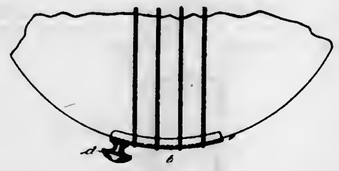
1. A lifting jack, comprising a base formed for containing fluid and with a spindle housing, a spindle slidable in the housing formed with ratchet teeth and provided with a crutch at the upper end, the base being formed with

a passage from the fluid container to the spindle housing, a valve mounted in the passage and closing it to a



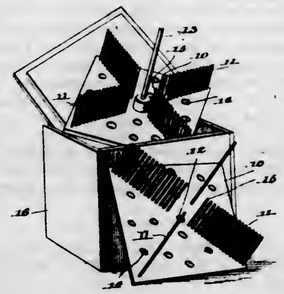
reverse flow, and means for elevating the spindle, said means also being adapted to operate the valve to permit a reverse flow of fluid.

1,422,782. GARMENT HANGER. CARRIE S. RATTAN, San Francisco, Calif. Filed Sept. 6, 1921. Serial No. 498,756. 1 Claim. (Cl. 211—13.)



In a garment hanger, a supporting hook having a depending shank, a curved supporting bar mounted on said shank, laterally sliding hooks supported by said curved support, a second curved supporting bar suspended below said first mentioned curved supporting bar, said second curved supporting bar being of a length equal to the first mentioned supporting bar, slots formed in said second mentioned supporting bar, end pieces adapted to be slidably held on said second mentioned supporting bar, cross-pieces extending therethrough and adapted to pass through said slots, and means carried at the outer ends of said end pieces for retaining a garment thereon.

1,422,783. DOORCHECK. ALEX REEVES, Atlanta, Ga. Filed July 21, 1921. Serial No. 486,555. 8 Claims. (Cl. 292—216.)



1. The combination with a rotatable door engaging and holding block having a door receiving recess providing opposed shoulders, of a spring member adapted to be connected with the lower corner portion of a door and extend from the side of the door to engage and turn the block into position to receive the door in the recess with the spring member engaging one shoulder and holding the door in engagement with the other shoulder to prevent rattling of the door against the holder.

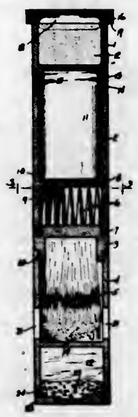
1,422,784. RIBBON ATTACHMENT FOR STRINGED INSTRUMENTS. JOHANNES RICHTER, Niederlossnitz, near Dresden, Germany. Filed Mar. 10, 1920. Serial No. 364,868. 1 Claim. (Cl. 84—301.)

A device whereby a mandolin or a similar stringed instrument may be held in position by a cord consisting of a piece of metal slightly curved to conform to the lower end of the instrument of right angular cross section and comprising two arms of different widths, said piece having its edge at the angle rounded off, an eye at one end of the arm which bears upon the lower end of the instrument and a grooved knob secured in said eye so that it stands outside the range of the strings, both ends of the cord being held by the groove of said knob.

1,422,785. FILM HOLDER. JOSÉ E. RODRIGUEZ SERRA, Ponce, Porto Rico. Filed Jan. 16, 1920. Serial No. 351,748. 3 Claims. (Cl. 242—77.)

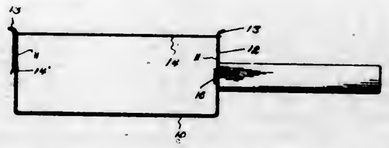
3. A holder comprising a plurality of film racks, each including an apertured base member and relatively spaced groups of spaced bars secured to and disposed vertically relatively thereto, a central post secured to the base members of one of the racks and adapted to extend through an aperture in the base member of the other rack so as to maintain the racks in a superposed and detachable relation.

1,422,786. SHEARS. GEORGE L. ROGERS, Philadelphia, Pa., assignor to Henry Disston & Sons, Incorporated, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 11, 1921. Serial No. 468,510. 2 Claims. (Cl. 30—11.)



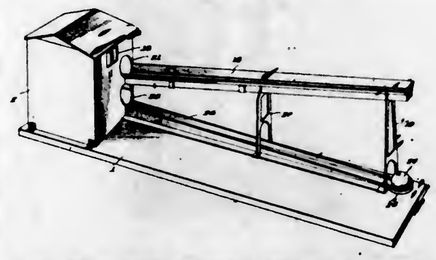
2. The combination of a bolt on which two parts are mounted, said bolt having a screw threaded portion adapted to the threads in one of said parts, said bolt having a longitudinal keyway therein; a washer mounted on the

bolt and having a key adapted to the keyway; means adjustably connecting the washer with one of the parts;



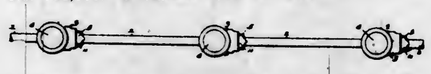
and means, on the bolt, for holding the washer to said part so that the part, which is not rigidly connected to the bolt, can turn freely on the bolt.

1,422,787. COMBINATION FACE BRUSH. ARTHUR E. ROPS, Brooklyn, N. Y. Filed Dec. 31, 1921. Serial No. 526,088. 2 Claims. (Cl. 132—81.)



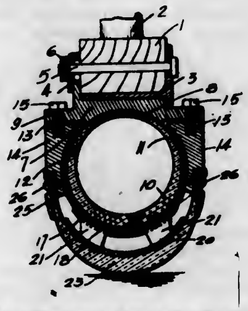
1. As a new article of manufacture, a combination face brush comprising a body having a brush at one side and massage devices at the other side, covers having screw-threaded engagement with the body and covering the brush and the massage device respectively, one of said covers having a receptacle at one end, a member having screw-threaded engagement with the other of said covers and adapted to support a shaving stick, said last-mentioned member also constituting a receptacle, removable closures for said receptacles, a powder puff secured to one of said covers, and a sponge to the other of said closures.

1,422,788. COMB CLEANER. CLARENCE RUNYAN, Aurora, Ind. Filed Aug. 30, 1921. Serial No. 496,856. 1 Claim. (Cl. 132—29.)



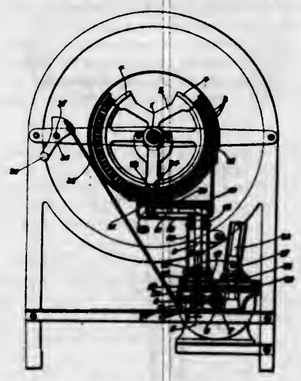
A comb cleaner comprising a substantially U-shaped frame, fingers projecting from the upper edge of the parallel end walls of said frame, one end wall having notches in its opposed side edges, a thread passed about said fingers in a manner to provide spaced parallel strands extended across the open end of the frame, with the terminals of said thread in said notches, the opposite end wall of the frame having parallel slots, a handle formed from a single piece of material, said handle being of substantially U-shaped formation in cross section, bendable tongues projecting from the opposed sides of the handle and adapted to be passed through said slots and subsequently bent against the adjacent end wall for holding said handle and frame fixed relatively.

1,422,789. TOY. ARTHUR C. SCHLOTH and HERMAN E. SCHLOTH, Lynn, Mass. Filed June 7, 1921. Serial No. 475,805. 2 Claims. (Cl. 46—57.)



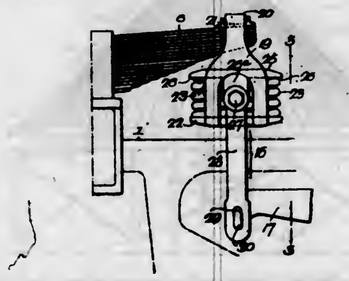
1. A toy or game, as herein described, comprising a housing having a sight opening, a shaft journaled in the housing, a numerically marked cylinder on the shaft, said shaft having radially disposed blades projecting therebelow in the path of contact with a spherical member, a downwardly inclined chute for directing the spherical member against the blades, and an oppositely directed trough receiving the spherical member after its contact with the blades for returning the same outward of the housing to a position below the elevated end of the chute.

1,422,790. CHAIN. JOSEPH FULLMER SCHOTT, Philadelphia, Pa., assignor to Link-Belt Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 17, 1919. Serial No. 331,301. 5 Claims. (Cl. 74—32.)



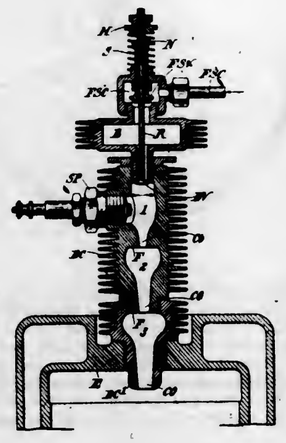
1. The combination in a single bar chain, of a series of bars, each bar having a large head at one end and a small head at the opposite end, the heads being integral with the bars; and block and socket couplings connecting the bars, each block having a recess for the small head of a bar and each socket having a recess for the large head of a bar, one of said parts having a space between the two recesses to allow for the longitudinal movement of the bar and to allow a head to turn in the recess when it is desired to detach a bar.

1,422,791. METAL-SHEATHED PNEUMATIC TIRE FOR VEHICLES. GEORGE F. SCHRIBER, Long Beach, Calif. Filed June 2, 1921. Serial No. 474,385. 1 Claim. (Cl. 152—10.)



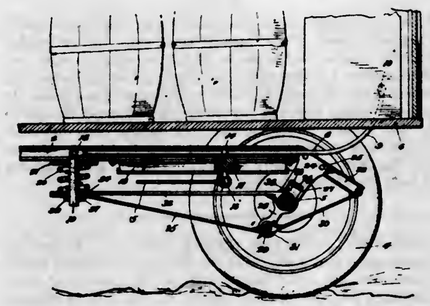
A pneumatic tire comprising a rim block adapted to be mounted upon a wheel and having an annular groove in its peripheral face to form a seat for an inner tube, the sides of the rim block extending outwardly from the annular groove, an inner tube covered with a liner and fitting in the annular groove, a metallic sheathing around the inner tube against the liner and extending outwardly and fitting the peripheral faces of the rim block at the sides of the groove, said metallic sheathing having peripheral openings at its tread portion, said sheathing being offset outwardly around the openings, circumferential sectional protecting plates fitting against the liner within the sheathing and covering the openings, circumferential sectional tread plates having lugs extending radially inwardly through the openings in the sheathing and impinging against the protecting plates, annular side plates fitting against the sides of the sheathing and bolted to the rim block, and a tire tread fitting against the tread plates and having side edges removably secured to the side plates.

1,422,792. GEARING. AUGUST E. SCHUETTE, Red Bud, Ill., assignor to Central Manufacturing Company, St. Louis, Mo., a Corporation of Delaware. Filed Jan. 17, 1921. Serial No. 437,932. 2 Claims. (Cl. 74—50.)



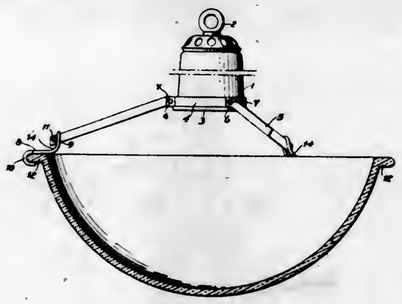
1. The combination with a gear wheel to be driven, a shaft, gearing for rotating said shaft, an arm pivoted on said shaft for swinging movements, and gearing on said arm driven from said shaft for driving said gear wheel, of a casing enclosing said gear for rotating said shaft, a removable cover for said casing, a casing enclosing said gear wheel and the gearing for driving the same from said shaft, a journal bearing for said shaft in connection with said second casing, and a sleeve connecting said removable cover and said journal bearing and enclosing said shaft.

1,422,793. EQUALIZING GEAR FOR LOCOMOTIVES. ELLWOOD M. SHANNON, Bala, Pa., assignor to The Baldwin Locomotive Works, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 8, 1922. Serial No. 542,057. 5 Claims. (Cl. 105—82.)



1. The combination in an equalizing gear for locomotives, of a series of springs and levers; links connecting the ends of the levers with the ends of the springs, each connecting link being made in two parts pivotally connected; and two coiled springs between the parts of each link.

1,422,794. IGNITION DEVICE FOR INTERNAL-COMBUSTION ENGINES. FREDERICK ARTHUR SMITH, Brasted, England. Filed Jan. 19, 1920. Serial No. 352,425. 10 Claims. (Cl. 123—143.)



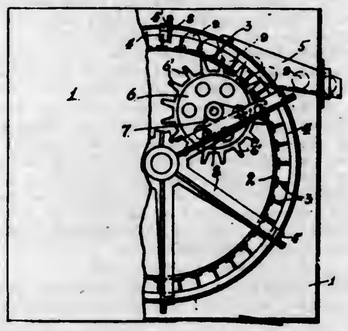
1. An automatic charge-accumulating and regulating device for internal combustion engines, comprising a box, a fuel supply conduit leading thereto, a delivery conduit leading therefrom to the engine cylinder, said delivery conduit comprising a plurality of communicating chambers having baffles therebetween, a delivery valve in said delivery conduit adapted to be opened and shut by variations in pressure in the engine cylinder, and controlling means in the fuel supply conduit preventing the entry of as much fluid to the box as is evacuated therefrom while the delivery valve is open, substantially as described.

1,422,795. AUXILIARY PROPELLING MEANS FOR MOTOR VEHICLES. FRANK B. SNYDER, South Altoona, Pa. Filed Oct. 14, 1920. Serial No. 416,945. 3 Claims. (Cl. 280—124.)

1. In a vehicle, a chassis frame, an axle, a body movable up and down with relation to the frame and axle, a lever supporting the body, means yieldably resisting movement of the lever, and a variable fulcrum for the lever.

1,422,796. LIGHTING-ACCESSORY SUSPENSION. WILLIAM H. SPENCER, New York, N. Y., assignor to I. P. Frink Inc., New York, N. Y., a Corporation of New York. Filed July 9, 1921. Serial No. 483,559. 1 Claim. (Cl. 240—115.)

A suspension device for a lighting accessory comprising a central support having arms hinged thereto at their inner ends at an inclined angle, suspension links at the outer end of the arms said links having their outer ends adapted to clamp the flanged edge of the accessory and being provided at their inner ends with upwardly curving loops sliding freely on the arms, and limiting pins fixed on said arms for preventing the links from sliding off the ends of the arms.

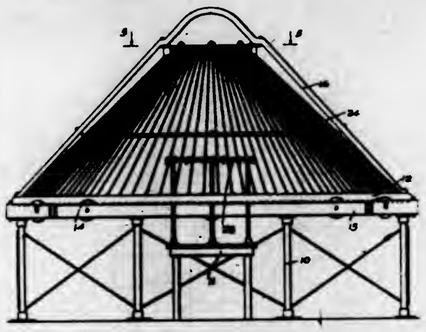


1,422,797. COLLAPSIBLE CRATE. ENOS ELI SUTHERLAND, Los Angeles, Calif. Filed Mar. 31, 1921. Serial No. 457,162. 2 Claims. (Cl. 217—48.)

1. A collapsible receptacle comprising four side walls having loop hinge connections at their ends and extending angularly across the corners of the receptacle, end closure members for the receptacle having two opposite corners cut away so that the solid corners may pass inside of two loop hinges and the cut away corners pass the other two loop hinges, and strips pivoted to the ends intermediate of their corners and adapted to swing into positions under the last two hinges and cover the cut away corners and hold the closures in place.

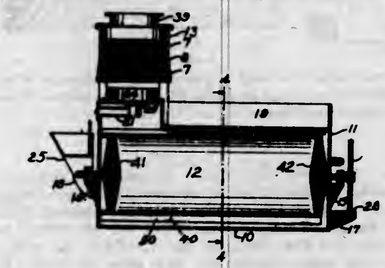
1,422,798. CAN-DISCHARGE DEVICE. ALBERT R. THOMPSON, San Jose, Calif., assignor to Anderson-Barngrover Mfg. Co., San Jose, Calif., a Corporation of California. Filed Apr. 3, 1920. Serial No. 370,937. 4 Claims. (Cl. 198—211.)

1. In apparatus of the character specified; a casing; a spiral canway therein; and a rotatable reel arranged axially of the spiral canway and having a peripheral series of spaced rails parallel with its axis; with a rotatable wheel mounted within the reel, above the axis thereof, having peripheral teeth adapted to project through and beyond the periphery of the reel whereby the wheel is rotated by the reel; said teeth projecting sufficiently to lift the cans and eject them from the canway as the cans pass over the wheel, substantially as described.



1,422,799. COMBINATION PLATE AND THREAD GUIDE. GEORGE C. L. TISCH, Elizabeth, N. J. Filed July 29, 1920. Serial No. 399,793. 3 Claims. (Cl. 66—12.)

2. In a thread guide, a plate provided with a transverse notched flange, a threaded opening above the flange and a lug above the opening, a threaded guide supporting member seated in the notched flange and having a U-shaped end engaging the lug, and a screw screwing into the threaded opening of the plate and engaging the supporting member.

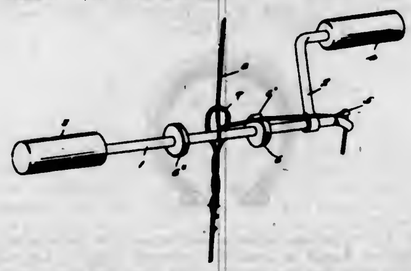


1,422,800. SORTING MACHINE. ALBERT VAN COTT and JOHN EVANS, Salt Lake City, Utah. Filed Jan. 26, 1921. Serial No. 440,095. 16 Claims. (Cl. 211—36.)

1. In an assorting device of the class described, the combination of a frame, a series of rods secured to the frame and extended upwardly and inwardly toward a common center, the said rods being so arranged and positioned that an operator adjacent to the upper ends thereof may place upon selected ones of said rods laundry articles or the like which will then slide downwardly and outwardly by gravity and all of the articles on one rod will then stand grouped at the lower outer end of said rod.

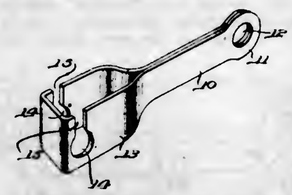
16. An assorting device of the class described comprising a frame, means for rotatably supporting it, a series of rods carried by the frame and extended upwardly and inwardly toward a common center, and an operator's platform mounted adjacent to the common center.

1,422,801. SULPHUR-BURNING APPARATUS. HAROLD DONALD WELLS, Glens Falls, N. Y. Filed Nov. 10, 1920. Serial No. 423,179. 6 Claims. (Cl. 23—1.)



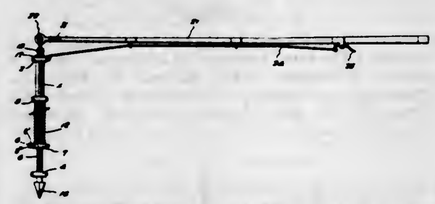
3. A sulphur burner of the type described which comprises a horizontal shell rotating within a casing, the shell at its forward end fitting tightly against the casing, and an air inlet damper positioned in the casing to admit air inside the shell.

1,422,802. THERMAL CUT-OUT DEVICE. GEORGE H. WHITTINGHAM, Baltimore, Md., assignor to Monitor Controller Company, Baltimore, Md., a Corporation of Maryland. Filed May 17, 1921. Serial No. 470,274. 2 Claims. (Cl. 200—122.)



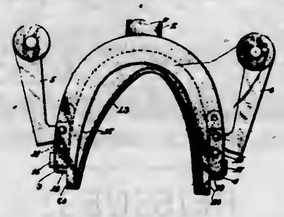
1. An electro-thermal cut-out comprising a thin helically corrugated metal tube, closed at its ends and containing an expansible fluid, and an electric heating coil wound on the body of the tube within the helical recess formed by the corrugation.

1,422,803. SPLICING TOOL. EARL J. WILLIAMS, Geary, Okla. Filed Aug. 21, 1920. Serial No. 405,033. 2 Claims. (Cl. 140—123.5.)



1. A device of the class described comprising a shaft having a crank at one end and a handle at the other end, a reel in the center and a claw formed on said shaft.

1,422,804. ROPE TIGHTENER. WALTER L. WITTE, Escondido, Calif. Filed Oct. 24, 1921. Serial No. 509,947. 1 Claim. (Cl. 24—129.)

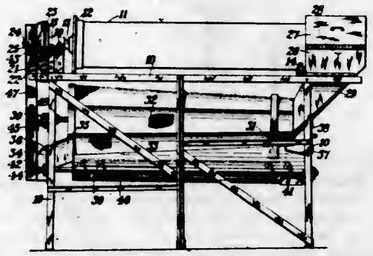


A device of the character described formed from a single strip of resilient metal bent upon itself intermediate its ends to define a substantially rectangular open frame and having its end portions brought together to define an elongated shank, the free end of the shank being formed with a hole and the frame portion being formed in opposite sides with holes and with constricted slots leading into said holes and extending to one edge of the frame.

1,422,805. GIG. JOHN D. WOODS and DENNIS J. PALMER, Steubenville, Ohio. Filed Apr. 9, 1921. Serial No. 459,935. 2 Claims. (Cl. 43—6.)

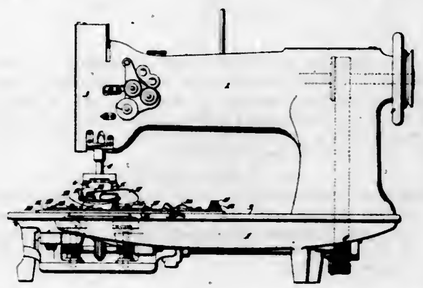
2. A device of the class described comprising a gig, including a spring pressed spear rod, a handle member having an eye for engaging the gig, a lever on the handle member, a slidable latch plate on the gig for holding the spear rod in retracted position and a cable connecting the lever with the said latch plate.

1,422,806. BED-LASTER END CLASP. CHARLES F. ADAMS, Swampscott, Mass., assignor to Hamel Shoe Machinery Company, Bridgeport, Conn., a Corporation of Massachusetts. Filed Sept. 9, 1920. Serial No. 409,156. 9 Claims. (Cl. 12—14.1.)



1. An end-lasting device comprising a flexible member having a recess formed in its inner face, and an upper engaging pad fitted within said recess.

1,422,807. SEPARATING OR SORTING APPARATUS. CHARLES JOSHUA LANE, London, England, assignor to Cyril Frank Elwell, London, England. Filed Oct. 1, 1921. Serial No. 504,812. 3 Claims. (Cl. 83—56.)

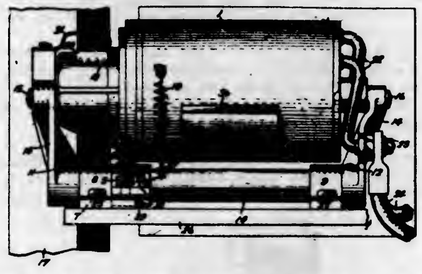


1. In sifting apparatus, the combination of a stand, a drum open at one end rotatably and removably mounted in said stand with its lower surface inclined down-

wardly from the horizontal, and its open end lower than its closed end, a housing surrounding the open end of said drum, a chute leading downwards from said housing, an open-ended conical sieve rotatably mounted in said stand with its axis below and parallel with the axis of said drum, the angle at the apex of the cone of said

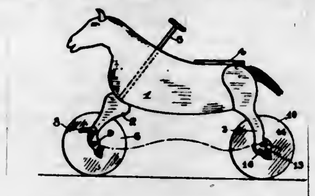
sieve being greater than twice the angle of inclination of the drum axis downwards from the horizontal, said sieve being arranged with its smaller open end enclosing the lower end of said chute, a delivery chute disposed below the open larger end of said sieve, and a tray extending lengthwise of said sieve below it to receive material passing through it.

1,422,808. STRIP GUIDING AND CONTROLLING ATTACHMENT FOR SEWING MACHINES. JOHN C. RINGE, Bridgeport, Conn., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed Feb. 11, 1918. Serial No. 216,482. 11 Claims. (Cl. 112—152.)



1. A strip-controlling attachment for sewing machines, comprising a strip-guide, edge-diverting means adapted to act upon an edge of a strip beyond the delivery end of said strip-guide and divert said edge from its normal course, and means independent of said strip-guide for at will rendering said edge diverting means effective.

REISSUES.



15,403. ENGINE-STARTING DEVICE. JOSEPH BIJUR, New York, N. Y., assignor, by mesne assignments, to Bijur Motor Appliance Company, a Corporation of Delaware. Filed May 18, 1921. Serial No. 470,610. Original No. 1,304,252, dated May 20, 1919, Serial No. 849,444, filed July 7, 1914. 25 Claims. (Cl. 290—48.)

1. Apparatus of the class described, comprising in combination, an engine, a motor adapted to start said engine, an engine-driven member, a motor-driven member radially off-set therefrom, and means operated by the initial rotation of said motor to swing said motor-driven member into power-transmitting engagement with said engine-driven member through an arc in the plane of the said engine-driven member about an axis which is positioned

from the surface of said engine-driven member at a distance greater than the length of the effective radius of said motor-driven member.

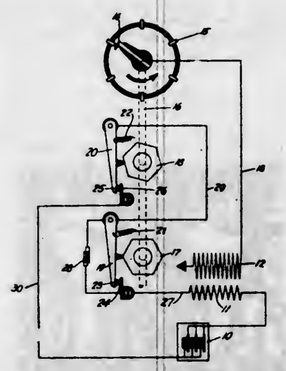
15,404. CHILD'S VEHICLE. NORBERT CHAPDELAINE, Montreal, Quebec, Canada, assignor, by mesne assignments, to International Toy Company, Limited, Montreal, Canada, a Corporation. Filed Mar. 27, 1922. Serial No. 547,250. Original No. 1,333,425, dated Mar. 30, 1920, Serial No. 303,233, filed June 10, 1919. Reissue No. 15,148, dated July 12, 1921. Serial No. 456,204, filed Mar. 28, 1921. 13 Claims. (Cl. 208—42.)

1. In a child's vehicle, a body having legs extending frontwardly and rearwardly therefrom, a wheel journaled centrally in relation to its tread between the front legs and forming a pivot for said body and also a steering member, foot rests projecting from and rigid with said front legs, a rear wheel journaled eccentrically in relation to its tread between said rear legs and forming the propulsion member and a seat situated in a forward position in relation to said rear wheel.

15,405. TIRE. WILLIAM G. FOARDING, Cleveland, Ohio, assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Mar. 2, 1922. Serial No. 540,607. Original No. 1,401,148, dated Dec. 27, 1921, Serial No. 104,390, filed June 19, 1916. 17 Claims. (Cl. 152—13.)

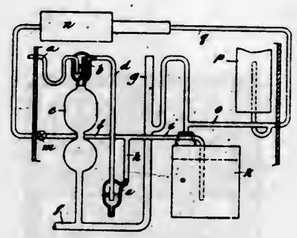
6. A tire casing having a carcass portion comprising a series of layers of material reversely folded back and forth across the tire progressively from the inner to the outer layer, and separate bead sections enclosed in folds of the material at the beginning and end of each complete layer.

15,406. KEY BASE FOR PLASTIC MATERIAL. JONATHAN O. FOWLER, New York, N. Y. Filed May 8, 1922. Serial No. 559,432. Original No. 1,390,774, dated Sept. 13, 1921, Serial No. 255,197, filed Sept. 21, 1918. 17 Claims. (Cl. 72—116.)



12. In a device of the class described, a base comprising a foundation sheet having a set of spaced wires on one face thereof and another set of spaced wires on the opposite face of said sheet, but running in a different direction from those first named, there being spaced perforations in said sheet at points coinciding with the crossing of the wires of the said two sets, and fused joints uniting the crossing wires at said perforations, to form means to hold a plaster coat.

15,407. ALUMINUM ALLOY. FRANCIS C. FRARY, Oakmont, Pa., assignor to Aluminum Company of America, Pittsburgh, Pa., a Corporation of Pennsylania. Filed May 27, 1922. Serial No. 564,272. Original No. 1,412,280, dated Apr. 11, 1922, Serial No. 369,695, filed Mar. 29, 1920. 21 Claims. (Cl. 75—1.)



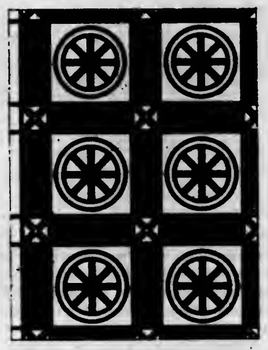
1. An alloy comprising aluminum, copper, magnesium and calcium, calcium not being the main constituent.

15,408. IGNITION SYSTEM. WILLIAM O. KENNINGTON, London, England, assignor to The Remy Electric Company, a Corporation of Indiana. Filed Feb. 27, 1922. Serial No. 539,778. Original No. 1,347,511, dated July 27, 1920, Serial No. 255,046, filed Sept. 21, 1918. 6 Claims. (Cl. 123—48.)

1. In an ignition system, a non-back-firing device comprising a primary coil with a source of current therefor, and a secondary coil with connections for producing sparking impulses; of a main make and break point, and an auxiliary make and break point, both in series in said primary circuit; means for operating said make and break points in quick succession, the main make and break being operated first in the normal rotation of the engine and last in the reverse rotation, with a condenser shunted around the contact points of the main make and break point only, substantially as and for the purpose described.

15,409. GAS-ANALYZING APPARATUS. OLOF RODHE, Stockholm, Sweden, assignor to Aktiebolaget Ingeniörsfirma Fritz Egnell, Stockholm, Sweden. Filed Mar. 3, 1922. Serial No. 540,914. Original No. 1,302,224, dated Apr. 29, 1919, Serial No. 145,206, filed Jan. 29, 1917. 7 Claims. (Cl. 23—3.)

1. Automatically operated gas analyzing apparatus for two or more individual analyses of a gas mixture streaming through the apparatus in one direction only, comprising first measuring apparatus, absorption apparatus, second or final measuring apparatus and registering apparatus, means for connecting said apparatuses to allow the flow of gas through the same in two channels having one or more parts of the apparatus in common but each channel having other of said parts independent of the other channel, and controlling means for causing the gas flow to take one or the other channel through the first and final measuring apparatus always in the same direction.

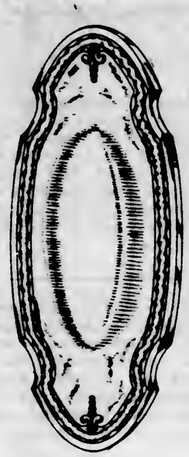


15,410. THREAD-MILLING MACHINE. CHARLES H. SCHURR and ERNEST J. LEES, Cleveland, Ohio, assignors to The Lees-Bradner Co., Cleveland, Ohio. Filed May 20, 1922. Serial No. 562,527. Original No. 1,355,854, dated Oct. 19, 1920, Serial No. 210,633, filed Jan. 7, 1918. 8 Claims. (Cl. 10—154.)

1. A thread milling machine comprising a work spindle, a tool spindle, means for rotating each, a movable support for one of said spindles, a lead screw operatively connected with said support and adapted to actuate the same, intermediary spindles, a train of gearing upon said spindles respectively in part adapted to connect said work rotating means with said lead screw, a plurality of said intermediary spindles being rotatable at different speeds and having projecting ends to serve as alternative driving units, one unit of said train of gearing being detachably securable upon one of the projecting spindle ends whereby one or the other of the latter becomes an active unit of said connection.

DESIGNS.

61,186. DRESS FABRIC. ALBINA CABALKA, Geddes, S. Dak. Filed Mar. 23, 1922. Serial No. 1,354. Term of patent 3½ years.

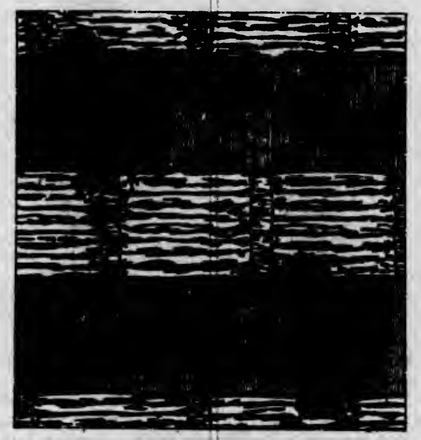


The ornamental design for a dress fabric, as shown.

61,187. WALL BRACKET FOR LIGHTING FIXTURES. THURE DAHL, New York, N. Y., assignor to Lightolier Company, a Corporation of New York. Filed Feb. 10, 1921. Serial No. 444,034. Term of patent 3½ years.

The ornamental design for a wall bracket for lighting fixtures as shown.

61,188. PLATE FOR WALL BRACKETS FOR LIGHTING FIXTURES. THURE DAHL, New York, N. Y., assignor to Lightolier Company, a Corporation of New York. Filed Feb. 10, 1921. Serial No. 444,035. Term of patent 3½ years.



The ornamental design for a plate for wall brackets for lighting fixtures as shown.

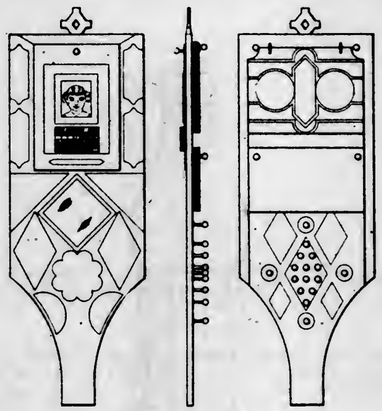
61,189. LACE. ELIZABETH ANDERSON DAVIS, New York, N. Y., assignor to Blanck & Company, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 6, 1922. Serial No. 1,565. Term of patent 3½ years.

The ornamental design for lace as herein shown and described.

61,190. FABRIC. WILLIAM DOWLING, New York, N. Y., assignor to Golding Bros. Company, New York, N. Y., a Corporation of New York. Filed Mar. 30, 1922. Serial No. 1,459. Term of patent 7 years.

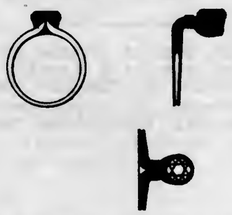
The ornamental design for a fabric, as shown and described.

61,191. EMBLEM, BADGE, BROOCH, PIN, CUFF BUTTON, WATCH FOB, OR ARTICLE OF SIMILAR NATURE. CHARLES B. DYER, Indianapolis, Ind. Filed Mar. 27, 1922. Serial No. 1,421. Term of patent 14 years.



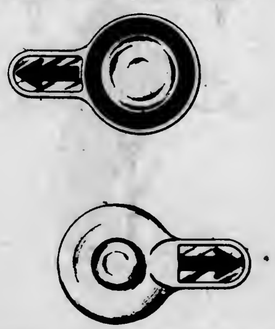
The ornamental design for emblem, badge, brooch, pin, cuff button, watch fob, or article of similar nature, as shown.

61,192. GREASE GUN. DOUGLAS F. FEALER, Evanston, Ill., assignor, by mesne assignments, to The Bassick Manufacturing Company, a Corporation of Delaware. Filed June 30, 1919. Serial No. 307,862. Term of patent 14 years.



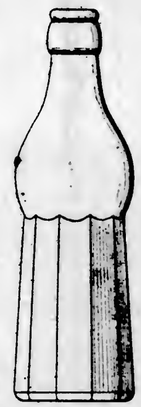
The ornamental design for a grease gun as shown.

61,193. COMBINED WRITING PAD AND ADVERTISING DEVICE OR ARTICLE OF SIMILAR NATURE. RICHARD M. GAFFNEY, St. Louis, Mo. Filed Mar. 11, 1922. Serial No. 1,119. Term of patent 14 years.



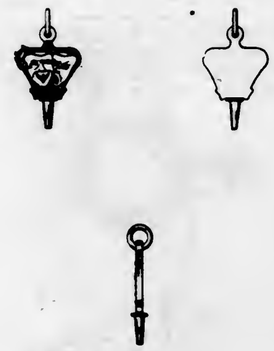
The ornamental design for a combined writing pad and advertising device or article of similar nature, substantially as shown.

61,194. RING. WALLACE G. GINDER, Los Angeles, Calif., assignor to Brock and Company, Los Angeles, Calif., a Corporation of California. Filed June 1, 1920. Serial No. 385,836. Term of patent 14 years.



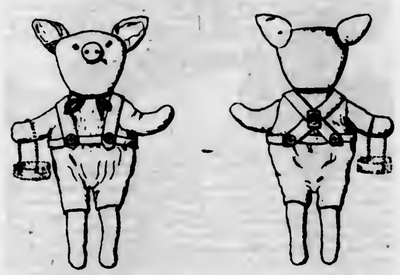
The ornamental design for a ring, as shown.

61,195. COMBINATION MIRRORSCOPE, PARKING LIGHT, and DIRECTION INDICATOR. WILLIAM P. HAMMOND, Maplewood, N. J. Filed May 11, 1921. Serial No. 468,690. Term of patent 14 years.



The ornamental design for a combination mirrorscope, parking light, and direction indicator, as shown and described.

61,196. BOTTLE. CLAUDE JOHNSTONE, St. Louis, Mo. Filed Aug. 8, 1921. Serial No. 490,802. Term of patent 14 years.

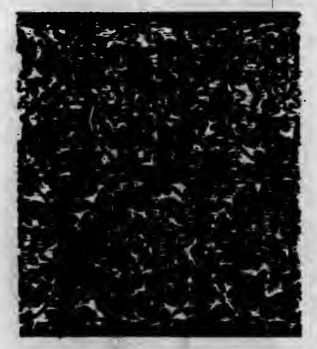


An ornamental design for a bottle as shown.

61,197. BADGE, BUTTON, CHARM, EMBLEM, PIN, OR ARTICLE OF SIMILAR NATURE. THOMAS C. KATKE, Milwaukee, Wis., assignor to Bunde & Upmeyer Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Feb. 20, 1922. Serial No. 786. Term of patent 7 years.

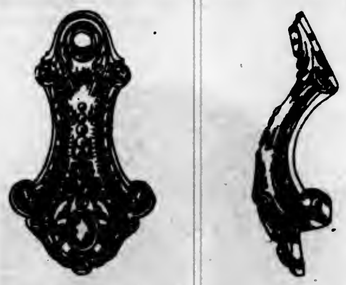
The ornamental design for a badge, button, charm, emblem, pin, or article of similar nature, as shown.

61,198. PIG DOLL. ISABELLA KERBY, East Helena, Mont. Filed Feb. 20, 1922. Serial No. 796. Term of patent 7 years.



The ornamental design for a pig doll as shown.

61,199. SAFETY PAPER. CHARLES KEES, Cleveland, Ohio, assignor to The Forman Bassett Company, a Corporation of Ohio. Filed Feb. 23, 1921. Serial No. 447,333. Term of patent 3½ years.

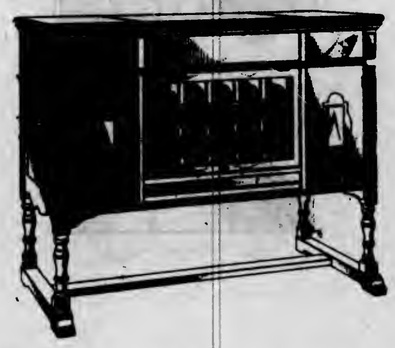


The ornamental design for safety paper, as shown.

61,200. LACE. JOHN LANGENEGGER, New York, N. Y., assignor to Blanck & Company, New York, N. Y., a Corporation of New York. Filed Apr. 6, 1922. Serial No. 1,563. Term of patent 3½ years.

The ornamental design for lace as herein shown and described.

61,201. LIGHTING-FIXTURE ARM. LOUIS LEVINE, Brooklyn, N. Y. Filed Oct. 8, 1921. Serial No. 506,529. Term of patent 7 years.



The ornamental design for a lighting fixture-arm, as shown.

61,202. GLOBE FOR LIGHTING FIXTURES. LOUIS B. LONDON, New York, N. Y. Filed Oct. 8, 1921. Serial No. 506,528. Term of patent 7 years.

The ornamental design for a globe for lighting fixtures, as shown.

61,203. PHONOGRAPH CABINET. LACHLAN MACLACHLAN, Grand Rapids, Mich., assignor to Cheney Talking Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 7, 1921. Serial No. 513,597. Term of patent 7 years.

The ornamental design for a phonograph cabinet, as shown.

61,204. BADGE, PIN, BUTTON, OR A SIMILAR ARTICLE OF MANUFACTURE. WILLIAM L. MANN, New York, N. Y. Filed Feb. 12, 1921. Serial No. 444,611. Term of patent 3½ years.

The ornamental design for a badge, pin, button, or a similar article of manufacture, as shown.

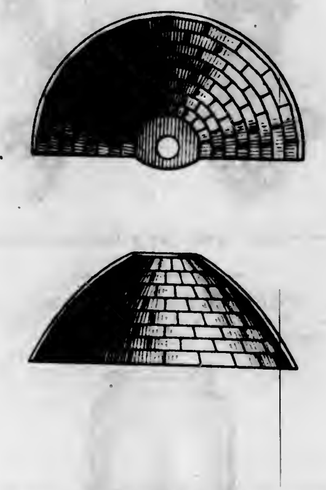
61,205. SAFETY PAPER. FRANK MEYER, Lakewood, Ohio, assignor to The Forman Bassett Company, a Corporation of Ohio. Filed Feb. 23, 1921. Serial No. 447,317. Term of patent 3½ years.

The ornamental design for safety paper, as shown.

61,206. DOLL. ANGELINE NORQUIST, Minneapolis, Minn. Filed Dec. 8, 1921. Serial No. 521,041. Term of patent 7 years.

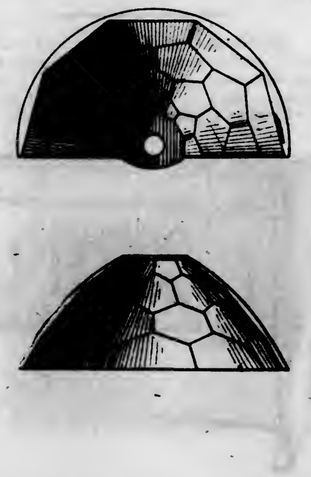
The ornamental design for a doll, as shown.

61,207. DOLL. CORA O. OLIVER, Oklahoma, Okla. Filed Feb. 28, 1922. Serial No. 942. Term of patent 3½ years.



The ornamental design for a doll substantially as shown.

61,208. FINGER RING. DAVID ORNSTEIN, New York, N. Y. Filed Mar. 13, 1922. Serial No. 1,137. Term of patent 3½ years.

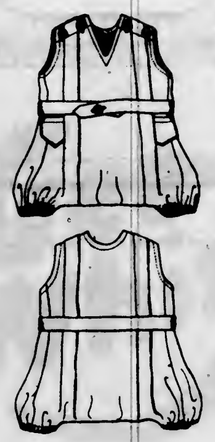


The ornamental design for a finger ring, as shown.

61,209. LIGHT DIFFUSER. OTHO M. OTTE, Tarentum, Pa. Filed Feb. 12, 1920. Serial No. 358,146. Term of patent 3½ years.

The ornamental design for a light diffuser, substantially as shown.

61,210. LIGHT DIFFUSER. OTHO M. OTTE, Tarentum, Pa. Filed Feb. 12, 1920. Serial No. 358,147. Term of patent 3½ years.



The ornamental design for a light diffuser, substantially as shown.

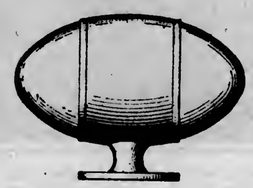
61,211. LACE. SAMUEL H. PAGE, Stratford, Conn., assignor to The American Fabrics Company, a Corporation of Connecticut. Filed Feb. 2, 1922. Serial No. 514. Term of patent 7 years.

The ornamental design for lace substantially as shown.

61,212. OUTER GARMENT. KATHARINE LESLIE POWELL, Amherst, Mass. Filed Jan. 31, 1922. Serial No. 470. Term of patent 3½ years.

The ornamental design for an outer garment, as shown.

61,213. SAUTOIR WATCH HOLDER. GUSTAV RIEXINGER, Toronto, Ontario, Canada, assignor to W. A. Milligan and Company, Limited, Toronto, Ontario, Canada. Filed Feb. 18, 1922. Serial No. 766. Term of patent 3½ years.



The ornamental design for a sautoir watch holder as shown.

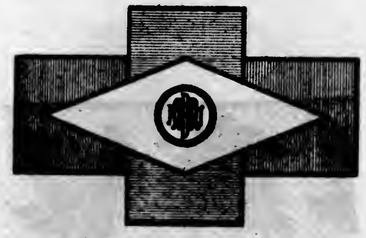
61,214. TOY. ABRAHAM H. SHENK, Joliet, Ill. Filed Nov. 25, 1921. Serial No. 517,797. Term of patent 3½ years.

The ornamental design for a toy, as shown.

61,215. PARKING LIGHT. HENRY HOWARD TAYLOR, Milwaukee, Wis. Filed Dec. 20, 1920. Serial No. 432,118. Term of patent 3½ years.

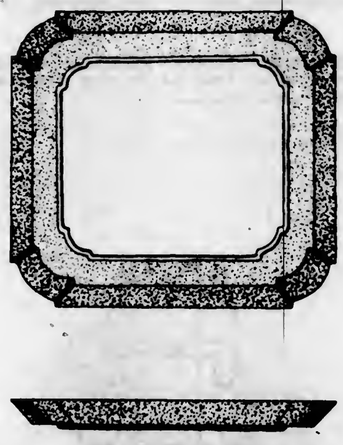
The ornamental design for a parking light, as shown.

61,216. COMBINED PHONOGRAPH AND LAMP STAND. SOLOMON TRUSTMAN, Detroit, Mich., assignor of one-half to Amos Emsley, Detroit, Mich. Filed Nov. 30, 1921. Serial No. 518,997. Term of patent 14 years.



The ornamental design for a combined phonograph and lamp stand as shown.

61,217. COMBINATION CLOCK, PICTURE, AND MIRROR FRAME. JOSEPH URBANEK, Chicago, Ill. Filed Apr. 6, 1922. Serial No. 1,562. Term of patent 14 years.



The ornamental design for a combination clock, picture, and mirror frame, as shown.

61,218. EMBLEM, SIGN, BADGE, BUTTON, OR ARTICLE OF SIMILAR NATURE. CHRISTY A. VANE, St. Louis, Mo., assignor to National Automobile Dealers' Association, St. Louis, Mo., an Association of Illinois. Filed Apr. 14, 1922. Serial No. 1,747. Term of patent 14 years.

The ornamental design for an emblem, sign, badge, button, or article of similar nature, as shown.

61,219. PLAQUE. HARRY W. WHIPPLE, Kansas City, Mo. Filed Mar. 24, 1920. Serial No. 368,415. Term of patent 3½ years.

The ornamental design for a plaque, as shown and described.

TRADE-MARKS

OFFICIAL GAZETTE, JULY 11, 1922.

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 117,377. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) CLARENCE C. HAY, Como, Miss. Filed Apr. 11, 1919.

HAY-PO

Any and all right to the before-and-after pictures shown on the labels filed with the application, to any before-and-after pictures, and to any and all matter other than the word "Hay-Po" is disclaimed.

Particular description of goods.—Hair Dressing.

Claims use since Feb. 27, 1917.

Ser. No. 129,545. (CLASS 45. BEVERAGES, NONALCOHOLIC.) GRONE & Co., St. Louis, Mo. Filed Mar. 11, 1920.

Gee Whiz

Particular description of goods.—Beverages, More Specifically Soda Water.

Claims use since Feb. 25, 1920.

Ser. No. 129,573. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) SCHERER, BURNELL & SCHERER, INC., New York, N. Y. Filed Mar. 11, 1920.

SCHERER, BURNELL & SCHERER INC. N.Y. TRU-BLU TRADE MARK INDUSTRIAL LABORATORIES

No claim is made to words "Trade Mark" and "Industrial Laboratories," "Tru-Blu," and letters "N. Y." apart from mark shown in drawing.

Particular description of goods.—Laundry Blue or Bluing.

Claims use since Nov. 10, 1919.

Ser. No. 131,334. (CLASS 34. HEATING, LIGHTING, AND VENTILATING APPARATUS, NOT INCLUDING ELECTRICAL APPARATUS.) THE C. M. KEMP MFG. CO., Baltimore, Md. Filed Apr. 19, 1920.

KEMP

Particular description of goods.—Gas Apparatus and Gas Burners, Particularly Apparatus for Mixing Air and Gas to Form Fuel Gas and Burners for Heating Purposes.

Claims use since on or about Jan. 1, 1911.

Ser. No. 132,736. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) FLEXLUME SIGN COMPANY, Buffalo, N. Y. Filed May 21, 1920.

DAY-NIGHT

Particular description of goods.—Electrically-Illuminated Signs.
Claims use since March, 1912.

Ser. No. 133,015. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) WRIGHT & ALEXANDER COMPANY, Rochester, N. Y. Filed May 27, 1920.

WRIALCO

Trade-mark "Wrialco."
Particular description of goods.—Metal Inserts for Anchoring Piping and Shafting, Etc., to Concrete Construction.
Claims use since on or about Jan. 24, 1908.

Ser. No. 134,112. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) CARAVEL COMPANY, INC., New York, N. Y. Filed June 24, 1920.

CARAVEL [ship] PANY, INC.

Particular description of goods.—Ice and Roller Skates, Baseballs, Bats, Baseball and Sporting Mitts, Footballs, Protectors and Pads for All Parts of the Body in Sports, Goal Posts; Golf Balls, Sticks, and Bags; Medicine Balls; Squash, Hand, and Tennis Balls; Rackets, Nets, Court Markers; Exercising Apparatus—Namely, Dumb-Bells, Indian Clubs, Exercising Poles, Parallel Bars, and Horses; Fishing Tackle—Namely, Flies, Reels, Nets, Rods, and Baskets; Playing Cards and Card Games, Polo Sticks and Balls; Archery Bows, Crossbows, Arrows, and Accoutrements; Toy Printing Presses, Toy Sewing Machines; Cricket Bats, Balls, Gloves, Gauntlets, Leg Guards, Stumps; Croquet Balls, Mallets, Arches, Posts, Clips; Hockey Sticks, Boomerangs, Shuttlecocks, Toy Wheelbarrows, Stuffed Animals, Puzzles, Soldiers, Toy Building Blocks, Mechanical Toys, Elastic and Inflated Toys, Balls, Balloons, Favors, Ankle and Wrist Supporters, Crab and Fish Traps and Nets, and Game Tables.
Claims use since about June 1, 1918.

Ser. No. 139,438. (CLASS 29. BROOMS, BRUSHES, AND DUSTERS.) JOHN L. WHITING-J. J. ADAMS COMPANY, Boston, Mass., assignor to John L. Whiting-J. J. Adams Company, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 9, 1920.

FEZ

Particular description of goods.—Brushes for Painting, Varnishing, or Applying Various Liquids and for Cleaning, Polishing, and Sweeping.
Claims use since about Aug. 1, 1910.

Ser. No. 139,439. (CLASS 29. BROOMS, BRUSHES, AND DUSTERS.) JOHN L. WHITING-J. J. ADAMS COMPANY, Boston, Mass., assignor to John L. Whiting-J. J. Adams Company, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 9, 1920.

FLYER

Particular description of goods.—Brushes for Painting, Varnishing, or Applying Various Liquids and for Cleaning, Polishing, and Sweeping.
Claims use since on or about Jan. 1, 1904.

Ser. No. 139,440. (CLASS 29. BROOMS, BRUSHES, AND DUSTERS.) JOHN L. WHITING-J. J. ADAMS COMPANY, Boston, Mass., assignor to John L. Whiting-J. J. Adams Company, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 9, 1920.

MUTUAL

Particular description of goods.—Brushes for Painting, Varnishing, or Applying Various Liquids, and for Cleaning, Polishing, and Sweeping.
Claims use since on or about Aug. 1, 1905.

Ser. No. 139,441. (CLASS 29. BROOMS, BRUSHES, AND DUSTERS.) JOHN L. WHITING-J. J. ADAMS COMPANY, Boston, Mass., assignor to John L. Whiting-J. J. Adams Company, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 9, 1920.

ORFULO

Particular description of goods.—Brushes for Painting, Varnishing, or Applying Various Liquids and for Cleaning, Polishing, and Sweeping.
Claims use since on or about Jan. 1, 1916.

Ser. No. 139,442. (CLASS 29. BROOMS, BRUSHES, AND DUSTERS.) JOHN L. WHITING-J. J. ADAMS COMPANY, Boston, Mass., assignor to John L. Whiting-J. J. Adams Company, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 9, 1920.

PANDORA

Particular description of goods.—Brushes for Painting, Varnishing, or Applying Various Liquids and for Cleaning, Polishing, and Sweeping.
Claims use since on or about Sept. 1, 1912.

Ser. No. 139,443. (CLASS 29. BROOMS, BRUSHES, AND DUSTERS.) JOHN L. WHITING-J. J. ADAMS COMPANY, Boston, Mass., assignor to John L. Whiting-J. J. Adams Company, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 9, 1920.

PIGMENT

Particular description of goods.—Brushes for Painting, Varnishing, or Applying Various Liquids and for Cleaning, Polishing, and Sweeping.
Claims use since on or about Jan. 1, 1904.

Ser. No. 139,444. (CLASS 29. BROOMS, BRUSHES, AND DUSTERS.) JOHN L. WHITING-J. J. ADAMS COMPANY, Boston, Mass., assignor to John L. Whiting-J. J. Adams Company, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 9, 1920.

Purchase

Particular description of goods.—Brushes for Painting, Varnishing, or Applying Various Liquids and for Cleaning, Polishing, and Sweeping.
Claims use since on or about Aug. 1, 1900.

Ser. No. 139,445. (CLASS 29. BROOMS, BRUSHES, AND DUSTERS.) JOHN L. WHITING-J. J. ADAMS COMPANY, Boston, Mass., assignor to John L. Whiting-J. J. Adams Company, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 9, 1920.

UTOPIA

Particular description of goods.—Brushes for Painting, Varnishing, or Applying Various Liquids and for Cleaning, Polishing, and Sweeping.
Claims use since on or about July 1, 1906.

Ser. No. 139,446. (CLASS 29. BROOMS, BRUSHES, AND DUSTERS.) JOHN L. WHITING-J. J. ADAMS COMPANY, Boston, Mass., assignor to John L. Whiting-J. J. Adams Company, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 9, 1920.

VERILO

Particular description of goods.—Brushes for Painting, Varnishing, or Applying Various Liquids and for Cleaning, Polishing, and Sweeping.
Claims use since on or about Jan. 1, 1916.

Ser. No. 139,766. (CLASS 29. BROOMS, BRUSHES, AND DUSTERS.) JOHN L. WHITING-J. J. ADAMS COMPANY, Boston, Mass., assignor to John L. Whiting-J. J. Adams Company, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 17, 1920.

ADMIRAL

Particular description of goods.—Brushes for Painting, Varnishing, or Applying Various Liquids and for Cleaning, Polishing, and Sweeping.
Claims use since Jan. 1, 1905.

Ser. No. 139,767. (CLASS 29. BROOMS, BRUSHES, AND DUSTERS.) JOHN L. WHITING-J. J. ADAMS COMPANY, Boston, Mass., assignor to John L. Whiting-J. J. Adams Company, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 17, 1920.

ADAMANT

Particular description of goods.—Brushes for Painting, Varnishing, or Applying Various Liquids and for Cleaning, Polishing, and Sweeping.
Claims use since on or about Jan. 1, 1897.

Ser. No. 139,769. (CLASS 29. BROOMS, BRUSHES, AND DUSTERS.) JOHN L. WHITING-J. J. ADAMS COMPANY, Boston, Mass., assignor to John L. Whiting-J. J. Adams Company, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 17, 1920. Under ten-year proviso.

No claim to the word "Brushes." The lining on drawing denotes shading and does not represent color.
Particular description of goods.—Brushes for Painting, Varnishing, or Applying Various Liquids and for Cleaning, Polishing, and Sweeping.
Claims use since on or about Jan. 1, 1884.

Ser. No. 139,770. (CLASS 29. BROOMS, BRUSHES, AND DUSTERS.) JOHN L. WHITING-J. J. ADAMS COMPANY, Boston, Mass., assignor to John L. Whiting-J. J. Adams Company, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 17, 1920.

BALTIC

Particular description of goods.—Brushes for Painting, Varnishing, or Applying Various Liquids and for Cleaning, Polishing, and Sweeping.
Claims use since on or about Jan. 1, 1906.

Ser. No. 139,771. (CLASS 29. BROOMS, BRUSHES, AND DUSTERS.) JOHN L. WHITING-J. J. ADAMS COMPANY, Boston, Mass., assignor to John L. Whiting-J. J. Adams Company, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 17, 1920. Under ten-year proviso.

BEEKMAN

Particular description of goods.—Brushes for Painting, Varnishing, or Applying Various Liquids and for Cleaning, Polishing, and Sweeping.
Claims use since on or about Jan. 1, 1893.

Ser. No. 139,772. (CLASS 29. BROOMS, BRUSHES, AND DUSTERS.) JOHN L. WHITING-J. J. ADAMS COMPANY, Boston, Mass., assignor to John L. Whiting-J. J. Adams Company, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 17, 1920. Under ten-year proviso.

BELGRADE

Particular description of goods.—Brushes for Painting, Varnishing, or Applying Various Liquids and for Cleaning, Polishing, and Sweeping.

DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF

UNITED STATES COURTS IN PATENT CASES.

DECISIONS OF THE U. S. COURTS.

Court of Appeals of the District of Columbia.

STEIN *v.* DOSCH.

No. 1487. Decided April 3, 1922.

1. PATENTS — INTERFERENCE — AMENDMENT OF PRELIMINARY STATEMENT.

Where the preliminary statement of an experienced inventor, made after at least two consultations with his attorney, stated that he first reduced the invention to practice on a specified date, the refusal to permit him to amend the preliminary statement, after he had seen statement of the adverse party, to allege the making and operation of a machine embodying the invention more than two years before the date stated in his first statement was not an abuse of discretion.

2. SAME — SAME — PRIORITY AWARDED TO THE JUNIOR PARTY.

Where in interference proceedings involving a simple improvement in driving shaft for power-driven sewing machines the junior applicant showed a reduction to practice prior to the filing date of the senior applicant, *Held* that the junior party is entitled to priority.

Mr. Charles J. Williamson for Stein.

Mr. John F. Heine and *Mr. George F. Scull* for Dosch.

ROBB, *J.:*

Appeal from a Patent Office decision in an interference proceeding awarding priority of invention to the junior party Dosch.

The invention is a very simple one. Power-driven sewing machines are arranged in series on either side of a so-called table. In the prior art the driving shaft was located considerably below the table and this invention consists in moving that shaft to a position directly under the table. It is expressed in four counts, of which the first, here reproduced, is sufficiently illustrative:

> 1. As an improvement in power mechanism for sewing machines, the combination of a table supporting a series of sewing machines and having a depression, a driving shaft located in such depression, driving wheels on said shaft, and means for transmission of power from said wheels to sewing machines supported on the table top.

In his preliminary statement, which was the result of at least two interviews with his attorney, Stein, already somewhat experienced as an inventor, alleged that he conceived, disclosed and made drawings of the invention "in the fall of 1914, and made other drawings in or about July, 1916"; that a written description of the invention "was first made on or about January 27, 1917"; that he first reduced the invention to practice "on or about March 15, 1917," by filing his application; "that he has built no machine embodying said invention." After he had seen the preliminary statement of Dosch, he moved to amend his preliminary statement by alleging the making and operation, in December of 1914, of a full-sized machine embodying the invention. This machine, he alleges, was set up on a Sunday, operated for a short time in the presence of his brother, and dismantled on the same day. The Examiner of Interferences said:

> An examination of Stein's testimony shows that he is a person of keen perception and ready understanding. It appears most unusual that Stein should have had two conferences with an experienced attorney in regard to the preparation of the preliminary statement and in his description of the conception of and development of the invention should have failed to mention the only device he ever constructed or the only test that he ever made of his invention. * * * To allow a party to amend his preliminary statement in the manner here asked, after having seen the other party's dates, would tend to negative the value or utility of preliminary statements unless such amendment was accompanied with a clear and satisfactory showing in support thereof.

Accordingly, the motion to amend was denied by the Examiner, and his action was sustained by the higher tribunals.

We concur in the ruling denying to Stein the right to amend his preliminary statement. Certainly no abuse of discretion has been shown. (*Blaw v. Whitall*, 43 App. D. C., 20; 213 O. G., 749.)

Drawings of the Dosch machine were made in August of 1916 and a table embodying the invention was constructed in the latter part of that year. The Examiner of Interferences was not satisfied that reduction to practice prior to Stein's filing date had been shown. The Examiners-in-Chief and the Assistant Commissioner, however, after a careful review of the evidence, reached the conclusion that such reduction to practice by Dosch clearly appeared, and the question is so free from doubt, in our view, that we accept their ruling without further discussion of the evidence. As already stated, the invention is a very simple one and the later changes made in the table were purely mechanical. As was said by the Assistant Commissioner, in speaking of Dosch's early table:

> The assembly of such a structure followed by operation in which the machines were started and stopped and sewing was done would appear to be sufficient to demonstrate whether or not the device was capable of successfully performing the work for which it was intended. * * * The testimony appears to clearly show that the results of the test were satisfactory to those concerned.

Since Stein was lacking in diligence, the decision awarding priority to Dosch was correct and must be affirmed.

Affirmed.

ADJUDICATED PATENTS.

(U. S. C. C. A. Calif.) The Boyle reissue patent, No. 14,695, for canteen, *Held* valid and infringed. *Woolwine Metal Products Co.* v. *Boyle*, 279 Fed. Rep., 609.

(U. S. C. C. A. N. Y.) The Gans patent, No. 1,195,923, claims 1 and 5, for apparatus for softening water by zeolites, *Held* not anticipated and infringed. *Permutit Co.* v. *Harvey Laundry Co.*, 279 Fed. Rep., 713.

Interference Notices.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., June 21, 1922.

Leslie & Welsh, their assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Flora W. Pinkus, of 93 Third Avenue, New York, for registration of a trade-mark and trade-mark registered November 6, 1894, No. 25,463, to Leslie & Welsh, 297 Main Street, Buffalo, N. Y., and a notice of such declaration sent by registered mail to said Leslie & Welsh at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Leslie & Welsh, their assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
Acting Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., June 26, 1922.

Paragon Malt Extract Co., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the applications of the Pabst Corporation, Milwaukee, Wis., the Decatur Brewing Co., 604 Cantrell Street, Decatur, Ill., and the Pabst Brewing Company, 917 Chestnut Street, Milwaukee, Wis., for registrations of trade-marks and trade-mark registered March 5, 1907, No. 61,117, to the Paragon Malt Extract Co., 3553 Third Avenue, New York, N. Y., and a notice of such declaration sent by registered mail to the said Paragon Malt Extract Co. at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Paragon Malt Extract Co., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
Acting Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., June 30, 1922.

The Rhubaral Company, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of The William S. Merrell Company, of Fifth and Pike Streets, Cincinnati, Ohio, for registration of a trade-mark and trade-mark registered June 2, 1914, No. 97,440, to The Rhubaral Company, of 1151 Market Street, Wheeling, W. Va., and a notice of such declaration sent by registered mail to said The Rhubaral Company at the said address having been returned by the post office undeliverable, notice is hereby given that unless said The Rhubaral Company, its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
Acting Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., June 30, 1922.

Andrew H. Hanford, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of the Eureka Metal Polish Co, (Inc.), of 1638 North Fairfield Avenue, Chicago, Ill., for registration of a trade-mark and trade-mark registered December 26, 1911, No. 84,627, to Andrew H. Hanford, of 30 Burling Slip, New York, N. Y., and a notice of such declaration sent by registered mail to said Andrew H. Hanford at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Andrew H. Hanford, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
Acting Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., June 30, 1922.

George Schneibel, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Don F. Lauro, of 289 Washington Street, New York, N. Y., for registration of a trade-mark and trade-mark registered September 17, 1901, No. 37,077, to George Schneibel, of 748 South High Street, Columbus, Ohio, and a notice of such declaration sent by registered mail to said George Schneibel at the said address having been returned by the post office undeliverable, notice is hereby given that unless said George Schneibel, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
Acting Commissioner.

Disclaimers.

835,120.—*Henry Livingstone Sulman, Hugh Fitzalis Kirkpatrick-Picard,* and *John Ballot,* London, England. ORE CONCENTRATION. Patent dated November 6, 1906. Disclaimer filed June 27, 1922, by the assignee, *Minerals Separation North American Corporation.*

"Your petitioner therefore for the purpose of assuring disclaimer of those parts of the thing patented which your petitioner does not choose to claim or hold by virtue of said Letters Patent, if such parts have not been already fully disclaimed, does hereby disclaim, as of March 28, 1917, as well as of to-day, from claims 9, 10, and 11 of said Letters Patent No. 835,120 any process of concentrating powdered ores excepting where the results obtained are the results obtained by the use of oil in a quantity amounting to a fraction of one per cent on the ore."

882,533.—*John M. Phillips* and *Robert F. Phillips,* Carrick, Pa. RUNNING GEAR FOR MINE CARS. Patent dated March 17, 1908. Disclaimer filed May 15, 1922, by the assignee, *The Phillips Mine & Mill Supply Company.*

Hereby disclaims from claim 2—

"Any running gear for mine cars having a wheel which does not have an axle cap, an enlarged bearing-forming bore extending through the hub and terminating at the cap, a bore of diminished diameter extending through the cap only, the shoulder between the two bores forming a thrust-bearing, a second thrust-bearing at the inner end of the hub, and an oil chamber in the hub terminating short of the outer end of the enlarged bearing-forming bore;

"Thereby limiting claim 2 to a running gear for mine cars comprising a wheel which has an axle cap, an enlarged bearing-forming bore extending through the hub and terminating at the cap, a bore of diminished diameter extending through the cap only, the shoulder between the two bores forming a thrust-bearing, a second thrust-bearing at the inner end of the hub, and an oil chamber in the hub terminating short of the outer end of the enlarged bearing-forming bore."

[*Republished to correct error in Official Gazette of May 30, 1922.*]

Patents Nos. 1,422,809 to 1,423,506.

THE OFFICIAL GAZETTE OF THE United States Patent Office.

Vol. 300—No. 3. TUESDAY, JULY 18, 1922. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.

Printed copies of patents are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

Important Information.

In ordering manuscript copies much time will be saved if the order states specifically what is desired, viz:

Application as originally filed. (Petition, specification, oath, and drawings as received.) Application as amended. (Petition, specification, oath, and drawings with amendments entered.)

Application as allowed. (Petition, specification, oath, and drawings as passed by the Examiner for issue.)

Original application. (Facsimile petition, specification, oath, and drawings at present time.)

Specification as originally filed. (As received in Office.)

Specification as amended. (With amendments entered.)

Specification as allowed. (As passed by the Examiner for issue.)

Original specification. (Facsimile at present time.)

File-wrapper. (File-wrapper only.)

File-wrapper and contents. (File-wrapper, contents of record, including photoprints of any tracings or of prints within file-wrapper. In patented cases, printed copy of the specification and drawings of the patent is furnished.)

File-wrapper, contents, and drawings. (File-wrapper and all of the contents of record, including photoprints of any tracings, exhibits, or prints within the file-wrapper. In pending cases, photoprints of the pending drawings only, omitting any canceled. If patented, copy of the specification and drawings of the patent being furnished, photoprints are not made of the original drawings unless specially ordered. If canceled drawings are wanted, they must also be specially ordered.)

Assignment. (Give the liber and page of the record as well as the name of the inventor.)

Printed publications in possession of the Office. (Give title and date of publication, also page and exact portion to be copied.)

Orders for copies of any other records not mentioned above must state specifically the exact paper to be copied.

Drawings.

RULE 38.

38. When there are drawings, the description will refer to the different views by figures and to the different parts by letters or numerals, (preferably the latter.)

RULE 52—EXTRACT.

(*f*) The different views should be consecutively numbered. Letters and figures of reference must be carefully formed. They should, if possible, measure at least one-eighth of an inch in height, so that they may bear reduction to one twenty-fourth of an inch; and they may be much larger when there is sufficient room. They must be so placed in the close and complex parts of drawings as not to interfere with a thorough comprehension of the same, and therefore should rarely cross or mingle with the lines. When necessarily grouped around a certain part, they should be placed at a little distance, where there is available space, and connected by short lines with the parts to which they refer and by short broken lines when the number or letters refers to parts shown in dotted lines. They should not be placed upon shaded surfaces, and when it is difficult to avoid this, a blank space must be left in the shading where the letter occurs, so that it shall apppear perfectly distinct and separate from the work. If the same part of an invention appear in more than one view of the drawing it must always be represented by the same character, and the same character must never be used to designate different parts.

It is suggested that numerals or letters be used without exponents.

Patent Office Publications.

The stock of the following publications is held for sale by the Patent Office, and orders for same should be addressed to the Commissioner of Patents:

Weekly Index—Annual subscription	$1.00
Commissioner's Decisions:	
Weekly edition—Annual subscription	2.00
Single numbers	.05
Trade-Mark Section of OFFICIAL GAZETTE:	
Weekly edition—Annual subscription	2.50
Single numbers	.05
Manual of Classification of the German Patent Office, (translated,) paper cover	1.00
Index to German Classification	1.00
Definitions of Revised Classes and Subclasses, edition of 1912, (Bulletins 1 to 27, inclusive)	.50
Bulletins, excepting Nos. 28, 29, and 30, (now out of print,) published since 1912, each	.10

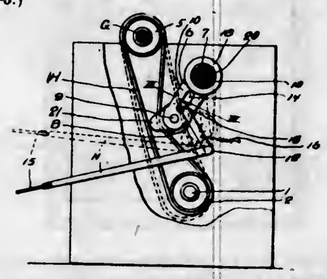
Other publications than those above named, exclusive of printed copies of patents, trade-mark registrations, etc., formerly held for sale by the Patent Office, have been transferred to the Superintendent of Documents, Government Printing Office. Orders for such publications should NOT be sent to the Patent Office, but to the Superintendent of Documents, to whom all remittances for such publications should be made payable.

Printed copies of specifications and drawings of patents, trade-mark registrations, etc., will be furnished by the Patent Office, as heretofore.

Notice—Attorney's Address.

Many letters are being returned to this Office for lack of street address. The attorney's full post-office address should be given in every power of attorney. The prompt delivery of communications will thereby be facilitated.

Condition of Applications Under Examination at Close of Business July 8, 1922.



(Total number of applications waiting action, excluding Trade-Mark division, 67,606; Trade-Mark division, 8,451. Oldest new case, Mar. 31; oldest amended, Apr. 1, 1921. The dates given are 1921 except where * indicates 1922.)

Room No.	Divisions, Examiners, and subjects of inventions.	Oldest new application and oldest action by applicant awaiting office action. New.	Amended.	No. of applications awaiting action.

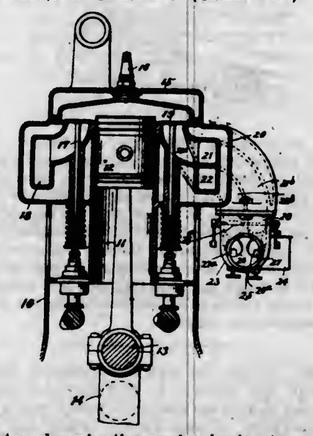
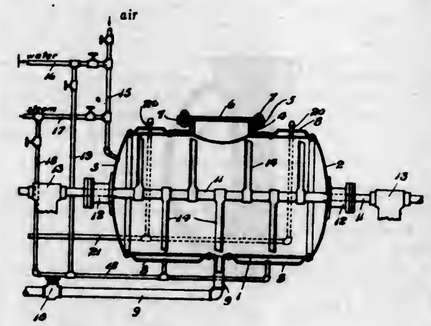
PATENTS



GRANTED JULY 18, 1922.

1,422,809. POWER CONTROL FOR DRIVE MECHANISM. CHARLES W. ANDERSON, Brooklyn, N. Y. Filed May 28, 1919. Serial No. 300,305. 1 Claim. (Cl. 64—5.)



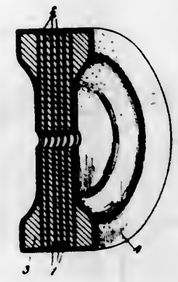
In combination, two smooth-faced pulleys spaced apart, a belt extending between said pulleys adapted to drive one of said pulleys from the other, said belt being normally loose and being arranged so that one lead thereof extends in an approximately vertical direction between said pulleys, a tightener for said belt comprising a body part having two arms projecting therefrom, means whereby said body is pivotally supported so that said arms hang by gravity below said body, an anti-friction roller pivotally supported between said arms at the lower ends thereof adapted to swing with said arms into and out of tightening position against said mentioned lead of the belt, an operating member engaging one of said arms operable to swing said arms into and out of belt tightening position, a spring for maintaining said operating member and said arms normally in non-tightening position, and projections formed upon said arms extending at an angle therefrom into positions for overlapping opposite edge portions of the belt, the arrangement being such that said projections will overlap the edges of the belt and thus serve to guide the belt with respect to said two pulleys at all times whether said arms be in belt tightening or non-tightening position.

1,422,810. INTERNAL-COMBUSTION ENGINE. WALTER D. APPEL, Cleveland Heights, Ohio. Filed Dec. 29, 1916. Serial No. 139,457. 11 Claims. (Cl. 123—59.)

2. An internal combustion engine having two or more intake valves per cylinder, and means for supplying fuel to the cylinder or cylinders through part or all the valves.

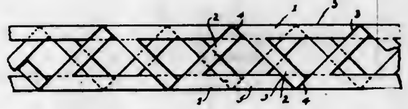
1,422,811. GLUE MIXING AND PRESERVING APPARATUS. EDWARD B. APPLEGATE and WILLIAM H. YEOMANS, Grand Rapids, Mich., assignors to Imperial Furniture Company, Grand Rapids, Mich., a Corporation of Michigan. Filed May 18, 1920. Serial No. 382,239. 2 Claims. (Cl. 257—84.)

2. In combination, a tank provided with an entrance opening in the upper side thereof, means for hermetically sealing said opening, an outlet pipe leading from the lower part of the tank, a shaft extending lengthwise of the tank and mounted for rotation, a plurality of stirring paddles attached to the shaft within the tank, a pipe leading into the upper portion of the tank and adapted to carry compressed air into the tank, water and steam pipes connected with the air pipe, a jacket surrounding the tank, a pipe leading from the steam pipe into the space between the jacket and tank, a pipe connecting the water pipe with said last mentioned steam carrying pipe, and valves in the various pipes for controlling the passage of air, water and steam, substantially as described.



1,422,812. BEARING. PERCY A. E. ARMSTRONG, Watervliet, N. Y. Filed June 13, 1919. Serial No. 303,887. 1 Claim. (Cl. 64—62.)

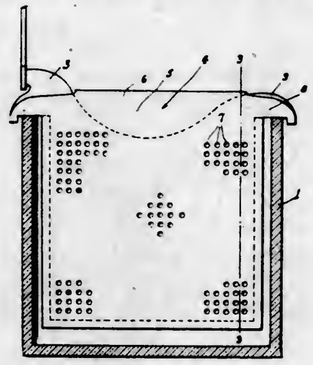
A bearing comprising an outer race member having a transversely curved inwardly convexed bearing surface, an inner race member having a spherical bearing surface, and a series of rollers between said race members, said rollers having their axes parallel to one another and having their bearing surfaces longitudinally concaved on a curvature larger than the curvatures of the bearing surfaces of the race members and making substantially point contact with said bearing surfaces of the race members



when not under load, and all of said rollers being completely symmetrical in form at and to a substantial distance on each side of the portion thereof of smallest diameter.

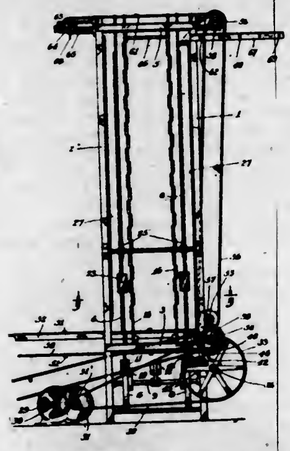
1,422,813. LAMINATED COMPOSITE WHEEL. HARRY N. ATWOOD and GEORGE B. BAINS, 3d, Reading, Pa. Filed Dec. 24, 1920, Serial No. 432,939. Renewed Nov. 16, 1921. Serial No. 515,695. 10 Claims. (Cl. 301—63.)

1. The method of producing a composite laminated structure of complex contour which comprises providing a flat body surface with an outstanding portion substantially defining the contour desired, applying to the built-up surface, a ply of vulcanizable material, and subjecting the assemblage to a molding operation attended by heat and pressure whereby to effect union of the ply to the built-up surface and cause the same to conform to the contour of the said surface.



1,422,814. BUILDING BLOCK AND WALL CONSTRUCTION. WALTER C. BARTELT, Thiensville, Wis. Filed Sept. 14, 1921. Serial No. 500,535. 12 Claims. (Cl. 72—38.)

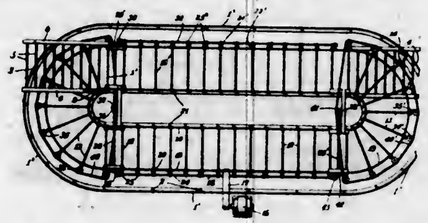
1. A building unit comprising two integral members, the marginal edges of which conform in outline to the sides of an isoceles right-angle triangle.



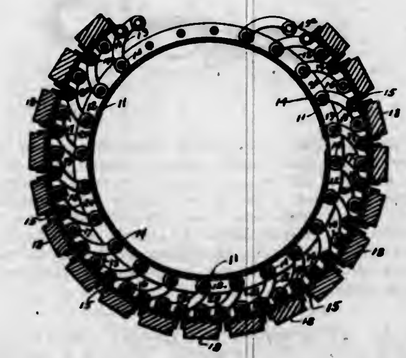
1,422,815. SEPARATOR FOR STORAGE-BATTERY PLATES. GEORGE E. BECK, Cleveland, Ohio. Filed Dec. 17, 1920. Serial No. 431,420. 5 Claims. (Cl. 204—29.)

5. The combination with a battery jar, and a battery plate suspended on the upper edges of the jar, of a separator of non-conductive material and consisting of perforated side members adapted to fit within the jar at the opposite sides of the battery plate and extend over the entire side area of the battery plate, a longitudinal arched portion connecting the upper ends of the side members and bridging the battery plate, and lugs projecting from the upper corners of the side members to engage over the

edges of the battery jar and suspend the separator on the jar independently of the battery plate.



1,422,816. ELEVATING DEVICE. FREDERICK BEERS, New Rochelle, and HOWARD L. POWELL, New York, N. Y., assignors to National Biscuit Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 27, 1920. Serial No. 406,446. 6 Claims. (Cl. 34—11.)

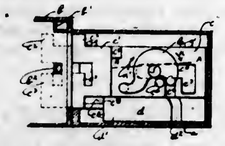


2. In an elevating device, the combination of vertical series of supporting members, lifting means adapted and positioned to rise from and descend to normal positions and, in rising, to lift articles on any of said supporting members to positions in which they are supported by the supporting members next above, rotary means so arranged that one complete revolution thereof will raise and lower said lifting means, a continuously rotating member, and means for periodically connecting said last named member to said rotary means to impart one revolution thereto and then disconnecting the same.

1,422,817. DRIER OR OVEN. FREDERICK BEERS, New Rochelle, and HOWARD L. POWELL, New York, N. Y., assignors to National Biscuit Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 27, 1920. Serial No. 406,449. 5 Claims. (Cl. 198—127.)

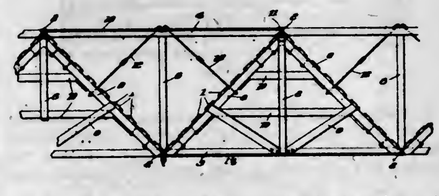
1. In an oven, the combination of an enclosing casing, and means for progressing articles therethrough in a looped, downwardly slanting path, comprising rollers arranged to extend across such path and means for rotating said rollers all in such direction that articles placed thereon will be carried forwardly over the same by frictional contact therewith, said last named means comprising a rotating shaft, vertical shafts rotated therefrom, and connections for rotating a plurality of said rollers from each vertical shaft.

1,422,818. RIM AND TIRE FOR AUTOMOBILE AND OTHER WHEELS. ISRAEL BENJAMINS, Brooklyn, N. Y. Filed June 2, 1921. Serial No. 474,566. 12 Claims. (Cl. 152—8.)



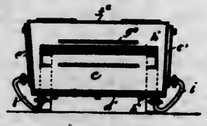
1. In a rim and tire for automobile and other wheels a series of wearing blocks, saddles adapted to hold said blocks, said saddles being connected to each other to form an endless chain, a rim, a series of levers pivotally connected at their outer ends to said saddles and at their inner ends to said rim and springs adapted to act on said levers, thereby acting on said saddles and wearing blocks.

1,422,819. FINGER RING. ERNEST C. BLAICHER, Irvington, N. J., assignor to Interstate Smelting and Refining Co., Inc., Newark, N. J. Filed Feb. 23, 1922. Serial No. 538,447. 1 Claim. (Cl. 63—15.)



A finger ring comprising an outer perforated ring member, an inner ring member secured snugly within the outer member and having perforations larger in area than the perforations in the outer member and disposed so as to be substantially in register with the perforations in the outer member.

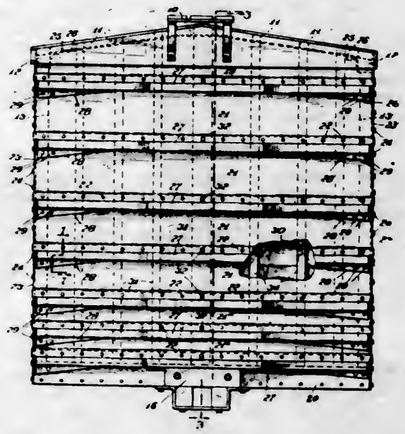
1,422,820. LOCK. ALEXANDER BLOCK, New York, N. Y. Filed Sept. 9, 1920. Serial No. 409,067. 47 Claims. (Cl. 70—46.)



1. In a lock, the combination of an actuator and a hooked bolt connected together for longitudinal movement relatively to each other, means for moving said hooked bolt and for subsequently causing said actuator to move in a direction for projecting the hooked bolt into engaging position, and to then move said actuator into its extreme operative position and into supporting relation with reference to said hooked bolt.

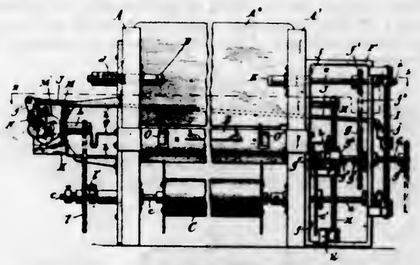
1,422,821. SHEET-PILING WALL CONSTRUCTION. CHARLES S. BOARDMAN and CLOUD CLIFFORD CONKLING, Buffalo, N. Y.; Lucile C. Conkling executrix of the will of said Cloud Clifford Conkling, deceased, assignors to Lackawanna Steel Company, Lackawanna, N. Y., a Corporation of New York. Filed July 7, 1915, Serial No. 38,609. Renewed Nov. 26, 1919. Serial No. 340,800. 4 Claims. (Cl. 61—39.)

1. A wall of sheet piling composed of triangular units, each formed of wall sections of interlocking sheet piling arranged in angular relation and sustaining members connected to the sections to form independently sustained units and to connect the units and therewith to form interacting trusses and the piling of said sections being interlocked in continuous saw tooth arrangement to form a continuous wall and to connect the units substantially as described.



1,422,822. MACHINE FOR APPLYING SOLUTIONS OF RUBBER OR THE LIKE TO FABRICS. ALBERT BONCLER, Malmo, Sweden, assignor to Benzine Condensation Co. Inc., a Corporation of New York. Filed Sept. 13, 1920. Serial No. 409,969. 4 Claims. (Cl. 34—48.)

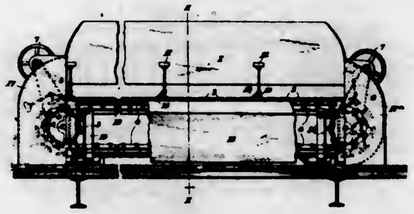
3. A machine for applying to fabric webs or impregnating fabric webs with solutions of rubber or similar material, comprising a working table and a casing, provided with cooling means on its lower part, the cooling means being so constructed and arranged that the rate of flow of the cooling medium through different portions of the casing will not be uniform whereby the lateral walls of the casing will be cooled at different temperatures, the



cooling part of the casing constructed in three sections, two of these forming the lateral walls and one the bottom, each of which being constructed hollow or double independent from one another, and pipes to connect the lower parts of the side walls with the hollow space of the bottom, outlets on the upper part of the side walls, and an inlet pipe on the bottom arranged to one side of the centre line.

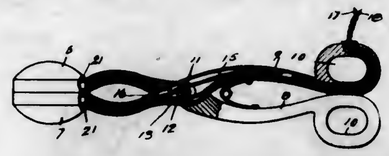
1,422,823. REENFORCED CAR END-WALL STRUCTURE. CHARLES D. BONSALL, Parnassus, Pa., assignor to Walter P. Murphy, New York, N. Y. Filed Nov. 14, 1919. Serial No. 338,075. 34 Claims. (Cl. 105—410.)

4. A sheet metal end panel for a railway car comprising a metal sheet formed with an out-pressed rigidifying rib which for a portion of its length is in the form of a web having a free edge and adjacent an end is channel-formed.



1,422,824. TRACKING DEVICE FOR PLAYER PIANOS. GEORGE P. BRAND, New York, N. Y. Filed Oct. 25, 1917. Serial No. 198,468. 69 Claims. (Cl. 84—137.)

1. The method of automatically maintaining registration between the perforations of a music sheet and the air ducts of a tracker bar, which consists in mechanically varying pressure to preserve alinement without lateral deviation of the music sheet from its correct position.



1,422,825. THEATER SEAT. RAYMOND BROOKS, Benson Mines, N. Y. Filed Mar. 11, 1920. Serial No. 364,948. 5 Claims. (Cl. 104—25.)

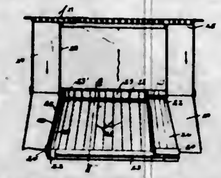
2. In seats for theaters and the like, a plurality of seating surfaces movable in a direction transverse to that in which the seats face, each seating surface being movable independently of the other seating surfaces, each seating surface being mounted on an endless conveyor and being movable when in operative position away from an

entrance aisle toward an exit aisle, and when in inoperative position away from an exit aisle toward an entrance aisle.

1,422,826. ELECTRICALLY-HEATED TONGS. FRANK O. BROWN, St. Louis, Mo. Filed Oct. 24, 1921. Serial No. 509,787. 4 Claims. (Cl. 219—21.)

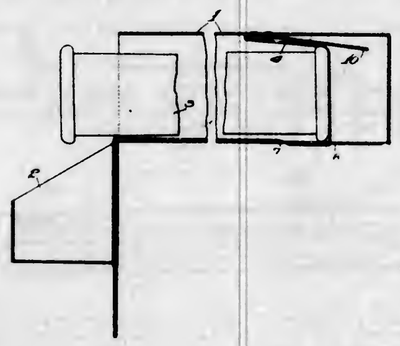
1. An electrically heated tong comprising a pair of hollow jaws, hollow handles formed integral with said jaws, a heating unit located in each of said jaws, electric conductors located in the hollow handles and connected to the heating units, said conductors extending through and out of one of said handles, an electric switch located in one of said handles for interrupting the electric current through said conductors, and means for removing said heating units.

1,422,827. ATTACHMENT FOR VIOLINS AND ANALOGOUS STRING INSTRUMENTS. WILLIAM I. BROWN, Syracuse, N. Y. Filed Jan. 27, 1922. Serial No. 532,092. 2 Claims. (Cl. 84—281.)



1. An attachment for violins and analogous stringed instruments comprising a base-plate having a thumb rest, and means for clamping the base-plate to the head of the instrument, and including relatively adjustable hook-shaped members for interlocking engagement with the tuning pins of said instrument.

1,422,828. PIPELESS FURNACE. CHARLES M. BULLER, Milwaukee, Wis., assignor to L. J. Mueller Furnace Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Nov. 12, 1919. Serial No. 337,553. 5 Claims. (Cl. 126—99.)

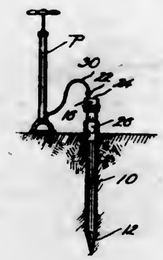


1. A section for a heating furnace consisting of a tapered tubular casing having longitudinally extending

reinforcing plaits in spaced relation, the plaits at the end of the casing of less size being of greater width than

at the other or larger end of the casing, said casing having a medial circumferentially extending rib and an end flange.

1,422,829. CONTAINER FOR MUSIC ROLLS AND THE LIKE. CHARLES S. BURTON, Oak Park, Ill. Filed Feb. 27, 1919, Serial No. 279,647. Renewed Dec. 5, 1921. Serial No. 520,159. 4 Claims. (Cl. 206—52.)



3. A container for a longitudinally-rigid article consisting of a tubular box having one open end; a telescoping closure for that end; a catch in the box for engaging the contained article when the latter is fully thrust into the box; a strap secured to the box and extending from its securement back from the open end for passing about the inner end of the contained article, and thence forward to the open end and in its course masking the engaging end of the catch, and at the forward end connected with the telescoping closure and accessible exteriorly thereof for simultaneously drawing the strap taut around the inner end of the article and between the same and the masked catch and withdrawing the telescoping closure.

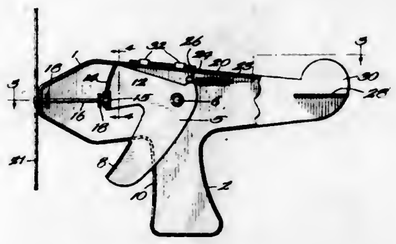
1,422,830. FUSE EMPLACING AND REMOVING IMPLEMENT. HAZEL B. BUSH, Bedford, Ohio, assignor to The Bush Electric Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 24, 1919, Serial No. 332,915. Renewed Dec. 14, 1921. Serial No. 522,440. 19 Claims. (Cl. 81—3.)

1. In an implement of the class set forth, the combination of fuse gripping jaws, and an adjustable latch for maintaining the jaws in closed condition with varying degrees of positiveness.

1,422,831. VERMIN EXTERMINATOR. WILLIAM WYATT CAMP, Denver, Colo. Filed Aug. 9, 1920. Serial No. 402,169. 1 Claim. (Cl. 43—129.)

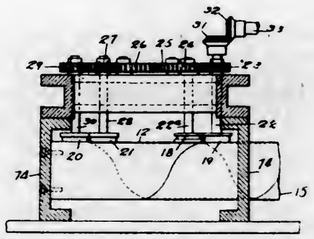
A vermin exterminator comprising a perforated member adapted to be driven into the ground, means to seal the member above the surface, said means including an adjustable sleeve to cover and uncover varying numbers of the upper perforations as desired, and means to admit a gas under pressure into the tube.

1,422,832. VALVE CUT-OFF AND SPEED INDICATOR FOR LOCOMOTIVES. VIRGINIUS Z. CARACRISTI, Bronxville, N. Y., and ANTHONY F. WALLBILLICH, Newark, N. J. Filed Sept. 30, 1920. Serial No. 413,765. 7 Claims. (Cl. 234—1.)



1. In combination with a speed indicator for vehicles and actuating means for the propulsion medium-controlling valve of the vehicle, said valve being movable in opposite directions from a neutral position for the forward and reverse movements of the vehicle; a second indicative means correlated with said speed indicator, means operatively connecting said second indicative means with the valve actuating means to operate the said second indicative means, upon a movement of the valve in one direction from its neutral position to propel the vehicle forwardly, to an extent determined by the speed indicator, whereby the valve is correctly positioned for the propulsion of the vehicle at a desired speed, said connecting means permitting of the movement of said valve in a reverse direction from its neutral position without effecting the operation of said indicative means.

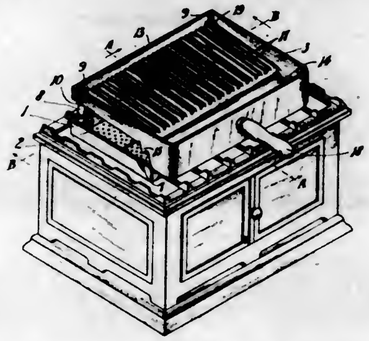
1,422,833. TOY. JOHN W. CARLSON, Chicago, Ill., assignor to Chicago Novelty Mfg. Co., Chicago, Ill., a partnership composed of John W. Carlson, David Seaholm, and Conrad Johnson. Filed Apr. 20, 1921. Serial No. 463,088. 6 Claims. (Cl. 46—14.)



1. A toy having a body with a hand grip approximating that of a pistol, and a revolving blade approximating the propeller of an airplane, an actuator being adapted to and resembling a trigger, said actuator being adapted to be manually operated and pivoted to the body so as to oscillate in a plane passing through the axis of the

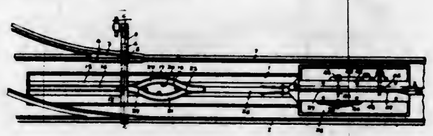
propeller, and a ratchet device operatively connecting the trigger and the propeller for rotating the latter when the

trigger is oscillated, said ratchet device constituting a one-way transmission whereby the oscillation of the trigger drives the propeller always in the same direction.



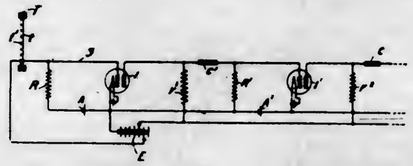
1,422,834. APPARATUS FOR MANUFACTURING PIPE. FRANK W. COLBY, Chicago, Ill., assignor to The Kansas City Spiral Pipe Company, a Corporation. Filed Jan. 19, 1916, Serial No. 72,949. Renewed Dec. 12, 1921. Serial No. 521,921. 14 Claims. (Cl. 113—35.)

1. An apparatus for making spiral pipe from a single strip of material, comprising a series of shaping rollers for bending the edges of the strip material so that each edge has two parallel overlapping portions at an angle to the main body of the strip, a mandrel at an angle to said strip, about which the strip is wrapped, into spiral form so that the parallel overlapping portions of one edge of the strip fit in between the parallel overlapping portions of the other edge of the strip, and opposed compressing rollers for compressing said parallel portions of the bent edges toward each other to clamp them together.



1,422,835. KITCHEN UTENSIL FOR BROILING AND TOASTING FOOD. ALICE CONDY, Ashfield, near Sydney, New South Wales, Australia, assignor to John Edward Bolger, Sydney, New South Wales, Australia. Filed Mar. 25, 1921. Serial No. 455,431. 2 Claims. (Cl. 53—5.)

1. A kitchen utensil comprising an open base frame adapted to be supported over a fuel burner, a sheet of heat conducting and heat radiating material mounted in said frame, said sheet having regularly spaced orifices, said orifices being countersunk on the underside and burred slightly on the upper side, a broiler device having grooved grid-bars, and a common catchment trough and

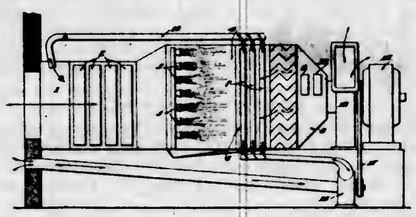


means for the attachment of said broiler device to said base frame.

1,422,836. RAILWAY SWITCH. JAMES D. COOPER, Toronto, Ontario, Canada. Filed Dec. 3, 1919. Serial No. 342,164. 5 Claims. (Cl. 246—327.)

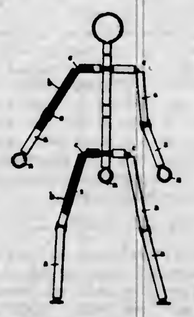
1. In a railway switch mechanism, the combination with the switch and a vehicle, of a transversely slidable member operatively connected with the switch and having a downwardly projecting pin, a longitudinally slidable member having a pair of interconnected guide-ways engaging the pin of said switch operating member and adapted to move said switch operating member in the reverse direction according to its direction of movement, a bar pivotally connected to said longitudinally movable member, a casing having vertical side walls formed with guide-ways therein, said guide-ways being separated by a plate member having one end closing the lower guide-way and adapted to spring upwardly, laterally projecting pins on said bar operating said guide-ways, a shoe carried by the vehicle adapted to be lowered into contact with said bar, means for locking the bar in the forward position, means for returning the bar, and means actuated by the shoe for releasing said locking means.

1,422,837. CONNECTING TRANSMITTERS TO VACUUM TUBE AMPLIFIERS. IRVING B. CRANDALL, Nahant, Mass., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 13, 1917. Serial No. 196,389. 11 Claims. (Cl. 179—171.)



2. In combination, a transmitter for changing sound waves into waves of electrical current, an amplifier for said current waves, and a common source of electrical energy arranged to energise said transmitter and to furnish operating current for said amplifier.

1,422,838. PROCESS OF CHLORINATING GASEOUS HYDROCARBONS AND RECOVERING PRODUCTS THEREFROM. GEORGE O. CURME, Jr., Pittsburgh, Pa., assignor to Carbide & Carbon Chemicals Corporation, a Corporation of New York. Filed July 7, 1920. Serial No. 394,571. 2 Claims. (Cl. 23—24.)

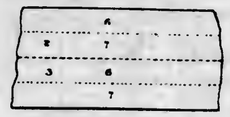


1. Process of preparing and recovering halogen substitution-products from gaseous hydrocarbons, comprising mixing the hydrocarbon in excess with the gaseous halogen; effecting combination of the halogen with liberation of the anhydrous halogen acid; separating the reaction products of higher boiling point than the hydrocarbon from the resulting gas mixture by anhydrous liquefaction; and returning the residual gaseous hydrocarbon to the operating cycle.

1,422,839. METHOD OF HUMIDIFYING AIR. PHILIPPE DE CLAMECY, Boston, Mass., assignor to B. F. Sturtevant Company, Boston, Mass., a Corporation of Massachusetts. Filed Sept. 3, 1919. Serial No. 321,392. 1 Claim. (Cl. 183—120.)

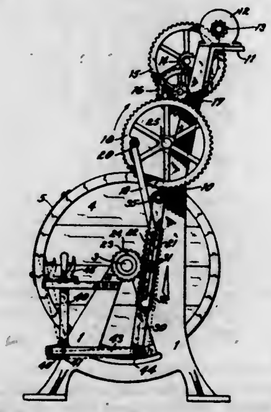
The method of humidifying air which consists in heating the air to a temperature in excess of the temperature at which it is to be delivered, spraying water into the heated air, projecting the heated air against a separating surface to precipitate a portion of the water held in suspension by the air, maintaining the separating surface cool by means of a current of air which first cools the separating surface and then becomes a part of the supply of air to be heated, and allowing the remaining portion of the water held in suspension by the air and not precipitated on the separating surface to be vaporized to give the desired humidity at the desired temperature.

1,422,840. JOINTED LAY FIGURE, MODEL, OR DOLL. CONSUÉLO DE GRASSE, née FOULD, Paris, France. Filed Feb. 24, 1920. Serial No. 360,758. 5 Claims. (Cl. 46—40.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. In a doll or lay figure, a skeleton consisting of flexible wire and rigid tube sections, all the latter being threaded on the same wire and having their adjacent ends adapted to make contact with each other.

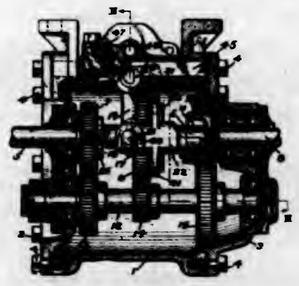
1,422,841. LUMINOUS ARTICLE AND METHOD OF MAKING THE SAME. WILLIAM H. DEY, Jersey City, N. J., assignor to United States Radium Corporation, a Corporation of Delaware. Filed Nov. 16, 1920. Serial No. 424,379. 6 Claims. (Cl. 240—1.)



1. A luminous article, comprising a glass casing provided with a bore, and a glass rod the diameter of which is slightly less than the diameter of the bore, painted with luminous paint, located in the bore.

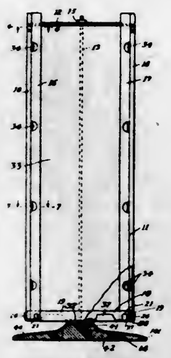
1,422,842. READING RIBBON IN SIGNALING MACHINES. WILFRID DOUCALL, Montreal, Quebec, Canada. Filed Mar. 13, 1920. Serial No. 365,648. 4 Claims. (Cl. 178—112.)

4. A reading ribbon comprising a length of sheet material in ribbon form divided longitudinally on an imaginary line in two equal parts and subdivided longitudinally into left and right hand divisions in each longitudinal half, the said longitudinal halves having perforations in transverse arrangement for left and right hands in groups or singly, these perforations continuing in successive lines along one longitudinal half and back by the other finishing at or about the starting point and completing a book roll.



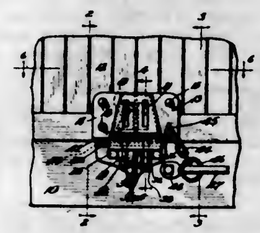
1,422,843. DRIVING MECHANISM FOR WASHING MACHINES. WALTER ERNI, Milwaukee, Wis. Filed June 25, 1917. Serial No. 176,743. 1 Claim. (Cl. 74—60.)

Driving mechanism for washing machines having an oscillatory drum, said driving mechanism comprising a pinion operatively connected with said drum, an oscil-



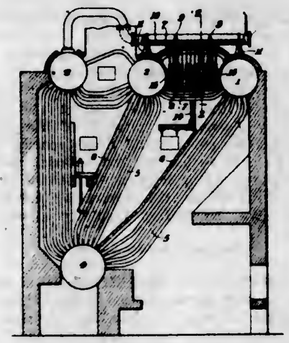
latory rack adapted to be thrown into and out of mesh with said pinion, a guide for said rack pivotally mounted to swing about a point above said pinion, means for reciprocating said rack, a bell crank lever linked to the lower end of said guide for moving said rack into and out of mesh with said pinion, said bell crank lever having a substantially vertically disposed manually operable arm, and means carried by said arm for positively locking said arm in either of its two extreme positions.

1,422,844. AUTOMATIC TRAIN-SPEED-CONTROL DEVICE. CLYDE C. FARMER, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed May 12, 1920. Serial No. 380,856. Renewed Jan. 14, 1921. Serial No. 437,356. 23 Claims. (Cl. 246—19.)



2. In a train speed control apparatus, the combination with a speed governor and a driving member operating at a speed relative to the speed of the train, of a change speed gear mechanism having different positions for varying the speed of the governor relative to the speed of the driving member and means including a removable staff for setting the speed gear mechanism to its different positions.

1,422,845. DISPLAY DEVICE. GEORGE M. FRANKS, St. Paul, Minn. Filed Mar. 2, 1921. Serial No. 449,183. 9 Claims. (Cl. 211—20.)

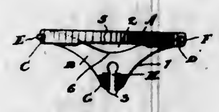


3. A display device comprising a lower frame member formed of a single piece of sheet iron, flanges turned upwardly from the body of said lower frame member along the edges thereof, ears pressed out of said upturned flanges and uprights mounted on said lower frame member between said ears and flanges.

1,422,846. LOCK FOR SLIDING DOORS. JAMES C. FRITTS, Scranton, Pa. Filed Sept. 6, 1921. Serial No. 498,617. 8 Claims. (292—148.)

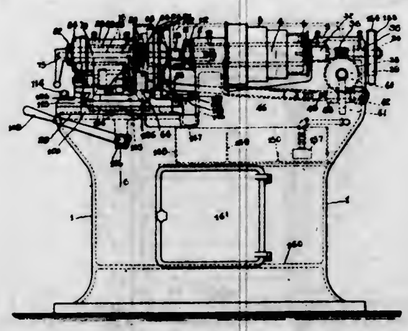
1. A lock for sliding doors comprising, in combination, a chambered casing having a bolt aperture in its face, a headed bolt loosely housed in the casing and adapted when withdrawn to have its forward end out of alignment with the aperture, a keeper having an outstanding apertured flange, the aperture being adapted to register with the casing aperture, and a key member for attachment to the free end of the bolt when advanced through the keeper.

1,422,847. SUPERHEATER. ERNEST H. FOSTER, Dongan Hills, N. Y., assignor to Power Specialty Company, New York, N. Y., a Corporation of New York. Filed Dec. 4, 1919. Serial No. 342,429. 5 Claims. (Cl. 122—478.)



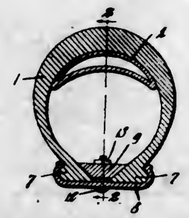
1. The combination in a steam boiler of the Stirling type as herein described where in a plurality of upper drums are connected by circulating tubes, of a superheater with transverse parallel vertical rows of tubes placed between the circulating tubes connecting the first and second upper drums, a beam mounted on and above said drums, a support for the superheater suspended therefrom and a vertical baffle which forces the furnace gases up and over the superheater tubes, said baffle extending up centrally between the transverse vertical rows of superheater tubes.

1,422,848. EXTRACTION OF POTASSIUM COMPOUNDS. WALTER GLASER, Brooklyn, N. Y., assignor to Potash Extraction Corporation, New York, N. Y., a Corporation of New York. Filed June 7, 1918. Serial No. 238,768. 6 Claims. (Cl. 23—22.)



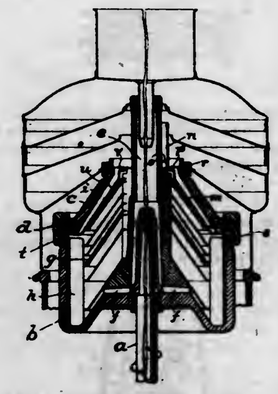
1. In a method of making hydrochloric acid, the steps which consist in heating calcium chloride with alunite in the presence of steam and then collecting the hydrochloric acid evolved.

1,422,849. TIE HOLDER. WILLIAM HARRY GRAINGER, Toronto, Ontario, Canada. Filed Apr. 14, 1921. Serial No. 461,224. 1 Claim. (Cl. 2—84.)



In a tie-holder, in combination a bow-shaped plate-like cross-bar provided with a concaved portion in its upper edge, and having each end projecting above said conceived portion; a tongue integrally formed with said bar, curved to conform to the bowed-shape of said cross-bar, and located substantially between said ends, and below said concaved portion and having a vertical slot opening through the lower end thereof, a bow-shaped plate-like cross-bar adapted to permit a neck-tie to be knotted thereon, and designed to rest in lateral contact with the ends of said first-mentioned cross-bar and relatively narrow so as to leave a space between the lower edge of said second-mentioned cross-bar and the edge of said concaved portion through which a certain portion of a tie will extend, and means whereby said bars are associated at their ends so as to permit of the separation thereof either for the substitution of a bar corresponding to said second-mentioned bar, or the removal of a tie mounted thereon.

1,422,850. MILLING MACHINE. WALTER A. GRUENBERG and DORA MILLER, Detroit, Mich., assignors to The Miller Transmission Company, New York, N. Y., a Corporation of Maine. Filed Sept. 22, 1919. Serial No. 325,313. 17 Claims. (Cl. 90—18.7.)

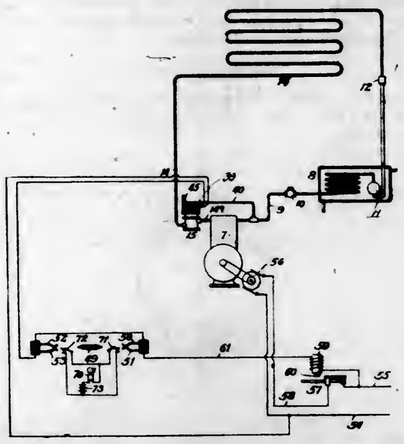


1. In a machine of the character described, the combination of a supporting frame, a rotary cutting tool, driving means therefor, a work supporting table on the frame, a carrier plate fitted thereon and adjustable longitudinally with reference to the tool, said carrier plate being formed with a transverse guide-way, a work carriage fitted to said guide-way and capable of transverse adjustment therein, a gauge plate and coacting locking means associated with the carrier plate and carriage to determine the carriage adjustment therein, a work holder journalled in the carriage and slidable therein toward and from the tool, cam means associated with the work holder to effect the movement thereof toward and from the tool during the milling operation to define the contour of the finished surface and operating connections for the work holder connected to the driving means whereby the feed movement of the work holder is transmitted from the latter in definite ratio, said operating connections comprising a flexible shaft to accommodate for the adjustment of the work holder, substantially as described.

1,422,851. TIRE. WILLIAM R. HALFPENNY, Juniata, Pa. Filed July 8, 1921. Serial No. 483,293. 1 Claim. (Cl. 152—8.)

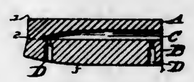
A vehicle tire comprising a casing having rim engaging means, and a spring ring crescent-shaped in cross section and having detachably connected interfitting ends, spring ring being seated in the casing against the tread portion thereof.

1,422,852. CENTRIFUGAL MACHINE. SELDEN H. HALL, Poughkeepsie, N. Y., assignor to The De Laval Separator Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 6, 1921. Serial No. 490,376. 9 Claims. (Cl. 233—46.)



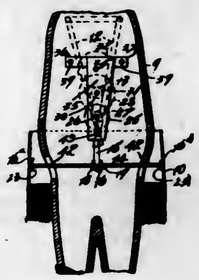
1. A convertible centrifuge comprising a bowl shell, a top disc above the separating space of the bowl, and alternative means one affording a free flow for heavy liquid from the peripheral part of said separating space to the space above the top disc and the other obstructing the flow to said space above the top disc.

1,422,853. CONTROLLING MECHANISM FOR REFRIGERATING APPARATUS. CHARLES C. HANSEN, Forest Park, Ill., assignor to Refrigerating Specialties Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 18, 1916. Serial No. 115,694. 3 Claims. (Cl. 230—24.)



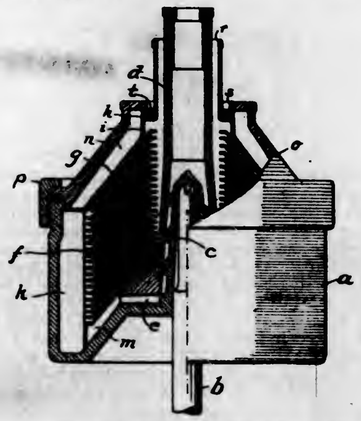
1. In a refrigerating system, the combination of a compressor, a circulating line for the refrigerant connected to

the compressor, an automatic cut-off in the low pressure side of the line leading to the compressor, a signalling de-



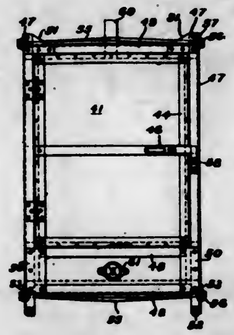
vice, and common means for operating first said signalling device and then said cut-off.

1,422,854. DOUBLE CUSHIONED SHOE HEEL OR LIFT. MAX G. HART, Elyria, Ohio. Filed Mar. 15, 1921. Serial No. 452,453. 4 Claims. (Cl. 36—35.)



1. In a shoe heel or lift having integral upper and lower portions of different elasticity, the said portions being separated along the front edge of the heel with an interposed compensating chamber.

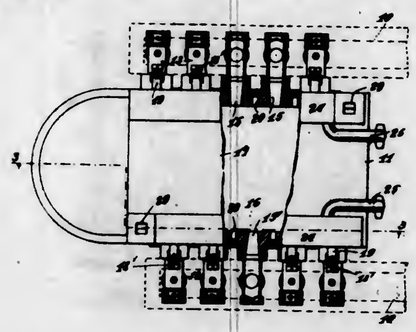
1,422,855. SHIMMY DOLL. SAMUEL HASKELL, Brooklyn, N. Y. Filed July 21, 1921. Serial No. 486,343. 5 Claims. (Cl. 46—40.)



1. The combination of a doll, a skirt carried by the doll and hanging loosely therefrom, a bar mounted for movement transversely of the doll, said bar, at its ends, contacting with said skirt, and means to impart to the bar a variable movement transversely of the doll.

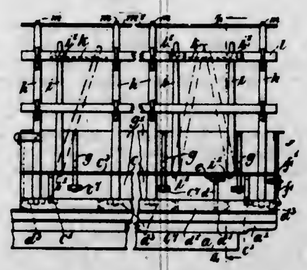
1,422,856. CENTRIFUGAL MACHINE. CYRUS HOWARD HAPGOOD, Nutley, N. J., assignor to The De Laval Separator Company, New York, N. Y., a Corporation of New Jersey. Filed May 5, 1921. Serial No. 466,962. 5 Claims. (Cl. 233—41.)

1. A convertible centrifuge comprising a bowl body, a liner within the bowl comprising a number of discs for dividing the liquid into layers, there being openings for the escape of liquid constituents of different specific gravities, a removable bowl cover, and a removable annular gasket adapted when inserted in the bowl, to be confined in non-adjustable position between the bowl cover and the liner in position to block the escape of liquid through one of said openings.



1,422,857. ELECTRIC OVEN. JULIUS D. HAYNSWORTH, Mansfield, Ohio, assignor to Westinghouse Electric Products Company, a Corporation of Pennsylvania. Filed Aug. 3, 1921. Serial No. 489,478. 4 Claims. (Cl. 25—132.)

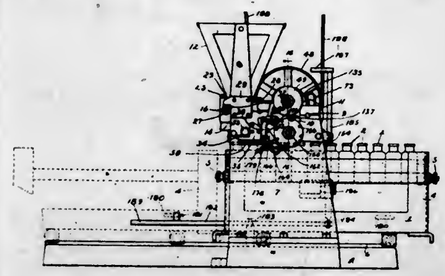
1. An oven comprising a back mounting panel having a channel in one face adjacent its periphery, a top and a bottom panel having one edge located in a co-operating portion of said channel, side panels having one edge located in a co-operating portion of said channel, a bottom front panel having a channel in one face adapted to fit over one edge of the bottom panel, a rear metal frame, a front metal frame and rods for clamping said frames against said oven panels.



1,422,858. MELTING TANK. GUY C. HEILMAN, Philadelphia, Pa. Filed Oct. 20, 1919. Serial No. 331,804. 7 Claims. (Cl. 49—54.)

1. A device of the class described, provided with a main chamber, combustion chambers discharging into said main chamber at one side, and peep-holes located in the opposite wall of the main chamber, in line with the said combustion chambers.

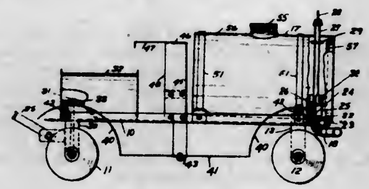
4. A device of the class described, provided with a main chamber of substantially rectangular shape having outlets at diagonally-opposite corners, combustion chambers discharging into said main chamber, and air-heaters each provided with an approximately horizontal air-chamber delivering air to one of said combustion chambers, and hot-gas chambers located above and below said air-chamber and connected at one end, the lower chamber being connected with the outlet of the main chamber at the other end, while the other end of the upper chamber has an outlet connection.



1,422,859. BODY FOR FARM TRUCKS. EDWARD R. HEWITT, Midvale, and JOHN H. BLAKE, Jr., East Orange, N. J., assignors to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed June 24, 1921. Serial No. 480,210. 3 Claims. (Cl. 296—14.)

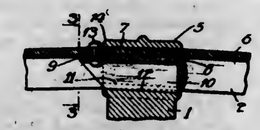
1. In a farm body for motor vehicles an all-steel bed, steel sides hinged thereto, unitary triangular steel braces pivotally supported at the sides of the bed and adapted to engage the sides of the body to support them in vertical position to form a box body, said braces being movable independently of the sides to a point below the hinge line to permit the sides to swing downwardly and outwardly into line with the bed to form a platform body, and bolsters secured at the side of the bed to support the sides in lowered position and house the braces when in lowered position.

1,422,860. PILL-COUNTER AND BOTTLE-FILLING MACHINE. WILFORD A. HILL, Waltham, Mass., assignor to B. O. & G. C. Wilson, Inc., Boston, Mass., a Corporation of Massachusetts. Filed June 3, 1921. Serial No. 474,819. 21 Claims. (Cl. 226—2.)



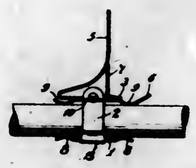
1. A machine of the class described comprising a support for a series of rows of containers, means to feed articles into each container of a row, and means acting after each container of said row has received a predetermined number of articles for moving said support to present a succeeding row of containers to said feeding means.

1,422,861. LIQUID COATING COMPOSITION. CARL D. HOCKER, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 11, 1919. Serial No. 344,177. 6 Claims. (Cl. 134—26.)



3. A liquid coating composition resulting from a combination comprising glycerine, congo copal, free fatty acid and castor oil.

1,422,862. TOY SPRINKLER. EMIL G. HOFMANN, Chicago, Ill. Filed Feb. 28, 1920. Serial No. 362,129. 2 Claims. (Cl. 46—48.)



1. In a toy sprinkler, a frame, wheels supporting the rear end of said frame, a pair of wheels for the front end of said frame, an axle connecting said pair of wheels, a bolster supported by said axle, and supporting the front end of said frame, a casing on the front end of said frame, a bracket having one end fixed to the frame within said casing and having the other end fixed to the front end of said casing a material distance above said frame, and a bolster pin extending through said bracket, said bolster, and said axle.

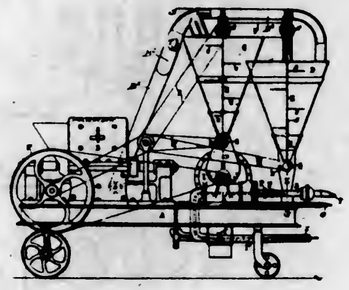
1,422,863. BRAKE BEAM. CHARLES F. HUNTOON, Chicago, Ill. Filed July 11, 1921. Serial No. 483,835. 5 Claims. (Cl. 188—231.)

5. A brake beam comprising compression and tension members secured together at their ends, a central strut, said compression member being in the form of a channel bar, a wedge between the web of the compression member and the strut, said strut having an inclined surface for coacting with the wedge, and means for securing the wedge to the compression member.

1,422,864. TUBE COMPRESSOR. FRANK S. HYATT, Brooklyn, N. Y. Filed Nov. 5, 1920. Serial No. 422,013. 2 Claims. (Cl. 251—5.)

1. In a sheet metal compression clamp of the character described, the combination of two separate oblong pieces of sheet metal disposed transversely to one another, one of said pieces being a flat piece of sheet metal constituting the lower clamping member and located wholly below the tube to be clamped, the other piece being longer than the first and having its ends bent up to form the ears for the cam operating upon a separate upper clamping member and means for securing the two sheet metal pieces together one upon the other, to form a sheet metal base of double thickness.

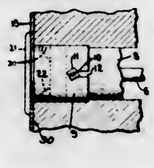
1,422,865. BURGLAR GUN. FRANCIS S. JOBSON, Mentone, Ala. Filed Feb. 18, 1922. Serial No. 537,572. 3 Claims. (Cl. 89—27.)



3. A burglar gun including a base, a barrel and a firing pin mounted on said base, a standard, a spring-pressed plunger mounted thereon and operatively connected with the firing pin, said plunger having a notch formed therein, a lever pivoted to the rear of said standard and normally engaging said notch, a bell-crank lever pivoted at one side of the standard and normally engaging the first-named lever, and a latch for locking said first-named lever in its plunger engaging position.

1,422,866. COTTON DYES. HEINRICH JORDAN, Leverkusen, near Cologne, Germany, assignor, by mesne assignments, to The Grasselli Chemical Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 27, 1919. Serial No. 326,984. 2 Claims. (Cl. 8—1.)

1. The new trisazodyes being derived from 1.4-diaminonaphthalene sulfonic acid, naphthylamin solfonic acid a naphthol compound and resorcin, which are after being dried and pulverized in the shape of their salts with alkali metals dark powders soluble in water with a bluish coloration, and being soluble in concentrated sulfuric acid generally with a greenish coloration, dyeing cotton pure greenish-blue which is rendered fast to washing by an aftertreatment with formic aldehyde; being broken up by treatment with stannous chlorid and hydrochloric acid into a 1.4-naphtholenediamin sulfonic acid, an aminooxynaphthalene and 1.3-dioxy-4-aminobenzene, substantially as described.



1,422,867. APPARATUS FOR FEEDING FUEL TO FURNACES. VLADIMIR KARYCHEFF and PRINCE EUGENE GAGARIN, Paris, France. Filed Feb. 16, 1922. Serial No. 537,112. 5 Claims. (Cl. 110—104.)

4. The combination with a wheel supported truck, of a fuel pulverising mill mounted on said truck, an injector pipe carried by said truck and provided at its forward end with a nozzle, a combined suction and pressure fan mounted on said truck and having means connecting its outlet to said injector pipe, a chute carried by said truck and connected to the inlet of said fan, a hopper connected to said chute, means permitting air to enter said

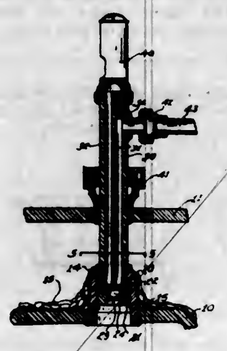
chute, and a conveyor supported by the truck and arranged to convey powdered fuel from the pulverizing mill to said hopper.

1,422,868. MOUNTING FOR DRAFT REGULATORS. FREDERICK C. KASCH and GEORGE F. NEFF, Akron, Ohio. Filed Dec. 3, 1921. Serial No. 519,608. 6 Claims. (Cl. 126—295.)

1. A draft regulator comprising a damper, a rotary shaft for the damper, a tubular housing to receive the shaft, a longitudinally adjustable extension on said housing, means to secure said extension in varying positions of adjustment so as to be flush with a wall, a cover plate on the end of the extension, spiral grooves in the cover plate and pins on the extension adapted to be received in the grooves, whereby the cover plate can be rotated into positions at varying distances from the end of the extension.

1,422,869. ESTERS OF DIOXYDIETHYLSULPHIDE AND PROCESS OF MAKING SAME. GEORG KRÄNZLEIN, Sindlingen, near Hochst-on-Main, and MARTIN CORELL, Hochst-on-Main, Germany, assignors to Farbwerke vorm. Meister Lucius & Brüning, Hochst-on-Main, Germany, a Corporation of Germany. Filed July 2, 1921. Serial No. 482,151. 2 Claims. (Cl. 260—106.)

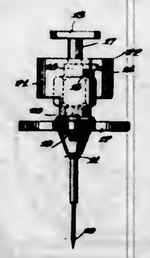
2. As new products, the compounds of the general formula:



$$S\begin{matrix}\diagup CH_2.CH_2O.R\\ \diagdown CH_2.CH_2O.R\end{matrix}$$

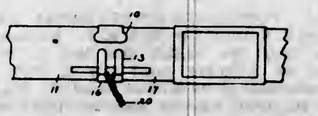
wherein "R" stands for any inorganic or organic acid residues.

1,422,870. LOW-WATER ALARM. CHARLES A. KOTHE, Galion, Ohio. Filed Feb. 21, 1921. Serial No. 446,922. 23 Claims. (Cl. 122—504.1.)



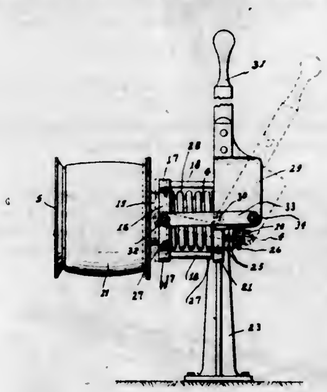
14. In a device of the class described, a steam boiler, a fusible plate adjacent the crown sheet thereof, pipe connections communicating with two adjacent points on the face of said plate and sealed thereby, the other ends of said

pipe connections being connected respectively with the steam in said boiler and an alarm, the central portions of



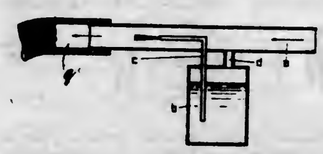
the underside of said plate being unsupported to allow warping of the plate for passage of steam to said alarm slightly before the plate melts.

1,422,871. ATTACHMENT FOR CARBURETORS. LEO F. LIEBER, Sidney, Iowa. Filed June 4, 1919. Serial No. 301,679. 2 Claims. (Cl. 261—39.)



2. A carburetor having a fuel valve provided with a stem, a cap piece for the carburetor in which the stem has a threaded connection whereby to reciprocate the stem when it is rotated, an arm secured to the stem and outstanding therefrom above the cap, a thermostat surrounding the stem above the cap having an angular extension at one end anchored to the cap and having its opposite end provided with an L-shaped recess forming an upstanding lug, said arm outstanding from the stem having its outer end projecting into the recess and provided with an aperture to receive the said lug as described.

1,422,872. WATCH-CHAIN FASTENER. JOHN LOMAN, Bristol, Conn. Filed Feb. 23, 1922. Serial No. 538,820. 1 Claim. (Cl. 24—3.)

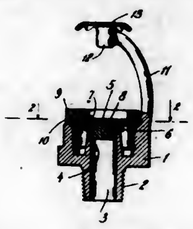


A watch chain fastener formed of a single piece of metal having one wall substantially full and unbroken, having the opposite wall of skeleton form, said walls being separated by a belt receiving space and connected at the top and bottom by short connecting pieces, a pair of spring fingers in spaced relation for receiving a watch chain guard and chain end connected to said guard, and said fingers being in the form of extensions of the border wall on one side of said belt receiving space.

1,422,873. CLUTCH PULLEY. JOHN F. MCNALLY and RALPH A. BRADLEY, Emporia, Kans. Filed Jan. 26, 1921. Serial No. 440,071. 2 Claims. (Cl. 192—99.)

1. The combination with an engine shaft, and a sleeve secured thereon, said sleeve being provided with a clutch head at its inner end, of a pulley fitted about the sleeve and having a clutch chamber in one end receiving and adapted to engage the said clutch head, a shifter frame slidably fitted upon the sleeve and bearing against the outer end of the pulley, a second frame fitted about the outer end of the sleeve, means for holding the said second frame in a fixed position, a lever head pivoted to the said second frame, a link pivotally attached at its inner end to the shifter frame and having its outer end pivoted to the lever head eccentric to the pivotal connection between the said head and the said second frame, and a spring coiled around the sleeve between the shifter frame and the said second frame.

1,422,874. ART OF EXTRACTING COAL IN MINES. HERMAN MACK, Hamm, Germany. Filed Oct. 3, 1917. Serial No. 194,519. 6 Claims. (Cl. 262—1.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

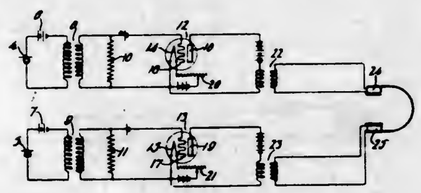


1. A process of extracting coal, consisting in introducing a moistened compressed gaseous fluid into a bore hole of the coal bed.

1,422,875. SPRINKLER HEAD. THOMAS J. MADIGAN, Brooklyn, N. Y., assignor of one-fourth to James O. Schwank, New York, N. Y. Filed Apr. 7, 1920. Serial No. 371,907. 2 Claims. (Cl. 169—41.)

2. A sprinkler head comprising, in combination, a threaded fitting, a collar threaded to the interior thereof and

readily removable therefrom for renewals, a plug closing the water passage of said fitting, a low fusing disc there-



over, said collar engaging the edge of said disc and holding said plug to its seat over the water passage.

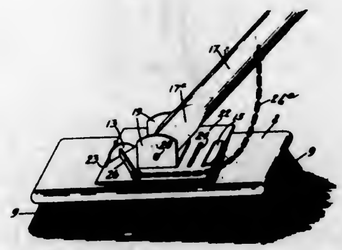
1,422,876. DETERMINATION OF WAVE-ENERGY DIRECTION. MAX MASON, New London, Conn., assignor to Submarine Signal Company, Portland, Me., a Corporation of Maine. Filed June 25, 1919. Serial No. 306,683½. 8 Claims. (Cl. 181—26.)

1. In apparatus of the character described, the combination of sound receivers disposed in a row, divided into two sections of a series of receivers each, means for bodily turning the row of receivers, a listening device having two ear pieces, one for each ear of the observer, and energy collecting means having branching tributary paths between the receivers of each section and the corresponding ear piece of the listening device, the several paths all having the same time of energy travel from the receivers to the listening device, substantially as described.

1,422,877. ACOUSTICAL AID FOR DEAF PERSONS. JOSEPH P. MAXFIELD, Maplewood, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 2, 1920. Serial No. 348,868. 5 Claims. (Cl. 179—107.)

3. A binaural system for deaf persons comprising a pair of microphones having highly damped vibrating systems, a corresponding pair of telephone receivers, a separate amplifying circuit connecting each of said microphones with the corresponding receiver, and means for adjusting the degree of amplification in said circuits.

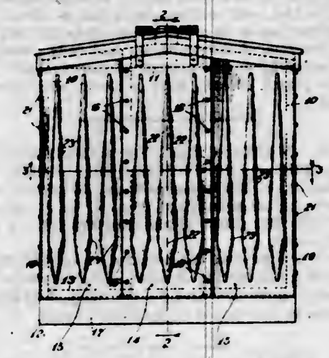
1,422,878. RETORT. FLOYD J. METZGER, New York, N. Y., assignor to Air Reduction Company, New York, N. Y., a Corporation of New York. Filed Oct. 11, 1917. Serial No. 195,951. 2 Claims. (Cl. 263—41.)



1. A retort adapted for use in the manufacture of alkali metal cyanide and to be subjected to the action of oxidising gases at high temperature, the retort comprising a body of ferrous metal which is corrodible by said gases and a protecting skin coating applied to the outer surface of the body and consisting of a base metal alloy which resists the oxidising action of said gases.

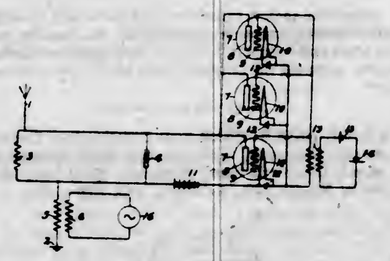
1,422,879. ASH TRAY AND RECEPTACLE. SIEGFRIED MEYER, New York, N. Y. Filed Aug. 6, 1920. Serial No. 401,699. 1 Claim. (Cl. 131—51.)

A device of the class described comprising a base plate, a horizontal stem rigid to and extending rigidly therefrom, uprights extending in spaced apart relation from said stem, resilient heads on said uprights, and a tray or receptacle having hollow elements to removably engage over said heads.



1,422,880. MECHANICAL CONNECTOR. WILLIAM HERMAN MICHAELSEN, Mount Vernon, N. Y. Filed May 8, 1919. Serial No. 295,741. 2 Claims. (Cl. 306—23.)

1. A device of the character described comprising a cleat made of sheet metal and having the form of a flat plate, said cleat being provided with an upturned lip and with an extending portion formed into a hook, a connector plate provided with a slot for receiving said upturned lip and with another slot for receiving said hook, a fastening member for detachably engaging said lip and an adjacent portion of said connector in order to prevent the separation of said connector plate from said cleat, and a handle mounted upon said connector plate by means of a flexible connection.



1,422,881. CORRUGATED-SHEET-METAL CAR END. WALTER P. MURPHY, New York, N. Y. Division of application Serial No. 82,423, filed Mar. 6, 1916 (now Patent No. 1,309,484, dated July 8, 1919), the copendency of its division Serial No. 804,429, filed June 10, 1919, renewed May 28, 1921, Serial No. 473,318. This application filed Nov. 15, 1920. Serial No. 424,124. 15 Claims. (Cl. 105—410.)

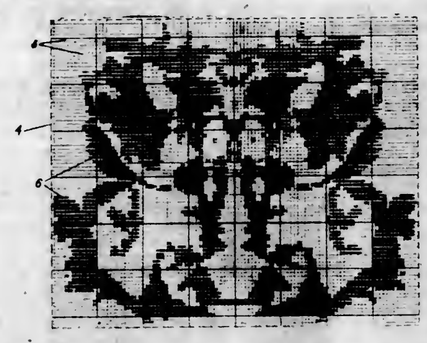
9. A sheet metal end structure for a railway car formed with a plurality of groups of substantially parallel corrugations each of which corrugations is of maximum depth at a point intermediate its ends and tapers therefrom toward its ends, the corrugations of each

group being of substantially uniform configuration but those of one group being deeper than those of another group.

1,422,882. RADIO TRANSMISSION. HAROLD W. NICHOLS, Maplewood, N. J., assignor, by mesne assignments, to Western Electric Company, Incorporated, a Corporation of New York. Filed Sept. 1, 1915, Serial No. 48,452. Renewed Jan. 2, 1920. Serial No. 348,880½. 3 Claims. (Cl. 250—19.)

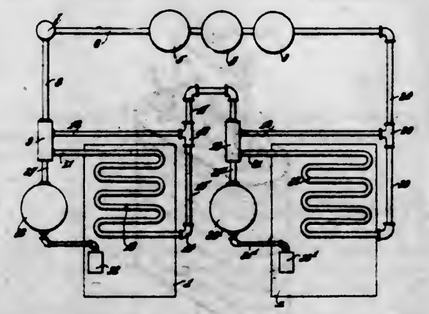
1. In a radio transmission system, an antenna, a source of high-frequency power supplying said antenna, a thermionic discharge path arranged to carry a fraction of the power for said antenna, a source of waves of signaling frequencies, and means for varying the power carried over said thermionic path in accordance with said waves.

1,422,883. FRUIT-JAR COVER. WILLIAM ROBERT NIPPER, Grants Pass, Oreg. Filed Nov. 10, 1921. Serial No. 514,234. 5 Claims. (Cl. 215—81.)



3. The combination with a fruit jar cover of an attachment therefor, said attachment comprising a body portion having a flange at each end thereof, and fastening means carried by said cover for detachably securing said attachment to said cover to depend from the under side of said cover.

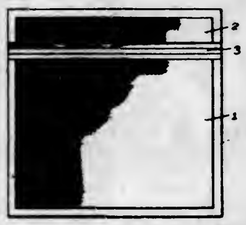
1,422,884. PROCESS OF MANUFACTURE OF SPONGE RUBBER. ANDREW JOHN OSTBERG and ALBERT KENNY, Richmond, near Melbourne, Victoria, Australia, assignors to The Standard Rubber Works Proprietary Limited, Melbourne, Victoria, Australia, a Corporation of Victoria. Filed Aug. 18, 1920. Serial No. 404,340. 1 Claim. (Cl. 18—53.)



A process for the manufacture of a spongy rubber material comprising mixing together 15 lbs. Pará rubber, 15 lbs. reclaimed rubber, 13 lbs. sulphur, 9 lbs. zinc white, 1½ lbs. carbonate of magnesia, then adding a volatile mineral oil to soften the rubber ingredient, and vulcanizing the same.

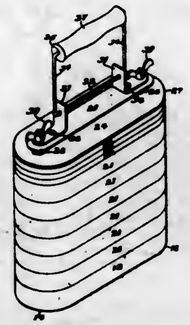
1,422,885. METHOD OF MANUFACTURING DESIGN CARDS. HERTA OTTOLENGHI-WEDEKIND, Genova, Italy. Filed Mar. 22, 1922. Serial No. 545,878. 1 Claim. (Cl. 41—17.)

In a method of forming designs which consists in producing a portion of a design on sized coordinate paper, completing the design by folding said paper upon itself and then recording said design on a second sheet of coordinate paper by means of straight lines corresponding to the pattern of said design to provide on the second sheet a record of the design for reproduction on any article upon which coordinate squares have been indicated, by means of the said straight lines, said lines by means of various characteristics indicating the various colors.



1,422,886. TEMPERATURE-CONTROLLING SYSTEM. PERCY R. OWENS, Mount Kisco, N. Y. Filed Feb. 27, 1920. Serial No. 361,687. 2 Claims. (Cl. 62—6.)

2. In a controlling system, the combination of a circulating system for refrigerating fluid, including a coil in a refrigerator and having inlet and exit pipes, a valve chamber included in said inlet pipe, a bypass pipe

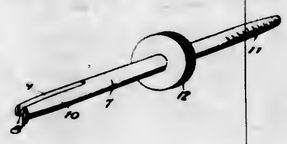


leading from said valve chamber, an automatic bypass valve in said chamber adapted to be moved to vary the relative extent of the openings of said inlet pipe and said bypass pipe, a thermostatic device within the refrigerator and connections between the same and said by pass valve adapted to move the latter in one direction or the other as the temperature in the refrigerator rises or falls to simultaneously vary the extent of the openings of said inlet pipe and of said bypass pipe into said valve chamber, a second coil in a refrigerator, said bypass pipe leading into said coil, a valve chamber in said bypass pipe adjacent said second coil, and another bypass pipe communicating with said valve chamber, an automatic bypass valve in said second chamber adapted to vary the relative extent of the openings of said pipe leading into said second coil and of the bypass pipe, and means comprising a thermostatic device within said second refrigerator and connections between the same and said bypass valve, whereby the relative extent of the openings of the said two pipes leading from said valve chamber are simultaneously varied as the temperature in the refrigerator rises or falls.

1,422,887. MAT. RAYMOND H. PHILLIPS, Trenton, N. J. Filed Dec. 12, 1919. Serial No. 344,286. 3 Claims. (Cl. 280—169.)

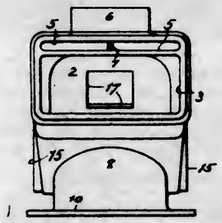
1. A mat for protecting the running board and dust guard of an automobile beneath a door opening comprising a rubber section to be placed on the running board and provided with a roughened top surface, and a second rubber section to be placed in contact with the dust guard, said second section being integrally connected to said first section by a thin strip of rubber joining said first section near its base.

1,422,888. EXERCISING DEVICE. LESLIE C. REEVES, Pitman, and MORTIMER A. WEBB, Jr., Camden, N. J. Filed Dec. 21, 1920. Serial No. 432,239. 5 Claims. (Cl. 46—69.)



1. A portable exercising device having an elongated body portion with substantially parallel sides merging into curved end surfaces and being of greater length than width; and a handle extending directly upward from the top of said body portion and having a connection with the body portion including a pivot bearing allowing the handle to swing relatively to the body portion in the direction of the width of said body portion, said handle including a grip extending approximately parallel with the length of said body portion; substantially as described.

1,422,889. MANUFACTURE OF 9.10-DIHALOGENANTHRACENE-β-MONOSULPHONIC ACID. KARL SCHIRMACHER, Höchst-on-the-Main, Germany, assignor to Hermann A. Metz, New York, N. Y., a Corporation. Filed Oct. 23, 1920. Serial No. 419,157. 4 Claims. (Cl. 23—24.)

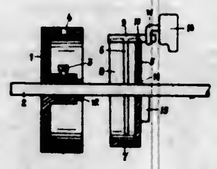


1. As a new process, the preparation of 9.10-dihalogenanthracene-β-monosulphonic acids, which consists in causing fuming sulphuric acid to act upon 9.10-dihalogenanthracene in presence of an indifferent agent.

1,422,890. VALVE TOOL. CHARLES DINES SEVIER and FRANK PETER ECKROAT, Fort Collins, Colo. Filed Jan. 19, 1921. Serial No. 438,491. 1 Claim. (Cl. 81—3.)

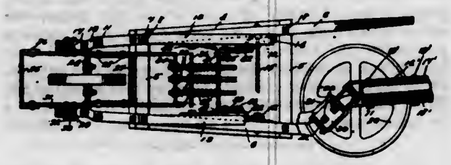
In a valve tool, a cylindrical body, one end of said body being tapered and screw-threaded on the tapered portion, the other end being bifurcated to form resilient fingers, and a grip mounted on the body, as and for the purposes set forth.

1,422,891. GAS BURNER FOR FURNACES. CHESTER L. SHARP, Lancaster, Ohio; Georgia Sharp administratrix of said Chester L. Sharp, deceased. Filed June 10, 1921. Serial No. 476,629. 5 Claims. (Cl. 158—109.)



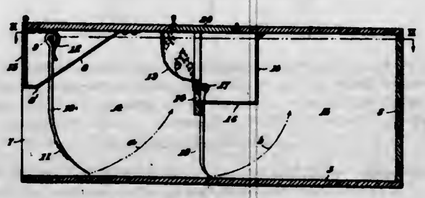
2. A gas burner of the type specified having a gas inlet portion formed with an inclined valve seat, an inclined valve to rest on said seat, means for manipulating said valve, and arms projecting from said valve and engaging a portion of the burner body adjacent to the lower portion of the valve, whereby when the valve is raised it will leave all portions of the seat.

1,422,892. DEVICE FOR GRADUATING LINES ON RULED PAPER. BARNETT SHATS, Buenos Aires, Argentina. Filed Jan. 21, 1921. Serial No. 438,970. 4 Claims. (Cl. 197—123.)



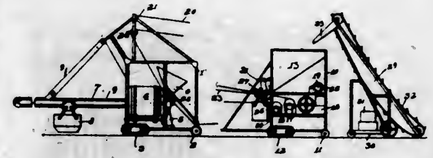
1. In a typewriting machine, a platen roll shaft, a hollow wheel fixed thereto and adapted to be turned by the operator for adjusting the platen roll, a second wheel

rotatable about said shaft and having a portion extending within the first mentioned hollow wheel, the second mentioned wheel being provided with integral resilient segments, a lever pivotally mounted on the second mentioned wheel and extending between the ends of said segments, an



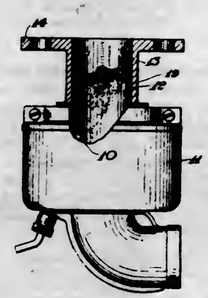
operating member for swinging said lever about its pivot in one direction to cause said segments to separate and engage the inner surface of said hollow wheel, and means fixed to said second wheel and adapted to engage a spring for moving the second wheel in the opposite direction.

1,422,893. WHEELBARROW. WILLIAM E. SHOWALTER, Huntingburg, Ind. Filed June 10, 1919. Serial No. 303,148. 3 Claims. (Cl. 280—52.)



1. A wheel-barrow comprising a body, guides carried by said body, a sliding frame supported by said guides and capable of rearward and vertical movement with respect to said body, spring means associated with said frame in such a way as to be placed under compression by the rearward and vertical movement thereof, and a supporting wheel carried by the frame and movable therewith.

1,422,894. ANIMAL TRAP. ALEKSANDER SKUBINSKI, Los Angeles, Calif. Filed July 28, 1920. Serial No. 399,566. 3 Claims. (Cl. 43—66.)

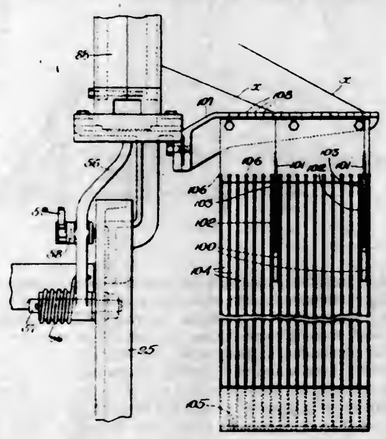


1. A trap of the class described including a box-like casing having a rear door and a front entrance opening, a partition for dividing the box into a plurality of compartments, closing means for the main compartment, comprising a plurality of pivotally mounted spring pressed fingers curved at the lower ends and provided with a series of teeth to prevent backward movement of the animal.

1,422,895. ROAD-BUILDING APPARATUS. CARL A. SMITH, Defiance, Ohio. Filed June 9, 1920. Serial No. 387,648. 1 Claim. (Cl. 214—1.)

Road building apparatus including movably supported mixing mechanism, a bin structure movable relative to the mixing mechanism to position for receiving materials to be mixed, a track cable connecting the bin structure to the mixing mechanism and adjustable in length so as to be substantially taut when the mixing mechanism and the bin structure are at any distances apart, a bucket movably supported by said cable, means for directing materials into the bucket from the bin structure, and means movable with the bin structure for shifting the bucket to convey material from the bin structure to the mixing mechanism, and means on the bin structure for engaging and supporting the bucket while the track cable is slack during the movement of the bin structure relative to the mixing mechanism.

1,422,896. HEATING COIL FOR CARBURETORS. EDGAR M. SORENG, Milwaukee, Wis., assignor to Briggs & Stratton Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Jan. 7, 1918. Serial No. 210,692. 5 Claims. (Cl. 219—38.)



1. In a carburetor, a throttle valve, and a helix of resistance wire secured on one face thereof forming an exposed electric heating coil.

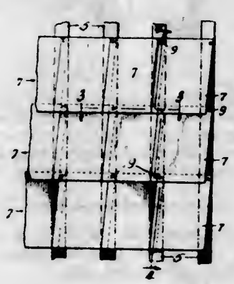
1,422,897. AUTOMATIC FILLING-REPLENISHING LOOM. WILLIAM S. SOUTHWICK, Clinton, Mass., assignor, by mesne assignments, to Wickwire Spencer Steel Corporation, a Corporation of Massachusetts. Filed July 10, 1917. Serial No. 179,677. 11 Claims. (Cl. 139—85.)

1. The combination with a loom, a shuttle, a filling magazine and a plurality of filling units therein, and means arranged to transfer said filling units, one by one, from said magazine to said shuttle, of a plurality of weights and guides therefor, said weights being movable

up and down independently of each other when the filling ends are attached respectively to them, said weights being

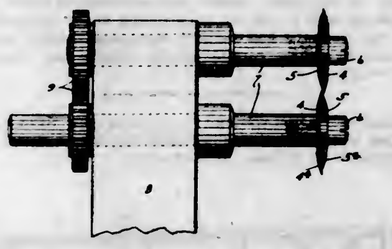
arranged to take up slack from said filling ends and to yield up such slack in consequence of the first traverse of each filling unit through the shed.

1,422,898. AUTOMATIC SWITCH FOR ELECTRIC HEATING APPLIANCES. BENJAMIN GEORGE CLAUDE STEPHENS, Auckland, New Zealand. Filed Feb. 14, 1920. Serial No. 358,792. 2 Claims. (Cl. 200—138.)



1. In automatic switches for electric heating appliances, the combination with a bimetallic thermostatic strip arranged within the heating influence of an electric heating circuit embodying a pair of terminals, a switch constructed to bridge such terminals and held in position against the action of a spring normally forcing it on the terminals, and releasing means for the said switch adapted to be engaged and operated by the movement of the bi-metallic strip through its expansion beyond a predetermined extent, substantially as specified.

1,422,899. TIRE. DANIEL L. STOUCH, York, Pa. Filed Apr. 13, 1922. Serial No. 552,269. 3 Claims. (Cl. 152—1.)

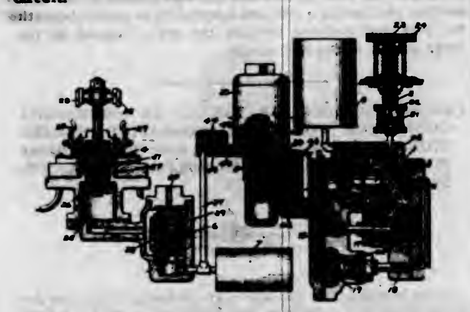


2. In a device of the character described, a casing having a crown portion, said crown portion being provided with an inwardly extending portion, fabric reenforcing arranged in said casing and extending through said inwardly extending portion, and a rib formed on said inwardly extending portion and projecting toward the base of the tire, the lower end of said rib being reduced to form shoulders adapted to engage the inner edges and top of the tire beads when the tire is in position.

1,422,900. ASH HOPPER. ARTHUR P. STRONG, Chicago, Ill., assignor to Green Engineering Company, East Chicago, Ind., a Corporation of Illinois. Filed Oct. 6, 1921. Serial No. 505,703. 3 Claims. (Cl. 189—3.)

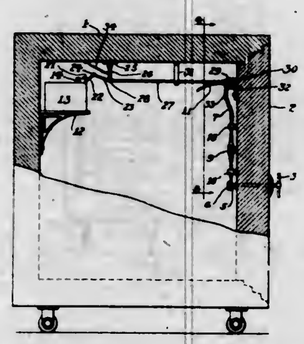
1. A tank wall, comprising plate supporting beams, plates arranged inside of said beams and closing the spaces between the same, and bolts securing the plates to said beams, the heads of the bolts being inside and overlapped and covered by the marginal portions of adjacent plates for protecting the bolts from contact with the material packed against the inside of said wall, said plates having recesses to receive and accommodate the bolt heads.

1,422,901. CUTTING DEVICE FOR LEATHER SOLES. GEORGE OAVILL TERRY, Minneapolis, Minn., assignor to Economy Shoe Machine Co., Minneapolis, Minn., a Corporation of Minnesota. Filed Aug. 16, 1920. Serial No. 403,647. 8 Claims. (Cl. 164—70.)



6. A cutting wheel comprising two concentrically arranged disks having contacting plane surfaces and outwardly disposed beveled and radial grooved surfaces, the wheels being of different diameter.

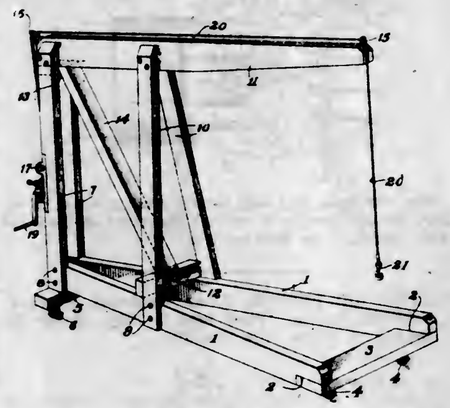
1,422,902. STARTING AND UNLOADING DEVICE. FRANK B. THOMAS, Wilkinsburg, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Nov. 13, 1919. Serial No. 337,717. 6 Claims. (Cl. 230—24.)



1. In a starting and unloading apparatus for an internal combustion engine driven fluid compressor, the combination with a motor for starting the engine, of a device for unloading the compressor, a switch device for controlling the motor circuit, and means for operating said device to effect the unloading of the compressor and

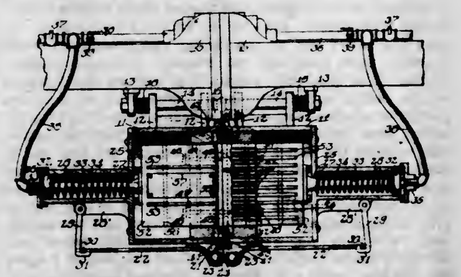
for then operating said switch device to close the motor circuit.

5. The combination with a motor for starting an internal combustion engine and a fluid compressor adapted to be driven by said engine, of a device for unloading the compressor, a valve mechanism operated by variations in fluid pressure for effecting the operation of said unloading device, a fluid pressure operated switch device for controlling the motor circuit, a timing reservoir, a valve device operated according to the pressure in said timing reservoir for supplying and releasing fluid under pressure to and from said switch device, and magnet controlled valve means for varying the fluid pressure on said valve mechanism and in said timing reservoir.



1,422,903. DEVICE FOR PROTECTING SAFES OR OTHER ENCLOSURES. GERALD W. TIFFANY, New York, N. Y., assignor of one-half to Norman J. Fitzsimmons, New York, N. Y. Filed May 28, 1921. Serial No. 473,297. 3 Claims. (Cl. 109—6.)

1. A device of the kind described comprising in combination an enclosure to be protected, a door giving access thereto, a container within said enclosure holding a noxious substance, an opening in said container, a cap for said opening, means tending to force said cap out of said opening, a catch for retaining said cap in said opening, and means connected to said catch and adapted to release the same when said door is forced open.

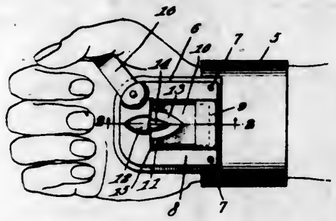


1,422,904. HOISTING APPARATUS. LAWRENCE T. TUCKER, Pollock, Mo. Filed Apr. 20, 1921. Serial No. 462,858. 1 Claim. (Cl. 212—142.)

In a hoisting apparatus, the combination of a pair of horizontal base beams, a pair of spaced, parallel, rear standards secured to said base beams, a pair of inclined front standards secured to said base beams near their center, a horizontal top beam secured between the upper ends of all of said standards, a block secured against the under face of said top beam and between said rear standards, a horizontal cross piece secured to the top of said base beams against the rear edges of the front standards,

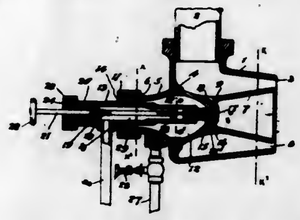
an inclined brace secured at its lower end upon the top of said cross piece and secured against the under face of the top beam in engagement with the front face of said block, and hoisting means carried by the rear standards and by the top beam, substantially as shown and described.

1,422,905. ELECTRIC COUPLING. CHARLES H. TOMLINSON, Mansfield, Ohio, assignor, by mesne assignments, to The Tomlinson Coupler Company, Mansfield, Ohio, a Corporation of Ohio. Filed June 22, 1912, Serial No. 705,149. Renewed Nov. 15, 1920. Serial No. 424,253. 26 Claims. (Cl. 173—332.)



26. In an electrical coupling mechanism for cars, the combination of a casing adapted to be supported upon the end of a car, a movable contact carrier mounted in a normally inoperative position in said casing, a movable member operatively connected to said carrier, contact fingers mounted in said casing and connected to the respective train line circuits, and means for actuating said movable member to shift the contact carrier to its operative position to establish electrical connection with the contacts of a counterpart coupling mechanism on an adjacent car.

1,422,906. CORN-HUSKING HOOK. ALFRED D. WAGNER, Eureka, Kans. Filed Apr. 15, 1921. Serial No. 461,502. 3 Claims. (Cl. 130—4.)



1. A husking implement including, a support, a body portion having an enlargement formed at one end thereof and having its opposite end depressed and contacting with

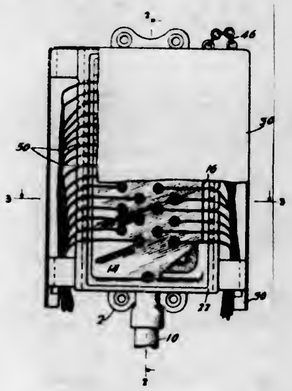
the support to provide a space between the support and body portion, a husking blade adapted to be positioned

within the space, and said husking blade adapted to engage the enlargement to restrict movement of the blade with respect to the body portion.

1,422,907. OIL BURNER. JESSE WILKINSON, Winnipeg, Manitoba, Canada. Filed June 1, 1920. Serial No. 385,674. 1 Claim. (Cl. 158—76.)

A burner comprising a hollow body, having right angularly related inlet and outlet openings and provided with a threaded aperture in line with the outlet, a hollow casing having the intermediate portion thereof threadedly engaged in said aperture and the forward portion thereof projecting into the body, said casing being formed with a flaring mouthpiece, the tip of which terminates at or near the outlet end of the casing and provides, in conjunction with said end, an annular discharge passage leading from the body, a partition wall at the juncture of the casing and mouthpiece formed with an aperture providing a valve seat, a hollow barrel projecting into the casing from the rear end thereof, an adjustable connection between the barrel and casing closing the rear end of the latter and permitting the barrel to be adjusted toward or away from said valve seat, a detachable nozzle carried by the inner end of the barrel and adapted to said seat to control communication between the casing and the mouthpiece, a hollow rod extending through the barrel and having a needle valve at its inner end adapted to a valve seat formed in the tip of the nozzle, and means for supplying oil to the barrel and means for supplying air to the casing.

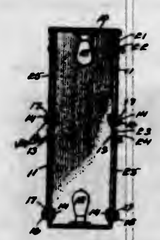
1,422,908. SEAT COVER. EDWARD WITTCOFF, St. Louis, Mo. Filed Aug. 22, 1921. Serial No. 494,336. 1 Claim. (Cl. 155—182.)



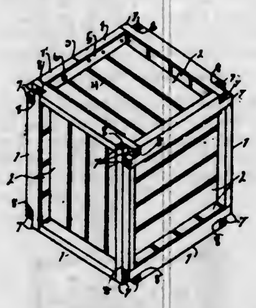
A cover for auto seats comprising a back section and a seat section, the lower margin of the back section being provided with eyelets, and the rear side and front margins of the seat section being provided with eyelets, and a lacing string inserted through the eyelets formed in the lower margin of the back section and the rear margin of the seat section, and having a free end adapted to be passed beneath the seat and inserted through the eyelet formed in the front margin of the seat section.

1,422,909. METHOD OF TAKING AN ORCHESTRA CONDUCTOR FOR CINEMATOGRAPHIC EXHIBITION. EUGEN WOLFF, Tempelhof, near Berlin, Germany Filed Mar. 15, 1920. Serial No. 366,171. 1 Claim. (Cl. 88—16.)

In an arrangement for taking an orchestra conductor for cinematographic exhibition, the combination with a taking apparatus of a reflector turned towards the conductor's front to reflect front representations of him into the said taking apparatus, a reflector turned towards the conductor's back, a third reflector turned towards the second said reflector to transmit the back representations to the apparatus, the lower edge of such third reflector separating the two series of images from one another, substantially as set forth.



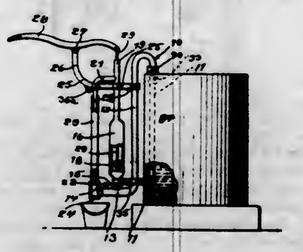
1,422,910. TERMINAL BOX FOR ELECTRIC CABLES. CHARLES R. YOUNG, Bloomfield, and HARRY N. VAN DEUSEN, East Orange, N. J., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 23, 1919. Serial No. 272,610. 15 Claims. (Cl. 247—7.)



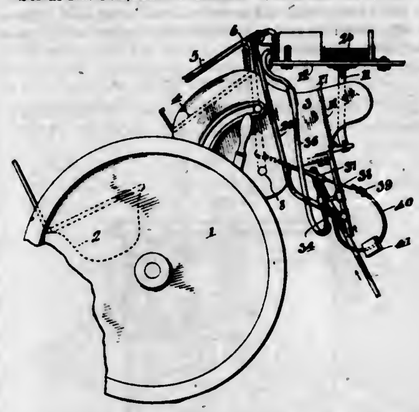
1. A cable terminal-box comprising a rear wall, two opposite end walls extending forwardly from said rear wall, a cover for the box forming a detachable front wall therefor and having rearwardly extending wings arranged to form the side walls of the box, and a pair of partitions connecting said end walls and extending forwardly from said rear wall substantially to the plane of the front edges of said end walls, whereby the box is divided transversely into a central compartment having a removable front wall and two lateral compartments each having a removable front wall and a removable side wall.

1,422,911. SIGN CARRIER. JAMES D. AUSTIN and THOMAS ROBERTS, Harrisburg, Ill. Filed Dec. 18, 1921. Serial No. 522,131. 2 Claims. (Cl. 40—142.)

1. In a device of the class described, a supporting structure, a longitudinally grooved rod mounted for oscillation relative to said supporting structure, and adapted to receive one edge of a character bearing member, and a movable holding device carried by said supporting structure and engageable with another edge of said character bearing member.



1,422,912. COLLAPSIBLE BOX. ELIAS M. AVERILL, Sparta, Mich. Filed Mar. 16, 1920. Serial No. 366,411. 3 Claims. (Cl. 217—12.)



1. In a collapsible box construction, side and end panels, cleats secured to the outer sides of the panels at opposite ends thereof, said cleats made thin and broad, each end of each cleat cut away uniformly one half the width laterally and the full width longitudinally and so formed that the ends of the cleats may be interlocked at the corners of the box and assemble a rigidly constructed collapsible box.

1,422,913. DISPENSING APPARATUS. ERNEST P. BAKER, Manson, Iowa. Filed Mar. 12, 1921. Serial No. 451,924. 4 Claims. (Cl. 221—63.)

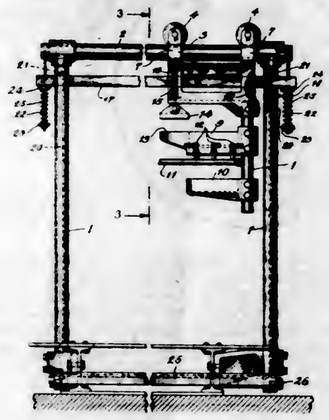
1. In a device of the type described, a siphon embodying two legs one of which embodies a discharge nozzle, a pump associated with said leg and embodying a discharge nozzle, and means for directing the fluid from the discharge nozzle of said pump into the discharge nozzle of the siphon.

1,422,914. AUTOMATIC FEEDER FOR PRESSES. PERRY W. BARKER, Youngstown, Ohio. Filed Sept. 22, 1921. Serial No. 502,415. 7 Claims. (Cl. 101—419.)

1. In a slip sheet feeding device for printing presses, the combination of an oscillating member, pick up devices carried by said member for transferring the printed sheets to a table, a pick up device for the slip sheets mounted for rotary and longitudinal adjustment on said member for transferring the slip sheets to said table, and means for automatically rendering the two pick up devices alternately operative.

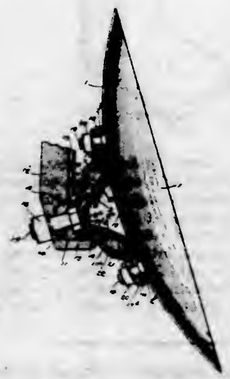
1,422,915. VENTILATED AUTOMOBILE DRIVER'S SEAT. DAVID BENSON and GEORGE K. BRUCE, Des Moines, Iowa. Filed Oct. 26, 1920. Serial No. 419,595. 1 Claim. (Cl. 155—131.)

In a ventilated automobile-driver's seat having a frame formed of side members and adjustable connecting means, each connecting means comprising a tube entering one side member laterally, a bolt screwed in said tube and extending through the other side member laterally, and a nut on said bolt between the latter side member and the adjacent end of the tube, said frame being adapted to support a fabric cover in embracing relation thereon, said cover being adapted to be stretched laterally by said connecting means.



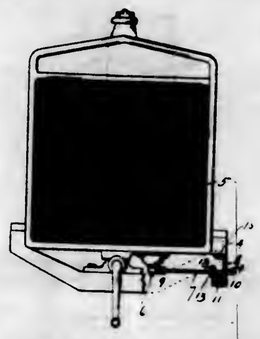
1,422,916. SCREEN GASKET. WILLIAM H. BETTS, Portland, Oreg. Filed Mar. 19, 1921. Serial No. 453,569. 1 Claim. (Cl. 48—180.)

A gasket adapted to be placed between the carbureter and the intake manifold flange of an internal combustion engine, consisting of two thicknesses of backing material



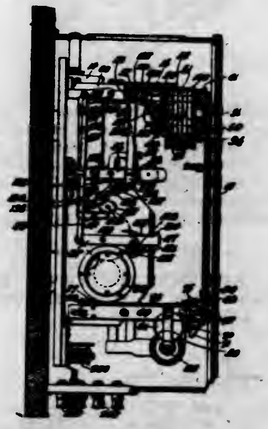
of the same general shape and perforations as are the flanges and having secured between same a flat screen facing the carbureter and a bulging screen facing the manifold, and having mounted across the center of said screens a bridge member, and a rotatable fan mounted on said bridge between said screens.

1,422,917. SOLDERING DEVICE. AXEL W. BJORKMAN, Brooklyn, N. Y. Filed Sept. 21, 1920. Serial No. 411,702. 8 Claims. (Cl. 113—92.)



1. In a soldering device, a flux container, a solder container, and a press for pressing the articles being soldered, a portion of said press being carried by the solder container.

1,422,918. DISK BEARING. JOHN C. BOHMKER, Bradley, Ill., assignor to Sears, Roebuck and Company, Chicago, Ill., a Corporation of New York. Filed Sept. 18, 1916. Serial No. 120,693. 1 Claim. (Cl. 64—10.)



A plow disk gearing comprising an inner member having its exterior surface generated in accordance with Schiele's anti-friction curve or an approximation thereof and hardened by a chilling operation, an an outer member having its interior surface generated on the same or a similar curve complementary to the exterior surface of said inner member and likewise hardened by chilling, said members being secured together in interfitting relation and adapted to be secured respectively to a support and to a plow disk.

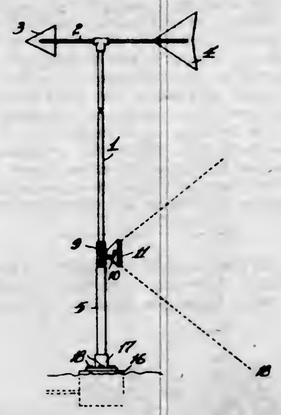
1,422,919. RADIATOR PET-COCK ATTACHMENT. MONTE H. BOSS, Indianapolis, Ind. Filed Oct. 28, 1921. Serial No. 511,142. 2 Claims. (Cl. 137—139.)

1. A bar having a recessed end to operatively engage the handle of a radiator drain cock and having a handhold at the opposite end for manipulating the bar, in combination with a bracket for supporting the bar formed of strap metal having a return bend at its lower end forming a double support for the bar, and having its upper end bent and adjustably secured to a supporting member.

1,422,920. MULTIPLE-RECORDING INSTRUMENT. RICHARD P. BROWN and FRITZ WAGNER, Philadelphia, Pa., assignors to The Brown Instrument Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed July 1, 1920. Serial No. 393,423. 27 Claims. (Cl. 234—55.)

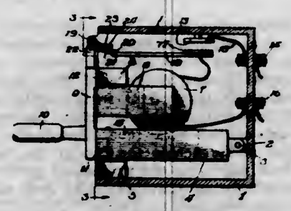
1. In a recording instrument, a meter arranged to respond to a plurality of electrical control circuits one at a time, means for connecting said meter with the respective control circuits, a record strip, means for recording on said strip the respective indications of said meter, and means including a movable anvil element to vary the number of the recorded indications for identifying the recorded indications with the respective control circuits.

1,422,921. VEHICLE TIRE. ERIC BYLUND, Winnipeg, Manitoba, Canada. Filed Nov. 23, 1918. Serial No. 263,886. 2 Claims. (Cl. 152—8.)



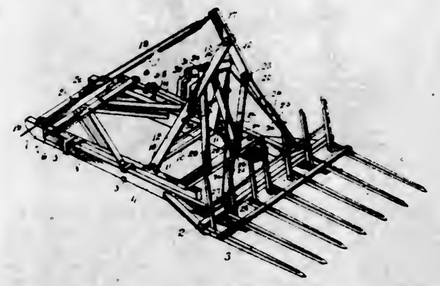
2. A vehicle tire comprising a rigid member adapted for detachable reception on the rim of a wheel and shaped

to form a groove thereabout, a plurality of radially disposed coiled springs secured in the groove, a band surrounding the springs and arranged to maintain the same in position, the springs and band filling the groove for a



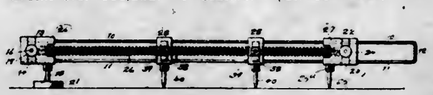
portion of its depth, a cushion mounted on the band and extending circumferentially beyond the groove all around, and side grooves in the cushion for the reception of the sides of the rigid member.

1,422,922. AIRPLANE LANDING DIRECTOR. BURR S. CAMERON, Douglassville, Tex. Filed Mar. 1, 1919. Serial No. 279,933. 5 Claims. (Cl. 73—55.)



1. An airplane landing director comprising a turntable support, a member co-operable with said support for turning it, being susceptible of actuation by air currents, and a light emitting element carried by said support in a position wherein the light rays thereof will be thrown in an alining direction with the air currents.

1,422,923. AUTOMATIC CUT-OUT. BERT L. CAMPBELL, Chicago, Ill. Filed Feb. 20, 1920. Serial No. 360,149. 4 Claims. (Cl. 200—93.)

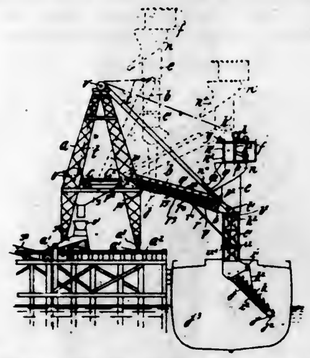


4. In a cut-out, a casing, an armature carried thereby, a permanent magnet pivotally connected to a portion of the casing and arranged to normally rest on said armature, an electro-magnet secured to said casing above said permanent magnet, a second armature disposed above said electro-magnet, means for rigidly connecting said second named armature and said permanent magnet together, a stationary contact, a movable contact in circuit with said electro-magnet, means for connecting said movable contact with said first named means, for causing the movable contact to snap into or out of engagement with said stationarry contact during the movement of said permanent magnet toward or away from said electro-magnet, and a handle secured to the connecting means between the permanent magnet and the second named armature.

1,422,924. HAY STACKER. EDWARD J. CANTWELL, Kansas City, Mo. Filed Feb. 14, 1921. Serial No. 444,672. 4 Claims. (Cl. 214—142.)

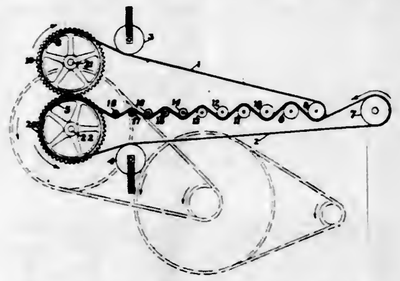
1. In a hay stacker, a base frame, a fork frame pivoted thereto, a swinging support pivoted to the base frame, a lever pivoted to said support, a link connecting said lever and said fork frame, means for swinging said lever in one direction, an auxiliary support pivoted to the base frame and arranged to bear against the first named support for resisting the movement of the latter in one direction, a second lever pivoted to the auxiliary support, flexible means connecting one end of the second lever with the fork frame, and a counter balance weight carried by the other end of the second lever, substantially as set forth.

1,422,925. PROPORTIONAL SCALING INSTRUMENT. JAMES D. CARTER, Chicago, Ill. Filed Feb. 11, 1921. Serial No. 444,131. 7 Claims. (Cl. 33—192.)



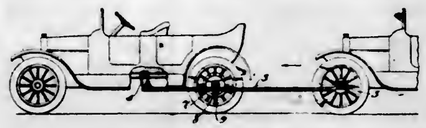
1. In an instrument of the class described, the combination of a frame, a longitudinally extensible and contractible elastic element, relatively adjustable members carried by the frame to each of which the elastic element is secured, an element intermediate the relatively adjustable members and secured to the elastic element, and working instruments one of which is attached to one of the adjustable elements, and one of which is attached to the intermediate element, for the purposes set forth.

1,422,926. UNLOADING APPARATUS. GEORGE CHARLES CHADWICK, Melbourne, Victoria, Australia. Filed July 13, 1918. Serial No. 244,745. 4 Claims. (Cl. 198—88.)



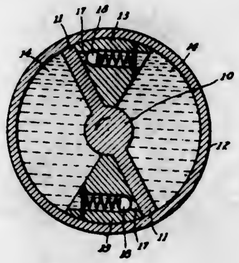
1. Unloading apparatus for vessels, comprising, in combination, a gantry; a conveyor arm hinged thereto at its inner end, and adapted to swing in a vertical plane; a non-rotating sleeve hinged to the outer end of said arm; a rotary elevator well rotatable in said sleeve portion; an adjustable extension hinged to the lower end of the rotary well; a flexible endless elevator guided by said well and extension, and including elevating buckets, adapted to take up material at the outer end of the extension; means for swinging the conveyor arm to raise and lower

the sleeve and well; means for swinging the extension to vary the height of its outer end; inclined thrust-supporting stay-rods; upper hinge connections between the upper ends of said stay-rods and the conveyor arm; lower hinge connections between the lower ends of the stay-rods and the rotary well, said lower connections including



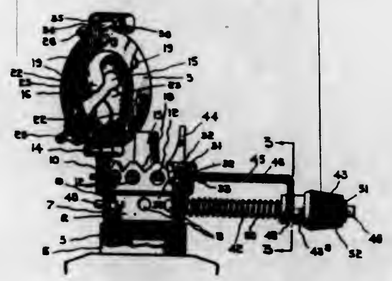
a non-rotating ring pivoted to the lower ends of the stay-rods and encircling the rotary portion of the well, said stay-rods being arranged to maintain the well in a vertical and staunch position against the thrust caused by the pressure of the material on said buckets; and means for turning the rotary well to swing said extension laterally.

1,422,927. LEATHER-SOLE-SOFTENING MACHINE. JAMES LEWIS CLEVENGER, Columbus, Ind. Filed July 19, 1921. Serial No. 485,821. 1 Claim. (Cl. 69—1.)



A machine for softening leather comprising a series of rollers of progressively diminishing diameters and two conveyor belts which pass over the top and bottom of the rollers in alternation, whereby a leather article held between said belts and passing successively by the rollers is given gradually increasing angles of flexure.

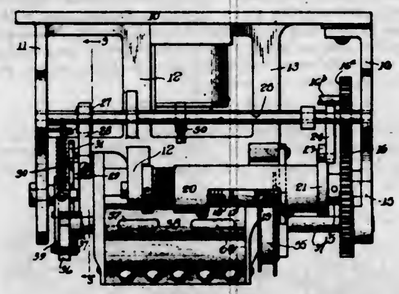
1,422,928. COMBINED TOW AND PUSH BAR. GEORGE M. COLLING, Carrington, N. Dak. Filed Mar. 9, 1921. Serial No. 450,825. 1 Claim. (Cl. 280—33.2.)



A combined tow and push bar having at one end a hook applicable to one of the axles of a vehicle and having at its other end means for attaching said bar to a second vehicle, and a saddle adjustable on the bar for supporting one of the axles of one of said vehicles.

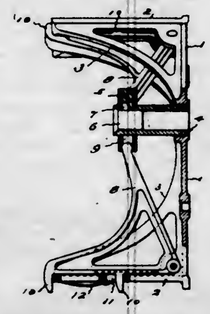
1,422,929. POWER-TRANSMISSION MECHANISM. RICHARD T. COOKE, Indianapolis, Ind. Filed Nov. 11, 1920. Serial No. 423,314. 5 Claims. (Cl. 64—100.)

5. In a power transmission device, the combination of a driving member, a driven member, a receptacle carried by one of said members, a plurality of balanced vanes carried by the other of said members and arranged within said receptacle, a plurality of balanced dams carried by and within the receptacle and dividing said receptacle into a plurality of compartments, in each of which is arranged a vane, said vanes and dams cooperating to permit a restricted flow impelled by the vanes from one compartment of the chamber to another, means for varying said restricted flow, means for permitting a less-restricted reverse flow from one compartment to another impelled by the vanes, and means for automatically angularly normalizing the driving and driven members.



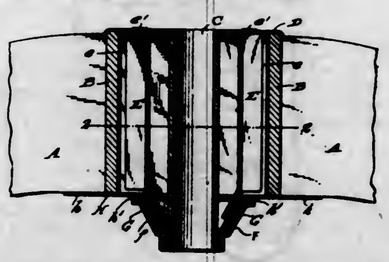
1,422,930. HYDROCARBON BURNER. CHARLES EDWARD CORADO, Winnipeg, Manitoba, Canada. Filed Aug. 19, 1921. Serial No. 493,529. 12 Claims. (Cl. 67—68.)

1. In a hydrocarbon burner the combination with a wick tube; of a wick trimming device consisting of a pair of spaced push rods slidably mounted upon the burner on opposite sides of the wick tube, and a member of substantially inverted U form rigidly connected to said push rods and movable in unison therewith, and across the top of the wick tube, that portion of the member which moves across the top of the wick tube being of narrow width for the purpose of preventing the flame of the wick being extinguished by such movement.



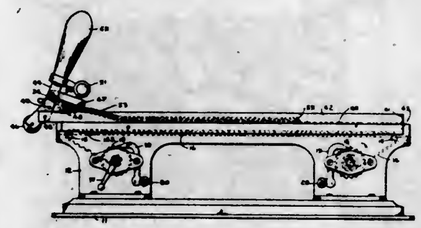
1,422,931. DOOR-CONTROLLING DEVICE. HERBERT W. CRANE, Chicago, Ill. Filed Oct. 1, 1919. Serial No. 327,785. 6 Claims. (Cl. 172—152.)

2. In a door controlling device, the combination of a motor, a spring-rotated pole changer adapted to interrupt the supply of current to the motor at a desired limit of movement, and mechanical means operated by the



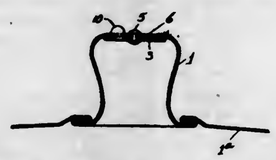
motor for positively shutting off the supply of current to the motor simultaneously with the operation of said pole changer, substantially as described.

1,422,932. SPARE-TIRE CARRIER. ALBERT D. CROSSLEY, Hartford, Conn., assignor of one-half to Reuben T. Bassett, Hartford, Conn. Filed July 1, 1920, Serial No. 393,340. Renewed May 25, 1922. Serial No. 563,679. 5 Claims. (Cl. 224—29.)



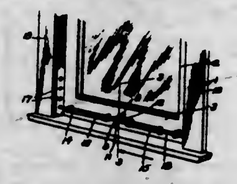
1. A tire carrier comprising a frame having outwardly extending legs and forwardly projecting feet, arms pivoted to the legs and having fingers adapted to project beyond the outer surfaces thereof, means for swinging the arms, and a lock for securing said means when the arms are swung to such position that the fingers project beyond the feet.

1,422,933. CHAIR BASE. ROBERT K. DAWSON, Guelph, Ontario, Canada. Filed Dec. 22, 1921. Serial No. 524,086. 16 Claims. (Cl. 155—138.)



1. A securing device for chair legs including a central upright member, clamping members movable substantially radially with regard to said central member and adapted to grip the chair legs, and means engaging said central member and said clamping members for drawing said clamping members into their clamping positions.

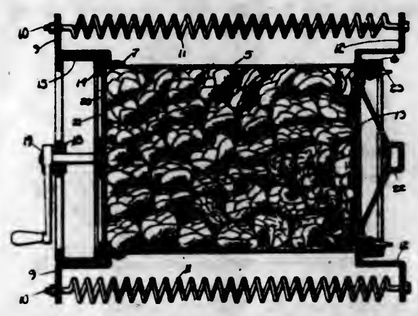
1,422,934. DUPLICATOR. THEODORE DANHEISER, New York, and FREDERICK FRANCIS FECHER, Brooklyn, N. Y., assignors to The Beck Duplicator Company, a Corporation of New York. Original application filed Oct. 11, 1917, Serial No. 196,040. Divided and this application filed Nov. 22, 1920. Serial No. 425,885. 8 Claims. (Cl. 101—133.)



1. An attachment for duplicators adapted to be movably supported thereon and comprising means adapted to support parts of a plurality of sheets of paper or the like and to permit a part of the lower of said sheets to be depressed on the said duplicator and adapted when moved with refernce to said duplicator to permit said lower sheet to escape but to retain all the other said sheets; said attachment also comprising means adapted to so depress said paper.

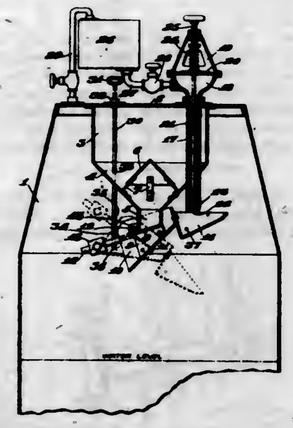
1,422,935. VENTILATING KNOB FOR COOKING VESSELS. MURRAY F. DEAN, St. Louis, Mo. Filed Apr. 18, 1921. Serial No. 462,440. 3 Claims. (Cl. 53—6.)

1. A ventilating knob for cooking vessels comprising a hollow shell adapted to be secured to the cover of the vessel, said shell having a plurality of perforations therein, and a disk rotatably secured to said shell, said disk having perforations therein corresponding to the perforations of said shell, whereby said disk may be turned so that the corresponding perforations of the disk and shell are in alinement, thus providing openings into the vessel or so that the perforations are out of alinement, providing a closed cover for the vessel.



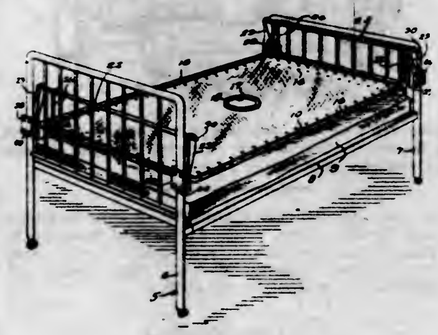
1,422,936. LOCK. ASA G. DELPH and ROBERT C. HEMPHILL, Kansas City, Mo. Filed July 5, 1921. Serial No. 482,373. 4 Claims. (Cl. 292—33.)

2. The combination with a frame having an opening and a movable closer for the same, of a plate on one side of the closer, normally retracted, spring-actuated



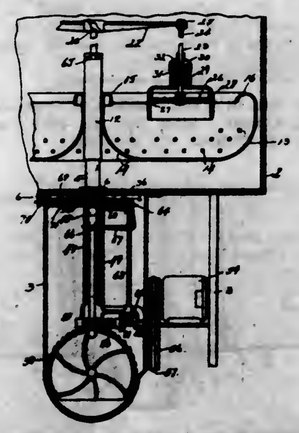
bolts on the other side of the closer, means connected to the plate and extending through the closer for releasing said bolts, and means on the frame for engagement by said bolts.

1,422,937. CABBAGE CUTTER. GEORGE DORCHEFF, alias George Theodore, Cincinnati, Ohio. Filed Oct. 7, 1919. Serial No. 506,042. 1 Claim. (Cl. 146—11.)



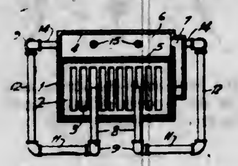
A cabbage cutter comprising a cylindrical body, a reciprocally movable non-removable plate within and movable from one end of the body, adapted to be moved toward the opposite end of the body, a cutter plate housing hinged at the opposite end of the body, a removable cutter plate rotatively mounted within the housing and arranged to close the opposite end of the body when the housing is moved to contact the body, means for rotating the cutter plate from its housing enclosed rim, springs extending longitudinally and exteriorly of the body, attached to the first mentioned plate and adapted to move the plate longitudinally of the body, and catches adapted until released to retain the first mentioned plate at the first mentioned end of the body for purposes of filling.

1,422,938. GAS GENERATOR. PARMER DORSEY, Wichita, Kans., assignor to Henderson-Willis Welding and Cutting Company, St. Louis, Mo., a Corporation of Missouri. Filed Nov. 23, 1918. Serial No. 263,908. 7 Claims. (Cl. 48—43.)



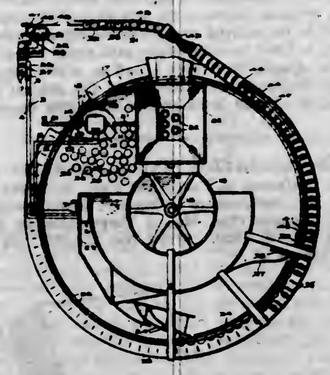
1. In a gas generator of the character described, a tank, a feed hopper therefor, a dumping charge-delivering device cooperating with the outlet of said hopper, said device having a self-discharging bucket of a filling capacity to overbalance and actuate the device to deliver the charge from the hopper, and automatically operative means, controlled by the pressure of the gas generated in said tank, for supplying a liquid to said bucket, said liquid-supplying means being maintained normally inactive under a predetermined pressure and becoming active only when the pressure decreases.

1,422,939. ATTACHMENT FOR BEDS. EDITH B. DOWN, Watertown, N. Y. Filed Feb. 11, 1922. Serial No. 535,910. 1 Claim. (Cl. 5—45.)



In a bed the combination with brackets having V-shaped attaching portions adapted to engage the corner posts of a bed, of means to securely connect said V-shaped attaching portions to the corner of the bed, the upper portions of said brackets being provided with transverse openings, winch bars rotatably extended through said openings, pins detachably locking said winch bars to said brackets the end portions of said winch bars being squared, a crank adapted for connection with the squared end portions of said winch bars, an auxiliary mattress connected to said winch bars, the upper portions of said brackets being extended angularly to overhang the ends of said mattress.

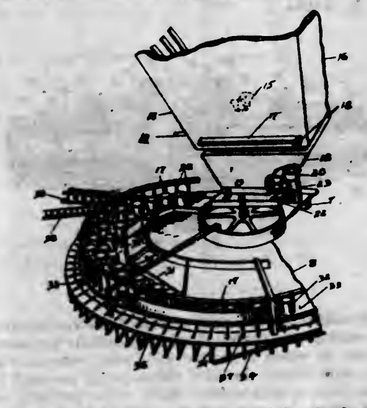
1,422,940. WASHING MACHINE. CHARLES W. DUNMIRE and SCHUYLER C. ENCK, Philadelphia, Pa. Filed Apr. 29, 1920. Serial No. 377,586. 1 Claim. (Cl. 68—19.)



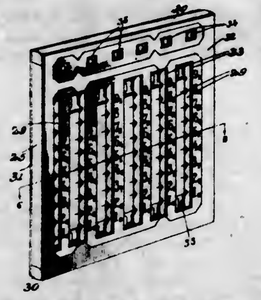
A washing machine comprising a tub having a hole in the bottom thereof, a tubular bearing mounted in said tub and communicating with said hole, a sleeve surrounding said bearing, a perforated clothes container carried by said sleeve, an axle slidably and rotatably mounted in said bearing, means for connecting the sleeve to the axle for raising the container during the upward stroke of the axle and other means for actuating the first named means to disconnect the sleeve from the axle at a predetermined time to permit the container to fall.

1,422,941. WATER HEATER. GEORG LONRATS ENNINGA, Sibley, Iowa. Filed Sept. 10, 1920. Serial No. 409,363. 1 Claim. (Cl. 126—367.)

In a water heater, a casing, a fire chamber in said casing, an ash pit in said casing, a grate separating said ash pit and fire chamber, a hinged door for said fire chamber, a smoke chamber in said casing a perforated partition dividing said smoke chamber from said fire chamber, a draft chamber connecting said ash pit and smoke chamber, pipe links connecting said fire chamber and smoke chamber, said pipe links extending in pairs outwardly from said fire chamber and substantially encompassing said casing, and a stack for said smoke chamber whereby a forced air circulation is set up in said pipe links.



1,422,942. CONTAINER-ARRANGING APPARATUS. SYLVESTER EBERLY, Toledo, Ohio, assignor to David A. Yoder, Toledo, Ohio. Filed Dec. 18, 1919. Serial No. 345,898. 12 Claims. (Cl. 198—1.)

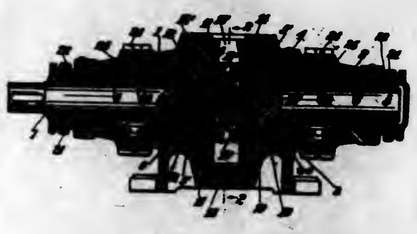


1. A machine for arranging containers as to the filling end, embodying a supply way, selector mechanism shifting containers from said way, a conveyor for receiving said selected containers, driving means for the conveyor and machine, and means for simultaneously stopping the conveyor and machine.

1,422,943. CAN-RIGHTING MACHINE. SYLVESTER EBERLY, Toledo, Ohio, assignor to David A. Yoder, Toledo, Ohio. Filed Sept. 20, 1920. Serial No. 411,456. 7 Claims. (Cl. 198—1.)

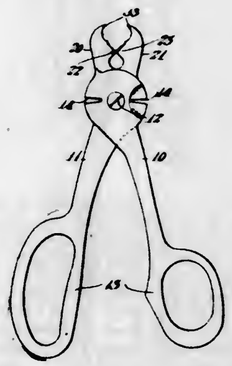
7. Mechanism for arranging cylindrical vessels embodying means for arranging the vessels on-end, selecting means for disposing selected vessels from on-end to on-side position, a support for the on-side vessels, a way to which the on-side vessels may roll, a way to which the remaining on-end vessels are forced by the mechanism including a swirl for turning these on-end vessels to end the same direction as the on-side vessels, thereby forming two rolling streams of vessels ended the same direction, and a chute for delivering the swirled vessels into the stream of the other vessels.

1,422,944. CALCULATOR. HARVEY S. EDMONDSON, Spokane, Wash. Filed Jan. 3, 1920. Serial No. 349,242. 4 Claims. (Cl. 235—69.)



1. In a device of the class described, a housing having sight openings on its face, number members slidably carried by said housing and movable past the sight openings and bearing quantities arranged in numerical order, the housing having slots and bearing a series of quantities arranged in numerical order beside each slot, the said members and said slots being equal in number to said sight openings, the said members having common means presented beneath said slots to provide for movement of the members in opposite directions, the end walls of said slots being adapted to limit the movement of the medium employed for moving the said members in either direction.

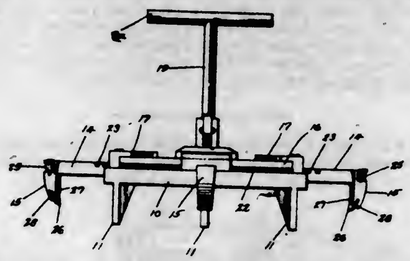
1,422,945. MANUFACTURE OF ARSENICAL COMPOUNDS. KARL BASIL EDWARDS, London, England. Original application filed Jan. 26, 1921, Serial No. 440,168. Divided and this application filed Oct. 22, 1921. Serial No. 509,750. 3 Claims. (Cl. 23—13.)



1. A process for the manufacture of salts of the formula R_3AsS_4, where R is an alkali metal or ammonium, which comprises treating arsenic trisulphide with a solution of an alkali polysulphide in the proportions of one molecular equivalent arsenic trisulphide, three molecular equivalents alkaline monosulphide and one molecular equivalent sulphur.

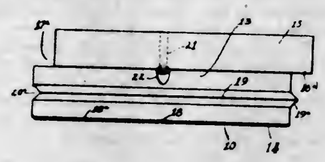
1,422,946. ROTARY MACHINE. FRITZ EGERSDÖRFER, Charlottenburg, Germany. Filed Sept. 10, 1920. Serial No. 409,502. 10 Claims. (Cl. 103—44.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In a machine of the class described, the combination, with a rotary piston having at its ends radially projecting flanges one of which is formed as a ring removably secured to said piston, the said piston being provided between its flanges with substantially radial pockets, and blades mounted for reciprocation in said pockets, of a cylinder enclosing said piston and arranged eccentrically with respect thereto, upon the inner wall of which when the parts are assembled the said blades bear, said cylinder, piston, and blades forming chambers the capacity of which is alternately reduced and increased upon rotation of the piston, and a fluid inlet and outlet for said chambers.



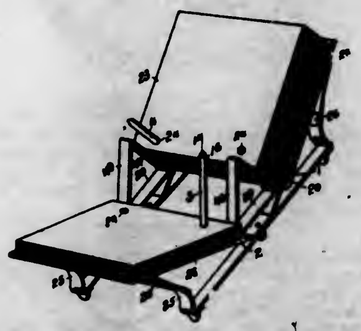
1,422,947. SHOE-BUTTON REMOVER. ORLANDO S. ELLER, Long Beach, Calif. Filed June 24, 1921. Serial No. 480,094. 2 Claims. (Cl. 218—27.)

1. A device for removing a shoe button staple from a shoe comprising: two coacting oppositely facing wedges; means for forcing said wedges under a staple from opposite sides of said staple; and means for positively gripping said staple after said wedges have spread it to free its points.



1,422,948. TIRE-RIM TOOL. NATHAN A. EUBANK, Nashville, Tenn. Filed Oct. 30, 1920. Serial No. 420,723. 2 Claims. (Cl. 157—1.)

1. A tire-rim tool comprising a base, radially movable arms carried by the base and having rim-engaging surfaces and depending hooks at their outer ends, the hooks of two adjacent arms having points which are pivoted to swing laterally, a rotatable spirally grooved member



mounted on the base over the arms, said arms having teeth seating in the grooves of said member, and means for rotating the grooved member.

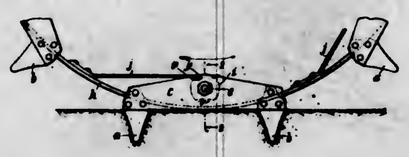
1,422,949. BRICK. JOHN EDWARD EVANS, Chicago, Ill. Filed Nov. 23, 1921. Serial No. 517,159. 4 Claims. (Cl. 72—19.)

1. A brick of the character described comprising a body portion, a flange on the inner edge of a side of said body portion, a recess formed in the inner edge of the opposite side of said body portion adapted to receive the aforementioned flange of a contiguous brick in a structure, a groove formed in the periphery of said body portion on one of said sides, a wedging tongue on the periphery of the opposite side adapted to be received in the aforementioned groove of a contiguous brick in a structure, said flange being provided with an opening to receive a nail or other fastening extending diagonally therethrough in the general direction of the side of said brick remote from said flange.

1,422,950. LOOSE-LEAF BINDER AND STAND THEREFOR. CHARLES R. FARGO and PAUL O. UNGER, Kansas City, Mo., assignors to Irving-Pitt Manufacturing Company, Kansas City, Mo., a Corporation of Missouri. Filed May 3, 1920. Serial No. 378,352. 24 Claims. (Cl. 129—8.)

17. In a loose leaf binder, a leaf-clamping member, two posts, one permanently and the other detachably secured

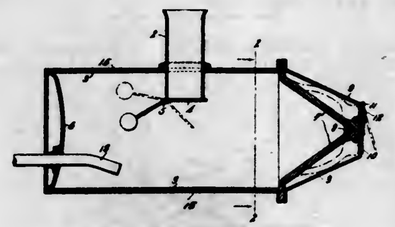
to the clamping member, and a follower leaf-clamping member adapted for sliding movement on said posts, substantially as set forth.



19. In a stand for a loose leaf binder, a frame having means for supporting a leaf-clamping member in a posting position, the frame having positioning means adapted to support a leaf-carrying post detachably mounted in the clamping member, substantially as set forth.

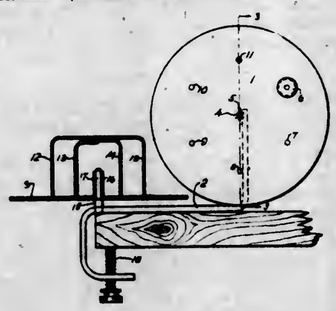
1,422,951. WINDOW-MOUNTING DEVICE. HENRY FAUROT, Jr., Chicago, Ill., assignor to Western Felt Works, Chicago, Ill., a Corporation of West Virginia. Filed Apr. 17, 1922. Serial No. 554,155. 1 Claim. (Cl. 296—44.5.)

A window mounting device, comprising a single normally flat strip of felt formed with parallel longitudinal grooves, the portion of the strip between the grooves being thinner than the portions between the grooves and the lateral edges, the strip being bent along said grooves into channeled form and adapted to have its base inserted in a channeled frame, the side walls of the strip being sewed to the bottom wall so as to reinforce the junctions of said walls and cause the side walls to tend to approach each other.



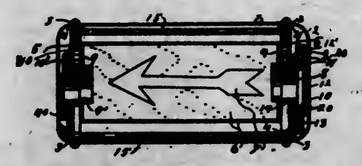
1,422,952. TRACTOR WHEEL. EMILE FEUILLETTE, Boulogne-sur-Seine, France, assignor to La Societe des Etablissements E. Feuillette, Boulogne-sur-Seine, France. Filed May 26, 1920. Serial No. 384,280. 3 Claims. (Cl. 301—50.)

2. A tractor wheel comprising in combination spikes connected in pairs by means of cross bars, said spikes being mounted at the mid point of said cross bars on members whose axes are parallel to the axis of the wheel and rotate in bearings fixed on the rim of the wheel; said members having two diametrically opposed flat portions which engage to hold the pairs of spikes tangential to the rim either in projected or retracted position, pistons perpendicular to the axis of the said members which force by means of a spring placed in a cylindrical casing enclosing the said bearing; and means to limit the oscillations of the pairs of spurs and facilitate their penetration into the earth.



1,422,953. RAILWAY-CAR WATER CLOSET. WILLIAM FRANK, Vancouver, British Columbia, Canada, assignor of one-half to William Taylor, Vancouver, British Columbia, Canada. Filed Nov. 26, 1921. Serial No. 517,860. 3 Claims. (Cl. 4—17.)

1. The combination with the delivery pipe from the bowl of a water closet, of a container into which the lower end of the delivery pipe projects, a valve opening downward adapted to close the lower end of the delivery pipe, yielding means for holding said valve closed, a valve opening outward at one end of the container, and yielding means



for holding that valve closed, and means for delivering a fluid under pressure into the container.

1,422,954. TRANSFER REEL. PERRY D. FRAZER, Ridgewood, N. J. Filed Nov. 29, 1920. Serial No. 426,901. 10 Claims. (Cl. 242—104.)

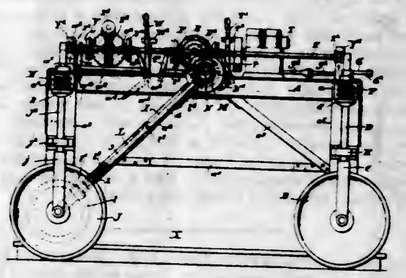
4. The take-down transfer reeling device for fish line, etc., comprising a bracket provided with a clamp and with a pivot and shaft, a take-off frame having a bottom plate and connected bearing cooperating with said pivot and wire supporting loops secured to said bottom plate to form guiding supports for a coil of fish line resting on said bottom plate and a reel comprising cooperating detachable plates of substantially the same size as said bottom plate, interposed line supporting pins including a releasable handle pin movably mounted with respect to both of said plates, a bearing sleeve connected to one of said plates and cooperating with said shaft to form a bearing for said reel and means detachably connecting said plates.

1,422,955. DIRECTION INDICATOR. WILLIAM F. FREEMAN and VEL ITHIEL CILLEY, Grand Rapids, Mich. Filed Oct. 2, 1920. Serial No. 414,297. 6 Claims. (Cl. 116—36.)

1. In combination with a direction indicator having a revoluble symbol cylinder therein; an antifriction roller revolubly mounted upon one end of the cylinder, a cam arm pivotally mounted, at one end, upon the end of the cylinder frame, a cam mounted on the other end of the

arm in position to engage the antifriction roller and revolve the cylinder from first position into second position, and means for connecting the cam arm with the brake rod of an automobile.

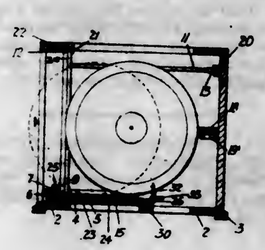
1,422,956. VEHICLE SPRING. JAMES MILTON GAAR, Richmond, Ind. Filed Jan. 9, 1920. Serial No. 350,259. 2 Claims. (Cl. 267—52.)



1. A vehicle spring having leaves provided with vertical series of laterally projecting lugs in transversely aligned pairs on opposite sides of its center, and U-bolts having their upper portions crossing one another on top of the spring leaves and having their side portions depending along opposite sides of the spring leaves and engaging the said lugs, as and for the purpose described.

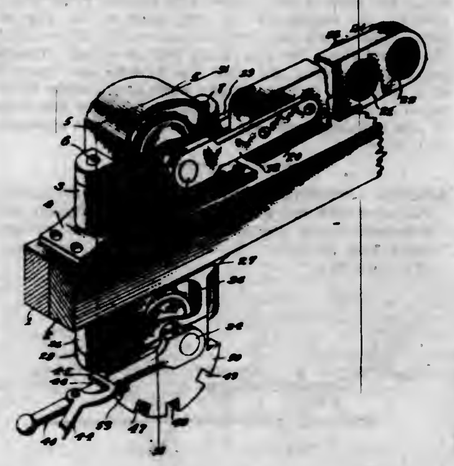
1,422,957. INK AND METHOD OF MAKING THE SAME. EDWARD S. GARVEY, Clayton, Mo. Filed May 23, 1921. Serial No. 471,927. 1 Claim. (Cl. 134—37.)

The herein described ink comprising aniline dye commingled with alcohol and shellac in proportions approximately as follows: aniline dye three ounces, alcohol four gallons and shellac six pounds.



1,422,958. LUMBER CARRIER. CARL F. GERLINGER, Dallas, Oreg. Filed Aug. 30, 1921. Serial No. 496,799. 8 Claims. (Cl. 212—141.)

1. A lumber carrier or truck comprising a frame, front and rear wheels on which the frame is supported, lifting shoes, vertically movable rack bars, connecting links directly pivoted to the shoes and to the rack bars, an engine on the frame, and connections between the engine and the rack bars for raising and lowering the shoes.



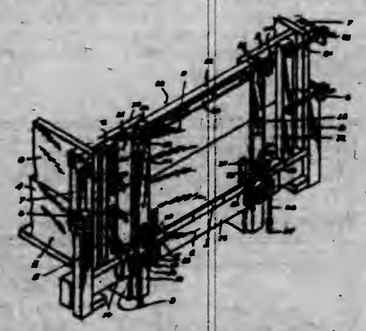
1,422,959. TALKING-MACHINE DISK-RECORD CABINET. HARRY H. GERSTNER, Dayton, Ohio. Filed July 13, 1921. Serial No. 484,451. 5 Claims. (Cl. 211—16.)

3. In a cabinet of the type described, the combination with a series of vertically disposed partitions secured within the front portion of said cabinet to receive talking-machine disk-records, of a plurality of horizontal slats secured at their front ends to said vertically-disposed partitions, a grooved member adapted to receive the rear ends of said slats, and a transverse piece secured to the rear wall of

said cabinet, containing a longitudinal groove to receive the grooved member which receives the horizontal slats.

1,422,960. AUTOMOBILE INTENTION-SIGNALING DEVICE. EDWARD TINKHAM GIBSON, Brooklyn, N. Y. Filed Mar. 29, 1921. Serial No. 456,640. 1 Claim. (Cl. 116—52.)

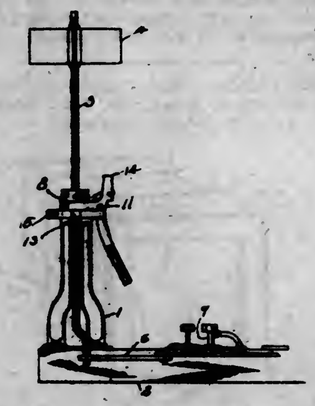
The combination with the roof of an automobile of an intention-signaling device comprising a housing-member secured to and projecting upwardly from said roof and adapted to keep rain from entering its interior and having in its bottom an opening disposed in vertical alignment with a co-operating opening in said roof; a signal-arm-turning shaft rotatably mounted in bearings in said housing-member to turn on a horizontal axis lying in parallel relation with the front-to-rear axis of the automobile and having a body-portion disposed within the interior of said housing-member and an end-portion extending outwardly from said housing-member; a shaft rotating member carried by the said body-portion of the shaft; a signaling-arm carried by the said end-portion of the shaft to travel in a vertical plane; a hanger-member having a locking-plate and fixedly supported beneath and in vertical alignment with said housing-member and projecting downwardly from the plane of the surface of the top of the interior of the car; a handle-member carried by said hanger-member and mounted to be manually swung on a horizontal axis lying in parallel relation with the front-to-rear axis of the automobile; a catch-member carried by said handle-member; and means connecting the said handle-member with the said shaft-rotating member whereby



manual operation of the said handle-member will operate to cause rotation of the said signal-arm-turning shaft and resultant movement of the said signaling-arm; said locking-plate having catch-engaging openings at predetermined points in its body, and said catch-member adapted to be manually operated to cause it to engage any one of the said catch-engaging openings in the said locking-plate to temporarily hold the said handle-member in a desired position.

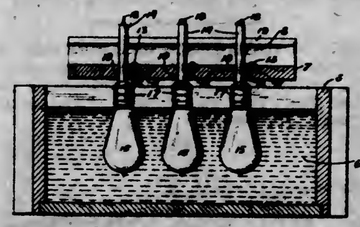
1,422,961. SELF-ADJUSTING BEARING. HARRY GLASS, Jamaica, N. Y. Filed July 25, 1921. Serial No. 487,293. 5 Claims. (Cl. 64—10.)

1. In a device of the kind described the combination with two bearing surfaces formed by the inner and outer faces of a hollow cylinder, of a bearing block providing a rigid surface contacting on said outer face and a plurality of bearing shoes resiliently held in said block in contact with said inner face.



1,422,962. WAGON-GATE CONSTRUCTION. GIDEON W. GOSS and CHARLES E. GOSS, Baltimore, Ohio. Filed July 26, 1920. Serial No. 399,047. 6 Claims. (Cl. 296—51.)

1. In a wagon body, an end gate construction for said body, including a pair of side frames capable of being connected with said body, a door structure normally arranged to cover the space between said side frames, means for pivotally connecting said door structure contiguous to its upper and lower edges with said side frames, whereby the door structure may be selectively operated to swing from either its upper or lower edges, and means for holding the door structure normally against swinging movement.



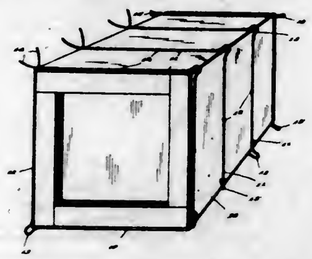
1,422,963. RAILWAY-SWITCH LOCK. ARTHUR G. GRANT and JOHN J. FANNING, Yardley, Wash.; said Fanning assignor to John V. Grant, Yardley, Wash. Filed Oct. 18, 1921. Serial No. 508,563. 2 Claims. (Cl. 246—414.)

1. The combination with a switch mechanism including a notched segment and a head rotatable with the rotatable shaft, of a slotted lateral arm on the head and a switch lever pivoted thereto, a slotted housing on the arm and a spring pressed bolt therein, and an integral wedge shaped tongue having an orifice and projecting from said lever

adapted to enter the slotted housing and co-act with said bolt for locking the lever.

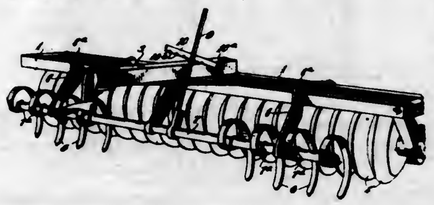
1,422,964. DEVICE FOR USE IN COLORING BULBS. HARRY L. GREENBAUM, New York, N. Y. Filed Aug. 25, 1921. Serial No. 496,374. 5 Claims. (Cl. 91—65.)

1. A device for use in coloring bulbs, comprising a stem, a supporting cup carried by said stem and provided with a portion for fitting upon an incandescent bulb terminal, said portion being made of soft rubber.



1,422,965. TOOL FOR CLOSING WIREBOUND BOXES. JASON H. GREENSTREET, Indianapolis, Ind. Filed Dec. 26, 1918. Serial No. 268,264. 4 Claims. (Cl. 140—118.)

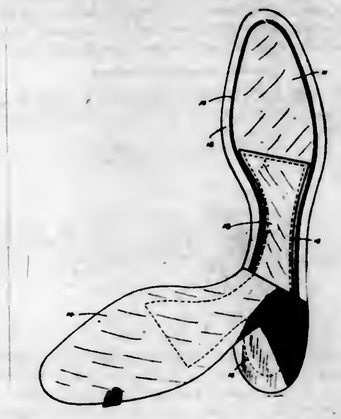
1. A tool for twisting together crossing wires embracing an article, comprising a rotatable shank trans-



versely slotted across its end to receive a pair of crossing wires by endwise application of the tool thereto, a transverse member being arranged at the base of the slot and formed to lie between the crossing wires to engage them laterally at the crossing point.

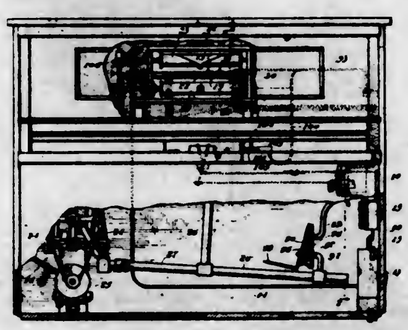
1,422,966. PACKAGE BLANK AND PACKAGE. JASON H. GREENSTREET, Indianapolis, Ind. Filed June 4, 1920. Serial No. 386,541. 10 Claims. (Cl. 217—12.)

1. A blank for wirebound packages comprising a series of side-forming sections formed for angular association with adjacent sections, said sections being connected together by binding wires and in such spaced relationship to each other that U-shaped surplus of binding wire is formed at the corners of the associated sections.



1,422,967. TRACTOR-TRACK OBLITERATOR. RAY H. GRISWOLD, Cleveland, and EARL J. POWELL, Berea, Ohio, assignors to The Dunham Company, a Corporation of Ohio. Filed Aug. 22, 1919. Serial No. 319,069. 4 Claims. (Cl. 55—12.)

1. In a tractor track eradicator for implements, an implement including a frame and a centrally located draft element, together with earth working elements below said frame, forwardly and downwardly extending bearing brackets detachably secured to said frame and extending in front of said earth working elements, an oscillatory tooth carrying bar in said bearing brackets below said frame and in front of said earth working elements, a plurality of earth working tooth bars adjustably carried by said bar and spaced apart in groups to correspond with the tractor elements of the attached tractor and adapted to traverse and eradicate the tracks thereof in front of said earth working elements of the implement, a hand lever on said tooth carrying bar extending upwardly in front of said implement frame, said hand lever extending at the side of said centrally located draft element and being provided with a lateral projection, and an oscillatory gravity bar on said draft bar provided on its under side with notches adapted to engage said projection of said hand lever in various positions.

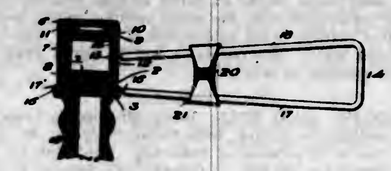


1,422,968. BOOT AND SHOE. EDWARD B. HAFERTEPEN, Cincinnati, Ohio. Filed Aug. 23, 1920. Serial No. 405,213. 6 Claims. (Cl. 36—76.)

1. A boot or shoe having the inner and outer soles made to conform to the shape of the last, a shank-piece sewed therebetween and extending from the heel of the shoe to the ball thereof by stitches through and through

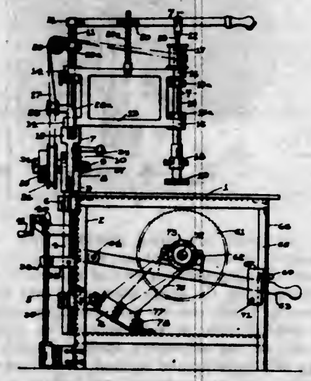
said inner and outer soles and shank-piece adapted to bind and hold said shank-piece and inner and outer soles in fixed relation to each other.

1,422,969. EXPRESSION DEVICE FOR AUTOMATIC MUSICAL INSTRUMENTS. JAMES CLARKE HAGEY, Chicago, Ill., assignor of one-half to The Cable Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 1, 1918. Serial No. 219,879. 105 Claims. (Cl. 84—36.)



1. An expression-device for an automatic musical instrument, comprising means for mechanically adjusting parts of the musical instrument to limit the movements of the note-sounding mechanism, said means including a regulator.

1,422,970. PORTABLE HAND TOOL FOR CAPPING, SEALING, AND UNSEALING BOTTLES. ORRIN A. HANFORD, Pasadena, Calif. Filed Mar. 26, 1921. Serial No. 455,734. 5 Claims. (Cl. 226—84.)



1. A portable hand tool of the character described, comprising a chambered die member provided with a beaded lower end, a slidable member within the die member, a washer plate within said first named member, resilient means adapted to contact with the upper surface

of said washer plate, and a handle member with one end fixedly secured to the beaded portion of the die member

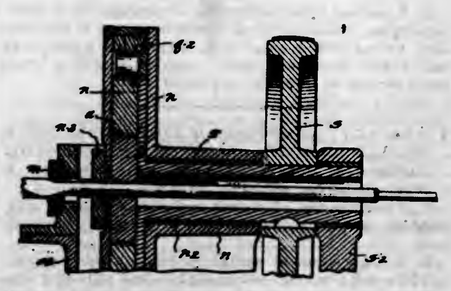
and its other end passing through an opening formed in the body of the said slidable member.

1,422,971. WOODWORKING MACHINE. JOHN HANSON, Worcester, Mass. Filed Apr. 16, 1921. Serial No. 461,863. 6 Claims. (Cl. 144—134.)

1. In a machine of the class described, a table, a bracket provided with a shank vertically adjustable on said table and terminating in a head, a socket turnable on a horizontal pivot pin extending through said head and a shaft extending from said socket upon which is pivotally mounted a tool carrying frame.

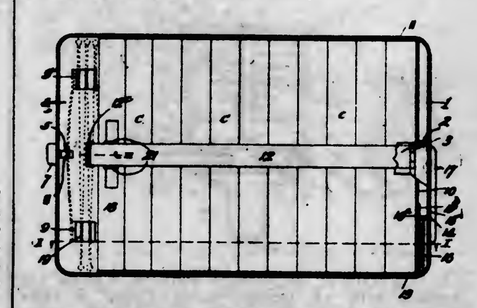
1,422,972. DUSTPROOF OIL RING. WILLIAM HENRY, Philadelphia, Pa. Filed Apr. 25, 1918. Serial No. 230,719. 5 Claims. (Cl. 286—30.)

1. The combination with the starting crank of a motor vehicle and the bearing for said crank, of a lubricant impregnated ring mounted on said crank adjacent the bearing; a washer formed to permit of its application to said crank; with a spring for moving the crank longitudinally in the bearing and operative on the washer to cause it to retain the lubricant ring in place.



1,422,973. INDEX-CARD HOLDER. WILLIAM HERTSBERG, Brooklyn, N. Y. Filed Feb. 23, 1922. Serial No. 538,654. 4 Claims. (Cl. 40—31.)

1. A display card holder formed of a single piece of twisted wire, a seat formed adjacent the middle portion of said wire to embrace a rod for supporting garment hangers, a clip formed integrally with the wire at one



end for holding a card, and a weight formed by coiling said wire at the opposite end for balancing the holder on the rod.

1,422,974. ART AND MECHANISM FOR DRAWING HOLLOW CYLINDRICAL METAL BODIES. CLIFFORD B. HIGGINS, Detroit, Mich., assignor of one-half to Harry A. Higgins, Detroit, Mich. Filed Dec. 27, 1920. Serial No. 433,319. 5 Claims. (Cl. 205—7.)

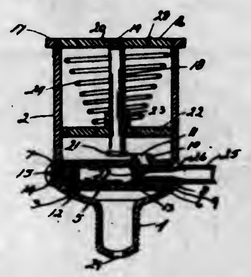
1. In the art of drawing metal tubes over a mandrel, the method of removing the mandrel therefrom, which consists in hammering the tube on the mandrel so as to expand the tube in order that the mandrel may be withdrawn.

1,422,975. CIGARETTE CASE. SIDNEY HOLTZCLAW, Kansas City, Kans. Filed May 10, 1920. Serial No. 380,329. 3 Claims. (Cl. 206—41.)

3. In a cigarette case, a body portion having an inwardly projecting plate at its front edge provided with a pair of downturned lugs, a latch projecting up through said plate, a flat spring bearing against said lugs and said latch, and a hinged cover having an inwardly projecting flange at its free edge for engagement with said latch.

1,422,976. STEEL-CUSHION WHEEL. ADDISON C. HOOF, Chicago, Ill. Filed June 26, 1919. Serial No. 306,772. 14 Claims. (Cl. 152—28.)

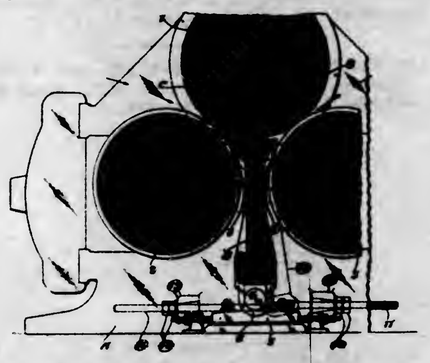
3. A cushion wheel comprising in combination, a wheel supporting member, resilient members secured to said support having bowed outer ends, means for maintaining said bowed outer ends under compression, and a wheel tread secured to said last mentioned means.



1,422,977. COMPOUND OF LIME AND SULPHUR STABILIZED WITH AN AROMATIC COMPOUND. MATTHEW S. HOPKINS, Reading, Pa. Filed July 8, 1921. Serial No. 483,346. 3 Claims. (Cl. 167—6.)

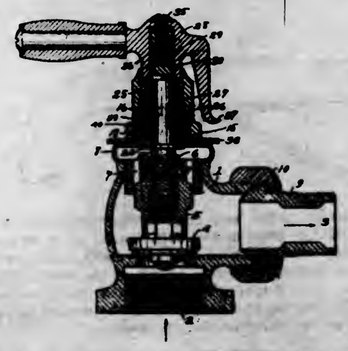
1. A composition of matter including a calcium polysulphide and a calcium salt of an aromatic sulphonic acid.

2. A composition of matter including a calcium polysulphide and a calcium salt of naphthalene sulphonic acid.



3. A lime-sulphur compound including in its content more than one percentum and less than ten percentum of a calcium salt of an aromatic sulphonic acid.

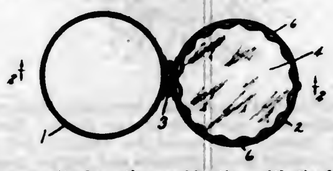
1,422,978. AUTOMATIC FILLER FOR GREASE CUPS. SAMUEL HOUGH, Atco, N. J., assignor of one-fourth to Ruben P. Levick, Berlin, N. J., and one-fourth to Charles J. Richter, Collingswood, N. J. Filed Sept. 22, 1920. Serial No. 411,930. 8 Claims. (Cl. 184—45.)



3. In a device of the character described, a grease cup provided with an interior barrel having a valve chamber therein provided with a tapered inlet opening forming a communication between the exterior of the cup and said valve chamber and further having an outlet opening forming a communication between the valve chamber and the interior of the cup, a spring actuated valve for normally closing said openings, in combination with a grease gun nozzle having a frusto-conical shoulder some distance from its end and adapted to register with the conical inlet opening to limit the inward movement of said nozzle having an outlet opening adjacent its end for registration with the outlet opening leading from the valve chamber when said nozzle is inserted therein and during which time the valve will be forced away from the openings by said nozzle.

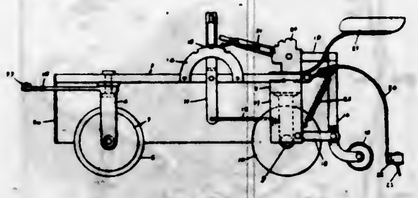
1,422,979. CANE MILL. HENRY HUNTER, St. Louis, Mo., assignor to Fulton Iron Works Company, St. Louis, Mo., a Corporation of Delaware. Filed May 16, 1919. Serial No. 297,651. 2 Claims. (Cl. 100—47.)

1. In a cane mill, a housing provided with crushing rolls, a pivotally mounted turnbeam extending across said housing and arranged between two of said rolls, a trash knife extending from the upper portion of said turnbeam and cooperating with one of said rolls, an oscillatory adjusting arm movable in said housing to adjust the pivoted turnbeam, an oscillatory operating shaft extending through said housing and secured at its inner end to said adjusting arm, an operating arm located at the exterior of said housing and secured to said operating shaft, and securing means cooperating with said operating arm to retain said turnbeam and trash knife in the positions to which they are adjusted.



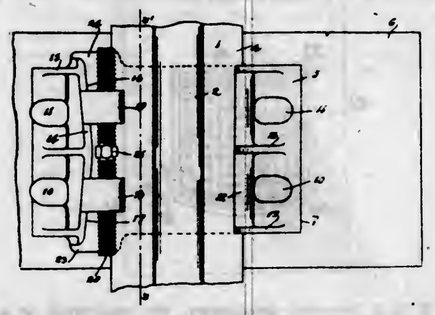
1,422,980. VALVE MECHANISM. FRANK L. HUTCHINSON, Milwaukee, Wis., assignor to Sterling Engineering Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed June 5, 1919. Serial No. 301,968. 4 Claims. (Cl. 251—47.)

2. In a valve mechanism, the combination with a valve casing and a valve therein, a valve operating stem projecting through the casing and having its inner end operatively connected with the valve, a casing extension having an annular packing member through which the stem passes, an annular projection on the stem adapted



to seat upwardly against said packing, a handle, a spring coiled about the stem with one end supported from the casing extension and the other end bearing against the handle, said stem being socketed in the handle and connected therewith by an adjusting screw passing through the handle and engaged in an axially disposed socket in the stem, whereby the handle is adjustable longitudinally of the stem.

1,422,981. VANITY BOX. FRANK S. HYATT, Brooklyn, N. Y. Filed Mar. 16, 1921. Serial No. 452,692. 3 Claims. (Cl. 132—83.)

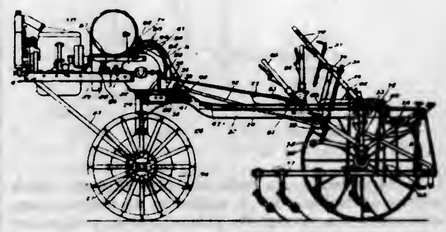


3. In a vanity box, the combination with the box, of a mirror and a corrugated spring wire adapted to press against the inner surface of the side walls of the box by some of its corrugations so as to be retained in frictional engagement therein and to engage by other corrugations upon the outer or visible surface of said mirror to hold the same in place in said box.

1,422,982. CULTIVATOR. ROBERT G. ISLEY, Edinburg, Ind. Filed Apr. 6, 1921. Serial No. 458,930. 2 Claims. (Cl. 55—73.)

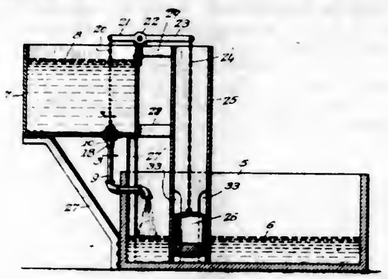
2. In a cultivator, a frame structure, series of cutting disks, a pair of substantially inverted U-shaped auxiliary frames pivotally suspended from parts of the frame structure, shafts carried by the lower ends of said auxiliary frames upon which said disks are mounted, means for shifting the positions of said disks, and means for raising and lowering the rear end of the frame structure for elevating and lowering said disks.

1,422,983. TIE-PLATE FOR RAILS. ERNEST N. JOHNSON, Winnipeg, Manitoba, Canada. Filed July 12, 1921. Serial No. 484,144. Renewed Apr. 15, 1922. Serial No. 553,014. 3 Claims. (Cl. 238—304.)



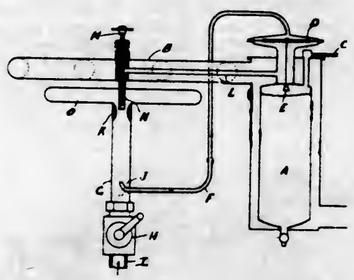
1. A rail fastening, comprising a base plate, means thereon engageable with one edge of a rail base, an abutment on the base plate spaced from the opposite edge of the rail base, a retaining member removable on the base plate for wedging engagement between said abutment and the adjacent edge of the rail base and means connected to said retaining member for moving same in opposite directions.

1,422,984. PENCIL. HAROLD R. JOHNSON, Cranston, R. I. Filed June 3, 1921. Serial No. 474,682. 8 Claims. (Cl. 120—18.)



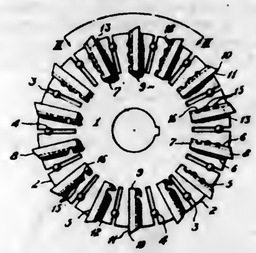
1. In a pencil of the character described, a shell, a tubular guide rigidly supported in the shell concentrically thereof and provided with a slot, a screw rotatably supported in the shell surrounding a portion of the guide, a tubular controller slidably mounted on the guide provided intermediate its length with a longitudinal slot and with a hole, a lead carrier slidably mounted in the guide, a lug on the carrier extending through the slots and into the screw, a plunger slidable in the carrier, and a finger on the plunger extending through the first slot, and hole, and into the screw.

1,422,985. POWER CULTIVATOR. EDWARD A. JOHNSTON, Chicago, and CARL W. MOTT, Berwyn, Ill., assignors, by mesne assignments, to International Harvester Company, a Corporation of New Jersey. Filed Oct. 25, 1916. Serial No. 127,619. 5 Claims. (Cl. 97—30.)



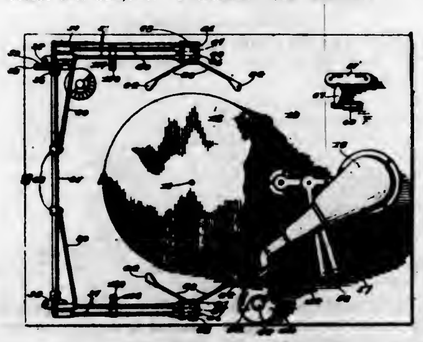
1. In a device of the class described, the combination of a main frame, carrying means and traction means supporting the respective ends thereof, a power plant on the frame for propelling the traction means, an implement adjustably supported on the frame, means for vertically adjusting the implement, means for angling the carrying means, positive steering means for the traction means, for locking the traction steering means against operation, and means controlled by the position of the implement for releasing the locking means.

1,422,986. WATERING TROUGH. ROBERT JUDY, Gifford, Ill. Filed June 11, 1919. Serial No. 303,333. 1 Claim. (Cl. 119—80.)



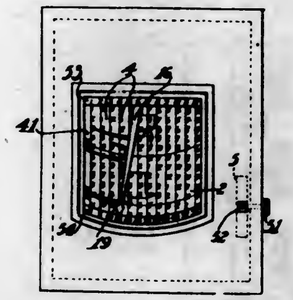
A self-contained unitary structure of the character described comprising a watering trough; a water reservoir located entirely above the trough and supported thereon; a pipe passing into the reservoir arranged to discharge water into the trough; said pipe being arranged so that water will not remain therein; a valve normally closing the upper end of said pipe; a hollow rectangular float guide structure extending from the bottom of the trough to the top of the reservoir having lateral openings through its vertical walls near its bottom end; a round, closed, cylindrical float within said guide; a lever pivoted to a proximate vertical wall of said reservoir having its outer end extending directly over the float and its inner end extending directly over the valve; a chain connecting the outer end of the lever to the float and a chain connecting the inner end of the lever to the valve whereby a straight vertical pull is made on each end of the lever in the operation of the device.

1,422,987. MEANS FOR CONTROLLING THE SUPPLY OF COMBUSTIBLE MIXTURE TO INTERNAL-COMBUSTION ENGINES. GEORGE KEITH and WILFRED AMBROSE WHATMOUGH, London, England. Filed May 3, 1918. Serial No. 232,421. 7 Claims. (Cl. 48—180.)



1. In combination, an induction pipe through which a mixture of fuel and air is sucked to an internal combustion engine, a passage for exhaust gases, a vaporizer in said passage, a tubular connection between said vaporizer and said induction pipe, said tubular connection extending through said exhaust passage, a valve serving to control communication between said vaporizer and said tubular connection, an obturating member for regulating delivery of vapor from said tubular connection to said induction pipe, a chamber between and in communication with said vaporizer and said induction pipe, and an automatically operating governor member movable in said chamber, said governor member being operatively connected to said valve and being controlled by the pressure in said induction pipe.

1,422,988. CUTTING TOOL. RAYMUND KIRNEL, Cleveland, Ohio. Filed Sept. 14, 1920. Serial No. 410,317. 13 Claims. (Cl. 29—105.)

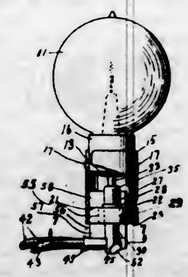


1. A cutting tool comprising a head and a blade mounted for adjustment movement in two distinct directions relatively thereto, and means for securing said blade against movement in one direction and further means for securing against movement in the other direction.

1,422,989. RECORD TURNER FOR PHONOGRAPHS. GLENN R. KNICK, Troy, Ohio. Filed Feb. 7, 1922. Serial No. 534,747. 8 Claims. (Cl. 274—1.)

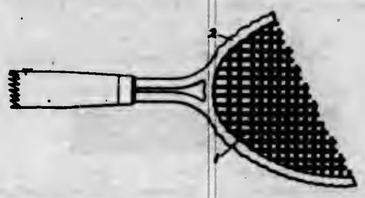
1. A phonograph including a turntable, means for driving the turntable, and means operated by the driving means for lifting, reversing, and replacing a record.

1,422,990. RECORDING SPEEDOMETER. MATT WILLIAM KOSKI, Cosmopolis, Wash. Filed Aug. 15, 1921. Serial No. 492,313. 4 Claims. (Cl. 234—31.)



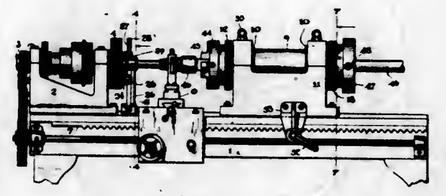
1. In a recording speedometer, the combination of a movable sheet and a transversely movable pointer, said sheet having thereon a plurality of individual transversely-spaced lines of figures indicating distances traveled, the several lines having their zero points positioned differently from all other lines, longitudinally of the sheet.

1,422,991. COUPLING. LOUIS W. KRUSE, San Jose, Calif. Filed Jan. 9, 1920. Serial No. 350,379. 1 Claim. (Cl. 173—324.)



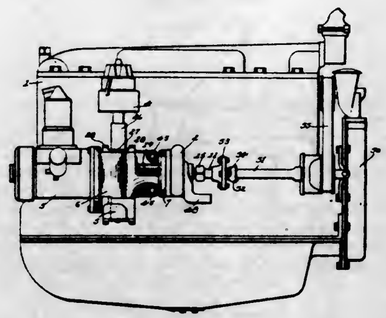
A coupling comprising a cylindrical body portion of insulating material provided with oppositely directed shoulders, and a cap member of insulating material adapted to engage each shoulder and provided with an orifice in the end thereof to permit the passage of wires therethrough, said body portion having a plurality of holes formed longitudinally therein and concentric to the axis thereof, a tube of electricity conducting material positioned in each hole, and a screw operatively positioned with relation to each end of each tube and adapted to engage the end of a wire inserted therein.

1,422,992. ELECTRIC CONNECTOR. EUGENE A. KUEN, Cincinnati, Ohio, assignor to The Thos. J. Corcoran Lamp Company, Cincinnati, Ohio, a Corporation of Ohio. Filed May 24, 1920. Serial No. 383,908. 3 Claims. (Cl. 173—328.)



1. In an electric connector, the combination of an insulating body, a pair of electric terminals positioned thereby, and a substantially U-shaped insulating strip, said insulating body provided with a slot, the base of said strip located in said slot, and the limbs of said strip extending beyond the respective ends of said insulating body so as to be located between said electric terminals.

1,422,993. ELASTIC METAL STRINGING, AND THE METHOD OF MAKING THE SAME. WILLIAM A. LARNED, Summit, N. J., assignor to The Dayton Steel Racquet Company, Dayton, Ohio, a Corporation of Ohio. Filed Feb. 13, 1922. Serial No. 536,135. 2 Claims. (Cl. 153—82.)

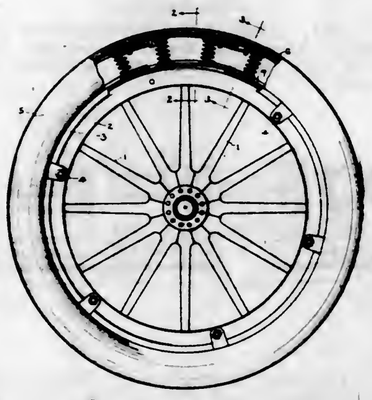


1. An elastic metal-stringing comprising a wire which has first been wound to form a helix of a number of coils per inch, and thereafter stretched in the direction of the axis of the latter, to reduce the number of its coils per inch to give the degree of stiffness, weight and elasticity required of it for the use to which it is put.

1,422,994. DEMOUNTABLE HEADSTOCK FOR LATHES. ARTHUR LEE LIGON, Killeen, Tex. Filed May 3, 1920. Serial No. 378,620. 9 Claims. (Cl. 82—28.)

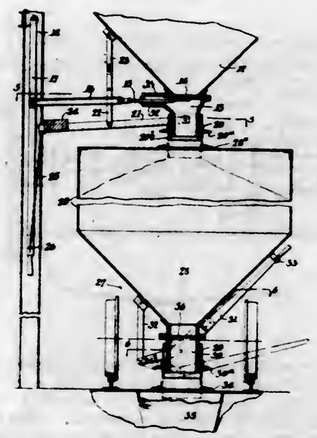
1. An attachment for common lathes enabling turning work longer than the lathe bed, comprising a hollow head stock in substitution of the usual tail stock and center rest, drive means for said head stock in connection with the lathe spindle, and means embodied in said drive means compensating for differences in location of the latter and of the head stock.

1,422,995. UNIT ASSEMBLAGE OF MOTOR ADJUNCTS. VINCENT LINK, Detroit, Mich., assignor to The Studebaker Corporation, a Corporation of New Jersey. Filed Feb. 14, 1920. Serial No. 358,706. 18 Claims. (Cl. 123—195.)



1. Motor assemblage of the character described embodying a supporting element cooperable with a motor and provided with a chamber adapted to contain a lubricant, a plurality of motor adjuncts supported on said element, and driving gears for at least one of said adjuncts positioned within the lubricant chamber, said supporting element being independent of the crank case of the motor and removable from the motor without necessitating the dismantling of any part of the crank case.

1,422,996. RESILIENT TIRE. STEVENS P. LONG, Birmingham, Ala. Filed Apr. 8, 1922. Serial No. 550,905. 4 Claims. (Cl. 152—8.)

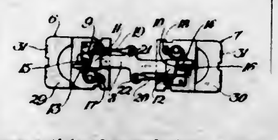


4. A resilient filler for tire casings, comprising a series of spring sections flexibly and yieldingly connected, each section comprising arcuate inner and outer plates which are transversely curved to conform to the inner contour of a tire casing, compression springs serving to connect

said plates near each end of a section, spring abutment lugs at the ends of the outer plate, coil springs mounted

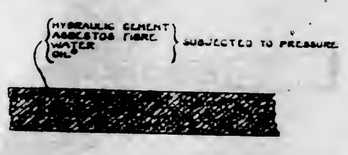
in these abutments and adapted to engage opposed abutments of adjacent sections, and circumferentially yieldable joint means connecting said sections.

1,422,997. APPARATUS FOR HANDLING COMMINUTED MATERIAL. ALEXANDER GRANT MCGREGOR, Warren, Ariz. Filed June 21, 1920. Serial No. 390,466. 8 Claims. (Cl. 214—18.)



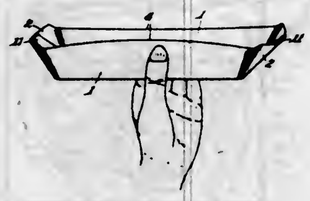
1. In a calcine handling apparatus, the combination with a calcine receptacle having an outlet part, of a sliding sleeve mounted on said outlet part and having an exterior horizontal flange, a calcine car provided with a receptacle having a charging opening of approximately the diameter of said sleeve and which opening may be brought beneath said receptacle outlet part, and means for normally holding said sleeve in a lifted position but permitting it to be lowered into contact with said car receptacle, said means comprising a lever connected with said sleeve, a link supported from said calcine receptacle, and means for holding down the outer end of said lever.

1,422,998. PRIMING AND DECARBONIZING DEVICE FOR INTERNAL-COMBUSTION ENGINES. FRANK D. MALTBY, Battle Creek, Mich. Filed Oct. 10, 1917. Serial No. 195,713. 5 Claims. (Cl. 137—139.)



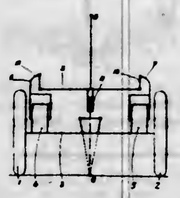
1. In a structure of the class described, the combination with a support member of a valve casing provided with a delivery port and air and water inlet ports, a valve in said casing adapted to connect either said air or water inlet port with said delivery port or to close said delivery port, said valve casing being arranged on one side of said support member and having a bracket extension with a threaded opening therein, a face plate arranged on the other side of said support member, said valve having a stem arranged through said support and face plate and provided with an index member, said face plate having indicia with which said index is associated, and a clamping member arranged through said face plate and support and threaded into said opening in said valve casing whereby said face plate and valve casing are secured upon said support.

1,422,999. BELT AND THE LIKE. KARL MATHEUS, Chicago, Ill. Filed Aug. 29, 1921. Serial No. 496,295. 5 Claims. (Cl. 267—69.)



1. As a new article of manufacture, a contractile device for belts and the like, comprising in combination a pair of end plates each having its end portion offset substantially the thickness of belt material, belt sections set into said offset portions, means for securing each offset portion to the corresponding belt section, guide blocks on the end plates having longitudinally extending guide passages, a slide plate having its end portions working within said guide blocks, pins on said slide plate, limiting its movement in the extension direction, a coil spring on each end plate having one end connected to such end plate, links joining the free ends of said springs with the central portion of the slide plate, and suitable housings secured to both end plates and covering over and protecting the springs, links and slide plate, substantially as described.

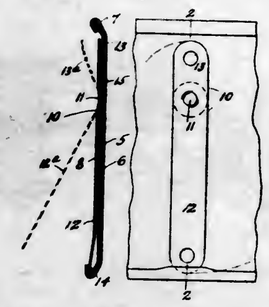
1,423,000. ASBESTOS-CEMENT PRODUCT AND METHOD OF FORMING THE SAME. RICHARD V. MATTISON, Ambler, Pa., assignor to Asbestos Shingle, Slate & Sheathing Company, a Corporation of Pennsylvania. Filed July 6, 1921. Serial No. 482,812. 11 Claims. (Cl. 25—155.)



1. A cement composition comprising a homogeneous mixture of oil and asbestos in finely divided condition, water and cement, the same having been subjected to pressure before the cement is set.

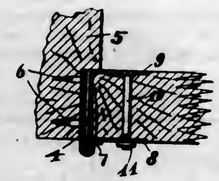
1,423,001. PAPER DISH. ELMER T. MAXWELL, Wheeling, W. Va. Filed Jan. 19, 1922. Serial No. 530,322. 2 Claims. (Cl. 229—31.)

1. A paper dish formed of a blank having the form of a rectangle with its corners cut away on relatively short diagonal lines, the sides and ends of the blank being turned upward on lines defining a rectangular bottom, each of said ends being formed by the production of two external end folds, a centrally disposed internal member and intermediate gussets, said folds having their confronting edges inclined and extending into approximate meeting relation adjacent to the upper edges of said ends, said gussets being defined by fold lines which, in the blank, diverge in opposite directions from the ends of the bottom-defining side lines, the relationship between the fold lines and the dimensions of the end folds being such that the blank when folded into dish form produces a dish having ends higher than its sides which relationship between the ends and sides is preserved when the sides are moved to a vertical position.



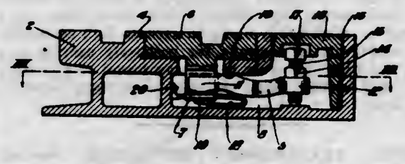
1,423,002. STABILIZING MEANS FOR SUSPENDED VEHICLES. HENRI. MESCHIA, Paris, France. Filed Aug. 1, 1921. Serial No. 489,017. 2 Claims. (Cl. 280—112.)

1. In a stabilising device for vehicles, the combination with the main suspension devices of said vehicle, of auxiliary laterally movable suspension devices interposed between said main suspension devices and the body of the vehicle, a rigid member extending downwardly from the vehicle body intermediate the lateral suspensions, a laterally movable structure swingable about the lowermost transverse center of the vehicle and means telescopically connecting said structure with said rigid member.



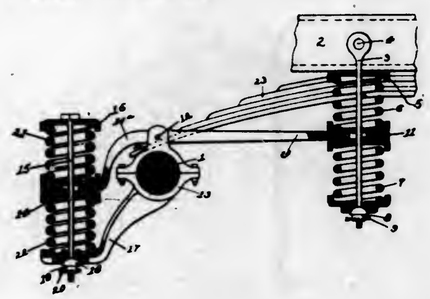
1,423,003. DISPLAY PANEL. WARREN R. MINNICK, Reading, Pa. Filed Jan. 12, 1921. Serial No. 436,686. 1 Claim. (Cl. 40—146.)

A display panel comprising a metallic backing sheet and a secondary backing sheet marginally flanged together, a metal disc interposed between said backing sheets, an aperture in said secondary backing sheet exposing part of



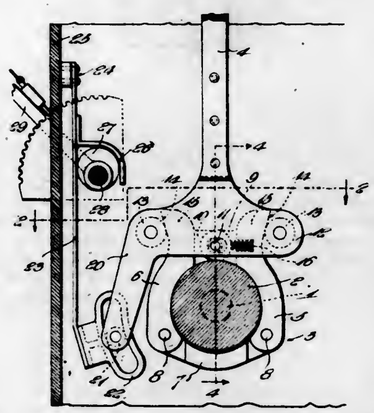
said disc, and a metallic supporting strip secured to said disc by a spot weld through said backing aperture.

1,423,004. HINGE. JOHN R. MOODY, Los Angeles, Calif. Filed Oct. 25, 1920. Serial No. 419,289. 2 Claims. (Cl. 16—135.)



1. In a hinge, one member having means to be secured to a frame; a second member of U-shaped cross section having one shank to reach over a sash from the inside and having another shank to reach over the same sash from the outside, both shanks having perforations one hole in one shank coming into alignment with a hole in the other shank, the perforation in the outer shank being provided with threads and engaging means inserted from the inside to freely pass with its front portion through the perforations in the inner shank and to firmly engage with the threads in the outer shank to allow a drawing of the outer shank to the sash from the inside.

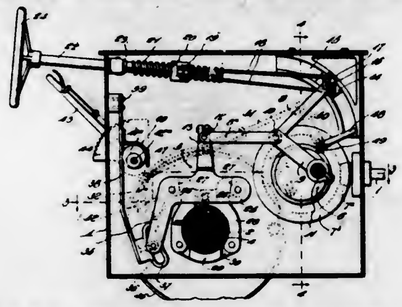
1,423,005. RAILWAY SWITCH. JOHN T. MOORE, Atlanta, Ga. Fled May 18, 1922. Serial No. 561,821. 8 Claims. (Cl. 246—443.)



2. A switch comprising a body portion, a movable tongue mounted on said body portion, and a metallic bonding member secured to said tongue and to said body portion to form an electrical bond between said tongue and said body.

1,423,006. SHOCK ABSORBER. HARRY B. MORGAN, St. Louis, Mo. Filed June 16, 1921. Serial No. 478,107. 3 Claims. (Cl. 267—20.)

1. A spring supporting device for automobiles comprising an equalizing lever designed to be fulcrumed on the axle to one side of its center, relatively heavy springs above and below the short end of said lever, a bracket carried by the axle and co-operating with one of said springs, relatively light springs above and below the long end of said lever and a bearing for one of said springs, which bearing is relatively fixed with relation to the chassis.



1,423,007. INTERMITTENT-GRIP DEVICE. SAMUEL STEPHEN MORTON, Harrisburg, Pa. Filed Sept. 25, 1920. Serial No. 412,739. 9 Claims. (Cl. 74—53.)

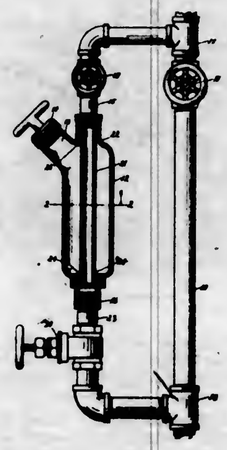
1. In an intermittent grip device, a drum, a flexible band surrounding said drum, a band-contracting lever adapted to travel bodily along an arcuate path concentric with said drum, and means for positively canting said lever, and band relatively before any travel of said lever along said arcuate path, whereby to initially contract said band.

1,423,008. TRANSMISSION MECHANISM. SAMUEL STEPHEN MORTON, Harrisburg, Pa. Filed Sept. 25, 1920. Serial No. 412,740. 19 Claims. (Cl. 180—17.)

1. In combination, two driving units adapted for positive anti-slipping connection with right and left-hand traction members, each unit being of positive-drive anti-slipping nature throughout and being adjustable for different speeds without pause in their positive anti-slipping driving; and limitaneously movable setting means operable by a single master control for setting said units

at a single operation to simultaneously accelerate one unit and decrease the speed of the other unit.

1,423,009. MECHANICAL BATTER. CHARLES H. MUCKENHIRN, Detroit, Mich. Filed June 26, 1919, Serial No. 306,853. Renewed Dec. 20, 1921. Serial No. 523,772. 18 Claims. (Cl. 25—21.)

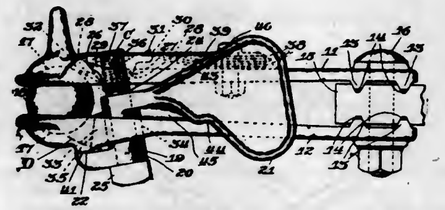


1. An apparatus of the class described, including a clay pressing and forming member, and means for oscillating said member progressively in different vertical planes.

1,423,010. SAFETY GAS VALVE. ELEANOR H. NEVICZKY, McKeesport, Pa. Filed Sept. 12, 1921. Serial No. 499,981. 3 Claims. (Cl. 251—45.)

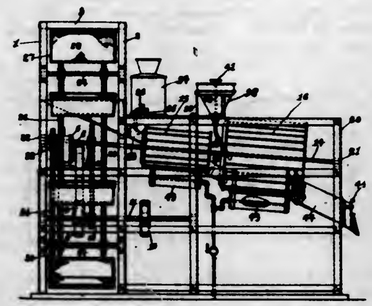
3. In combination with a gas valve having a protruding stem, a hand wheel free to rotate on and slide longitudinally of said stem, said hand wheel being concaved toward said disk and having a fluted perimeter and said disk being of proper diameter and contour to fit in said hand wheel and interlock therewith, and a helical spring coiled about said stem between said disk and said hand wheel whereby said hand wheel is normally held out of engagement with said disk but by pushing said hand wheel along said stem, compressing said spring, said hand wheel may be interlocked with said disk and the valve may be operated by turning said hand wheel.

1,423,011. LUBRICATOR. LONNIE EDWARD OSBORNE, Pittsburgh, Pa., assignor to Locomotive Stoker Company, a Corporation of Pennsylvania. Filed Mar. 4, 1920, Serial No. 363,322. Renewed May 31, 1922. Serial No. 565,015. 3 Claims. (Cl. 184—55.)



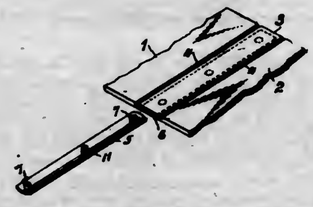
3. A lubricator comprising, in combination, a nipple screw threaded both interiorly and exteriorly at one end, a section of pipe engaged with said interior screw threads, a cylinder having restricted extremities provided with internal screw threads, one of said extremities engaged with the exterior threads of said nipple, the other extremity forming a sliding fit upon and extending beyond the free end of said pipe section, said section having ports opening into said cylinder adjacent each extremity.

1,423,012. HINGE FOR STOVES AND RANGES. STANLEY W. PALMER, Beaver Dam, Wis., assignor to Silas McClure, Beaver Dam, Wis. Filed Dec. 14, 1920. Serial No. 430,662. 8 Claims. (Cl. 16—128.)



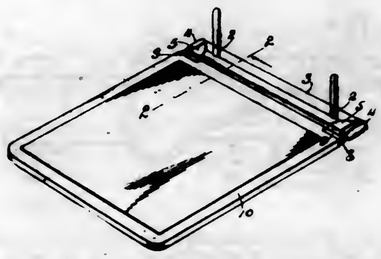
7. A range having a substantially vertical wall provided with a door opening, a door for closing the opening, and a pivotal connection between the door and the wall, said connection being at the top of the door, and offset inwardly from the plane of the door, whereby the door will be biased by gravity to swing inwardly beyond the vertical to cause the door to be pressed closely against the wall about the door opening when closed.

1,423,013. AUTOMATIC MOWER PITMAN. CHARLES PEARSON, Chicago, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed Dec. 21, 1918. Serial No. 267,837. 43 Claims. (Cl. 287—89.)



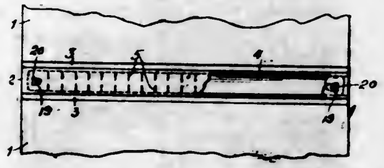
1. In a pitman having straps one of which is resilient, means including a member having rotary movement on its axis and oscillatory movement about one end for forcing said resilient strap toward the other strap when in clamping position.

1,423,014. NUT-SALTING MACHINE. MARIO PERUZZI, Wilkes-Barre, Pa. Filed Jan. 31, 1921. Serial No. 441,378. 7 Claims. (Cl. 107—43.)



7. A machine of the class described comprising inclined communicating drums mounted for rotation, means for conveying the material to be coated into said drums, means for supplying a coating material to one of said drums and means for supplying a granular material to the other of said drums.

1,423,015. TEMPORARY BINDER. FREDERICK D. PITT and GEORGE W. NEWMAN, Kansas City, Mo., assignors to Irving-Pitt Manufacturing Company, Kansas City, Mo., a Corporation of Missouri. Filed July 10, 1919. Serial No. 309,928. 8 Claims. (Cl. 129—1.)



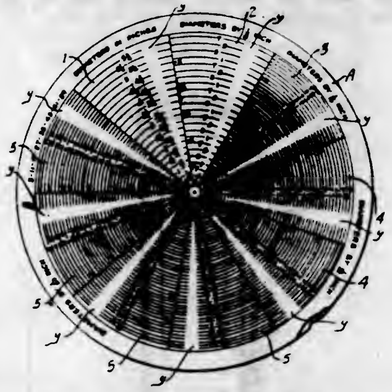
8. In a book cover attaching means, a single ply cover sheet having a pocket between the inner and outer sides thereof, said sides extending continuously from one side edge of the pocket to the other side edge thereof.

1,423,016. BINDER. WILLIAM P. PITT, Kansas City, Mo., assignor to Irving-Pitt Manufacturing Company, Kansas City, Mo., a Corporation of Missouri. Filed Mar. 28, 1921. Serial No. 456,174. 8 Claims. (Cl. 129—12.)

1. In a binder, a binder member comprising a body, and two end members mounted respectively on the ends of the body and having each a lip formed into a barrel adapted to receive a pintle, substantially as set forth.

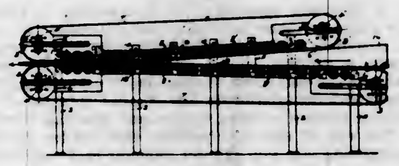
1,423,017. BOOK-COVER-ATTACHING MEANS. FREDERICK D. PITT, Kansas City, Mo., assignor to Irving-Pitt Manufacturing Company, Kansas City, Mo., a Corporation of Missouri. Filed Sept. 19, 1921. Serial No. 501,606. 12 Claims. (Cl. 129—1.)

1. The method of forming a pocket for receiving a back plate in the back of a book, consisting in cutting a longitudinal row of transverse slits in the back, and horizontally severing the material from slit to slit, substantially as set forth.



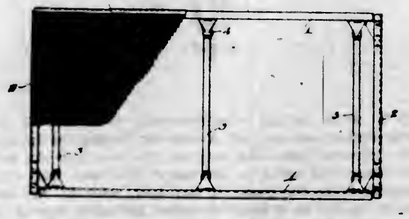
1,423,018. COVER-ATTACHING MEANS FOR BOOKS. WILLIAM P. PITT, Kansas City, Mo., assignor to Irving-Pitt Manufacturing Company, Kansas City, Mo., a Corporation of Missouri. Filed Sept. 19, 1921. Serial No. 501,527. 4 Claims. (Cl. 129—24.)

1. In a loose leaf book of the kind described, a back of a book, and a strip of flexible material sewed adjacent to its longitudinal edges to the back and adapted to form therewith a pocket for receiving a back plate, and having free ends adapted to underlap the ends of the back plate, substantially as set forth.



1,423,019. COMPASS SCALE. WEBSTER V. POGUE, Mount Vernon, N. Y. Filed May 27, 1920. Serial No. 384,732. 4 Claims. (Cl. 33—1.)

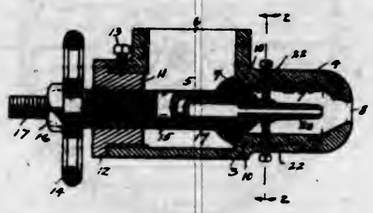
1. A compass scale, comprising a member provided with a plurality of segmental sections having regularly spaced arcs that are parts of circles of different diameters, the arcs of each section corresponding to a diameter of some common fraction of an inch or other standard unit of



linear measurement and the arcs in each segmental section representing circles of different diameters from those represented by the arcs of the adjoining sections.

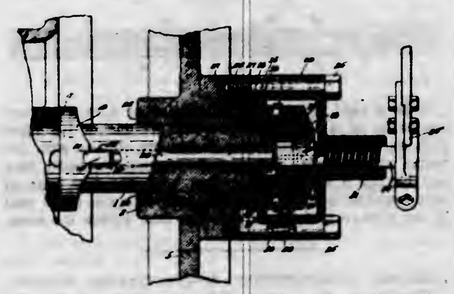
1,423,020. MOLDING MACHINE. JAMES T. POKORNY, Cedar Bayou, Tex., assignor of one-half to A. T. Eddingston, Port Arthur, Tex. Filed Sept. 18, 1920. Serial No. 411,130. 2 Claims. (Cl. 25—21.)

1. A molding machine including a fixed frame-work, an adjustable frame-work arranged above the fixed frame-work, retaining plates secured to and spaced from the fixed frame-work on each side and extending up on each side of the movable frame-work, wedge-shaped space blocks fixed to the side members of the respective frame-works, between them and the retaining plates, endless belts arranged to travel in said respective frame-works between which the material to be moulded passes, the edges of said belts passing along adjacent the apexes of said space blocks and being freed of excess material thereby.



1,423,021. SCREENING APPARATUS. MORLEY PUNSHON REYNOLDS, Cleveland, Ohio, assignor to The W. S. Tyler Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 22, 1919. Serial No. 325,429. 2 Claims. (Cl. 83—36.)

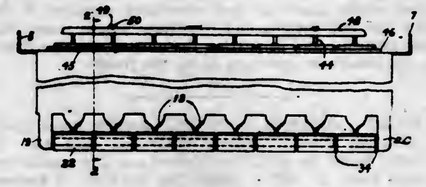
1. In mechanism of the character described, the combination of spaced pairs of superimposed strips rebent



laterally upon themselves throughout their length, woven wire screens mounted upon the corresponding strips of the pairs and having their overlying edge portions clamped beneath such rebent portions of said strips and means engaging said strips for moving the same with respect to each other to tension said two screens equally and together.

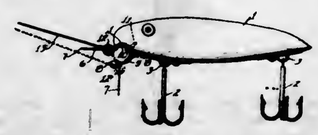
1,423,022. OIL BURNER. AUSTIN A. RILEY, Indianapolis, Ind., assignor of two-thirds to Central States Bridge Company, Indianapolis, Ind., a Corporation of Indiana. Filed May 16, 1921. Serial No. 469,755. 5 Claims. (Cl. 158—76.)

4. The combination, with a valve-body having an air-inlet, a valve-seat and a nozzle outlet, of an oil-supply pipe entering the body, said nozzle supporting the oil-supply pipe centrally of the valve seat, means for centering the nozzle with the valve seat, a valve slidably mounted on the oil-supply pipe, and means extending outside of the body for adjusting the valve in its seat.



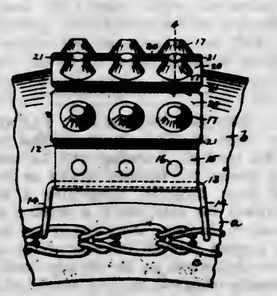
1,423,023. CLUTCH-OPERATING MECHANISM. EUGENE D. ROBERTS, Tacoma, Wash. Filed Apr. 13, 1921. Serial No. 461,115. 4 Claims. (Cl. 192—97.)

3. In a device of the character described the combination with a shaft, bearings therefor, a clutch having one member rotatably fixed on the shaft and the other member secured to a drum and rotatable upon the shaft, and a thrust-pin within said shaft of a chambered shouldered thrust collar secured upon one end of the shaft, a casing enclosing the same provided with a shoulder against which the shoulder on the thrust collar abuts, an interiorly screw threaded extension on the casing, and a thrust screw therein, of a revolving and sliding thrust block having oil channels therein fitting within the chambered thrust-collar and located between the thrust screw and the thrust pin and means between the thrust screw and the drum operable by axial movement in one direction to lock the shaft and drum together.



1,423,024. TOY PIANO. GEORGE E. ROBERTS, Spencer, Ohio, assignor to The Spencer Metal Products Company, Spencer, Ohio, a Corporation of Ohio. Filed July 31, 1919. Serial No. 314,461. 10 Claims. (Cl. 84—404.)

4. In toy pianos, a sheet metal key bent to form a top, a front and two side portions, said front portion being bent backwardly and then downwardly to form an overhanging lip, said side portions being bent into closer spaced relation with each other from an intermediate



point to the rear end, and having holes adapted to receive a pivotal rod for the key and said top having a slot punched adjacent to said holes for the purpose described.

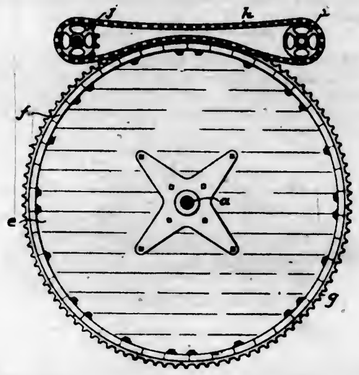
1,423,025. CONTROLLER FOR FISH LURES. CLAUDE M. RODGERS and ARTHUR W. WENGER, Warsaw, Ind. Filed May 25, 1921. Serial No. 472,477. 2 Claims. (Cl. 43—46.)

1. In a fishing lure, the combination with a rigid body of depth and oscillation controlling and stabilizing means secured thereto, said means comprising a member formed with a substantially semi-cylindrical intermediate portion having an integral laterally extending plane extension at one end and an integral laterally extending lip at the other end, and frictional members for securing the semi-cylindrical portion to the rigid body adjacent to one end of the latter, whereby the plane extension may be positioned at various angles to the plane tangent to the lower surface of the body.

1,423,026. ANTISKID ATTACHMENT FOR ELASTIC TIRES. WILLIAM T. ROLLINS, Boston, Mass., assignor to Russell Codman, Jr., Boston, Mass. Filed Mar. 25, 1922. Serial No. 546,604. 1 Claim. (Cl. 152—14.)

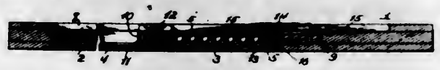
An anti-skid attachment unit comprising a flexible body strip of sheet material, adapted to be curved across a portion of a tire tread, and provided at its ends with anchoring devices; and a series of strip-stiffening skid-resisting elements extending transversely across the strip and inseparably united thereto, each of said elements including first, a flat-sided sheet metal plate bearing on the outer side of the body strip, bent across the longitudinal edges of the strip, and having ears bearing on the inner side of the strip, and secondly, a plurality of rivets having skid-resisting heads bearing on the outer surface of the strip, and shanks passing through the plate, the strip,

and the plate ears, and upset on the inner sides of said ears, the plates of said elements forming flat surfaces surrounding the bases of the rivet heads and protecting the major portions of the strip, said strips and their ears being spaced apart so that transverse portions of the strip are left flexible, and constitute hinges connecting said elements, and permitting the unit to conform freely to the transverse curvature of the tire tread.



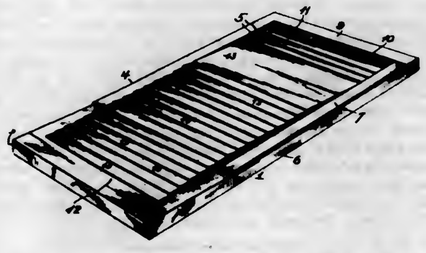
1,423,027. ARTIFICIAL TOOTH. JOSEPH ELON ROSE, Portland, Oreg. Original application filed Oct. 7, 1920, Serial No. 415,258. Divided and this application filed Sept. 21, 1921. Serial No. 502,275. 2 Claims. (Cl. 32—29.)

1. An artificial tooth comprising a thin metal crown having walls adapted to closely envelop the end and sides of a prepared natural tooth and to be trimmed and shaped to fit closely against the lingual, labial and other surfaces of the same; the labial crown-wall comprising a central protruding portion partially surrounded by a receding peripheral groove; a relatively thin labial facing accurately fitted and cemented to the protruding and groove portions of the labial crown-wall throughout the entire engaging surface and extending to its incisal edge; the rear surface of the facing and the outer and inner surfaces of the labial crown-wall being irregular, the irregularities of the rear surface of the facing being counterparts of the irregularities of the outer surface of the labial crown-wall and the irregularities of the inner surface of the labial crown-wall being counterparts of the irregularities of the labial surface of the prepared natural tooth, the mated counterparts corresponding reversely to each other thus providing intimate and exact fitting at all points; and the labial crown-wall providing a portion directly behind the incisal edge of the facing, considered in the direction of the tooth's axis, forming an impact-receiving wall to transmit to the crown, impact and strain applied to the facing at its incisal edge.



1,423,028. DRIVING MEANS FOR TANNING DRUMS. ERNEST ROTH, Philadelphia, Pa. Filed July 13, 1918. Serial No. 244,726. 1 Claim. (Cl. 74—42.)

Driving means for tanners' drums or heavily loaded drums of large diameter, comprising a shaft for the drum, bearings for said shaft, a driving shaft parallel with and above the drum shaft and at one side of a vertical plane passing through the axis of the drum shaft, a driving sprocket wheel on the driving shaft and of very small diameter relatively to the diameter of the drum, an idle sprocket wheel arranged to rotate about an axis parallel to the driving shaft spaced from, and in substantially the same horizontal planes as the driving sprocket wheel, said idle wheel being at the side of the vertical plane passing through the axis of the drum shaft opposite the driving shaft, said sprocket wheels being between two vertical planes extending through the drum, a sprocket rack on the periphery of the drum extending into the space between the sprocket wheels, above the lower plane and below the upper of said horizontal planes, and a slack sprocket chain extending around the sprocket wheels and in engagement with the sprocket rack, the sprocket wheels and the rack being so disposed with relation to each other that the upper reach thereof extends in substantially a horizontal plane, while the major portion of the lower reach is of arcuate form within the planes of the sprocket wheels, the sprocket wheels being

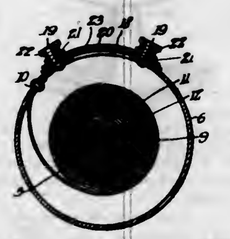


so spaced and positioned that the major portion of the lower reach of the chain is in contact with the rack and engaging a relatively large number of teeth of the rack, and is held in contact by gravity alone.

1,423,029. CARD INDEX. JOSEPH CLIFFORD RUSSELL, Pittsburgh, Pa. Filed Oct. 12, 1920. Serial No. 416,377. 4 Claims. (Cl. 129—16.)

3. In a card index, the combination of a card support consisting of a split tube provided at one of its edges with an inwardly projecting flange out of line with the centre of the tube, and a card entering the split tube and having a flange cooperating with the free edge of said inwardly projecting flange, and with the inner wall of the tube to lock the card to the tube within the same.

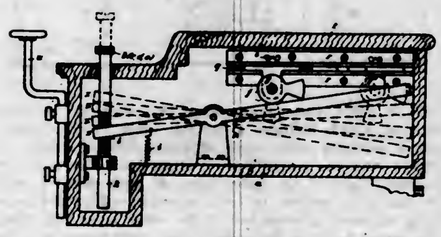
1,423,030. CARD INDEX. JOSEPH CLIFFORD RUSSELL, Pittsburgh, Pa. Filed Feb. 10, 1921. Serial No. 443,849. 4 Claims. (Cl. 129—16.)



1. In a card index, the combination with a frame provided with guideways, of a card support provided with cylindrical end portions movable in said guideways and having a body portion which is partly circular in cross-section.

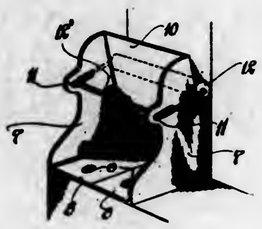
3. In a card index, the combination with a frame provided with guideways, of a sheet metal card holder having a slot and provided with an inwardly projecting flange, a portion of which forms one wall of said slot, said sheet metal support having its body portion partly circular in cross-section and provided at its ends with cylindrical portions, and a card entering said slot and provided with a flange depending below the free edge of the flange in said support.

1,423,031. MANUFACTURE OF OPEN-HEARTH STEEL. HERBERT C. RYDING and ANSON W. ALLEN, Birmingham, Ala. Filed July 6, 1917. Serial No. 178,931. 2 Claims. (Cl. 75—46.)



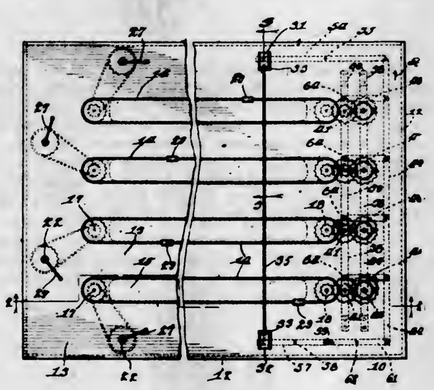
1. 1. In the manufacture of basic open hearth steel the method which comprises first providing a highly heated or molten complete slag consisting of lime and oxidizing agents in a basic open hearth furnace, and then introducing a complete charge of molten blown metal, finishing it with the initial slag in said furnace, removing the finished steel and the slag and repeating the operation with an entirely new slag for the next heat of metal.

1,423,032. SPRING MOTOR. LUDWIG SCHMITT, Chicago, Ill. Filed Apr. 11, 1921. Serial No. 460,445. 3 Claims. (Cl. 185—45.)



3. A spring motor of the type described, including a drum forming a spring housing, said drum having an opening in its circumferential wall for the supply of lubricant to said spring, a pair of threaded studs mounted in said wall opposite the ends of said opening, a gasket having openings fitting over said studs, a cover-plate for said opening curved endwise to conform to the curvature of said circumferential wall and formed with apertures fitting over said studs, and nuts on said studs for clamping said cover plate and gasket in place over said opening.

1,423,033. FINGER-TRAINING DEVICE. WILLIAM SCHMITT-MARCEL, Florence, Italy. Filed Mar. 11, 1921. Serial No. 451,659. 5 Claims. (Cl. 128—26.)

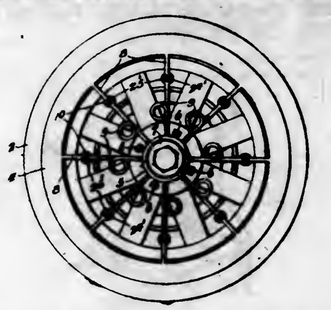


1. A finger training device, comprising movable keys, pivoted levers for actuating said keys, a shaft having a cup concentric with and encircling said shaft, and a cam for operating said levers, said cam having a hub adjustably receivable in said cup.

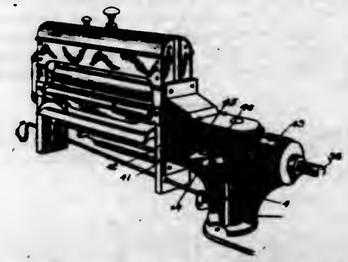
1,423,034. WINDOW-SASH HOLDER. HENRY L. SCHOLL, Spokane, Wash. Filed Dec. 20, 1919, Serial No. 346,222. Renewed Apr. 11, 1922. Serial No. 551,469. 1 Claim. (Cl. 292—239.)

A window sash holder consisting of an integral bracket having an attaching base plate, an inclined front plate, vertical side walls and rearwardly declining straight slots in said walls lying in a plane approximately perpendicular to the front plate, a U-shape bail journaled in the walls, a roller journaled on the bail to co-act with the front plate, and said bail adapted to form a pivot and the upper ends of the slots located in position, whereby the roller may be swung over the top of the bracket and rest on the rear edges of the walls of the bracket.

1,423,035. TOY. ERNEST G. SCHREYER, Chicago, Ill. Filed Dec. 13, 1919. Serial No. 344,580. 6 Claims. (Cl. 46—56.)



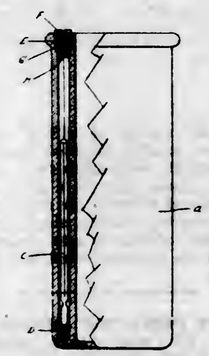
1. In a toy, the combination with a suitable frame, of a pair of spaced spindles mounted therein, a sprocket fixed on each spindle, an endless chain connecting said sprockets, a toy image fixed at a given point to each chain, hand operated elements for rotating said spindles and chain, a rotatable counting wheel, means indicating a point fixed with relation to said counting wheel, and gearing whereby the counting wheel is rotated from one of said spindles.



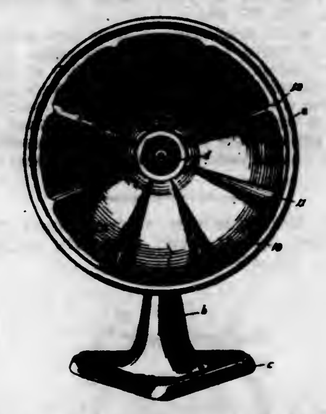
1,423,036. TIRE PROTECTOR. HOWARD H. SHANNON, Denver, Colo. Filed Mar. 5, 1921. Serial No. 449,825. 3 Claims. (Cl. 301—39.)

3. Means to prevent shredding or burning of the side of a pneumatic tire comprising an annular guard adapted

to be snugly arranged against the side of a tire and constructed for its connection to the wheel bearing the tire; said construction including spokes, and the spokes being coiled and resilient.

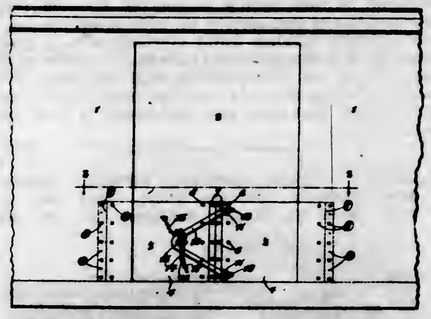


1,423,037. GEARING. HENRY SIEMEN, Kansas City, Mo. Filed June 4, 1921. Serial No. 474,918. 4 Claims. (Cl. 74—101.)



1. A gearing comprising a drive shaft, spaced gears loosely mounted on the drive shaft and having clutch faces, a clutch member intermediate the gears and having clutch faces on its respective ends to alternately engage the clutch faces on the gears, mating gears at right angles to the first named gears and meshing therewith, stub shafts fixed to the last mentioned gears, aligning shafts for the stub shafts, and sleeved clutch members for connecting the aligning shafts to the stub shafts.

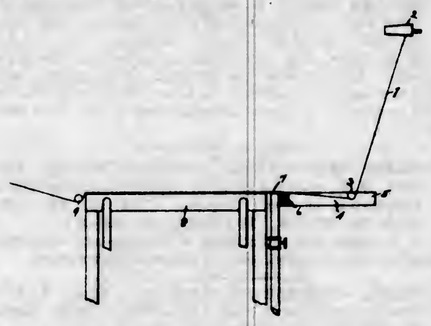
1,423,038. NURSING BOTTLE. VERA I. SIMS, Sioux City, Iowa. Filed Aug. 5, 1920. Serial No. 401,335. 3 Claims. (Cl. 215—11.)



1. A straight sided glass bottle having an interior vertical cell formed integrally with the side of the bottle, open at its upper end and adapted to receive a thermometer, irregular in cross-sectional contour, the interior of the cell being engageable with the thermometer to hold it against rotary movement.

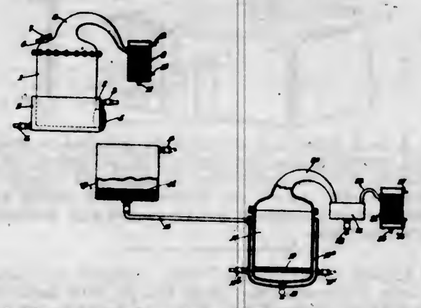
1,423,039. ELECTRIC RADIATOR. CHARLES F. SMITH and GEORGE E. CURTISS, New Britain, Conn., assignors to Landers, Frary & Clark, New Britain, Conn., a Corporation of Connecticut. Filed Mar. 8, 1920. Serial No. 364,079. 6 Claims. (Cl. 219—34.)

1. A reflector having a dish shaped reflecting surface provided with a plurality of longitudinally and transversely curved panels and angularly disposed walls connecting the panels.



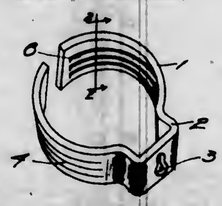
1,423,040. GRAIN DOOR. ROY E. SMITH, Iuka, Ill. Filed July 10, 1919. Serial No. 309,826. 2 Claims. (Cl. 20—30.)

1. A grain door, comprising two separate sections, each of which includes a vertical inner layer of board and a separate outer layer of board rigidly secured together and the outer layer terminating short of the vertical edges of the inner layer at both ends; a reinforcing strip secured to each extended end of the inner layer of board at each end of the outer layer and filling the spaces between the ends of the outer layers and the ends of the inner layers respectively; a V-shaped bar having the extremities of its arms pivoted to one of said sections between the two reinforcing strips secured to said section and being arranged to extend entirely across the two adjacent reinforcing strips and overlap relatively a considerable part of the other section; and a fastening



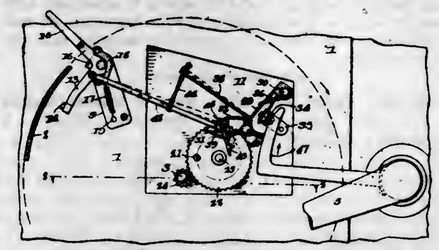
member carried by said other section between the two reinforcing strips secured to said other section arranged to be received between the arms of said bar at their point of union.

1,423,041. COMPOSITION FOR THE TREATMENT OF ARTIFICIAL SILK. CHARLES A. SNYDER, Philadelphia, Pa. Filed Sept. 3, 1921. Serial No. 498,437. 2 Claims. (Cl. 134—11.)



1. A composition for finishing artificial silk thread consisting of olive oil soap dissolved in water having olive oil added thereto.

1,423,042. PROCESS OF RECOVERING GLYCERINE. JOHN A. STEFFENS, Baltimore, Md., assignor to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed Nov. 19, 1919. Serial No. 339,218. 5 Claims. (Cl. 87—4.)



3. The process of recovering glycerine from materials subjected to alcohol fermentation comprising precipitating the organic materials with an acid, distilling off the water, and then leaching with a liquid and recovering glycerine therefrom by distillation.

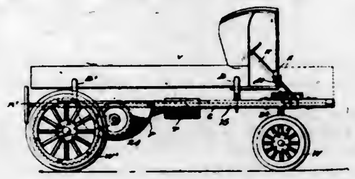
1,423,043. BROOM HOLDER. FRANK H. STEINHEISER, Spokane, Wash. Filed Oct. 18, 1921. Serial No. 508,587. 2 Claims. (Cl. 24—257.)

1. A broom holder comprising a split ring of resilient metal having a slotted offset portion, said ring having opposed annular series of slits forming tongues, and said tongues having inturned sharpened edges for frictionally engaging a broom handle.

1,423,044. AUTOMATIC STOP FOR GRAMOPHONES. OLE O. STORLE, Tacoma, Wash. Filed Apr. 30, 1920. Serial No. 377,031. 5 Claims. (Cl. 192—116.)

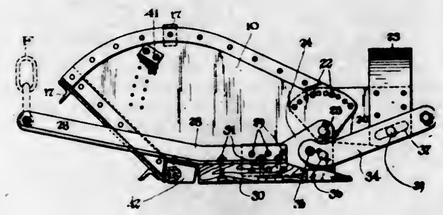
1. In an automatic stop for gramophones the combination with a brake and means for releasably holding the brake in off position, of a trip adapted to be rotated by the rotation of the turn table, a brake releasing member movable into and out of the path of the trip, a pivoted support adapted in normal position to hold the releasing member in inoperative position, a lever carried by said support and connected with the releasing member, and a member movable with the tone arm of the gramophone and tending by engagement with said lever to shift the releasing member out of operative position as the tone arm swings inwardly over a record, the trip being adapted by engagement with said lever to periodically shift the releasing arm into operative position while the turn table rotates.

5. In an automatic stop for gramophones, the combination with a brake and means for releasably holding the brake in off position and applying it when released, of brake releasing mechanism comprising a pinion on the turn table spindle, a gear meshing with the pinion and a stationary plate on which the gear is mounted having a bearing fitting the spindle and determining the proper relation of the gear to the pinion.



1,423,045. ELECTRICAL CONNECTOR. EMIL STRANSZKY, Dover, Ohio, assignor to The Dover Manufacturing Company, Dover, Ohio, a Corporation of Ohio. Filed Aug. 20, 1918. Serial No. 250,761. 1 Claim. (Cl. 247—13.)

A connection protector for electrical apparatus comprising a main body portion rabbetted to form a flat sur-



face parallel with the axis of the member and terminating in a shoulder perpendicular to said axis; a removable closure member adapted to fit in the recess formed by said two surfaces, said main and closure members together forming a complete protector of cylindrical contour; the opposing faces of the body and closure members being provided with longitudinal registering grooves adapted to receive lead wires; that part of the body portion beyond the shoulder being pierced by conduits in alinement with said grooves to receive the conductor terminals of said apparatus; and means for removably securing said closure in place.

1,423,046. FARM TRACTOR. EZRA W. TABER, Chicago, Ill. Filed Sept. 18, 1919. Serial No. 324,406. 3 Claims. (Cl. 180—41.)

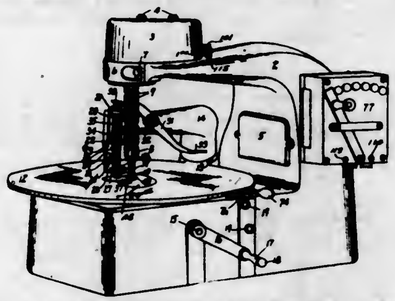
1. In a tractor, a chassis, brackets adjustably mounted on said chassis, driving wheels having stub axles journaled on said brackets, said driving wheels being adapted to be selectively arranged on the inner or outer sides of said brackets, gears carried by said driving wheels, driving shafts having a differential connection and a plurality of sets of gears carried by said driving shafts, one of said sets of gears being engaged with the gears of the driving wheels when said driving wheels are arranged on the outer sides of said brackets, and the other of said sets of gears being engageable with the gears of the driving wheels when said driving wheels are arranged on the inner sides of said brackets.

1,423,047. BUCKET. WILLIAM LOVE THOMPSON, Greenville, Miss. Filed Aug. 3, 1920. Serial No. 400,906. 14 Claims. (Cl. 37—40.)

1. In a bucket of the character described, a bucket body including side plates, a back plate and a bottom plate, an adjustable extension carried by the forward end of each of said side plates, an oscillating frame carried by the bucket body including a frame member pivoted to each of the side plates, upper and lower stops secured to each of the side plates and adapted to limit the oscillatory movement of said frame, said upper stop being adjustable and serving to properly suspend the frame in elevated position, a cutting bit carried by the frame members, a long lever rigidly and directly secured to each frame member, a short lever pivotally connected to each of said frame members, guide means carried by the adjustable extensions and operatively engaged with the short lever and runners carried by each of the long levers and adapted for alternate engagement with the ground with respect to the cutting bit.

1,423,048. FUEL. BURNELL R. TUNISON, New York, N. Y., assignor to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed Apr. 12, 1920. Serial No. 373,306. 21 Claims. (Cl. 44—9.)

1. A liquid fuel which is more dense than kerosene, comprising a relatively heavy hydrocarbon of an aliphatic series, and alcohol.



1,423,049. FUEL OF LIQUID TYPE. BURNELL R. TUNISON, New York, N. Y., assignor to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed Apr. 12, 1920. Serial No. 373,307. 15 Claims. (Cl. 44—9.)

1. A liquid fuel comprising a petroleum distillate heavier than kerosene and an ester of an organic acid and a mono-hydric alcohol, the heavy oil being present in the proportion of about three-quarters of the total mixture.

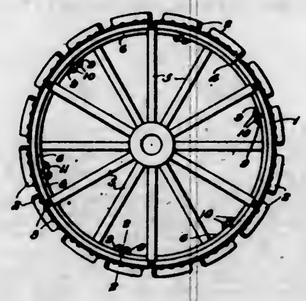
1,423,050. LIQUID FUEL. BURNELL R. TUNISON, New York, N. Y., assignor to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed Apr. 12, 1920. Serial No. 373,308. 11 Claims. (Cl. 44—9.)

1. A liquid fuel consisting of a petroleum distillate heavier than kerosene, and an aromatic hydrocarbon.

1,423,051. BURNISHING MACHINE. LOUIS J. VAN GUELPEN, Cincinnati, Ohio. Filed Nov. 3, 1919. Serial No. 335,516. 14 Claims. (Cl. 69—1.)

1. In a machine of the character described, a revolving spindle, feeding and presser foot mechanism, and a feeding plate for supporting the same, and capable of being moved upward and downward, said feeding and presser foot mechanism moving upward and downward with the plate.

1,423,052. BURNISHING TOOL. LOUIS J. VAN GUELPEN, Cincinnati, Ohio. Filed Feb. 18, 1919, Serial No. 277,861. Renewed Feb. 15, 1922. Serial No. 536,817. 7 Claims. (Cl. 69—1.)

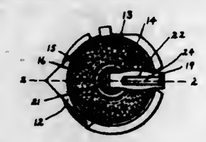


1. In a burnishing tool of the class described, a revoluble spindle, a tool carrier, said tool-carrier situated in said spindle, a removable tool capable of being attached to said tool carrier, and a heating unit also carried by said tool carrier.

1,423,053. EGG-PRESERVING COMPOUND. EDWARD VICTORINE, Cedar Rapids, Iowa. Filed Sept. 8, 1921. Serial No. 499,272. 1 Claim. (Cl. 99—1.)

An egg-preserving compound, consisting of the following ingredients in substantially the proportions stated, in parts and decimal parts by weight: calcium oxide, 148; aluminium and ferric oxides, 0.60; magnesium oxide, 1.40; sodium chloride, 99.20; calcium sulphate, 0.50; calcium chloride, 0.20; magnesium chloride, 0.05; insoluble matter and moisture, 0.05; water, 250.

1,423,054. TRACTOR-WHEEL WEIGHT. JOHN B. WALKER, Minerva, Ohio. Filed Mar. 25, 1922. Serial No. 546,591. 6 Claims. (Cl. 301—41.)



4. A tractor wheel weight comprising a plurality of arcuate sections, a lug formed at either extremity of each of said sections, a wedge engaging the lug at the extremity of one section and the lug at the extremity of the adjacent section and securing said sections together and to said wheel.

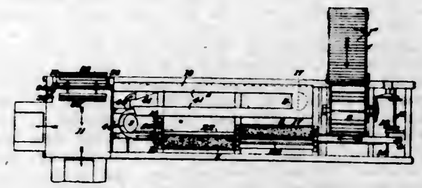
1,423,055. TOOL HANDLE. CHARLES A. WALTERS, near Marion, Iowa. Filed Mar. 12, 1921. Serial No. 451,908. 4 Claims. (Cl. 279—99.)

1. Combined with a tool-bit having a threaded stud, notched to form a key-seat, an engaging nut, a key slidable but non-revoluble therein, to engage said key-seat, and a handle having a stud threaded to engage the other end of the nut, and adapted to thrust the key into its seat.

1,423,056. SEWING-MACHINE BOBBIN CASE. LUCIUS E. WEAVER, East Hampton, Conn., assignor to Summit Thread Company, East Hampton, Conn., a Corporation of Maine. Filed Feb. 28, 1921. Serial No. 448,687. 1 Claim. (Cl. 112—233.)

A sewing-machine bobbin case comprising a central tubular post, a bobbin-confining latch pivoted within the outer end of the bore of the post, and movable to an operative position at right angles with the post, and to an inoperative position in alinement with the post, said latch having a cam-shaped arm at its inner end, means within the post for cooperation with said arm in yieldingly retaining the latch in either of said positions, the outer end of the latch being positively supported by the case, when the latch is in its operative position, said latch being provided with a longitudinal slot extending from the outer end portion of said arm, and an inherently resilient bobbin-controlling tongue fixed to the latch, at the outer end of said slot, and extending lengthwise of the slot, the tongue being shorter than the slot, and its inner end normally projecting from the inner side of the latch, and arranged to bear yieldingly on the outer end of the core of a universally wound bobbin when the latch is in its operative position, the tongue being adapted to be pressed into the slot by the bobbin, so that a bobbin of maximum length and yardage of thread may be confined by the latch and tensioned by the tongue, the edges of the slot preventing edgewise displacement of the tongue.

1,423,057. WINDOW. BENJAMIN WHIBLEY, Winnipeg, Manitoba, Canada. Filed June 16, 1919, Serial No. 304,733. Renewed Dec. 12, 1921. Serial No. 521,926. 4 Claims. (Cl. 20—521.)



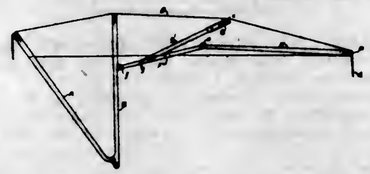
1. A window comprising a housing, inner and outer sills, an elongated opening between the sills, a permanent sash in the housing, normally resting upon the outer sill, a door normally closing the opening between the sills, a storm sash normally resting upon the door and slidably secured to the permanent sash to move relatively thereto to allow rotation of the door to clear the opening to permit descent of the sashes therethrough.

1,423,058. FUEL ADAPTED FOR USE IN INTERNAL-COMBUSTION ENGINES. MILTON C. WHITAKER, New York, N. Y., assignor to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed Nov. 12, 1919. Serial No. 337,398. 7 Claims. (Cl. 44—9.)

1. A fuel comprising an alcohol above 20 parts by volume, benzol 17 to 35 parts, gasoline 20 to 50 parts, and ethyl acetate 5 to 20 parts.

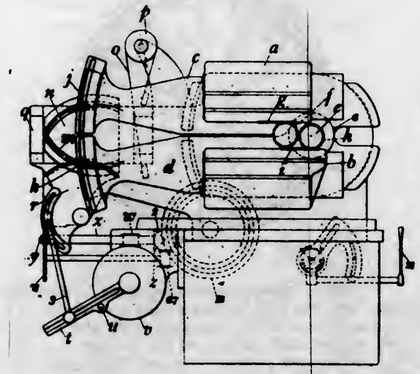
1,423,059. APPARATUS FOR WASHING AND CLEANING EGGS. COLONEL J. WILLIAMSON, San Francisco, Calif., assignor to Williamson Machine Company, San Francisco, Calif., a Corporation of California. Filed Dec. 27, 1920. Serial No. 433,528. 25 Claims. (Cl. 146—14.)

1. An apparatus for the described purpose, the same comprising means for receiving and wetting the eggs to be cleaned, means for receiving and advancing the wet eggs as a stream through the apparatus, and means associated therewith for scrubbing the eggs as moved forward in their path of travel.



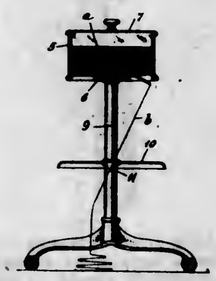
1,423,060. DISK WHEEL. JOHN F. WILMOT, Detroit, Mich. Filed Nov. 2, 1921. Serial No. 512,163. 5 Claims. (Cl. 301—63.)

1. In a vehicle wheel having a hub and a rim, a main supporting disk attached at the periphery to the rim, and a series of disks each of less diameter than the next of the series, all of the disks being secured at the center to the hub and the disks intermediate the disk of least diameter and main disk being fixedly attached to the adjacent disk only.



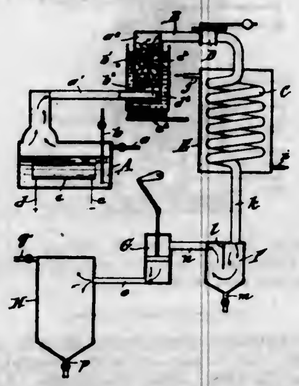
1,423,061. FOLDABLE VEHICLE TOP. JAMES THAUSTON WOLFE, Washington, D. C. Original application filed July 17, 1914, Serial No. 851,586. Divided and this application filed Nov. 19, 1917. Serial No. 202,817. 2 Claims. (Cl. 296—116.)

2. A foldable cover-support comprising a rear bow, a front bow, two-part rule-jointed side arms projecting the front bow from the rear bow and deflected upwardly to give the rear parts of the side arms upward and forward inclination and to render the side arms self-sustaining under the vertical load imposed by the cover when in shelter position, and an intermediate bow permanently pivoted to and upwardly and forwardly inclined from the rear parts of the side arms but otherwise free from connection with the side arms, and a suitably sustained cover



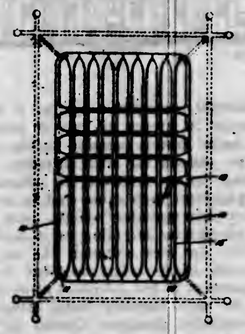
material permanently attached to the intermediate bow, and limiting its forward swinging movement upon the side arms when the top is in shelter position.

1,423,062. GEAR-CUTTING MACHINE. ISAAC HENRY WRIGHT, Salford, England. Filed June 1, 1920. Serial No. 385,688. 5 Claims. (Cl. 90—10.)



1. In gear cutting machines, the combination with a pair of balanced arms, a common pivot for said arms, means for moving said arms about said pivot, and tool carrying slides upon said arms, of a work blank carrier and means simultaneously rotating said carrier and traversing said slides on their forward or operative strokes, as set forth.

1,423,063. DISPENSING DEVICE. ADALBERT ALEXAY, Avenal, N. J., assignor to Simplex Paper Accessories Co., Inc., Brooklyn, N. Y., a Corporation of New York. Filed Mar. 31, 1922. Serial No. 548,325. 6 Claims. (Cl. 211—29.)

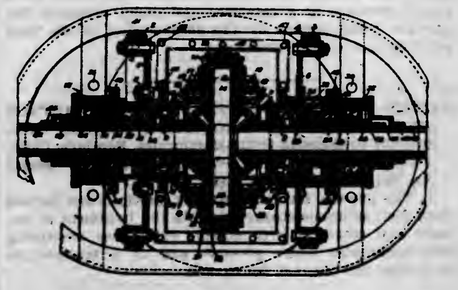


1. A dispensing device for paper napkins comprising a container, a support therefor, a stack of napkins supported in said container, and a ribbon threaded through said stack of napkins and adapted to release the napkins from said container.

1,423,064. CARBURETING LIQUID FUELS. OTTO P. AMEND, New York, N. Y. Filed June 8, 1917. Serial No. 173,665. 9 Claims. (Cl. 44—9.)

9. A colorless motor fuel, made from petroleum, having a specific gravity above .74, a bromine absorption number in excess of 125, a flashing point below zero F., over fifty per cent of which fuel is volatile at temperatures below 80° C., containing not less than thirty per cent of naphthene hydrocarbons, and free from terpenes and resinous colloidal matter.

1,423,065. BED BOTTOM. SHERMAN L. ARNOLD, Woodlawn, Pa. Filed July 26, 1921. Serial No. 487,651. 3 Claims. (Cl. 5—20.)

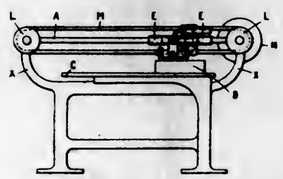


1. A bed-bottom comprising a rigid tubular metal frame, a plurality of supporting elements extending lengthwise thereof, such supporting elements being formed of rubber reinforced with textile material, the ends of such supporting elements being composed of rubber reinforced with textile material, and having apertures therein through which the end of said frame can be passed, and additional supporting elements extending crosswise of said metal frame, at the portion thereof where the greatest strain comes during normal use of the bed-bottom.

1,423,066. TEMPERATURE INDICATOR. LOUIS V. ARONSON, Newark, N. J. Filed Oct. 14, 1920. Serial No. 416,907. 1 Claim. (Cl. 116—114.)

In a device for indicating the temperature of the cooling medium of an internal combustion engine, a flexible tube adapted to extend into said cooling medium, indicating means carried by said flexible tube, a temperature responsive element contained in said tube, a flexible thermal element wound spirally upon said tube, the turns of the spirals adjacent the end of the tube being closely wound whereby to protect the end of the tube.

1,423,067. VARIABLE-SPEED GEARING. MALCOLM FORRESTER LAMBE AYMÉ AYMARD, Colchester, England. Filed Nov. 4, 1921. Serial No. 512,893. 3 Claims. (Cl. 74—34.)



1. In a structure of the character described, a drive shaft, a friction disk carried thereby, a driving axle including separate end sections, casings for the axle sections, a differential housing, pinions carried by the inner ends of the axle sections, a shell receiving said pinions and having side tubes receiving the inner end portions of the axle sections, a pin extending radially through the shell between the pinions, pinions carried by the pin within the shell and extending between and meshing with the pinions of the axle sections, collars rotatable upon the sleeves upon opposite sides of the differential housing, friction rings received about the collars and engaging the friction disk, beveled gears carried by the collars within the differential housing, and beveled gears carried by the pin externally of the shell and within the housing and extending between and meshing with the beveled gears of the collars.

1,423,068. IRONING MACHINE. WILLIAM EXCELL BAKER, West Norwood, England. Filed Jan. 19, 1921. Serial No. 438,498. 2 Claims. (Cl. 68—8.)

1. An ironing machine comprising a flat iron, a table carried by a suitable frame over which said iron travels,

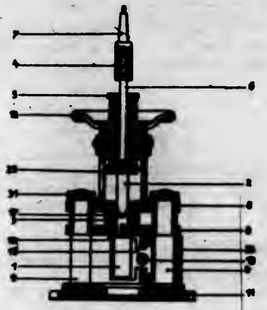
a bar or the like carried by said frame in parallel relation to said table, a pulley mounted in a bearing at each end of said bar one of said pulleys being adapted to be driven from any source of power, a flexible band running around and between said pulleys, a bracket adapted to

slide on said bar, an arm carried by and adapted to rock on said bar, flexible coupling means between said arm and said flat iron, a double acting clutch carried by said arm and adapted to engage said flexible band, and means for operating said clutch which is so connected with said iron that it partakes of all of its movements.

1,423,069. PROCESS FOR DISSOLVING OR RECOVERING METALS. HANS BARDT, Santiago, Chile, assignor to Sociedad Hidro-Metalurgica, Santiago, Chile, a Corporation of Chile. Filed Sept. 17, 1921. Serial No. 501,418. 5 Claims. (Cl. 204—10.)

1. An electrolytic process of extracting metals from ores, matte, cupriferous waste and alloys, which comprises subjecting the metal containing materials to the action of a solution containing sulphuric and nitric acids in the presence of a catalyzer and under pressure, the pressure being formed by the electrolysing of the said solution in a closed container.

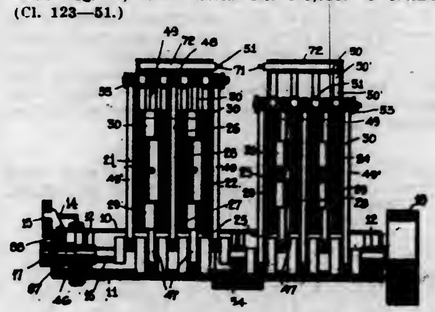
1,423,070. PROCESS FOR PRECIPITATING METALS FROM SOLUTIONS. HANS BARDT, Santiago, Chile, assignor to Sociedad Hidro-Metalurgica, Santiago, Chile, a Corporation of Chile. Filed Sept. 17, 1921. Serial No. 501,419. 2 Claims. (Cl. 75—18.)



1. The process for recovering by precipitation metals from their solutions characterized by the treatment of metallic salt solutions with organic substances containing poly-saccharides under pressure and at a temperature exceeding 100 degrees centigrade.

1,423,071. PROCESS FOR MANUFACTURING ELECTRODES. HANS BARDT, Santiago, Chile, assignor to Sociedad Hidro-Metalurgica, Santiago, Chile, a Corporation of Chile. Filed Sept. 17, 1921. Serial No. 501,420. 4 Claims. (Cl. 204—4.)

1. Process for the manufacture of electrodes, which consists in electrolysing a solution containing carbonate of manganese and an excess of perchloric acid, and employing anode material inert with respect to perchloric acid whereby a deposit of a peroxide film is formed upon the anode to serve as the desired electrode.



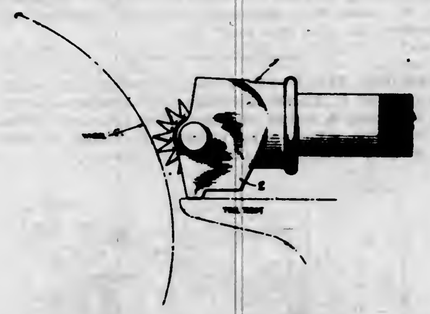
1,423,072. MEANS FOR DRILLING POLYGONAL HOLES. RUDOLF BARTHOLOMÄUS, Berlin, Germany. Filed May 5, 1921. Serial No. 466,972. 3 Claims. (Cl. 77—61.)

1. A device for drilling polygonal holes comprising a drill with a polygonal shaft, polygonal guide blocks, one side of each guide block abutting against a side of another guide block and the guide blocks being so disposed with respect to each other as to form a guide hole for guiding the polygonal shaft and corresponding in shape to the hole to be drilled, and means for altering the size of

the said guide hole by positively shifting one of the said guide blocks so as to cause each succeeding block to move the one next to it.

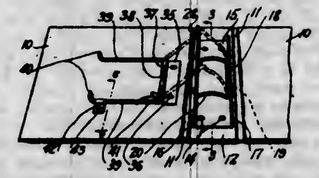
1,423,073. INTERNAL-COMBUSTION MOTOR. ADOLPH BEHN and JOHN GUSTAV SCHMITT, Brooklyn, N. Y. Filed Aug. 12, 1920. Serial No. 403,023. 8 Claims. (Cl. 123—51.)

4. In an internal combustion motor, a plurality of cylinders arranged in groups of two or more cylinders each cylinder water jackets common to the cylinders of each group, two pistons for each cylinder, the pistons of each cylinder being arranged to alternately move toward and away from each other and to define a combustion chamber intermediately of the ends of the cylinders, valve mechanism including an intake valve and an exhaust valve for each cylinder, the valves for the cylinders of each group being enclosed in removable valve casings common to the cylinders of such group, the valve casings in each instance being situated directly opposite the explosion chambers formed in the several cylinders, valve casing water jackets for the separate valve casings, the valve casing water jackets and the cylinder water jackets being in communication, a crankshaft, a direct connection between one of the pistons of each cylinder and the crank shaft, a separate indirect connection between the other of the pistons of each cylinder and the crank shaft, and valve operating mechanism for the valves.



1,423,074. AIRLESS TIRE. CHARLES H. BRADEN, Los Angeles, Calif., assignor to National Airless Tire Company, Los Angeles, Calif., a Corporation of Nevada. Filed Apr. 27, 1921. Serial No. 464,806. 3 Claims. (Cl. 152—5.)

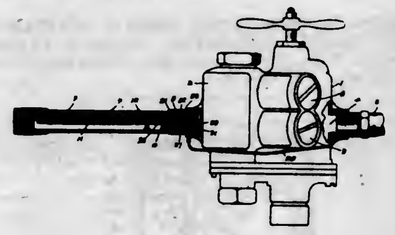
2. In a tire of the character described, an annular core having a pair of rows of cavities opening outwardly on each of the opposite sides thereof, the cavities in each row being separated by tapered columns, the cavities in one row of the pair of rows being offset in relation to the cavities in the other row, the columns of the inner row decreasing circumferentially in width toward the inner



periphery of the core, and the columns of the outer row decreasing circumferentially in width toward the outer periphery of the core; there being a central body in said core extending between the inner and outer perimeters thereof separating the cavities on one side of the core from those on the other side.

1,423,075. STAGGERED-TOOTH CUTTER FOR DRESSING ABRASIVE ELEMENTS. FRANCIS C. BRANDENBURG, Piqua, Ohio. Filed May 22, 1920. Serial No. 383,435. 4 Claims. (Cl. 125—37.)

1. A cutter for a dressing tool comprising an assemblage of cutter units each having a peripheral series of sharp-pointed staggered teeth having their side faces extending diagonally of the axis of the unit, corresponding teeth of the units lying side by side throughout the series and presenting their sharp points to the face of the work piece.



1,423,076. PAPER FILE AND BINDER. HARRY BRUNDAGE, San Francisco, Calif., assignor to George W. Koerner, New York, N. Y. Filed Dec. 10, 1920. Serial No. 429,620. 4 Claims. (Cl. 129—8.)

4. A file comprising a pair of rigid covers, a rigid backing plate hingedly connecting said covers, uprights extending in parallel from said plate, one of said uprights having a rolled edge, file prongs pivoted in said edge

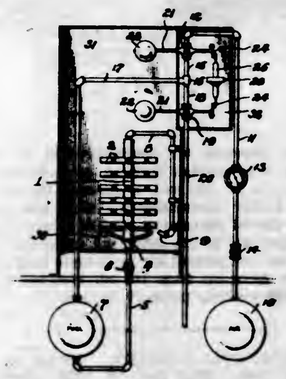
adapted to extend over the other upright and enter recesses therein, a guard receptive of the ends of said prongs slidably mounted on the last named upright, stops limiting the action of said guard, spring means for frictionally holding said guard in adjustment, a fork pivoted on one of the covers, means co-operative between said fork and prongs whereby they are adapted to form continuous guides for articles disposed thereon and a clip for holding said fork when not in use.

1,423,077. OILING DEVICE. PETER WILLIAM BURKE and ANDREW JACKSON BREEDING, Bremerton, Wash., assignors of one-third to Frank Rogers, Bremerton, Wash. Filed May 26, 1921. Serial No. 472,769. 6 Claims. (Cl. 184—39.)

1. In a tool actuated by compressed air, a tubular oil chamber, a solid portion between said chamber and the working parts of the tool, a passage through said solid portion, a tube communicating with said passage extending into the oil chamber, a plunger in said chamber adapted to reciprocate on the tube, and means for diverting a part of the compressed air to actuate said plunger and to thereby force oil from the oil chamber through the tube into the working parts of the tool.

1,423,078. MUSIC-ROLL CABINET. EDWARD L. CARLSON, Denver, Colo. Filed Dec. 12, 1921. Serial No. 521,625. 2 Claims. (Cl. 211—16.)

2. A filing device for music rolls, comprising a body member of substantially rectangular shape and of considerable thickness, a longitudinal groove on each side of its upper surface, adapted to receive the end flanges of a music roll spool, and transverse channels joining said grooves and adapted to receive the body part of a music roll.

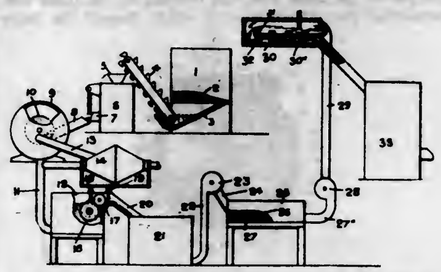


1,423,079. VANITY CASE. OSWALD J. CATHCART, Newburgh, N. Y. Filed Feb. 1, 1922. Serial No. 533,350. 7 Claims. (Cl. 132—83.)

6. A vanity case comprising a main body member, and a main cover member hinged thereto, and forming the

powder compartment, one of said members being provided with an aperture in its face, a rouge container of smaller diameter than the main body members, located within said apertured member, and in operative relation thereto, and having its outer edges substantially flush with the surface of said main member, and an independent cover member for the rouge container, comprising a flat metal plate pivoted to the apertured body member at one side of the aperture therein, and adapted to close said aperture and the rouge container when in closed position, a mirror supported on the interior of the main cover member, a powder puff located within said main body and cover members, a rouge puff of smaller diameter than the powder puff located in the rouge container, and a mirror carried on the interior of the cover for the rouge container.

1,423,080. SAFETY DEVICE FOR GAS GENERATING AND HEATING APPARATUS. WILFRID G. CHAUSSE, Detroit, Mich. Filed Aug. 8, 1919. Serial No. 316,081. 3 Claims. (Cl. 158—36.)



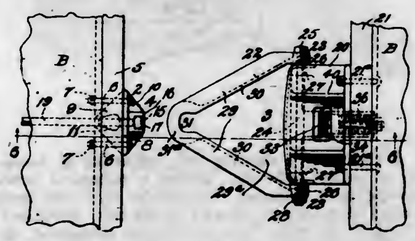
1. The combination of a gas generator, a fuel supply tank communicating therewith, a supply of air under pressure communicating with said fuel supply tank and adapted to force fuel to said generator, a burner communicating with said generator and adapted to receive gas therefrom and heat said generator, and valvular means controlling the supply of air to said fuel supply tank and adapted to automatically shut off the supply of air to said fuel tank and release the pressure of air in said fuel tank.

1,423,081. FIBER BOARD. MANLEY CHEW, Midland, Ontario, Canada. Filed Oct. 23, 1920. Serial No. 419,049. 2 Claims. (Cl. 154—45.9.)

1. As a new article of manufacture, a fiber board composed of chip waste reduced to a cooked, shredded, pressed, dried state, and waterproofed.

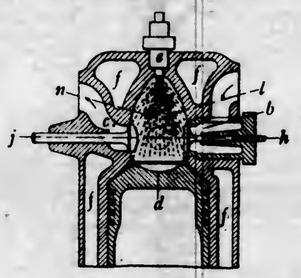
1,423,082. APPARATUS FOR PRODUCING FIBER BOARD. MANLEY CHEW, Midland, Ontario, Canada. Filed Oct. 23, 1920. Serial No. 419,050. 4 Claims. (Cl. 92—1.)

1. Apparatus for producing fiber board comprising a container, means for moistening and heating the chip waste therein, a beater, a conveyer between the container and beater, a screen, a chute extending between the beater and screen, a receptacle, a chute between the screen and receptacle, a cylindrical screen located in the receptacle, a co-acting felt roll cooperating therewith, a vat, a chute extending from the receptacle to the vat, an agitator, a pipe and pump between the vat and agitator, a final receptacle provided with cross slats located in the bottom, and a pipe line extending from the agitator



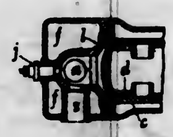
to the final receptacle, a pump located in the pipe line, and an inclined flat chute leading from the final receptacle to the press.

1,423,083. METHOD OF PRODUCING FIBER BOARD. MANLEY CHEW, Midland, Ontario, Canada. Filed Oct. 23, 1920. Serial No. 419,051. 5 Claims. (Cl. 92—1.)



1. The method of manufacturing fiber board from chip waste consisting of steam cooking the waste, then introducing water into the mass, then beating the water permeated mass, then screening it, then agitating it and then feeding the mass now reduced to pulp in a flat stream to the press, then expressing the water therefrom and pressing the pulp into board form.

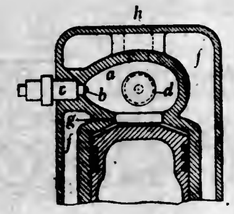
1,423,084. TRUCK COUPLING. JAMES H. COTTON and WILLIAM L. BURNER, Columbus, Ohio, assignors to The Kilbourne & Jacobs Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed Aug. 23, 1919. Serial No. 319,489. 3 Claims. (Cl. 213—67.)



1. The herein described coupler devices for joining two adjacent trackless trucks having rigidly attached endplates normally arranged to act as bumpers when approaching each other on lines inclined at any of numerous angles, said coupler presenting a male element and a female element each secured to an end of the base part of a truck, the female element being an elongated laterally expanded loop-like device hinged at its base line to the underside of one of said plates and having a laterally expanded triangular open space terminating in an active apex at its forward extremity, said element being adapted to swing up to a horizontal position under the floor of the adjacent truck when the trucks are at either of numerous angles as aforesaid, and the male element being a lug carried by and extending downward from the center of the end plate of the adjacent truck and adapted to enter the open triangular space at the base line of the loop element and on either of several vertical lines remote from each other passing through said passageway, said male element and female element being adapted to positively compel relative movement of the cars to bring the male element to the apex of the loop.

1,423,085. INTERNAL-COMBUSTION ENGINE. KENNETH IRWIN CROSSLEY and WILFRED LE PLASTRIER WEBB, Manchester, England. Filed July 27, 1920. Serial No. 399,391. 3 Claims. (Cl. 123—32.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In internal combustion engines, the combination comprising an oviform combustion chamber, an oil injector sprayer at the smaller end of said chamber, a piston forming the larger end of the chamber and air admission and exhaust valves at respective sides of the chamber, as set forth.

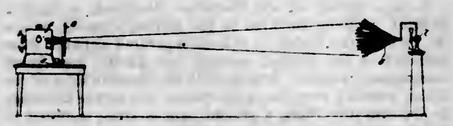


1,423,086. INTERNAL-COMBUSTION ENGINE. KENNETH IRWIN CROSSLEY and WILFRED LE PLASTRIER WEBB, Manchester, England. Filed July 27, 1920. Serial No. 399,392. 2 Claims. (Cl. 123—32.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In four stroke cycle internal combustion engines, the combination comprising a combustion chamber in part rectangular and having a circular opening at one end of less cross sectional area than the said rectangular part and a semi-circular closure at the opposite end, admission, exhaust and starter valves on the respective sides of the said rectangular part, a piston having a projecting part thereon entering the said circular opening in the combustion chamber, and fuel injecting means in the said semi-circular end of the combustion chamber injecting the fuel in the form of spray and diffusing it throughout the compressed and heated air in the combustion chamber towards the end of the compression stroke so that vaporization and ignition of the fuel occurs before the spray can impinge upon any metal surface, as set forth.

1,423,087. INTERNAL-COMBUSTION ENGINE. KENNETH IRWIN CROSSLEY and WILFRED LE PLASTRIER WEBB, Manchester, England. Filed July 27, 1920. Serial No. 399,393. 3 Claims. (Cl. 123—32.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In internal combustion oil engines, the combination comprising a cylinder, an oviform combustion chamber, a water jacket contacting with the larger end of the said chamber, an oil injector nozzle at the smaller end of the

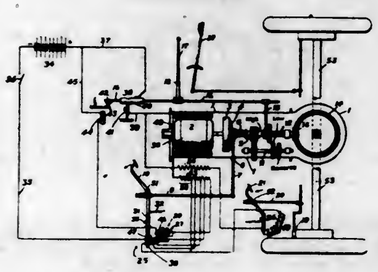


chamber, an air admission valve on one side, an exhaust valve on a second side and an opening to the said cylinder on a third side of the chamber, as set forth.

1,423,088. INTERNAL-COMBUSTION OIL ENGINE. KENNETH IRWIN CROSSLEY and WILFRED LE PLASTRIER WEBB, Manchester, England. Filed July 27, 1920. Serial No. 399,396. 4 Claims. (Cl. 123—32.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

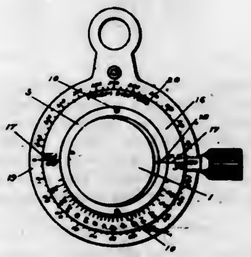
1. In four stroke cycle internal combustion oil engines, the combination comprising a cylinder, an ellipsoidal combustion chamber having its longitudinal axis at right angles to the axis of the said cylinder, an oil injector at an end of the said chamber, admission and exhaust valves at the upper side of the chamber and a water jacket on the exterior of the cylinder and chamber, as set forth.

1,423,089. METHOD OF PRODUCING COLOR EFFECTS. ALLERTON S. CUSHMAN, Washington, D. C. Filed June 10, 1921. Serial No. 476,595. 3 Claims. (Cl. 46—70.)



2. A method of producing color effects which consists in projecting successively and intermittently separate beams of differently colored light upon a moving object having a large number of independently moving parts, at such rate of succession that the different parts exhibit separate and distinctive color effects.

1,423,090. ELECTRIC MOTOR VEHICLE. JAMES KENDALL DELANO, New York, N. Y. Filed July 21, 1920. Serial No. 397,964. 12 Claims. (Cl. 172—179.)



4. The combination, with vehicle running gear, an electric motor, and clutch means operable to connect or disconnect said running gear and motor, of motor-controlling means connected to and operable in conjunction with said

clutch means, mechanical brake means operable to act upon said running gear, and further motor-controlling

means connected to and operable in conjunction with said mechanical brake means.

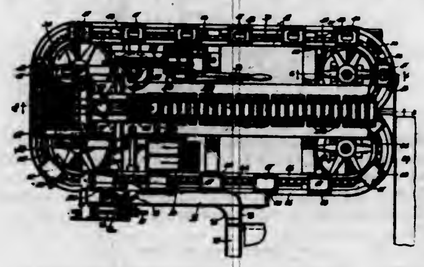
1,423,091. OPTICAL INSTRUMENT. HENRY L. DE ZENG, Moorestown, N. J. Filed May 21, 1920. Serial No. 383,058. 5 Claims. (Cl. 88—20.)

1. In a device of the character described, a holding element, a pinion mounted in the holding element, means for turning the pinion, a pair of separated annular rings mounted in the holding element and having gear teeth therearound adapted to mesh with the opposite sides of the pinion whereby rotation of the pinion will rotate the rings in opposite directions, a second pair of rings mounted in the first pair of rings and out of engagement with the holding element, removable means for securing the second pair of rings to the first whereby the second pair of rings may be removed from the device without removing the first pair of rings from the holding element, and a pair of lenses mounted in the second pair of rings.

1,423,092. OPTICAL INSTRUMENT. HENRY L. DE ZENG, Moorestown, N. J. Filed Apr. 16, 1921. Serial No. 461,794. 6 Claims. (Cl. 88—20.)

1. In a hand supported ophthalmologic instrument, a handle grip having a light chamber, a source of light in the light chamber, a reduced channel section beyond the handle grip, a diaphragm cross plate in the channel portion having an orifice smaller than the cross section of the channel, a supporting plate having a sighting orifice secured to the outside of the reduced channel portion and extending substantially parallel with and beyond the end

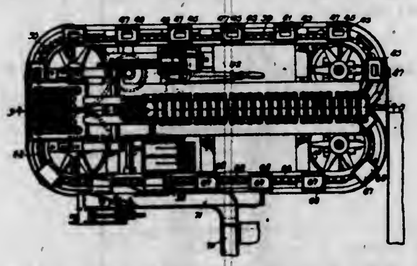
thereof, and an inclined mirror having an orifice secured to the supporting plate in alinement with the channel portion.



1,423,093. METHOD OF AND APPARATUS FOR SEALING VACUUM JACKETS. JOHN L. FATE, Chicago, Ill.; Daisy L. Fate, executrix of said John L. Fate, deceased, assignor, by mesne assignments, to C. Roy Gleason, Chicago, Ill. Filed Oct. 23, 1918. Serial No. 259,390. 10 Claims. (Cl. 113—82.)

1. The method of exhausting and sealing a jacket having an opening through which air is exhausted and surrounded by a depression forming a trap, which embraces the steps of applying a fusible medium in said trap, applying a sealing cap over said opening in contact with said fusible medium, evacuating the jacket and forming a vacuumised space within a conduit around said opening, thereafter applying heat to said fusible medium through said cap while in the air exhausted space, whereby the sealing medium is trapped and the cap is sealed to the jacket over the opening, and finally releasing the vacuum in said vacuumised space.

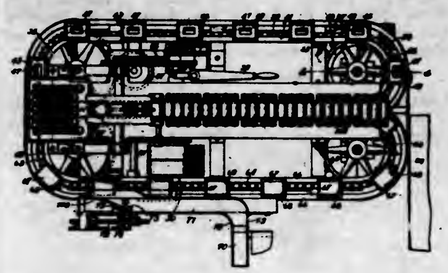
10. Means for exhausting and sealing a jacket having an exhaust opening and around said opening a trapped depression, comprising a rimmed cap over said opening adapted to be primarily supported at its margin by solid fusible particles within said depression, an exhaust tube



adapted for connection with a vacuum pump and having an open end adapted for sealing connection with the jacket wall around said exhaust opening, and an endwise spring pressed electrical heating element within said tube adapted for connection to an electric circuit and for pressure contact centrally against said cap.

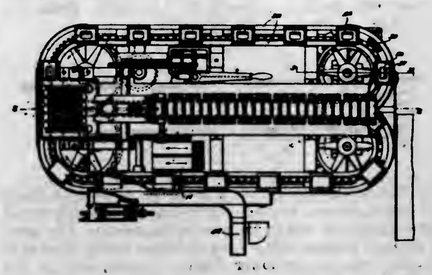
1,423,094. CARTON-SEALING MACHINE. JOHN L. FERGUSON, Joliet, Ill., assignor to The Quaker Oats Company, Chicago, Ill., a Corporation of New Jersey. Filed Aug. 29, 1913, Serial No. 787,371. Renewed July 16, 1919. Serial No. 311,381. 55 Claims. (Cl. 93—6.)

33. A machine comprising mechanism for operating with respect to articles, and two conveyors, each during its travel, carrying said articles in position for said mechanism to operate with respect thereto.



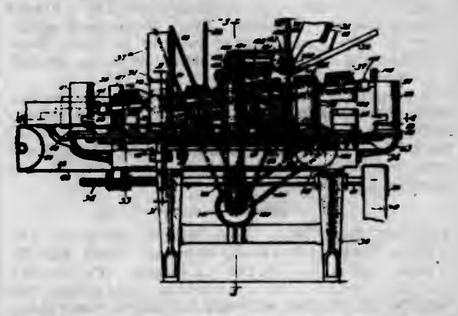
1,423,095. CONVEYER. JOHN L. FERGUSON, Joliet, Ill., assignor to The Quaker Oats Company, Chicago, Ill., a Corporation of New Jersey. Original application filed Aug. 29, 1913, Serial No. 787,371. Divided and this application filed Apr. 10, 1920. Serial No. 372,746. 19 Claims. (Cl. 198—102.)

2. A conveyer mechanism including the two conveyers traveling throughout a portion of their length in separate paths and traveling together throughout a portion of their length, and means for transferring articles from the first conveyer to the second conveyer after said articles have traveled past the common portion of the paths on the first conveyer, whereby the articles will be caused to travel twice in the common path, once on the first conveyer and once on the second conveyer.



1,423,096. TRANSFER MECHANISM. JOHN L. FERGUSON, Joliet, Ill., assignor to The Quaker Oats Company, Chicago, Ill., a Corporation of New Jersey. Original application filed Aug. 29, 1913, Serial No. 787,371. Divided and this application filed Dec. 26, 1918, Serial No. 268,267. Renewed Oct. 9, 1920. Serial No. 415,948. 25 Claims. (Cl. 198—20.)

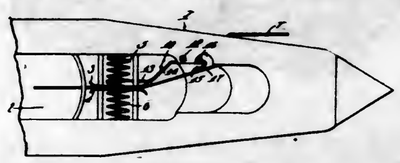
1. The combination with an endless conveyor, of a device for effecting the removal of articles laterally one by one from said conveyor, said device including a rotating member having its axis transverse to said conveyor located in the path of the articles carried by said conveyor and adapted to be peripherally engaged by such



articles, said member having a gap in the periphery thereof for permitting the passage of one article at a time.

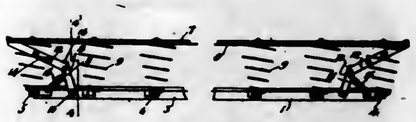
1,423,097. CARTON-HANDLING APPARATUS. JOHN L. FERGUSON, Joliet, Ill., assignor to The Quaker Oats Company, Chicago, Ill., a Corporation of New Jersey. Original application filed Aug. 29, 1913, Serial No. 787,371. Renewed July 16, 1919, Serial No. 311,381. Divided and this application filed Jan. 14, 1921, Serial No. 437,319. Renewed June 13, 1922. Serial No. 567,974. 13 Claims. (Cl. 93—36.)

1. In a machine of the character described, carton supporting means, a driving member for moving said carton supports, a source of compressed air positioned to supply said air to remove said cartons from said supports, and means depending from said driving member comprising a member to open and close said compressed air source.



1,423,098. DEVICE FOR OPERATING ON CONTAINERS. JOHN L. FERGUSON, Joliet, Ill. Filed Jan. 25, 1917, Serial No. 144,551. Renewed Mar. 1, 1921. Serial No. 448,744. 55 Claims. (Cl. 113—27.)

1. A machine for placing peripherally flanged closures in closing position with respect to the openings of

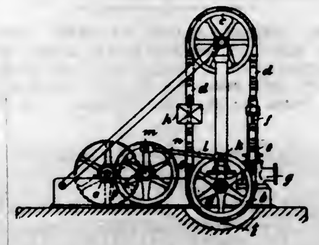


containers comprising a conveyor for the containers a guide member for traveling along with the containers and means whereby said guide member is positioned between the inner surfaces of the flanges of the closures and adjacent portions of the containers to guide the closures and the containers in their relative movement.

1,423,099. SHUTTLE ATTACHMENT. HOWARD LEROY FONNER, Altoona, Pa. Filed Apr. 4, 1922. Serial No. 549,442. 4 Claims. (Cl. 139—46.)

1. The combination with a weaving shuttle having thread engaging jaws and a thread exit eye; of a thread cutter mounted therein between said jaws and eye, said cutter having an arm positioned to be actuated by one of said jaws to throw the cutter into cutting engagement with the thread when excessive tension is placed on the thread.

1,423,100. BEDSPRING ATTACHMENT. ROBERT BRUCE GALLAGHER and REGINALD CHESNEY YOUNG, Winnipeg, Manitoba, Canada. Filed July 12, 1921. Serial No. 484,149. 3 Claims. (Cl. 5—29.)



1. The combination with a mattress, presenting upper and lower frames having cushioning springs interposed therebetween, of means for preventing relative side sway of the said frames, said means including levers pivoted to the side rails of the lower frame to swing only in the longitudinal direction of the rails, links connecting the free ends of the levers to the side rails of the upper frame, stops on the levers engageable with the links to limit upward swinging of the latter beyond a position substantially at right angles to the levers, and springs connected between the levers and the lower frame normally holding the levers inclined toward the ends of the frames and tending to resist the swinging movement of the levers occasioned by depression of the upper frame.

1,423,101. PROCESS OF PREPARING OPTICALLY-ACTIVE AROMATIC AMINOALCOHOLS. ALFONS GAMS and ERNST WYBERT, Basel, Switzerland, assignors to Society of Chemical Industry in Basle, Basel, Switzerland. Filed Oct. 14, 1921. Serial No. 507,763. 1 Claim. (Cl. 260—128.)

A process for the preparation of optically active aromatic aminoalcohols, which consists in reducing optically active salts of the corresponding aminoketones, separating the salts of the optically isomeric aminoalcohols formed from each other, and transforming them into the free bases by the usual methods.

1,423,102. GEAR FOR WELL PUMPS. HEINRICH WILHELM GERKEN, Wandsbek, Germany. Filed Jan. 31, 1922. Serial No. 533,114. 2 Claims. (Cl. 74—14.)

1. Gear for well pumps, comprising three pulleys, two being journaled about a common axis and the third pulley being journaled at a distance above the said two pulleys, a sectional chain, one section surrounding the upper pulley and the lower section being doubled and surrounding the said two lower pulleys, a cross head on one side of the endless chain attached at its center to the upper section of the chain and to the upper end of the piston rod of the well pump, and the two ends of the cross head being

attached to the ends of the lower double section of the chain on one side, the ends of the chain on the other side being attached to a balance weight adapted to balance the weight of the piston rod, means to reciprocate the endless chain to an extent corresponding to the stroke of the pump.

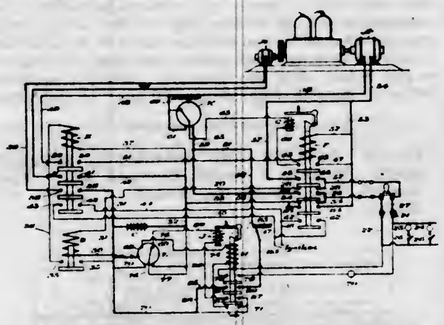
1,423,103. COOLING COMPOUND FOR HOT JOURNAL BOXES AND PROCESS FOR PRODUCING THE SAME. JULIUS Q. GILL, Peoria, Ill. Filed Aug. 2, 1920. Serial No. 400,634. 5 Claims. (Cl. 87—9.)

1. A cooling compound for hot boxes, which consists of corn oil, castor oil and caustic alkali in such proportion as to form soap, a small amount of free alkali, ivory black, methyl salicylate, and water in such proportion as to constitute more than 50% of the mixture.

1,423,104. EXTENSIBLE LADDER FOR FIRE ESCAPES. RICHARD GLASSER, San Francisco, Calif. Filed Apr. 27, 1921. Serial No. 464,852. 5 Claims. (Cl. 228—19.)

1. A drop ladder comprising a stationary and a plurality of movable vertical sections, one movable section being slidably secured to the stationary section and the next movable section to the first one, means secured to the stationary section adapted to engage and impart vertical motion to the first movable section, a pulley secured to the upper part of the latter, and a flexible connection between the bottom of the stationary section and the top of the second movable section being led over said pulley adapted to transmit the vertical motion of the first movable section to the second movable section at twice the velocity of the first movable section.

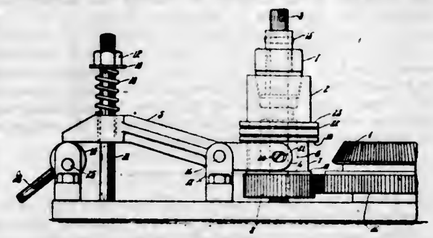
1,423,105. BOTTLE CAP. SVEND HANSEN, New York, N. Y. Filed Sept. 13, 1921. Serial No. 500,407. 1 Claim. (Cl. 215—38.)



The combination with a bottle cap of a cork disk located therein, and corresponding in diameter to the internal diameter of the cap, so as to cover the inner face of the same, and a metal disk of smaller diameter than the diameter of the cork, applied to the exposed face of the cork and formed with integral prongs projecting through the said cork.

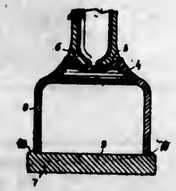
1,423,106. BOTTLE CAP. SVEND HANSEN, New York, N. Y. Filed Sept. 13, 1921. Serial No. 500,408. 1 Claim. (Cl. 215—38.)

The combination of a metal bottle cap with a ring of cork inserted therein, and a metal cup inserted into the center of the cork to bear against the inner face of the cap and formed with a flange overlapping the inner edge of the face of the cork.



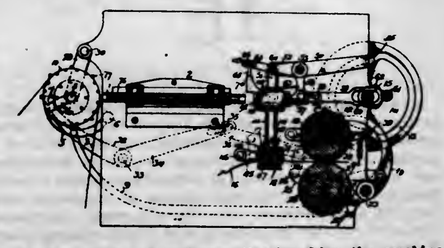
1,423,107. ELECTRICAL GENERATING SYSTEM. HARRY A. HARRINGTON, Cuyahoga Falls, Ohio. Filed Jan. 10, 1920. Serial No. 350,641. 13 Claims. (Cl. 290—30.)

8. In an electrical generating system, the combination with an electrical generator; a battery; a prime mover; an electrical motor for starting the prime mover; and a main distributing circuit including current consuming devices; of a system of control for said apparatus comprising a main distributing circuit switch; an auxiliary switch for controlling the starting motor and an interlock operated by said auxiliary switch for interrupting the actuating circuit for the main switch when the auxiliary switch is open.



1,423,108. CLUTCH MECHANISM. JOHN ALLEN HEANY, New Haven, Conn., assignor, by mesne assignments, to Rockbestos Products Corporation, a Corporation of Delaware. Filed Jan. 24, 1919. Serial No. 272,870. 2 Claims. (Cl. 192—66.)

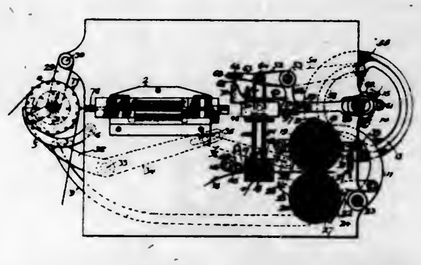
1. A friction clutch mechanism comprising: a vertical driven shaft, a cone clutch member attached to said shaft, a cone clutch member rotatably mounted on said shaft below said clutch member attached to said shaft, means for rotating said rotatably mounted clutch member, a sleeve on said shaft beneath said rotatably mounted clutch member for moving said clutch member vertically into and out of engagement with said clutch member attached to said shaft, a ball bearing device between the top of said sleeve and said rotatably mounted clutch member, a horizontally pivoted lever extending away from said shaft and arranged to actuate said sleeve, a spring arranged to bear



downwardly on the outer end of said lever to thereby tend to raise the rotatably mounted clutch member into engagement with the clutch member attached to said shaft, and a manually operable cam member arranged to engage the outer end of said lever for moving the lever against the action of said spring to clutch-disengaging position.

1,423,109. METHOD OF PRODUCING WHEELS. JACOB LUDVIG HELLEN, Kloften, Norway. Filed Dec. 30, 1919. Serial No. 348,417. 2 Claims. (Cl. 29—174.)

1. A method of constructing water-tight hollow metal wheels consisting in forming hollow metal spokes, thickening the outer ends of said spokes and providing the thickened ends with spherical end surfaces, forming a hub and placing the inner ends of said spokes in said hub, forming a metal ring into a felly of channel-shaped cross-section with the mouth opening outwardly, providing the bottom of the channel with integral spaced spherical seats corresponding to the number of spokes in the hub, placing the spherical ends of the spokes in engagement with the spherical seats, reducing the circumference of said felly to cause the same to grip the spokes, and placing a rim over the mouth of said channel.

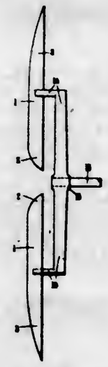


1,423,110. JACQUARD-CARD REPEATING AND TRANSPOSING MACHINE. LOUIS HERZOG, Beacon, N. Y., assignor to Glenham Embroidery Company, Beacon, N. Y., a Corporation of New York. Filed Sept. 1, 1920. Serial No. 407,428. 7 Claims. (Cl. 164—114.)

1. In a jacquard-card repeating machine the combination of selecting members adapted to be actuated by a

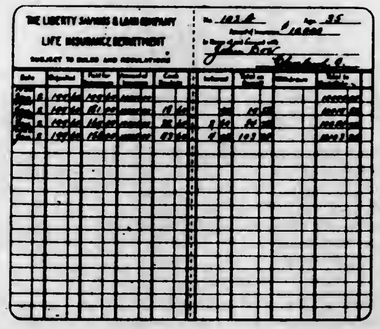
master jacquard card and members for perforating the repeat card, controlled by said selecting members, certain of said selecting members being adapted to control the perforations affecting the extent of movement devices in an embroidering machine jacquard, and others of said selecting members being adapted to control the perforations affecting the direction of movement devices in the jacquard, means for actuating corresponding perforating members according to the operation of said selecting members which control the extent of movement devices, and means for causing the transposition in the operation of certain other perforating members by said selecting members which control the perforations for the direction of movement devices of the jacquard.

1,423,111. JACQUARD-CARD REPEATING AND TRANSPOSING MACHINE. LOUIS HERZOG, Beacon, N. Y., assignor to Glenham Embroidery Company, Beacon, N. Y., a Corporation of New York. Filed Sept. 1, 1920. Serial No. 407,429. 3 Claims. (Cl. 164—114.)



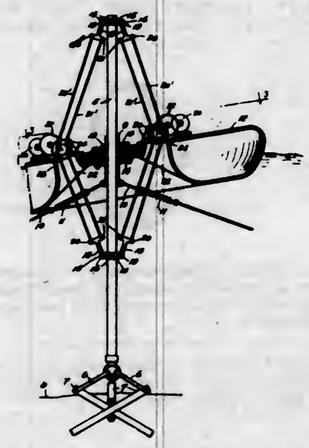
1. In a jacquard-card repeating machine the combination of punching members for making rows of perforations in a repeat jacquard-card, and consisting of a plurality of groups or series, platens adapted to individually lock the punching members for operation, slides operated by a master jacquard-card comprising a plurality of groups or series and means connecting the individual slides in said groups with individual platens bearing similar relative positions, but in different groups of said platens, whereby the operations of said slides are transposed to effect the transposition of the perforations in the repeat card.

1,423,112. OIL CUP. FRANK O. HOAGLAND, Bridgeport, Conn., assignor to The Bilton Machine Tool Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Apr. 22, 1920. Serial No. 375,687. 2 Claims. (Cl. 184—95.)



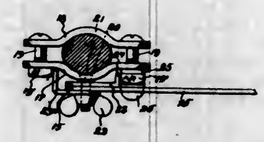
1. An oiler of the class described, including a casing having a pocket formed therein adapted to be closed by a screw and provided with a threaded and plain side wall portion, a hollow screw adjustably mounted in the pocket and having part only of its periphery threaded to adjustably engage the threaded portion of the socket and provided with means to limit its withdrawal movement, said screw further including a side filling opening below the head of the screw and positioned to be closed when the screw head is seated.

1,423,113. SCREW PROPELLER AND THE LIKE. ALEXANDER ALBERT HOLLS, Hyde Park, London, England. Filed Jan. 21, 1922. Serial No. 530,952. 4 Claims. (Cl. 170—159.)



1. A blade for screw propellers, windmills, and like fluid operating or operated mechanisms comprising a central part and two end parts, the shape in plan of the central part being quadrangular and its shape in cross section being such that its chord gradually increases from its inner side and its camber and angle of incidence relative to the helical plane decreases towards its outer side; and the shape of each of the end parts in plan being such that it is cut away from its point of junction with the central part so as to bring its leading edge back until it meets its trailing edge, which is a continuation of the trailing edge of the central part, and the shape of each of said end parts in cross section being such that its chord, camber and angle of incidence to the helical plane are gradually reduced from their points of junction with the central part to their tips.

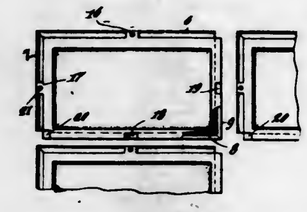
1,423,114. SAVINGS AND INSURANCE ACCOUNT BOOK. EVERETT J. HOUSE, Cleveland, Ohio. Filed May 11, 1920. Serial No. 380,580. 1 Claim. (Cl. 283—57.)



Means for facilitating the keeping of depositors' accounts with associated savings and insurance organizations, consisting of a pass book the pages of which have successively arranged, appropriately headed columns for entering the date of deposits, amount of deposit, amount paid for insurance, amount of insurance, cash-savings, interest, total on deposit, withdrawals, and total to beneficiary.

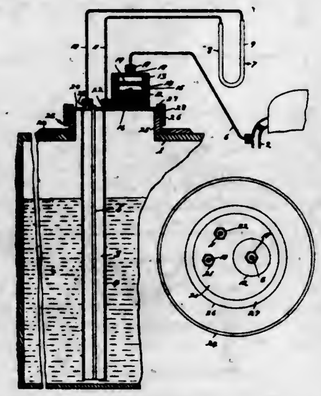
1,423,115. WAVE MOTOR. OSCAR HULTBERG, Seattle, Wash. Filed Apr. 11, 1921. Serial No. 460,452. 4 Claims. (Cl. 253—10.)

1. In a wave-motor, the combination of a mast, means to maintain said mast substantially vertical, a floatative vessel, means for connecting said vessel to the mast to rise and fall with the waves, wheels provided on said vessel, cables extending through the vessel and connected above and below the same to said mast, means provided on said wheels whereby the latter are caused by said cables to be rotated in the same directions during both the upward and downward wave impelled movements of the vessel.



1,423,116. WINDSHIELD AWNING. EARL H. HUTCHESON, Augusta, Ga. Filed July 2, 1921. Serial No. 482,115. 2 Claims. (Cl. 296—95.)

2. An attachment of the character described including opposed clamps, bolts passing through the ends of the clamps and having nuts, a pivot bolt projecting from one of said clamps, an oscillatable member mounted on the pivot bolt, washers disposed on each side of the oscillatable member and through which the pivot bolt passes, and a nut on the pivot bolt bearing against one of said washers, each of said washers being provided with lugs engaging against the first named nuts and holding said nuts from rotation and being held from oscillation by said nuts.



1,423,117. TILE. BENJAMIN P. INFANTINO, New York, N. Y. Filed Feb. 14, 1919. Serial No. 277,056. 1 Claim. (Cl. 72—19.)

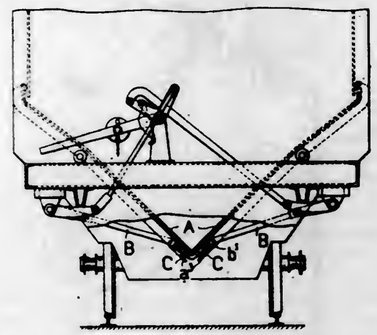
A tile having tongues approximately midway of its thickness along its top and one end edge, and grooves along the bottom and other edge, said tongues each having a laterally extending portion constituting a filler lug having a portion arranged flush with the back face of the tile, each tongue having an opening extending through the same and the filler lug for the insertion of

a fastening device, and the rear walls of the grooves being provided with notches adapted to snugly receive the filler lugs of contiguous tile.

1,423,118. DEPTH-INDICATING DEVICE. HORACE W. KING, Ann Arbor, Mich. Filed Apr. 1, 1920. Serial No. 370,417. 6 Claims. (Cl. 73—54.)

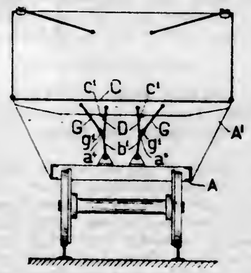
1. In a depth indicating device for liquids, the combination with a closed tank containing a liquid, of a chamber communicating with the air outside said tank and with the liquid in said tank, a suction pipe connected to said tank for producing a vacuum therein sufficient to draw air into said chamber for displacing the liquid down to the point of communication of said chamber with the liquid, means for preventing the passage of the liquid from said tank through said suction pipe, and a pressure gage in communication with said tank above the level of the liquid therein.

1,423,119. HOLDER FOR ELECTRIC LAMPS AND THE LIKE. JAMES F. KING, Worcester, Mass. Filed Sept. 9, 1921. Serial No. 499,437. 2 Claims. (Cl. 248—20.)



2. As an article of manufacture, a holder for electric lamps and the like comprising a wire coil the ends of which extend therefrom in a plane transverse to the plane of the coil, and diverge from each other, said arms extending inwardly from their extremities and crossing each other, and having a pair of flexible parallel surfaces on their extreme ends for engaging on opposite sides to a flat article, whereby the natural re-

siliency of the wire will hold said surfaces together and apply pressure to the opposite sides of an article to

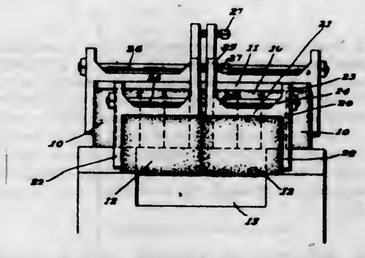


which they are applied and whereby pressure applied inwardly to said arms will release the grip.

1,423,120. LOCKING MECHANISM FOR THE DOORS OF SELF-DISCHARGING RECEPTACLES. PAUL KRÜGER, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Oct. 14, 1921. Serial No. 507,735. 2 Claims. (Cl. 105—38.)

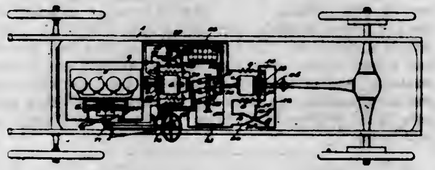
1. In a locking mechanism for doors, an operating element for each door, a bolt pivotally secured to each door and pivotally secured to the associated operating element, each bolt engaging in the loading position of the doors behind the edge of the other discharge door.

1,423,121. DUMPING CAR. PAUL KRÜGER, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Mar. 17, 1922. Serial No. 544,542. 2 Claims. (Cl. 105—260.)



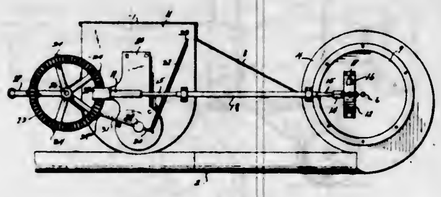
1. In a dumping vehicle a body provided with end walls, a bottom tiltable to either side about laterally disposed axes and crank-arms located on each side of the central longitudinal plane, and links positively connecting said bottom to said end walls.

1,423,122. CONFETTI BOMB. JAMES KYRIAZOPOULOS, Lowell, Mass. Filed Feb. 7, 1920. Serial No. 357,005. 9 Claims. (Cl. 41—10.)



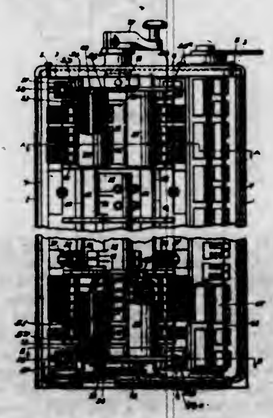
1. A confetti bomb comprising a frangible shell containing a compacted charge of confetti adapted to be distributed by the fragmentation of said shell caused by exterior action.

1,423,123. FORGE CLAMP. PHILIP A. LEACH, East Brimfield, Mass. Filed Jan. 31, 1921. Serial No. 441,283. 1 Claim. (Cl. 263—1.)



In a clamp, the combination of a pair of members each having a horizontal main portion and two arms or projections extending upwardly therefrom at opposite ends, and a jaw extending downwardly therefrom in alignment with one of said projections, means extending through the two pairs of arms and projections just above the horizontal position for pivotally connecting them together at that point, and means mounted on one of the arms for engaging the corresponding arm on the other member and forcing them apart at their extreme ends.

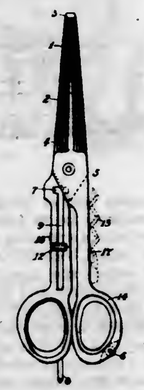
1,423,124. GASOLINE-ELECTRIC AUTOMOBILE. FRANCIS GLOYD LE MERLE, MERVIN JEAN ULLMAN, and JOHN EMMET BARRY, Washington, D. C. Filed Sept. 14, 1920. Serial No. 410,188. 5 Claims. (Cl. 290—17.)



5. The combination with a prime mover and generator apparatus, of a series motor connected thereto, and a regulator comprising a throttle valve for the prime mover, a torque motor connected thereto, comprising an armature and field winding connected in series and across the generator terminals, and an auxiliary field winding connected in series with the generator.

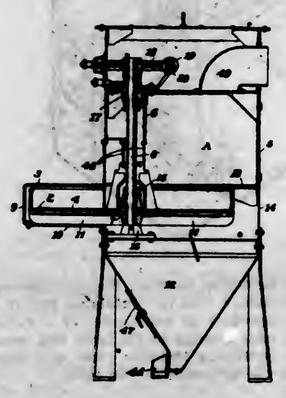
1,423,125. DUST GUN. JOSEPH F. LEMONS, Adams, Tenn., assignor of one-fourth to W. B. Winters, Adams, Tenn., and one-fourth to John Hancock, Springfield, Tenn. Filed Oct. 15, 1921. Serial No. 507,991. 3 Claims. (Cl. 43—148.)

1. In a dust gun, a hopper, a delivery tube associated with the hopper and in communication therewith, a rock shaft mounted within the hopper above the communication between the hopper and tube, an agitating member carried by said shaft, a fan casing having an outlet communicating with one end of the delivery tube, a rotary blower fan within the casing, a second shaft rotatably carried by the hopper, a member fixed to said second named shaft and operatively connected with the fan to rotate the same, oppositely directed members carried by the rock shaft, means associated with one of said last named members for automatically turning the rock shaft in one direction, the second of said last named members closely approaching the gear, and circumferentially spaced lugs carried by the gear for contact with the second of said last named members to intermittently move the rock shaft in a second direction.



1,423,126. ELECTRIC CONTROLLER. NILS D. LEVIN, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed Nov. 21, 1916. Serial No. 132,686. 17 Claims. (Cl. 200—10.)

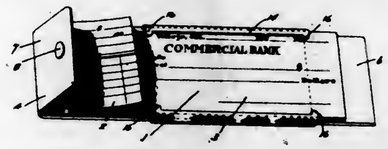
1. In a controller of the class described, the combination with a rotatable cylinder, of contact plates carried by the cylinder, brushes adapted to contact with the plates, an elongated magnet core adjacent the points of contact of the brushes and having its magnetic axis parallel with the axis of the cylinder, and an insulated conductor wound upon said core.



12. In a controller of the class described, the combination with a rotatable cylinder, of plates carried by the cylinder, brushes adapted to contact with the plates, an elongated blow out magnet adjacent to point of contact of the brushes, and independently removable insulating plates between the brushes to prevent the formation of arcs between adjacent brushes.

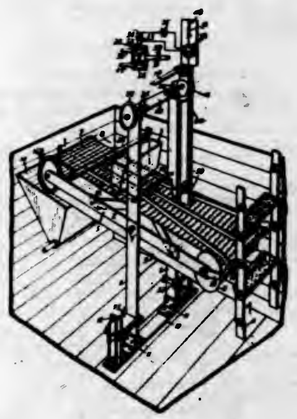
1,423,127. SCISSORS. EDWARD LEVY, London, England. Filed Mar. 16, 1920. Serial No. 366,290. 2 Claims. (Cl. 7—6.)

1. A can-opening tool of the scissors type including a combination with the closed scissors members, the handle of one member carrying a pivoting point and having a longitudinally disposed slot with an enlargement at one end guarded by one handle member when the scissors are closed, and a cutting element movable in said slot and releasable through the slot enlargement when the handles are separated.



1,423,128. SAND-BLAST APPARATUS. HUGO F. LIMPERT, Hagerstown, Md., assignor to Pangborn Corporation, Hagerstown, Md., a Corporation of Maryland. Filed Dec. 8, 1920. Serial No. 429,233. 10 Claims. (Cl. 51—15.)

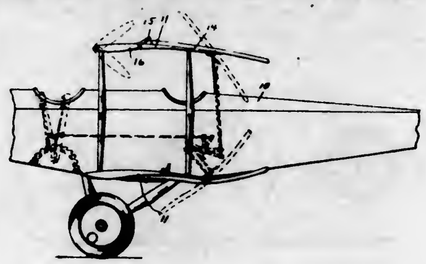
1. In combination in a sand blast apparatus, a casing, a rotary carrier lying partly within and partly without said casing, a sand blast nozzle, an air jet nozzle, an arm supporting said nozzles at its free end and oscillating in a horizontal plane over the said table, a vertical shaft



carrying said arm, and a pair of flexible hose pipes extending from a point adjacent the axis of oscillation of the said nozzle supporting arm to the nozzles carried thereby, substantially as described.

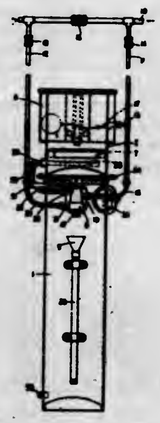
1,423,129. STIFFENER FOR FOLDING BOOKS. WARREN O. LYNCH, Berkeley, Calif. Filed Oct. 15, 1921. Serial No. 507,831. 1 Claim. (Cl. 24—66.)

A stiffener for a folding book of the character described adapted to stiffen the same in its folded and in its unfolded condition comprising a stiffening plate substantially co-extensive with the folded book having flanges thereon adapted to slidably engage the upper and lower edges of the body portion of the book and to be slid along the said edges when the book is unfolded so as to stiffen the creased portion of the book, a large central portion of the flanges being cut away so as to fully disclose the reading matter on the check while the remaining projections extending from the ends of the flanges insure a firm contact between the plate and the book.



1,423,130. ORE CONCENTRATOR. WILLIAM C. McCOY, Wilkinsburg, Pa. Filed Sept. 26, 1917. Serial No. 193,230. 24 Claims. (Cl. 83—83.)

1. In an ore-classifying machine, the combination with an ore carrying table, a tank for containing fluid in which said table is adapted to be submerged, of a device for oscillating said table relative to the tank, and means for controlling the oscillating impulses from said device in accordance with the movement of said table.

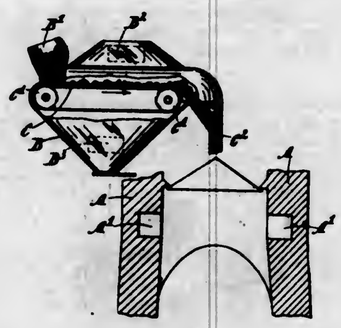


1,423,131. AEROPLANE. CHARLES D. McNAMARA, Fair Play, Colo. Filed May 4, 1921. Serial No. 466,838. 2 Claims. (Cl. 244—29.)

1. In an aeroplane, the combination with a main plane thereof, of an auxiliary plane pivoted at its transverse center to said main plane and shiftable about its pivot to engage and disengage the main plane, means to prevent

air passing from what is the meeting edge of the auxiliary plane below said auxiliary plane and means for shifting said auxiliary plane.

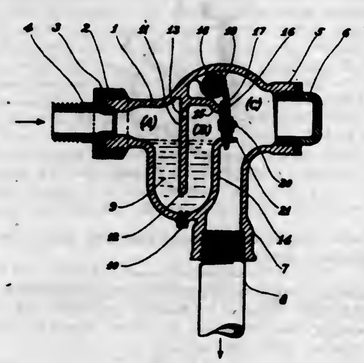
1,423,132. TREATMENT OF WATER FOR SOFTENING, STERILIZING, AND LIKE PURPOSES. HENRY J. MAGRATH, London, England. Filed Aug. 31, 1921. Serial No. 497,334. 4 Claims. (Cl. 210—24.)



1. A plant for use in treating water for softening and like purposes, and involving the use of a reagent which requires regenerating at intervals, said plant comprising a vessel the lower portion of which forms a chamber adapted to contain the active material and a bed of filtering material, and the upper portion of which forms a separate chamber for the regenerating solution, a ball cistern in connection with said separate chamber, a multiple-way cock, comprising an outer shell with a discharge outlet to waste, and a plug with passages therein fitting in said shell, pipes connecting the shell of said cock with the water inflow and outflow and with the separate chamber, a distributing head in the lower chamber above the active material, a pipe connecting the distributing head with the shell of the cock, a collecting pipe and connections leading from near the bottom of the lower chamber to the shell of the cock, the plug of said cock being adapted to be set in either of two positions, in one of which water can only flow through the lower chamber for treatment therein, while in the other position regenerating solution can flow from said separate chamber through the lower chamber for regenerating purposes, followed by water from said ball cistern for washing out purposes, the spent solution and the waste washing water being discharged through the waste outlet of said cock.

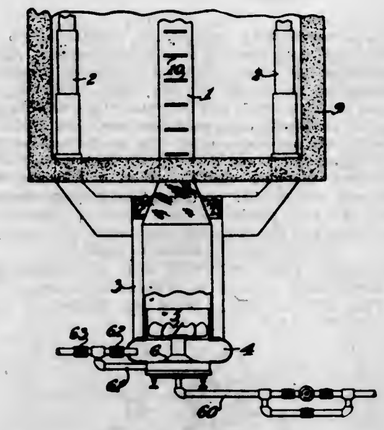
1,423,133. TIE DEVICE. ALEXANDER S. MATHERS, Los Angeles, Calif. Filed May 28, 1921. Serial No. 473,456. 11 Claims. (Cl. 85—14.)

1. In a device of the character described, two outwardly diverging legs pivotally connected at their inner ends, inwardly extending projections at the outer ends of the legs, and a transversely extending projection at the inner end of one of the legs.



1,423,134. LOW-TEMPERATURE DISTILLATION. ARTHUR CUMMING MICHIE, Newcastle-upon-Tyne, and EDMUND GEORGE WEEKS, Northumberland, England, assignors to Charles Hesterman Mers and William McLellan, both of Westminster, London, England. Filed Nov. 12, 1919. Serial No. 337,573. 2 Claims. (Cl. 202—8.)

2. The process of continuously distilling fuel which consists in passing a heating medium through a body of said fuel, providing fresh charges of fuel separate from the said body of fuel, passing a heating medium through the charges and raising the temperature thereof above the temperature of condensation of the distillate but below a temperature that will effect appreciable decomposition of the fuel, and delivering the said charges while so heated to the body of fuel.

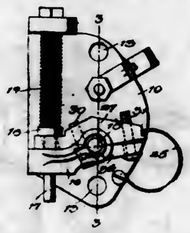


1,423,135. RELIEF VALVE. ARNOLD W. MILLER, Pittsburgh, Pa., assignor to C. Howard Hook, Pittsburgh, Pa. Filed May 14, 1921. Serial No. 469,591. 1 Claim. (Cl. 137—103.)

A relief valve comprising a casing provided with partitions forming three compartments, an inlet compartment having an inlet port near the upper end thereof, an outlet compartment having an inspection opening adjacent its upper end and a discharge port at its lower end, and an intermediate pressure compartment, the partition between the pressure and outlet compartments being provided with an outlet port, a valve therefor, the partition between the inlet and pressure compartments being spaced from the bottom of the casing to provide a water seal and having a reduced aperture adjacent its upper end, the inlet port,

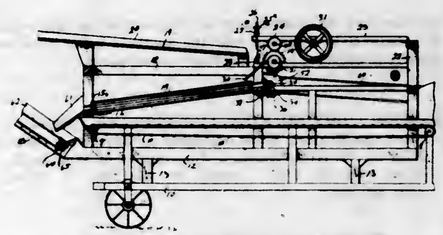
the aperture, the outlet port and inspection opening being in substantial alignment and the aperture being disposed above the centers of said inlet and outlet ports.

1,423,136. DRYING KILN AND PROCESS. MORITZ L. MUHLLAN, Seattle, Wash., assignor to Northwest Blower Kiln Co., Seattle, Wash., a Corporation of Washington. Filed July 20, 1921. Serial No. 486,283. 5 Claims. (Cl. 34—24.)



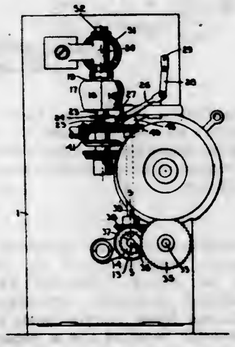
1. In combination, a kiln, a fan for circulating air through said kiln, a steam driven engine for operating said fan and means for delivering the exhaust steam from said engine to the current of air circulated by said fan and in advance of said fan.

1,423,137. MAKE-AND-BREAK IGNITION DEVICE. MILTON MURRAY, Williams Wharf, Va. Filed Oct. 28, 1920, Serial No. 420,248. Renewed Apr. 10, 1922. Serial No. 551,211. 3 Claims. (Cl. 123—144.)



1. In a make and break ignition device including stationary and movable contacts and a rocker rod which carries the movable contact, a tappet controlled and spring actuated rocker arm including two parts one of which has a rocking adjustment with respect to the other and

has a flat surface engaging a flattened surface of the rocker rod, and means to adjust the rocking part of the

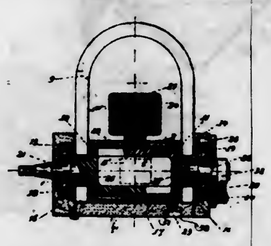


arm with respect to the other part and secure the same in adjusted position.

1,423,138. CORN-SNAPPING MECHANISM FOR SILO FILLERS. GEORGE F. NORTON and EDWIN A. ENDE, Mayville, Wis. Filed Feb. 26, 1920. Serial No. 361,602. 1 Claim. (Cl. 130—5.)

In a corn husking machine, the combination of a bottom frame work support having longitudinally extended horizontal side bars, a conveyor to operate substantially throughout the length of said frame work, an upper frame having laterally and longitudinally spaced standards resting removably upon said side bars, corn feeding and husking mechanisms mounted upon the forward portion of said upper frame and over the forward portion of said conveyor, snapping means and stalk deflecting means mounted on the rear portion of said upper frame and over the rear portion of said conveyor whereby both the husks and the stalks are received on said conveyor.

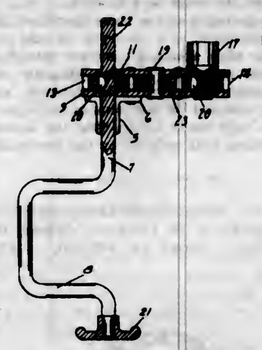
1,423,139. FIRE SHUTTER FOR MOVING-PICTURE MACHINES. JAMES H. O'BRIEN, Manchester, N. H. Filed Feb. 27, 1920. Serial No. 361,904. 5 Claims. (Cl. 88—19.4.)



1. In a moving-picture machine, the combination with film-actuating mechanism for feeding the film, of a fire shutter, a centrifugal governor for controlling the shutter, governor-rotating means actuated directly and positively by the film, and means to apply continuously a braking action on the governor-rotating means sufficient to overcome the momentum of the governor and bring it to rest promptly when the governor-rotating means suddenly ceases to act, but insufficient to affect the action of said means normally.

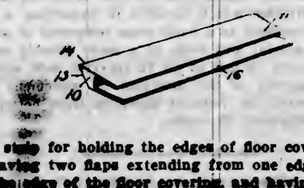
1,423,140. BRUSH AND CHOPPING AX. OLUF ESAIA OLESRUD, Rawlf, Alberta, Canada. Filed Jan. 29, 1920. Serial No. 354,768. 1 Claim. (Cl. 30—11.)

A brush ax comprising a brush bit having a curved cutting edge and an eye through the top of the bit in a plane angularly disposed to the plane of the cutting edge, and a curvature in said bit from the eye towards the cutting edge whereby direct contact with the ground by said cutting edge is avoided.



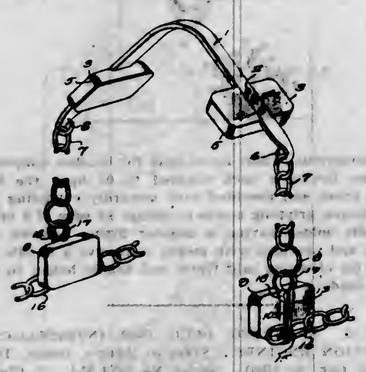
1,423,141. MAGNETO ELECTRIC MACHINE. CAMILLO OLIVETTI, Ivrea, Italy. Filed June 19, 1919. Serial No. 305,381. 9 Claims. (Cl. 171—209.)

2. In a bi-polar magneto, in combination magnet poles; a core having a winding and a pair of poles; a rotor having means in permanent magnetic connection with the magnet poles and adapted to intermittently magnetically connect each of the magnet poles with one of the poles of the core when said means are directly in line therewith; and means for indirectly connecting the poles of the core magnetically to opposite magnet poles when said rotor means is in a position intermediate said poles of the core.



1,423,142. WRENCH. RALPH H. OWENS, Lincoln, Nebr. Filed Nov. 3, 1919. Serial No. 335,377. 6 Claims. (Cl. 81—57.)

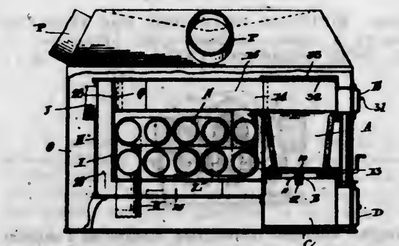
1. In a wrench of the character described, a pair of spaced plates, a spur gear positioned between said plates, an operating shaft keyed to said spur gear and serving as a pivot therefor, a second spur gear between said plates and carrying a wrench element which protrudes beyond the outer surface of one of the plates, a third spur gear journalled between said plates and meshing with both the aforesaid first and second spur gears, said operating shaft extending through and beyond the plate



on the side of the wrench element to a distance greater than that of the wrench element, thereby serving as a pressure bearing while the wrench is in operation.

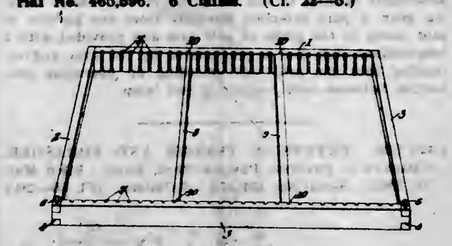
1,423,143. STRIP FOR FLOOR COVERINGS AND THE LIKE. MARCUS PATTERSON, Brooklyn, N. Y. Filed Jan. 30, 1922. Serial No. 532,748. 6 Claims. (Cl. 16—16.)

3. A strip for holding the edges of floor covering, said strip having two flaps extending from one edge so as to grasp the edge of the floor covering, and having its other edge formed to provide an obliquely projecting ridge, said ridge being adapted to bind against a side wall on an upward tendency of the strip.



1,423,144. BACKBAND. RAYMOND W. PAUL, Pike Road, N. C. Filed July 14, 1921. Serial No. 484,748. 1 Claim. (Cl. 54—39.)

A back band comprising a pair of cushioning pads adapted to engage the back of a horse, said bands being provided with flat engaging surfaces, and being further provided with transverse grooves in their upper faces,



a substantially inverted V-shaped member, said member being provided with a plurality of openings adjacent each end to permit said cushioning pads to be secured thereto in various positions, the ends of said member being provided with inturned hooks, flexible connections secured to said inturned hooks, and a combined rein holder and trace carrier secured to the other end of said connections, each of said rein holder and trace carriers comprising a block, a member secured to said block comprising a pair of spaced sides, the lower portions of said sides being arranged relatively close to each other and adapted to receive a link of a trace chain, the intermediate portion thereof being relatively spaced to permit passage of a trace chain, and the upper portion being arranged to form a substantially circular portion for the reception of a rein, and a roller mounted beneath said substantially circular portion.

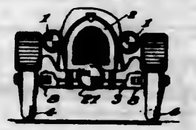
1,423,145. FURNACE. WILLIAM FRANKLIN PAYNE, Stratford, Ontario, Canada. Filed July 30, 1921. Serial No. 488,648. 9 Claims. (Cl. 126—109.)

1. In a furnace, a fire pot, a heating chamber, conduits leading the products of combustion across the top, down one end and backwardly and forwardly along the bottom of the heating chamber, and a serpentine heating coil in the heating chamber.

1,423,146. STEREOTYPE-CASTING FRAME. JOHN W. PECKHAM, Parkston, S. Dak. Filed Apr. 29, 1921. Serial No. 465,596. 6 Claims. (Cl. 22—5.)

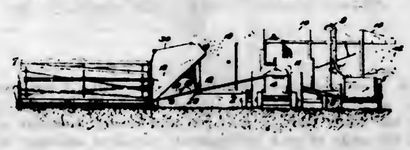
6. A stereotype casting frame, comprising a top member, a bottom member, and intermediate members, means on the inner faces of said top and bottom members and on the ends of said intermediate members whereby said intermediate members may be arranged within the frame formed by said top and bottom and end members to form a mold cavity, said top member being removable for the purpose of filling said cavity with metal.

1,423,147. KEY HOLDER. GEORGE R. PEARY, Washington, D. C. Filed Feb. 28, 1921. Serial No. 448,552. 9 Claims. (Cl. 59—96.)



1. A key holder consisting of opposed disk-like members, each having a peripheral flange turned toward the

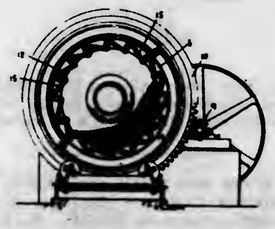
other member; said flanges being adapted to fit snugly one within the other for holding the two members together,



and means carried by one of said members for attaching keys thereto.

1,423,148. DIRIGIBLE HEADLIGHT FOR VEHICLES. RAYMOND A. PERRY, Oakland, Calif. Filed Oct. 17, 1921. Serial No. 508,278. 1 Claim. (Cl. 240—62.)

A dirigible headlight for vehicles, comprising a supporting bracket adapted for attachment to a front vehicle axle and provided on one face with an integral boss terminating approximately flush with the upper surface of the axle and formed with a vertical bore, a tubular post extending upwardly from and rotatably mounted on said boss, a bolt passing through said tubular post and boss and providing a vertical fulcrum for said post and affording a means for retaining said post on said boss, a lamp carried by and extending outwardly from one side of said post, an operating arm extended at right angles from the other side of said post over said axle, a split clamp detachably secured to the reach rod of the vehicle steering gear, a part extended laterally from one portion of said clamp in the plane of said arm and provided with a longitudinal slot, and a pin carried by the arm and extending into the said slot affording an operating connection between said reach rod and lamp.



1,423,149. EXTENSION FEEDER AND THRASHER. CHARLES C. PFISTER, Pawnee Rock, Kans. Filed Mar. 10, 1921. Serial No. 451,374. 5 Claims. (Cl. 56—20.)

1. In an apparatus of the class described, the combination with a wheeled truck, of a platform provided with a central enlarged portion and with extensions projecting at right-angles from said central enlarged portion, a bin-box on said central enlarged portion contiguous to one of said extensions, a wagon contiguous to the bin-box and one of said extensions, a thrasher on the enlarged portion of the platform, and an extension, conveyors on the other extension of the platform and discharging into said thrasher, means for operating the thrasher and the conveyors, a grain conveyor connected to the thrasher and adapted to discharge either into said wagon or said bin-box at the will of the operator, and means for connecting the wagon and the truck to a tractor.
